and exhibited first at Philadelphia in 1891, winning eleven prizes on ten entries. In 1892 he married, bought out his father's farm and established his home there. From then on he began to push exhibiting and advertising his varieties of standard-bred poultry. He does an extensive business in this country and as an exporter. Good-sized birds for the variety and large eggs with a good yield are always in demand, and Mr. Kulp says: "It pays to breed what the people want, and I always try to do it."

What "Uncle Sam" Is Doing for Poultry

Effective Organization of Girls and Boys for Helpful, Useful and Interesting Home Work and Promotion of Pure Bred Poultry Interests. *By Prince T. Woods, M. D.*

OUR "UNCLE SAM" comes in for a good deal of criticism, some of it just and some unjust, for this is a country of free speech and it is easy to criticize,—particularly so when the responsibility rests very lightly, if at all, on the shoulders of the critics. On numerous occasions "Uncle Sam" has been criticized because he was assumed to be doing so much for farm animals and so little for the children, who are to be our future citizens and who stand in need of much practical education to fit them for efficient and useful citizenship.

Without discussion or further comment on the plaint of the critics, we propose to tell our readers a little about the work our "Uncle Sam" is quietly doing for our girls and boys, helping them to help themselves, but chiefly as it affects poultry interests.

Government work thrives only when it is met with real appreciation and effective co-operation on the part of the People, for in reality the People, the Country and the Government are *one*. For a long time the United States Department of Agriculture, in the employ of the People, has been endeavoring to find a way to keep the girls and boys at home on the farm, to interest them in home work and to better conditions of farm life, as well as to improve the farms and increase their productiveness. It has been slow work, necessarily quiet work, and work which, for obvious reasons, had to be promoted with tact and discretion. Before one criticizes this work he should consider that the amount and quality of work an employee turns out, and the speed with which he accomplishes his task, depends in very large measure upon the attitude, the interest and co-operation of the employer,—and in this case *you*, Friend Reader, are the employer.

Girls' and Boys' Corn Clubs were organized thru the efforts of agents of the Department of Agriculture. As these proved successful, Canning Clubs and other clubs followed.

When Pig Clubs began to grow the elders developed a more lively interest. Then came the organization of Poultry Clubs and it is of these particularly that we wish to tell our readers.

Late in June we spent the greater part of a week in Washington, D. C., as the guest of Harry M. Lamon, Senior Animal Husbandman in charge of Poultry Investigations, Animal Husbandry Division, Bureau of Animal Husbandry, United States Department of Agriculture. That is a long title but we thought we would give it all here in case any of our readers want to write to Mr. Lamon for further information about Girls' and Boys' Poultry Clubs and the work "Uncle Sam" is doing for more and better poultry. He already has a big army of correspondents, but we know he will welcome more, and he is right on deck with a great store of useful poultry information which is freely given to all citizens for the promotion of pure-bred poultry interests. We had a very interesting, instructive and pleasant visit with our "Uncle Sam's" poultry investigators and we brought home a considerable amount of material and many photographs, which will require several articles to present, so that this may be considered the first of a series on "What 'Uncle Sam' Is Doing for Poultry." Of course we spent a day at the Government poultry farm at Beltsville, Maryland, but that story will have to be told in another chapter,—this one has to do with the Poultry Club work, which is a big work, a worthy one, and is benefitting many girls and boys and encouraging them to engage in wholesome helpful work at home.

The Chief of the Animal Husbandry Division is George M. Rommel, a man of wide experience, who has a keen interest in farm animals, the betterment of farm conditions, increased productiveness, and the keeping of girls and boys at home on our farms, with better opportunities and greater incentive to become producers. He is taking an active interest in pure-bred poultry, "bred to a written standard," as a valuable farm asset both as moderate cost food for the home and as a source of increase in income for the farmer and his family. All poultry club work is conducted in this

division and all practical experimental work in poultry husbandry; mating, breeding, housing, feeding, care and management, hatching, rearing, etc., which are all included in the "Poultry Investigations" branch of this division, in charge of Harry M. Lamon and his associates; Alfred R. Lee, Robert R. Slocum and Joseph W. Kinghorn.

The Girls' and Boys' Poultry Club work was first started in Virginia in 1912 and, as with all new projects, was handled as an experiment during the first year. It was necessary to formulate new methods of procedure to fit practical and existing conditions. The attitude of the people and the manner in which suggested methods were met had to be carefully studied and observed. At the close of 1913 the project was not only found to be practical in accomplishing its principal object,—to improve farm poultry and farm poultry methods, but it could be clearly seen in practically every instance that the children, as well as the older people, realized the importance of the work and, so far as local conditions permitted, followed the methods and suggestions outlined by the U. S. Department of Agriculture. As a result of this apparent success, the Poultry Club work was extended during 1914 to five other Southern states,—Georgia, Kentucky, North Carolina, South Carolina and Tennessee. In 1916 Oklahoma was added. In taking up the work in these states the object was to start the poultry instruction where there existed the greatest need for it. The results have been very satisfactory and everywhere great interest is being shown by children and parents in the Poultry Club work. Member-

ship has greatly increased. The figures for 1916 are not yet available for publication, but from the records shown us, we believe that the "Poultry Investigations" branch of "Uncle Sam's" Dept. of Agriculture can show one of the largest, most helpful and useful, practical, educational organizations for the promotion of legitimate poultry interests that is now in existence.

Poultry Club results for 1915 show organization in six states, including ninety-nine counties. 351 Girls' and Boys' Poultry Clubs were organized, giving a total membership of 3,922. The members of these clubs set 23,227 eggs, hatched 16,941 chicks and raised 13,745 of them. 2,969 pounds of chickens were sold for \$822.96. Average price per pound 27.7 cents. 248 head of breeding stock were sold for \$475.87. 1607.5 dozen eggs were sold for \$429.34 at market prices. 155.6 sittings were sold for \$92.59. Value of stock on hand owned by club members January 1, 1916, was \$7,331.81, and value of equipment was \$2,094.19. During 1915 forty exhibitions were held by club members; 3,322 fowls were shown; 151 dozen eggs were exhibited; cash prize awards amounted to \$1,476.74. When the figures for 1916 are published we believe that a very considerable increase will be shown.

At the present time the state organization work of poultry clubs is locally conducted by the following agents of the U. S. Dept. of Agriculture: Virginia, N. E. B. Talcott, Burkeville, Va.; North Carolina, A. G. Oliver, West Raleigh, N. C.; South Carolina, C. C. Cleveland, Rock Hill, S. C.; Georgia, D. J. Taylor, Athens, Ga.; Tennessee, R. N. Crane, Knoxville, Tenn.; Kentucky, A. S. Chapin, Lexington, Ky.; Oklahoma, H. Embleton, Stillwater, Okla. It is expected that the work will soon be extended to other states. At regular periods the State Agents are brought to Washington and given a thoro course of instruction and practical demon-

stration work at the Government Experimental Farm. Effective team work is encouraged.

State Agents make regular weekly reports of Poultry Club work to the U. S. Department of Agriculture and these reports are very complete including, points visited, miles traveled, letters written, lectures given, subjects discussed, extent and interest in poultry in counties visited, market conditions, prospects of next year for organizing, members' homes visited for home instruction, nature of work done, farms and poultry plants visited with report of results, demonstrations given, attendance at lectures and make up of audiences, other meetings attended, clubs organized, members secured, member's reports received, club exhibits made, community breeding associations organized, articles published in local press, circulars distributed, names of schools where poultry work is being conducted, poultry houses planned and

building, extent to which pure-bred stock and eggs are being distributed, experiences and suggestions for promoting the poultry work. We had the pleasure of reading a number of these weekly reports and we found them very interesting, and to the Department they will undoubtedly prove a source of much valuable poultry data as well as a means of keeping in close touch with the work of the State Agents.

The State Agent not only organizes poultry clubs, but he visits schools and encourages interest in poultry work, gives home instruction in poultry keeping, investigates and reports matters of poultry interest and he is supplied with material for interesting and practical poultry lectures. The Department of Agriculture furnishes a fine line of lantern slides, charts, poultry data and poultry moving picture films which are loaned for instruction work. Available for use of each agent are many blue prints of poultry house plans and practical poultry equipment and a wonderfully fine collection of

poultry photographs, including some remarkable feather plates. Agents also receive practical instruction in the comparative study of the standards of the several popular pure-bred varieties of poultry and are prepared to interest and instruct local public school teachers in teaching poultry husbandry. Wherever possible an effort is made to interest the teachers and to secure their co-operation in making poultry instruction a part of the regular school work and in the organization of poultry clubs. The co-operation of the teachers is held to be necessary to produce best results and in many cases the teachers and school superintendents are found to be greatly interested in poultry.

Before organizing the Girls' and Boys' Poultry Clubs the importance of the poultry industry is explained and the children are shown how boys and girls, thru poultry work, can establish for themselves a pleasant and profitable business. The object of the poultry club is to give the girls and boys

worth while employment at home, to interest them in increasing the home supply of poultry and eggs for food, to improve farm poultry and place poultry keeping on a higher plane on our farms. The production of pure-bred poultry is encouraged and where it is desired to use the common farm flocks the owner is advised to grade up these flocks by the use of pure-bred males. Arrangements are made with local breeders of poultry to supply members of poultry clubs with hatching eggs and breeding stock at much reduced prices to encourage the use of pure-breds.

Meetings of the poultry clubs are held at least once a month and oftener when the interest warrants it. Members are required to write compositions on poultry work and an effort is made to have such compositions credited as a part of regular school work. Thruout the year the agents in charge of the poultry club work assist the members and their parents in every possible way by means of instructive talks before the clubs, giving practical demonstrations embracing the fundamental principles of poultry keeping and by visiting members' homes and giving practical help. The parents are educated in the importance of the work and the value of poultry thru the practical demonstrations of successful work by the children and, invariably, the result of club work is great improvement in poultry conditions, in-

School at Church Road, Virginia, first school at which the U. S. Dept. of Agriculture presented poultry club work. See "What 'Uncle Sam' Is doing for Poultry."

terest is developed and a source of wholesome food and increased revenue is added to the farm home.

In poultry club work it has been noticed that frequently the parents are prone to disregard the interest taken by their

children when they first start with poultry club work, presumably due to lack of appreciation of the importance of poultry on a well-balanced farm. However, as the children become more interested and develop enthusiasm, the parents get into the spirit of the work and heartily co-operate, giving the youngsters a chance to make the most of their opportunity. Often they encourage the children by remodeling old poultry houses or helping to build new ones. In practically all cases the establishment of pure-bred poultry on a farm has developed a greater appreciation of poultry, and particularly pure-bred poultry, as a source of farm food supply and income. In communities where poultry clubs have been organized, it is an established fact that farmers now look on poultry as a source of revenue on the farm instead of a "necessary nuisance" as formerly. The development of Girls' and Boys' Poultry Clubs has resulted in the establishment of Community Breeding Associations, a demonstration of adult interest developed thru the initial steps taken by the children and their great enthusiasm in the work.

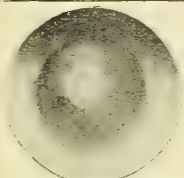

Community Breeding Associations, the object of which is to establish in one community an interest in one particular breed or variety of fowls, have proved practical and have met with considerable favor in each section where they have been organized. By closely associating with other members, all breeding the same variety, each member becomes stronger as a breeder of the club breed, greater uniformity is secured and the quality of the stock is improved. For both breeding stock and market poultry production, and its several branches, the advantages of successful community co-operation are secured.

Several schools have been encouraged to develop and operate a school poultry plant and examples might be cited where high schools and graded schools have added a course in poultry husbandry to the regular curriculum, using Government bulletins and circulars as text books and managing a practical poultry plant on the school grounds so that the

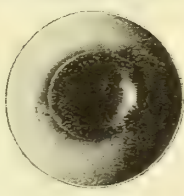

POSTMASTER: You are directed to post this placard in the lobby of your post office.—A. S. HURLESON, Postmaster General.

PRODUCE INFERTILE EGGS!

FERTILE EGGS SPOIL QUICKLY
IN SUMMER WEATHER.

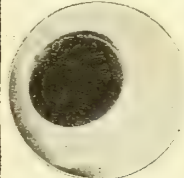

No. 1. Fertile egg after 24 hours at 103° F.
FERTILE EGGS BEGINNING TO HATCH.
BUT FERTILE'S EYE POOL.

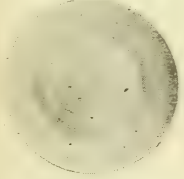

FRESH EGG.

INFERTILE EGGS KEEP BEST AND
MARKET BEST IN SUMMER HEAT.

1A. Infertile egg after 24 hours at 103° F.
NO FERTILE GERM. NO BLOOD RING. STILL GOOD
POOD. IT WOULD BE STILL BETTER IF ADDED COOL.

No. 2. Fertile egg after 36 hours at 103° F.
BLOOD RING FORMING. NOT GOOD FOR POOD.

FERTILE EGGS COST THE FARMER \$15,000,000 A YEAR.

Farmers lose \$45,000,000 annually from bad methods of producing and handling eggs. One-third of this loss is preventable, because it is due to the partial hatching of fertile eggs which have been allowed to become warm enough to begin to incubate.

*The rooster makes the egg fertile.
The fertile egg makes the blood ring.*

You can save the \$15,000,000 now lost from blood rings by keeping the male bird from your flock after the hatching season is over.

The rooster does not help the hens to lay. He merely fertilizes the germ of the egg. The fertile germ in hot weather quickly becomes a blood ring, which spoils the egg for food and market. Summer heat has the same effect on fertile eggs as the hen or incubator.

INFERTILE EGGS WILL NOT BECOME BLOOD RINGS.

After the hatching season cook, sell, or pen your rooster. Your hens not running with a male bird will produce infertile eggs—quality eggs that keep best and market best.

RULES FOR HANDLING EGGS ON THE FARM.

Heat is the great enemy of eggs, both fertile and infertile. Farmers are urged to follow these simple rules, which cost nothing but time and thought and will add dollars to the poultry yard returns:

1. Keep the nests clean; provide one nest for every four hens.
2. Gather the eggs twice daily.
3. Keep the eggs in a cool, dry room or cellar.
4. Market the eggs at least twice a week.
5. Sell, kill, or confine all male birds as soon as the hatching season is over.

NOTICE.

children can take an active part in the improvement of the school flocks and the establishment of a practical poultry farm on a small scale that serves as a model to farmers of the community.

"Uncle Sam," thru his Girls' and Boys' Poultry Clubs and their exhibits, is helping to secure better quality in market eggs and to prevent the losses which result from shipment of fertilized eggs in warm weather. The infertile egg is recommended as most desirable for marketing and the least liable to be spoiled by shipping and market conditions before it reaches the consumers. Egg placards which explain the advantages of producing and marketing infertile eggs are broadcasted by poultry club agents and thru the Post Office Department. This department issued an order which placed the egg placards in the post offices of Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Kentucky, Texas, Alabama, Mississippi, Michigan, Kansas and Oklahoma, and it is probable that other states will be added when a greater supply of placards is available. Southern railroads, banks, stores, creameries and packing houses have taken a hand in the distribution of egg placards, for it is believed that a more general production of infertile eggs for

warm weather shipments will result in the saving of many millions of dollars annually, now lost thru spoiled fertile eggs.

The work of promoting poultry interests through Girls' and Boys' Poultry Clubs under the direction of the United States Dept. of Agriculture is a great work and one that is well worth while. We hope to see it developed to a still wider field of usefulness and extended to every state in the Union. At the present time there is a great deal of difficulty in securing experienced and competent demonstrators to serve as state agents. It is a work that calls for a broad practical knowledge of the various branches of the poultry business and a comprehensive understanding of the many popular breeds and varieties, as well as a good foundation of experience in actual poultry work.

Sex Control in Poultry Breeding

CHAPTER V—A Practical Application. *By Herb E. Sharp*

(Copyright, 1916, by Herb E. Sharp and Prince T. Woods.)

ANY DISCOVERY, method or invention, to be of value, must be of some practical use, and to be of practical use, must be of such a nature as to permit of its being pretty generally applied, and while a universal application is not to be expected, yet a very general application is greatly to be desired, and in the question of Sex Control this much we hope to make possible.

No matter how perfect an idea may be, no matter how complete, and clear the directions may be given, if the experimenter fails to follow the right method of procedure, he should not be disappointed in his results, and if his efforts end in failure, he cannot condemn the principle which he may have tried to demonstrate.

Two plus two makes four; two multiplied by two makes four, thus it matters not which method we apply, the results are the same, and in breeding livestock the same thing is found to be true, no matter how we mate some individuals we get only indifferent results. Four plus four makes eight; four multiplied by four makes sixteen; here we have made use of exactly the same two formulas, with a different foundation numeral, and we have accomplished vastly different results, and this illustrates very plainly the differences that breeders will secure from different individuals when breeding in exactly the same manner.

It is as important to secure the right foundation stock as it is to follow the correct methods of mating, and caring for the stock. For instance in some families of fowls, and larger stock, the very finest individuals are produced by the mating together of close relatives, that is: mother and son, father and daughter, or brother and sister; at the same time, in many families, such matings have been found to yield only destructive results. For this reason let us present here a word of caution, before taking up the actual work of breeding for sex control let us make sure that the foundation stock has been selected from a family that will not lose some valuable character from the mating of close relatives; such families will most likely be found in the fowls of solid color, and perhaps in those breeds that have been developed from wild or native ancestors, without resort to crossing two or more lines of blood, such as the Leghorns, Hamburgs, Minorcas, and Langshans.

The surest test of whether or not a family will withstand the effects of close in-breeding is the amount of in-breeding behind them. Here cattle breeders have a great advantage over the poultry breeders in their registered pedigrees, that reveal unerringly the exact degree of relationship, between any two individuals, much more faithfully than the records of even the human family do, especially where the family relationship is somewhat remote.

It is not enough that a bird or animal conforms closely to the type of the breed it represents, but it must be backed by long lines of pure breeding. The mere fact that an animal is registered in the herd book of a breeder's club does not insure the purity of the breeding behind the animal, it does insure that all of the ancestors were known to be of that breed, but in Jersey cattle there will be found great families, "Flying Foxes," "St. Lamberts," and "Golden Ferns," and many others. If an animal traces all ancestors to one of these families, then that animal is pure bred, but if it traces to two or more, then it is as certainly cross-bred, as tho its parents were from different breeds.

Registration makes the pedigree authentic, and the pedigree reveals the quality of the ancestors, and their relationships to each other.

Poultry breeders, lacking these authentic records to refer to, must depend solely on the word of the producer, when buying supposedly line-bred or in-bred stock, but there are many breeders in all breeds whose word is as good as a government bond, so far as their information goes. And from such as these can be secured foundation stock that

has been more or less intensely line-bred, selecting from these the hen that produces mostly females in her chicks is only the work of a single year, if there be such a one in the flock.

To mate such a hen to her own sire, or brother, is the easiest thing for the poultryman to do, and to follow this with the mating of the same hen to her son, and the third year mate her to the son of her son, these chicks will be $\frac{7}{8}$ the blood of the dam, and can be depended upon to follow very closely after the performance of the dam, save in those cases where the dam herself is a "sport" or "freak", when the chicks will most likely present the family trait, instead of the traits of the dam. If the family be one that has shown no stability, by vacillating from one extreme to the other, or if the remote ancestors were of two or more distinct types, then we need hardly expect to secure uniformity in the results of our work.

Many thousands of years were required to develop the Leghorn, and many more thousands were required to develop the Langshans, and we need not hope to produce their equals in the matter of uniform breeding results in a few months, or half a dozen years. The Holstein breed of cows has been kept pure for at least a thousand years, but no intelligent effort has ever been made to secure uniform markings as was done in the Dutch Belted cattle and the Herefords.

In these breeds the effort was made by following an intense series of matings of close relatives, and the marks were made a basis of selection, and if we make Sex Control the basis of selection and then follow the same method of mating close relatives, we cannot fail. If we should cross the Hereford and the Dutch Belt, does any one suppose that all calves would have white faces, and white belts?

Some of them would, no doubt, but these could by no means be expected to reproduce their own likenesses, and selecting from such a foundation any female because she had dropped mostly female calves, and breeding her to her own closest male relative, would not cause the sex trait to be inherited by the progeny, any more than the white face and the belt; the results would be mongrels, and they would only give the appearances and performances of mongrels, so in the breeding of fowls, if we select one of the many cross-bred breeds, we cannot reasonably hope for success.

If it should eventually be shown that Sex Control is not for these cross-bred breeds, then it will not be the fault of the underlying principle, but the fault of the foundation stock selected.

If two plus two make four, and four plus four make eight, then the live stock breeder must as surely select the right individuals, to find any definite and certain results, as the mathematician must select the correct numerals, in order to find the correct answer.

In mating fowls, where certain combinations of color markings are required to maintain the breed, it has often been found that the mating of sire and daughter, or dam and son, tends to weaken, or strengthen—some one color at the expense of another, and if selection is made only for the desired sex, and then the close mating is followed in one of these breeds, we will perhaps have the desired sex control, but the color will have been permanently lost, the breed destroyed.

As the sire does not influence the sex of his own progeny, we can only find the tendency of a sire, by watching the performance of his closely related females, his dam, his sisters, and the dam of his sire, etc., after these will come his daughters, and when he has produced a large number of daughters from different dams, and they have lived long enough to indicate their sex tendencies their sire will probably have gone into retirement.

In those breeds that have been developed by domesticating some wild form, and never breeding in any foreign

blood, where the color combinations are simple, it will readily become possible to build, establish and maintain families, flocks, herds, and strains, that will transmit from generation to generation the trait of producing progeny very largely of one sex.

We must first select the breed, then the family, then the individual in that family, that has been intensely line-bred, and that has shown a strong predominance of the desired sex in her progeny.

Now in selecting the line-bred individual, we must watch for another condition, that is where the pedigree traces back thru several generations of line-breeding, where no very close relatives have been mated, and we find that two

PUREST 13730.	{ Sire.	{ Mercury 432. ...	{ Jupiter 93.	{ Saturn 94.	{ Rhea 166.	
						{ Alpheia 171. ...
	{ Dam	{ Nymphaea 5141.	{ Mercury 432. ...	{ Leda 799.	{ Jupiter 93.	
						{ Phaedra 2561. ...

individuals have appeared an equal number of times. If these two individuals were not in perfect harmony in *all* characters, that is if they were not closely related, then the progeny of that line of breeding is very likely to be erratic in their performance, sometimes following the characters of one of these parents, and sometimes the other and very often compromising by exhibiting neither.

In dairy cattle, where we have the advantage of records there are many just such pedigrees, and the owners of indifferent specimens are continually wondering why their stock does not develop as it should, when it has two such wonderful individuals as foundation. The answer lies in the lack of perfect harmony of the invisible characters. Those two individuals did not "nick" perfectly; they could not because they were not closely related.

In selecting the individuals for our breeding yards we are selecting the ancestors for posterity, and if we pay close attention to the selection of the ancestors now, we will give to posterity the kind of ancestors we desire.

Let us, then, select for example a cow that is known for her milk and butter production, and for the fact that she has dropped, say eight heifer calves, and only one bull, and her daughters also showed the power of their inheritance by dropping from four to eight heifers, and from two to three bulls each. Now if the old cow's bull calf was dropped while she was young, it would be possible, and correct to mate him to his mother, but, as frequently has occurred, the lone bull did not appear till late in the life of the cow, and she may have quit breeding before he was of age to use; then we must have recourse to some other method of mating. If the sisters are from a sire closely related to the old cow, or from different sires we can mate the young bull to these sisters, and so increase, or strengthen the proportion of the blood of the original dam, in the progeny, and this will serve to increase to some extent the proportion of the predominating sex shown in the offspring.

We can next mate this bull to his own daughters from his sisters, so increasing the blood and characters once more, and we will by now probably have produced another bull, son of his sire's daughter from his own sister, and as the blood of the original dam has increased in proportion as the later generations have come, this younger bull is stronger than his sire, and we can well retire the older one, and breed the younger to his dam and her sisters, and again to his daughters, etc.

The same method will be found applicable in the poultry yards as well, only that we have not the records to refer to in making selections and much more must be chanced on the selection of the foundation stock.

But the poultry breeder has a great advantage in that he can produce a much larger number of individuals from a single specimen in one year, than the cattle breeder can produce in an entire lifetime. A single hen will readily produce 20 to 30 chicks in a single season, but a cow will hardly produce a dozen calves in her life time, tho some rare ex-

ceptions have done far better than that, thus the poultry breeder can observe the performance of two or three generations, in his own yards while the cattle breeder is raising a couple of selected individuals.

As an ideal example of the correct method of breeding, I will present the pedigree of the Jersey cow "Purest" 13730. While there are perhaps no definite records of her performance as a sex control specimen, if her ancestor, "Rhea" 166 had dropped six or more heifers, and not more than two bulls, and her mate "Saturn" 94 had been a closely related animal, no student of the laws of heredity would question that "Purest" should have dropped more heifers than bulls, if she had lived to a good old age.

It will be readily admitted that she could not have inherited any traits or characters not possessed by her sire "Mercury." Here the sire was not merely half of the herd, "Purest" being considered as a herd, but he was positively all of it, and as he was the product of a brother-sister mating and hence a double grand son of "Saturn" and "Rhea," he could not have possessed any traits and characters not possessed by them, and could not transmit to his progeny any other traits or characters; "the fewer number of characters a sire may possess the greater strength he will show in transmitting them," is a practical law, and in the case of the cow "Purest" we would normally expect her to show great prepotency, as a result of the fact that absolutely all of her ancestors for several generations were in perfect harmony in all characters.

So rare is, such a pedigree, and so intense is the degree of in-breeding, I have been tempted to make use of a separate designation for it, and have used the term "Straight Bred" as the cow was bred right straight in, and was $\frac{7}{8}$ the blood of her sire.

It is not possible to secure foundation animals bred as was the cow "Purest," at all times, and we have recourse to one other system of breeding that is as certain in its results, tho somewhat slower in its application, and known as "Line Breeding." In this case, sometimes by tracing the records back for seven or more generations we occasionally find that some one individual appears several times, as in the case of the Guernsey Bull "McDonald's Prince." On his sire's side he traces to "Loyal of the Hunguets" once in the fifth generation, and twice in the sixth; while on the side of his dam he traces to "Loyal" three times in the fifth generation back, and each time thru a different son or daughter, so that "Loyal of the Hunguets" shows six times in the pedigree, while no other remote individual, shows even twice, and it is clear that if "Loyal" was equally as strong in his breeding powers as the rest of the ancestors of "Prince", then "Loyal" will dominate the entire pedigree, and so his traits and characters, will be very apparent in "Prince" and in his descendants.

With this pedigree before us, if we have an adequate idea of the breeding powers of "Loyal" we will be able to reasonably forecast the breeding powers of "Prince" tho there are five generations between them. If "Loyal" was an exceptional animal, "Prince" is very likely to duplicate his work.

Poultry breeders generally have not access to such records, but by taking such a pedigree as a pattern, we can shortly establish a similar line of breeding in our own yards, but in selecting foundation stock we are solely dependent upon the intelligence of those breeders who have carried on their line breeding operations over some considerable period of time, and have been able to present some definite results; trap nests have not yet been invented with an attachment on the side for measuring the breeding ability of the individual. Any fowl may lay 300 eggs in a year, but that does not indicate that her daughter will do likewise, or

that her son will produce a flock of daughters that will.

The Babcock Test, and the Milk Scales, in the dairy, show very clearly what a cow has done, but they do not show what the ability of her daughter will be, or what she will transmit to her sons; these are things which we may estimate from a study of the pedigree only, and it matters not how many high records may be possessed by the ancestors, if there is no blood relationship between them the posterity will not be uniform, in appearance, performance, or production.

The pedigree must reveal a definite degree of line breeding, or as in the case of the cow "Purest," Straight Breeding. It must trace directly to a practically perfect individual, that has inherited from his ancestors the qualities desired, and where Sex Control is the quality desired the pedigree must trace to an individual female that has produced a great preponderance of the sex desired.

With the foundation female in our hands we are ready to apply the principle, by mating her to her son, if she produces one, and if she fail then to the son of her daughter, selecting of course the daughter which comes closest to our ideal, and where there is opportunity to choose, select the male that comes the nearest in external appearances.

Mate then to the closest female relatives, until we have produced a male that carries more of the blood of the foundation female, in displacing the older male, also reserve the female that is most closely related to him, for the close family relationship is as necessary to insure harmony in invisible characters as records of performance are to show desirable individuals.

Perhaps this illustration will drive home the argument as well as pages of words. There is no possible registration for an animal with such a pedigree as this; his power to reproduce his own likeness is positively nil, even tho his grandparents all be the choicest of their breeds.

MONGREL	{	Shortsey.	{	Shorthorn.
				Jersey.
		Herestein.		Hereford.
				Holstein.

There is nothing wrong with the animal except that he has lost the power to transmit the characters of his parents. Such an animal may have the highest records of the world *behind* him, but he has *nothing before* him, simply because his family ties have been broken up by the matings of non-related individuals.

Sex Control will be entirely dependent on the ability of the individual to transmit to his or her progeny the traits and characters inherited from the ancestors, and inheritance depends so wholly on the mating of close relatives, a practice that has been condemned both loudly and long, by both great and small, that it will be with many misgivings that the average breeder will be brought to make the attempt, with even a small number of individuals, yet when we think of the vast number of fine males sacrificed every year, "to avoid in-breeding", we are compelled to wonder why no one has ever dared to try this out before.

Beginning with a practically perfect individual, and breeding back to that individual, be it of either sex, we are increasing the prepotency and, if the stock be not forced beyond the limits of endurance in the making of high records, we will produce stock capable of making greater and greater returns on the feed invested. This will be evidenced first by the greater size of the individuals, and second by the greater normal yield of the females, whether in milk, butter or eggs.

As a concrete, present day example of the power of inheritance, which may be built up by a long series of matings of close relatives I wish to cite the following record:

Phillip Dauncey, of England, in 1826, purchased a foundation herd of Jersey Cattle, and began a systematic course of line breeding, which has been continued down to the present time in the hands of various breeders, and the results are apparent, and can be viewed by any one interested.

After 46 years of his work he bred the bull "Young Rioter" to his own daughter, "Essay," and she dropped a

bull calf, ever since known as "Stoke Pogis." This bull was brought to America with the cow "Marjoram," whose pedigree showed two sires from the Dauncey herd, so that she was closely related to "Stoke Pogis." They produced the bulls "Stoke Pogis III" and "V," and the cow "LeClair's Marjoram," and several others.

"LeClair's Marjoram" was bred to her full brother "Stoke Pogis V.," and produced the bull "One Hundred Per Cent." she was then bred to this son, and produced "Two Hundred Per Cent," another bull.

Meanwhile "Stoke Pogis III" had been bred to the cow "Kathleen of St. Lambert," and produced the cow "Ida of St. Lambert;" she was bred to the full brother of her sire, "Stoke Pogis V.," and produced the cow "Pomona's Ida of St. Lambert."

This cow was then bred to the bull "Two Hundred Per Cent" and produced the cow "Idaletta of Glen Rouge;" she was bred to the bull "Rioter of St. Lambert Jr." also a line bred descendant of "Stoke Pogis III" and they produced the cow "Idaletta's Riotress," that made 17 lbs. 8 oz. of butter in seven days.

"Idaletta of Glen Rouge" 141141, was also bred out of the family line to the imported bull "Eminent" 69631, and this time she produced the bull "Eminent's Pilot," a bull that showed every trait and character of his dam, and her family, not only in himself, but also in his get. The bull "Eminent" sold for \$10,000 at auction and has given a good account of himself when bred to ordinary good Jersey cows, but when bred to the intensely in-bred "Idaletta of Glen Rouge," the calf resembled the dam more than the sire and the characters of the dam have showed up in the calves of the next generation. Sons as well as daughters of the bull "Eminent's Pilot," are now in their prime and are making their own records in the world. I have viewed closely a number of them from different cows and can state positively that so far as I have found them, they are a uniform lot and of good promise; those that are in milk are making good records.

It is just 90 years since Phillip Dauncey began in-breeding this stock and there has been only about two introductions of foreign blood and both times this was a detriment to the family, even tho it was the best that money could buy.

This record is not cited as evidence of the transmission of the sex trait as sufficient information is not at hand for the purpose, but it is cited merely to substantiate what has been said as to the increase in breeding ability due to in-breeding. It further shows that more than *five generations* will have to be carried before the stock will "run out," where the foundation stock is right and reasonably good care is given the breeding animals.

Poultry breeders have so much greater opportunity to test out such a system of breeding that it is a great wonder to me that some one has not come forward with an authentic record of similar work many years before.

Such a system of breeding, if long continued, beginning with a hen whose chicks are mostly females is certain to eventually establish a family or strain of fowls whose chicks will be usually from 75% to 95% or an even 100% females, especially if care be taken to breed from those females that produce the greatest preponderance of females in their chicks. Cattle breeders have an advantage in their registered pedigrees, in the selection of foundation stock, but the poultry breeders have an equally great advantage in the shorter period of time required to secure results, and the larger number of progeny to be secured from a single individual. This gives a much wider range of selection, and a better opportunity to figure an average from which to make a foundation or basis for selection.

The pedigree is, of itself, of no value, but it will reveal the real value as a breeder, of the individual and in a far better degree than will any other test. An individual may look all right to the competent judge, and then be all wrong in the breeding yards or an individual may hold all the world's records for its particular line of work and yet be worthless in the breeding pens; but never yet was an intensely line bred individual with a long line of correct ancestry behind it, that was not able to produce good stock, if properly raised.

The frump of good parentage, is of more value than the perfect specimen of poor breeding or mixed parentage.

Many breeders discard very carefully the individual that is not near perfect in appearances, while many others discard the individual that has not been forced to the limits of endurance, simply because there is no record with it. Many a bull has been slaughtered because his dam was not tested and there was not time to test his daughters. "Stoke Pogis III" was killed; "Because he made such a nice piece of meat. He dressed 1700 pounds," and shortly afterwards his daughter, "Mary Anne of St. Lambert" made 36 pounds of butter in seven days and 867 pounds of butter in 365 days, as a four year old. Can any one say what her daughter would have done, could she have been bred to her own sire after she became a mature cow?

An intelligent examination of the pedigree of "Stoke Pogis III" must have revealed his great prepotency and saved him from an ignominious death. He was condemned by the scales, as would be practically all of our best breeding animals, yet the animal with high record ancestors is being sought for with a Babcock Test, and the milk scales, while the same thing is going on religiously in the poultry yards by the aid of a trap nest, that cannot and does not show the breeding power of any bird, male or female.

Dr. and Mrs. Prince T. Woods, of American Poultry Journal editorial staff, and Miss Dorothy T. Woods, The Anchorage Farm, Silver Lake, Mass. June, 1916. Photo by Master Robert P. Woods.

The only reason I cannot write up the "Stoke Pogises" of the poultry yard is because we have no system of registration, nor records, not because they are not killed regularly, for we go right on merrily killing our best birds to suit the idle fancy of some fellow with a loud voice and a cheerful slogan, "Swat the rooster," regardless of his ability or his ancestry, before we know what his daughters will do or whether he should live to be mated to his best daughter or not.

The bird whose ancestry is unknown may or may not be of value, he may or may not be the line bred descendant of some strong individual we would prize very highly; he may or may not have the ability to give us the kind of descendants we want in our yards, and so we may or may not be making a mistake when we send him to the shambles.

But taking the country over, the campaign perhaps should be extended to include not only the rooster but also his sisters and all their kind, for the bird that fails to produce progeny better than himself, is not the kind of bird we all desire to keep; but that bird whose daughters regularly lay a uniform lot of fair sized eggs, which usually hatch out a strong preponderance of female chicks, can well be preserved and mated to its own nearest of kin. Then to the second and third generations, and as long as his age permits and his chicks continue to show improvement.

Careful attention to the selection of the females used, and the retention of those that produce the greatest percentage of females is certain to bring the desired results.

There was a time when the poultry breeder cared not

whether his hen laid two eggs a year or two hundred, so long as she could produce a better fowl than herself and those breeders were far wiser in their ignorance than are some of the trap nest enthusiasts in their wisdom. For in those days the breeder did produce some degree of uniformity, and with it some prepotency, which was followed in due course by the ability to produce as many eggs in a year as any of our fowls today will produce under identical conditions of feed and care.

Under the lash of the trap nest records, attention is being drawn to what the ancestors have done and away from what the progeny will do, the selling point becomes the number of eggs laid, or supposed to have been laid, while no attention is given to what kind of a chick will be produced by the hen, whereas the real value of any specimen lies in the quality of the progeny it will produce.

If a hen would lay six hundred eggs in a year, and none of them could be hatched, she would be worth just as much as the grocer would pay for her eggs; but if she lays a dozen eggs that can be hatched and each egg contains a pullet capable of laying 150 eggs, then that hen has a value as a breeder, far in excess of anything that her dozen eggs could bring at the grocer's.

If a hen will produce a flock of chicks of uniform appearance and performance, then careful feeding will make possible any high record that may be desired, more high records are made by feeding than there are made by breeding. It is admitted that the best of stock will not produce without feed, but the most indifferent stock can be fed into producing a substantial number of eggs.

For fifty years we have had records of hens laying 300 eggs or more in a single year, and one record was recently published of a hen that laid four eggs a day in a trap nest, but no one has yet claimed to have secured these great record hens without scientific feeding, and on this account, the high record should be entirely ignored, when selecting breeding stock for if the stock is good and intelligently handled, the records will follow, while if the record has been made, the stock may be worn out and no amount of intelligent handling will bring back their former vitality. Mating such a hen to the son of another high record hen without regard to color, shape, weight or relationship, and we have absolutely no assurance of what the progeny will look like, or act like, in the breeding yards, or in the feeding test, nor anywhere else.

Selecting a female because of the sex shown by her chicks when we view all the chicks, then mating her to her son, or her daughters to their brother, we have every assurance that the chicks will look like, and act like their strongest ancestor, and if all ancestors are uniform in appearance and similar in performance, then we will have a uniform flock of birds that will stand up under a reasonable amount of high pressure work and give a good account of themselves. And in the breeding pens such stock will give us an ever increasing proportion of female chicks.

Our trap nest friends who are ever giving us greater, and greater records for their fowls fail to consider the steady advance they are themselves making in the art of forcing hens to do their utmost by manipulation of the feed rations. They would attribute all the advance to the hidden laws of inheritance; because a certain hen has laid 200 eggs is no indication her daughter or son's daughter will do as well. If they will once take such a hen, breed her to her own sire, then to her son, and then to the son of that son, and produce a daughter that will make such a record, without the excessive high feeding, then we will have some grounds for crediting their claims of inheritance.

Then by line breeding to secure the type desired, increase the prepotency and producing ability, and with these the proportion of the sex desired.

Editors have quite uniformly cautioned breeders against line breeding or in-breeding their stock, but I would say that if a sire is not good enough to be mated with his own daughters, he is not good enough to be used at all, for if he is right, his daughters will be better than their dams and another infusion of the same blood will make them better still, if he is wrong, no one wants him anyway. There is no use going even a short distance in the wrong direction.

Laying Ducks and Their House on the Niagara Farm, Ransomville, N. Y.

Duck Farming A Profitable Occupation

A Good Variety of Ducks Properly Fed and Cared For Will Convert Foodstuff into a Highly Finished Product, More Economically and in Less Time Than Any Bird Sold for Meat Purposes.

By Earle William Gage, Ashville, New York

RAISING DUCKS HAS BECOME one of the well established and highly specialized lines of modern poultry raising. Many duck raisers are making excellent returns supplying the increasing demand for this tender, juicy and luscious meat, which commands high prices at all seasons of the year, due to the fact that there exists a shortage of meats of other kinds. But a few years ago, ducks were looked upon as a mysterious member of the bird family, being kept on most farms

as a novelty. With a close study of the need of the birds under domestication and with the application of commercial principles in duck breeding, has followed such progress as exists in few farm endeavors.

Formerly the duck was cataloged under the list of game birds. With very few exceptions they are strictly aquatic birds, characteristic of northern regions, where some 90 of the 180 species are found. There are from five to 10 sub-families recognized in fowl lore, yet there are but half a dozen that have been brought up to a high rank of domestication, being raised under the same conditions as other poultry.

As table delicacies water fowl have long been held in high regard and they are grown in large numbers in all parts of the civilized world. In China, especially, duck breeding has been carried on for many centuries, while the goose was the sacred bird of Egypt fully 4,000 years ago. It is most interesting to note that though the bird has been bred in domestication for such a long period it has been modified but little as regards external characteristics, while the duck is practically the same bird so highly valued by the ancients.

Wild ducks of all breeds are found in all parts of the world, and display a wonderful variation in size, color and markings. The plumage of certain types is exquisite,

in many cases having a wonderful brilliancy that cannot be described, but which commands instant admiration.

To America's list of domesticated ducks, Europe, Asia and Australia have made contributions. The present interest in breeding wild varieties bids fair to add many valuable species to those already domesticated. Many of these wild birds are particularly attractive because of their wonderful plumage and these will naturally appeal to the fancier. Others have a distinct value for table use and because of this will undoubtedly appeal to the commercial poultry grower. In fact, the American Poultry Association today recognizes as pure bred, 11 distinct breeds of ducks, and two of these are bred in two varieties. The most popular are those which, because of their size, are useful as table poultry. The widely bred table kinds are the Pekin, the Aylesbury, the Rouen and the Muscovy. The Indian Runner is the world's greatest egg-producing duck, and is being kept more and more for this use, some high-blooded fowls having a record of 325 eggs per year, while a few flocks of a dozen birds have laid 15 eggs in one day, thus showing that individual ducks may lay two eggs in one day.

According to the 1910 census, nearly \$2,000,000 was invested in ducks in the United States. Ducks were reported on nearly 8 per cent of the farms, being most numerous in the following States, according to duck population: Iowa, Illinois, New York, Pennsylvania, Missouri, Tennessee, Indiana, Kansas, Oklahoma, Arkansas and Ohio, the number ranging from about 225,000 head in Iowa to 106,000 in Ohio.

Because of the increased demand, among city consumers, for duck meat, New York State was the only State which shows an increase in the number of ducks, while in other States the figures show decreases. Long Island contains the world's largest and most specialized duck farms, managed upon a commercial scale, in which fortunes are individually represented. Here duck raising has attained a position of success seldom reached.

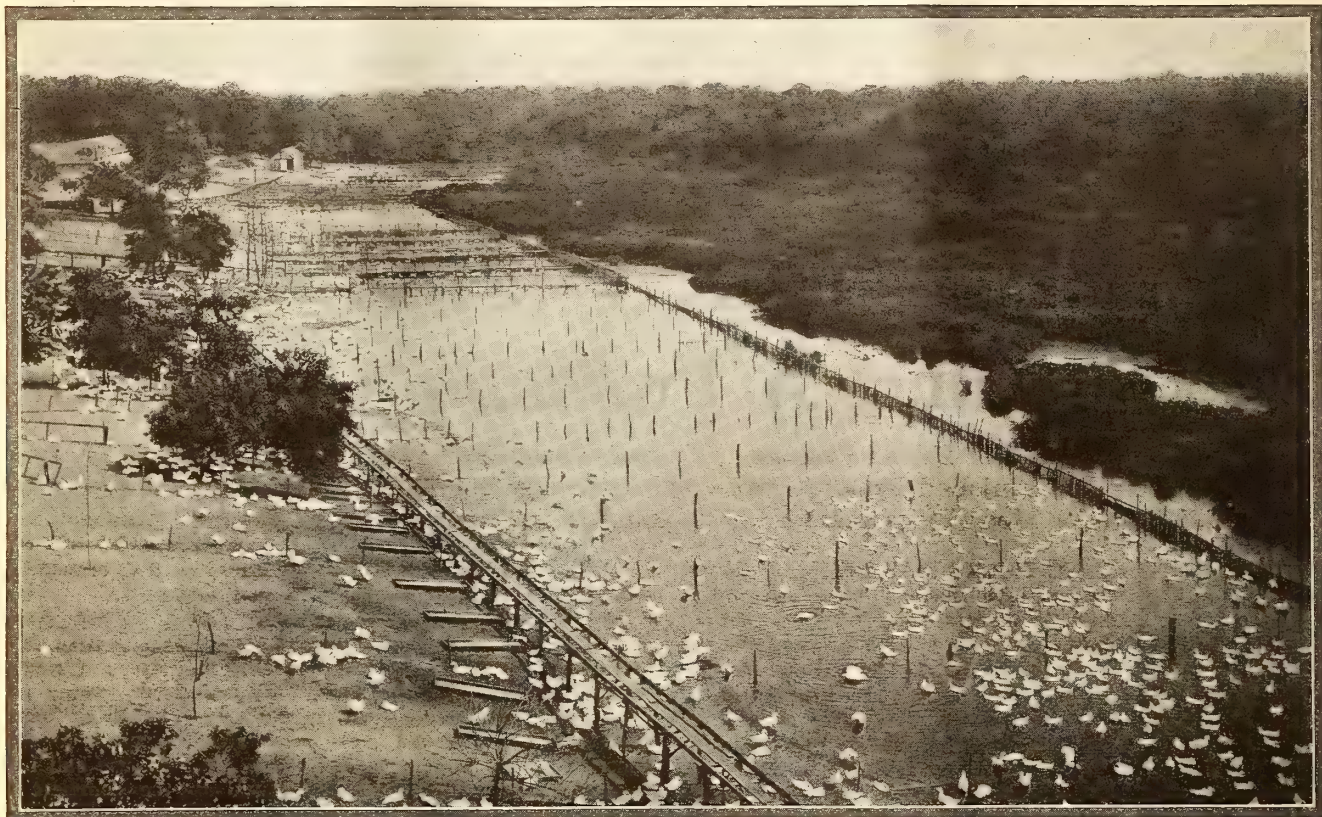

Duck raising on a commercial scale is practiced near Buf-

falo, the Curtiss Brothers' poultry farm at Ransomville, Niagara county, New York, being one of the world's largest general poultry farms, where approximately 150,000 ducks are marketed annually. This farm aims to supply breeders and the meat trade, the light and heavy strains being bred of pure-blood type. Certain sections of New England, particularly close to Boston, have specialized duck ranches, where thousands of ducks are produced during the growing season, and are profitably sold on large eastern markets. New Jersey, Pennsylvania, New York, Maryland, Virginia, and neighboring states, represent locations in which ducking raising may become profitably established upon commercial proportions.

Alfred R. Lee, of the United States Department of Agriculture, animal bureau, after an exhaustive investigation into the proper methods to pursue in duck raising, and methods employed, is of the opinion that duck growing in the

a good pasture, and for those varieties demanding water, where a stream or running water abounds. But farmers usually fail to gain all the profit and pleasure out of duck raising possible, due to lack in care and attention.

The Department of Agriculture recommends that duck farms be located on light, sandy soil, sloping, where the droppings leach away freely, thus insuring the land keeping sweet and sanitary. It is vital that the duck farm have a location allowing frequent and good shipping facilities, both in sending products to market and securing grain for the rations. The buildings should be so located and planned as to allow economy in labor and future development. Where the business is carried on a large scale, the incubator cellar is an important factor and should be located conveniently to the brooder houses, the brooder house to the growing house, pens and killing room. The pens in the houses, the outside yards and the arrangement of the buildings, it is

View of a Commercial Duck Farm on Long Island

United States is in its infancy, and that the future holds bright prospects for those who enter the industry upon a common sense basis.

Duck raising on a large scale has been developed as a special business to a more considerable extent on Long Island than elsewhere, because of the exceptionally good location as regards markets and climatic requirements. This location is within close shipping distance of New York, Boston, Philadelphia and hundreds of smaller consuming centers. Intensive duck farming on a large scale has, in fact, been more successfully developed than intensive chicken raising, since Pekin ducks, especially, stand confinement well, being more easily and economically brooded, and being subject to so few ailments and diseases as to increase the production to a high mark. Advanced and improved methods of artificial hatching and rearing ducks, with a list of labor-saving devices have successfully been used on duck farms.

Duck raising is adapted to general farms, and on many farms success has been achieved and profit made by using the duck flock as a side line. Not only does the duck add variety, both in meat and eggs, to the farmer's table, but proves a source of income. Breeds of ducks which are good layers are profitable on farms, particularly where there is

urged, should be planned so that the ducks may be easily driven from one house to another. The feed room or house must be centrally located for best results. Convenient watering arrangements are very essential if the flock be large, as ducks require large quantities of drinking water.

Altho it is possible to successfully produce ducks on intensive systems, yet it is more advisable to allow large yard spaces. Double yards, allowing the rotating of the flock from one to another, the soil planted to some quick-growing succulent plant such as rape, oats, wheat and rye, grant more intensive methods. A pond or stream is best for the breeding flock as they usually will lay a higher percentage of fertile eggs when allowed free exercise on range and water. Many successful duck farms are located many miles from a stream and these dry-land duck farms furnish a part of the food supply of many cities.

Producing green ducks has become one of the features of duck raising. These are dressed according to the market demand, at a comparatively young age and are not allowed to have access to a pond, being developed in pens and runs.

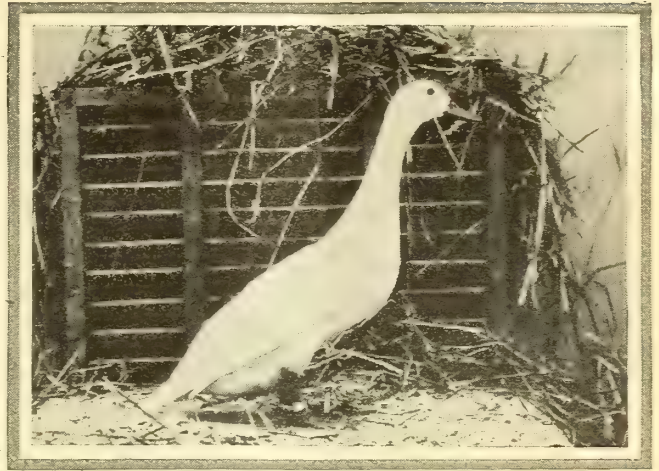

A good variety of ducks properly fed and cared for will convert feed into a highly finished product, more economically and in less time than any bird sold for meat purposes. Prolific egg production spells success for the Indian

Runner duck. Income from poultry may be divided into three classes—eggs, market and fancy, and this type of fowl meets all three requirements.

This variety start laying when very young, and inasmuch as nearly every duck proves a good layer except during molt, with proper feed and care, makes this duck the more profitable. They not only lay one year but several and do not cease their best productive age after one season's continuous laying. Even in extremely cold winter weather, when many hens stop laying, ducks lay well. "The bird that lays is the bird that pays."

With good management, ducklings are easy to raise, reaching marketable age at eight or 11 weeks of age. The meat, owing to rapid development, is both juicy and tender and of fine flavor. The great consuming centers of the country are demanding green ducks at the highest prevailing meat prices, during the summer months averaging between 30 and 40 cents per pound, and as a dressed duck weighs from four to six pounds, this makes a neat profit for the raiser.

Some have not succeeded with ducks, due to the fact that they did not understand the demands of this variety of poultry, for few of the rules that apply to hens will succeed with ducks. Ducks are consumers of food in great quantities during their developing stage. While they may eat 8 ounces of food at three weeks of age, they consume from

Pure Blooded Indian Runner Duck

good hatching eggs. A western New York poultryman uses a novel and sensible method of selecting ducks for laying hatching eggs. After having selected the birds with broad breast and back, deep in the keel, not too large in head and neck, medium length in body, and sharp alert eye, from the flock, he drives those selected a distance of about half a mile, giving them their time to waddle along. Those that fall behind and cannot keep up with the flock are never used for breeding, while those that withstand the trip are sure to produce vigorous and healthy stock for the next season. This is a very simple suggestion that has helped in the success of this farmer.

When the ducklings have been hatched 36 hours they may have a little feed and water. Either bread and cracker crumbs, hard boiled eggs or oatmeal slightly moistened and sprinkled with sand. Feed only a very little at a time, about every two hours starting at six in the morning and stopping at six at night, allowing a liberal feed at last time. But never allow them to have all the feed they want until they are ten days old. Give warm water for drinking when they are young after each feeding, but do not allow them to play in it and get wet. Gradually add bran to their bread crumbs, and when three weeks old a mash of four parts bran, two parts shorts, one part corn meal, one-half part beef scrap and one-fourth part fine sand, mix with water or milk to a thick, crumbly mass and feed four times each day what they will consume clean. Give plenty of drinking water, keep housed on rainy days and keep their bedding dry. Plenty of shade should be provided at all times.

One of the great items in favor of profit-bearing with Runners is that expensive buildings and high fences are not necessary. Open front sheds will be very satisfactory for breeders, while they will do equally as well penned as when roaming on open range. But on range they pick up most of their living during the spring, summer and fall.

Beautiful Rouen Duck of France

12 to 20 ounces the week previous to dressing. Indian Runner ducks being dry-land fowls, do not demand water as some varieties, and must not have it except in protected dishes when very young, as the danger from becoming damp and catching fatal cold is great. When older they should be given sufficient water for drinking and this fresh twice a day.

It is possible to raise Runners after it is too late to safely hatch chicks and insure maturity early enough to make satisfactory layers. In this way the same incubators and hens may be used to raise the ducklings used earlier in the season. They will develop fast in warm weather with very little care—practically no lice, mites or disease to battle against as with chicks, so that the ducklings put in all their time just growing into money, just as the mother duck puts in her time laying eggs. June, July and August are satisfactory months to hatch and raise ducklings, in fact, the eggs may be placed in the machines or under the hens just as soon as the chick hatching is over. Any time from spring to fall is opportune duck raising time.

Much will depend on the parent stock in the success with the ducklings. If the eggs for the start are purchased, it is best to know that the party you buy them of has good stock, but there is no need to worry about the fertile eggs withstanding a shipment of several hundred miles. I once bought some rare Indian Runner hatching eggs 1,500 miles away, and they hatched out with but one loss, and that was due to my fault. The parent birds should be vigorous and rightly mated and cared for to insure producing

A Pair of Pekin Ducks

Duck Brooder House

During winter weather they must be kept off snowy ground, in a dry place with plenty of bedding. The mash consists of four parts bran, three parts shorts, one part beef-scrap moistened. Give the mash mornings, what they will clean up nicely. At noon a feed of some sort of green—alfalfa, clover, rape, etc.—and at night corn, wheat or oats. Keep plenty of fresh water, fine ground oyster shells and grit before them at all times, and they will produce eggs at all seasons.

With good foundation Runners, it will not be difficult to please customers and give each and every one their money's worth. Green ducks are in great demand in nearly every town. On the farm, ducks can be raised with profit. The reason why farmers have failed to secure profitable returns from their green ducks has been that they have not paid enough attention to feeding and care to secure a share of the market demand for fancy green duck. The Indian Runner makes a prime light weight, which develops at lower cost and earlier date, thus making it a desirable breed to keep.

Pekin ducks are kept almost exclusively by commercial duck farmers in this country who make a specialty of producing "green ducks," and prove a popular breed on farms. This variety originated in China and was introduced into this country about 1875, where it soon became the most popular breed on commercial duck farms. The introduction of the Pekin variety practically marks the opening of the era of intensive commercial duck farming in this country. This breed has a creamy white plumage, a long, broad and deep body, with a full breast and deep keel. The attractive carcass makes it a very desirable article to offer on markets. The standard weights of the adult drake and duck are nine and eight pounds each, respectively. This variety is very hardy, good egg producers, practically nonsitters and are especially adapted to meat production. They are docile, easily confined, needing only low fences, are well suited to either commercial duck farming or as a side line on general farms.

The Aylesbury breed is a native of England, in which country it is more popular than any other kind. It is a

large, white duck having the same standard weights and general shape as the Pekin. This breed resembles the Pekin in many respects. It makes an ideal market flesh producing bird, and having white plumage, would supply aside from eggs and meat, a profitable feather for plumage houses.

In the Muscovy duck, several varieties of the breed have become established. This breed originated in South America and is considered by many specialists to be of a different species from our other ducks, the head and face of the true Muscovy being partly bare, with red, rough carunculated skin. It has a long, broad body, with greater breadth, but less depth and less keel development than the Pekin. The drake is usually a third larger than the hen, the drake's standard weight being about ten pounds, and that of the hen seven pounds.

Ducks Dressed Ready for Market

The Rouen duck originated in northern France and has been developed to its present high standard through systematic line breeding. This breed has very handsome markings, but inasmuch as it does not mature as early as the Pekin, Indian Runner or Aylesbury, is not as desirable for duck farm purposes.

There are three general methods employed in preparing ducks for market, namely dry picking, scalding and steaming. The ducks are usually killed by sticking in the mouth or through the throat with a pointed knife, and then stunned by a blow on the back of the head with a short club. The wings are picked to the first joint and the neck halfway to the head. Long pin feathers usually are removed with a dull knife and the down sometimes is rubbed off with the moistened hand of the picker, shaved with a keen knife, or burned with alcohol flame. On the larger duck farms, pickers work every day except Saturday and are continually engaged in preparing stock for the market.

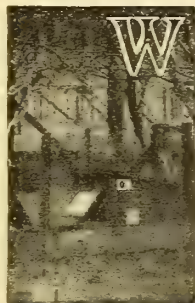

A practical Duck Breeding House

Duck feathers on the large farms represent added income, as duck feathers are of fine texture and much sought after by the commercial feather dealers. Therefore, dry

picking is very popular here, thus allowing the feathers remaining in the most desirable condition. Feathers sell for 40 to 50 cents a pound when dried.

The Single Comb Rhode Island Red—Why?

I Overheard a Man Say He Never Saw a Novice with a Good Looking Flock of Reds. From a Child I Was Always Fond of Knotty Problems, and That Decided Me. What Satisfaction in Getting a Truly Fine Specimen! *By Maude E. Chase*

WHEN I WALKED INTO the building housing the poultry show at the Panama Pacific International Exposition, I was reminded of a great shop window filled with valentines, so great was the variety of color, shape and size. The delicacy of one was enhanced by the brilliancy of another. Fascinated by the attractive variety, I tried to select one that particularly suited my fancy—but with difficulty.

For two years or more I have been acquiring all the theoretical knowledge that I could from books, correspondence

course, etc., and I had now come to this show to make a selection of breeds and begin practical operations.

I found there was no particular best breed for a city lot—or for a large ranch for that matter. A few minutes conversation with any breeder and you will be convinced that *his* is the ideal breed and the one best adapted to the particular needs of the buyer. Had I not acquired a dislike for some of the small breeds, Mrs. Martin would surely have sold me some of her Leghorns after a few minutes talk with her. But when I thought of how she had won ribbons and had been in business but five years and in such a contested class as the White Leghorn class, I said, "It is not so much a case of breed as of the breeder behind the breed" or the woman behind the breed in that case, for *she* would make a success with any breed she undertook to raise.

To the average American, no matter how attractive a bird may be to the eye, unless he can make it show a profit, he will not long continue with it. If we have a valuable bird, the more we can raise like her, the more valuable the bird. Therefore we want her to lay eggs. But prolific egg laying is a matter of management and breeding rather than that of breed, for has not every breed represented, won a prize at some time or other in the egg laying contests?

There was one question that bothered me—and that was the matter of confinement in close quarters, until I met a breeder who made this statement: "One breed will stand confinement as well as another, if you but study its requirements. Know your birds, their natural characteristics, their wants, and care for them accordingly." That was the fairest statement I received from any one and that man has my confidence. I know he will give a square deal.

As a photographer and colorist, my test for a good picture is: The picture when thrown upon the screen which calls forth applause is good, but the one which causes an involuntary exclamation from the audience is good indeed. And so I watched the people here. The Rhode Island Reds, and the Buffs—Orpington, Wyandotte and Rock—seemed to call forth involuntary praise. There is something about red and yellow that touches one. For instance if you step into the room of an acquaintance for the first time, and that room is done in a deep rich red and an open fire is blazing on the hearth, you will involuntarily exclaim, "Oh, how cozy you are here", and you will feel at home and on an intimate footing with the occupant. But no matter how cheerful the fire, if the room is white, you feel a little cold and distant. Is this not so, or did you ever think of it? Thus while you may stand at some distance and admire the snow-white plumage, the red will impell you to take it in your hands and fondle it. Take another instance of a young man sending his lady flowers. He starts with emotional white carnations, then selects violets and finally irresistible red roses.

I noticed that while there was a large class of Rhode Island Reds, there seemed to be many not worthy of a high class

show. Is it then so difficult to get fine feathers in the Reds? What satisfaction there must be then in getting a truly fine specimen. I overheard a man say that he never saw a novice with a good looking flock of Rhode Island Reds. From a child I was always fond of knotty problems—and that decided me. Rhode Island Reds for mine, with perhaps later some Buckeyes, seeing that I am a native of the Buckeye state.

I still greatly admire all the Buffs but many of them are not so popular here and it would be more difficult getting new blood, and as I am essentially an American, other things being equal, I have decided to stick to the American breeds. I purchased a pen of White Wyandottes owing to the popularity of white, and found that while the cockerel was from Missouri, the hens were imported from Barron in England. What's the difference between an American hen raised in England and an English hen raised in America? So I am back again with the Rhode Island Reds—an American hen raised by Americans for Americans.

I have been told that to make a success of the poultry business, one must be possessed of capital, experience, enthusiasm, energy and a vast amount of patience. Well, to test out my brooder system, I purchased a bunch of birds of a smaller breed because they were cheap, altho I could not resist the temptation to add a few Rhode Island Reds to the lot. Well, I have discovered where the vast amount of patience comes in, for while the Reds endear themselves to me more and more as the days go by, the others strain my patience to the breaking point and I vow, "Never again".

Summing up my reasons for selecting the Reds, let me say that to secure a "rare"—and I understand that rare is a good descriptive word for the breed—fine specimen gives one the feeling of a difficult task well done for the following reasons:

The breed is typically American; when it comes to quality as a market fowl (the true test of popularity in America) the Reds hold their own both for laying eggs and for fine quality meat; and here in California where our climate is so hard on white and buff plumaged birds, and where it is not always easy to find a sandy soil, the Rhode Island Red is the coming bird. At any rate I am convinced that it will be, just as soon as people forget that foolish precedent demanding white shelled eggs, as they have already done in the matter of yellow legs in market fowls.

Since taking up the study of poultry culture I have been greatly interested in reading breed articles which appear from time to time. It is somewhat like reading the same story over and over with different names substituted. Each claims the best winter layers. Each says they require less food. Each states they will stand confinement best. Each claims the best dual purpose, and so on thruout the list of good points. And to select a breed for beauty alone is like trying to pick the winner at a baby show—you are sure to be accused by someone of showing partiality. I attended a baby show once as I had made sittings of some four hundred babies entered in the contest, and believe me, I felt sure they would be compelled to send in a riot call, after the prizes were announced. And the very baby who had caused me the most trouble, trying my patience to the utmost, took first prize! I thought him anything but beautiful, so you see there is no accounting for tastes.

Personally, I am well satisfied with my choice of the Rhode Island Reds and when I undertake a hard task, I like to stick it out until I win, so in the future, my friends will find me at the shows beside a pen of Rhode Island Reds.

AMERICAN POULTRY JOURNAL is
the oldest poultry paper in America. It has
a national and world-wide reputation. The
best writers on poultry matters contribute
to its columns. It receives the patronage
and endorsement of the foremost rep-
resentative breeders of standard poultry and
manufacturers of poultry appliances in the
country.

Very few people realize the great
numbers of fowls kept on city and
town back lots, or the very consider-
able importance of the poultry work
of "back-lotters" in the production of
food poultry and eggs.

Recent agitation of an ordinance
prohibiting the keeping of poultry
within the city limits, brought to
light the fact that not less than 3,000,000 fowls and
chickens are kept by Chicago poultry keepers. One
feed store on the West Side was reported as hand-
ling \$5,000 worth of feed a month for poultry
keepers in that neighborhood. Numerous cases were
cited where the back-lot poultry played an import-
ant part in the support of the family, supplied de-
sirable poultry meat and eggs for the home table,
furnished new-laid eggs for the sick, and showed
substantial weekly sales thruout the neighborhood.

Chicago has many poultry keepers, both fanciers
and the "just eggs and meat" kind. But this city
does not stand alone in this respect and nearly every
large or small city and town has a large percentage
of back-lot poultry keepers. In two big cities we
know of a few fair sized broiler and egg plants that
are conducted on the roofs of sky-scrapers. Not
very large plants to be sure, but of sufficient size
to have importance as a source of wholesome food
supply and to afford a comfortable addition to the
income of the owners, who are modest wage earners.

In most cities and large towns fowls can only be
kept within certain limits by special permit of the
Board of Health. Fairly strict sanitary regulations
are imposed. That is all well enough, for certainly
it is necessary that in congested residential or busi-
ness sections any live stock should be kept under

strictly cleanly and sanitary conditions.

In some places the anti-hen sentiment is strong
and city ordinances interfere seriously with the
keeping of poultry. The anti-noise crusade is a seri-
ous menace to back-lot poultry keeping, unless it
is possible to find a way to make cocks crowless and
to silence the cackling of the hens. Nervous folks,
who seem able to peacefully abide the noise of L-
trains, the racket of flat-wheeled street cars, the
shrieking trolley grinding on ill-greased curves, the
roar and turmoil of ordinary business traffic, and
the siren voices of steamers in the harbor, appear
to be unduly annoyed and prostrated by "the cock's
shrill clarion" announcing the dawn, or the cackle
of excited "biddy."

City poultry keepers will have to be up and doing
if they wish to stay in business and they will have
to keep on fairly good terms with their neighbors
to avoid protests against a "noisy chicken yard."
Cock-crow shortly after midnight or at 3 a. m.,
has a serious and alarming effect upon the delicate
nervous system of "neighbors," who think nothing
of staying up all night to sing the latest popular
songs or play ragtime on pianola or phonograph,
while the guests trip the "light fantastic." In this
anti-noise campaign, much seems to depend upon
"whose ox is gored." We do not believe that an
ordinary city flock will really make sufficient noise
to seriously affect the nervous system of the av-
erage city dweller. Of course back-lot poultry yards
should be kept in a scrupulously clean and sanitary
condition, unnecessary noise should be avoided; as
few males as are absolutely required should be kept,
to minimize the annoyance caused by crowing, and
it will be wise to keep the more quiet and peaceable
varieties.

But we do think that a great deal of this anti-poultry movement, directed against city and town lot poultry keeping, is unfair and unjust. There are far greater noise evils and unsanitary city conditions that should be regulated before legislating against the city poultry raisers. In this, as in other matters, organization and political influence plays an important part and if city dwellers would continue to pursue poultry keeping for both pleasure and profit, they must be up and doing and bring their influence to bear on the "city fathers."

Get busy, back-lotters, get busy!!

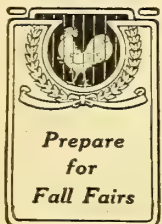

During the latter part of June we had a very agreeable and interesting visit with "Uncle Sam's" Poultry Investigators in Washington and at the Government Experimental Farm at Beltsville, Maryland.

On pages 982 to 986 of this issue of A. P. J. will be found an illustrated report of the work for poultry

"Uncle Sam" is doing thru his Girls' and Boys' Poultry Clubs, a big and useful work, well begun. In the September American Poultry Journal we hope to present a well illustrated report of our visit to "Uncle Sam's" farm and believe it will be of interest to all our readers. It is probable that, from time to time, we will present further articles on "What 'Uncle Sam' Is Doing for Poultry," which series will endeavor to show our readers what a big work for the betterment of pure-bred poultry and poultry conditions has been undertaken by the Animal Husbandry Division of the Bureau of Animal Industry, U. S. Dept. of Agriculture.

The Poultry Investigations work is directly in charge of Harry M. Lamon, who is well and favorably known to the poultry fraternity. He is ably assisted by a corps of efficient associates who pull together and do good team work. We were impressed with the fact that these investigators go at their poultry experimental work with open minds, seeking whatever may be found, rather than attempting to prove or discover any certain thing. That is a mighty good way to do experimental work, for an investigator who starts out to prove any one thing in animal husbandry, usually ends by "proving it."

The records of the Poultry Investigations are very complete, not only written records of the farm work but reports from state and county agents and of breeders who are co-operating with the department and a very fine collection of photographs and drawings. The information in Uncle Sam's possession is available for all interested citizens who ask for it. We believe that all progressive breeders and associations of poultrymen will find it decidedly to their advantage to co-operate with "Uncle Sam" in this work.

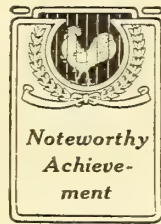

While preparation of young and old stock for exhibition should be a continuous process, one of keeping the birds in the best of health and condition, it will be well to begin special preparations now to fit specimens for the fall fairs and shows.

Plan to make a showing at your next local exhibit. Show your birds in clean, attractive coops and be sure to have them

tame and in the pink of condition. Train and handle your birds until they will stand and pose to advantage. A wild frightened specimen in a show coop has a mighty slim chance of ever winning a prize.

Help your local fall shows and they will help you. A win at the fall exhibition means sales of breeding stock, and of hatching eggs, or chicks, later on. Here is an opportunity to secure good advertising values with little effort and with much good to all concerned. Go to it!

Whether one's sympathies are strictly neutral—as they should be—or whether they are pro-Ally or pro-German, he cannot help feeling admiration for the noteworthy achievement of the people of the hard pressed Central Power, and particularly for Capt. Paul Koenig and his crew, in bringing the great under-sea merchant ship Deutschland safely from Bremen to the port of Baltimore, with a cargo of much-needed dyestuffs.

It is too early to determine whether or not mammoth submarine merchantmen will prove practical in establishing under-sea trade between Germany and the United States and it is probable that the return trip of this new type of merchant ship will prove exceedingly hazardous. If it is true that there are several more of these ships in commission and on the way to the United States, with much-to-be-desired freight, and these ships succeed in establishing fairly regular communication, then the result will be epoch making.

Whatever the outcome may be, we must take our hats off to the enterprise, pluck and perseverance of the people who made this first voyage of a big submarine trading ship a success.

According to the reports, the ship made 4,100 miles between Bremen and Baltimore, less than 100 miles of which was actually made while the vessel was completely submerged. When one is familiar with the vast empty stretches of ocean encountered even on brief voyages, the fact that this history-making craft, sailing with decks practically awash, remained unseen and unreported is not difficult to understand.

Could Jules Verne come back to review this event, he might say: "I told you so."

Read the advertising columns carefully for summer bargains. Within the next few weeks many fine breeding specimens will sell at bargain prices to enable the breeder to make room for growing stock. Do not miss your opportunity.

You will also find summer offerings of hatching eggs at attractively low figures. August hatched chicks, if well reared in comfortable quarters, make prime quality capons and soft roasting chickens, bringing good prices in the early spring and summer. Properly managed, early fall chickens will make full growth in from 22 to 24 weeks from the shell. Some excellent breeding specimens, doing good work as two-year olds, were late summer and fall hatched. Day-old chicks are being offered at very low prices, quality considered.

You should have no difficulty in securing what

you need from the summer offerings at prices that are half, or less than half, those asked in the early spring. Write and ask advertisers for special summer prices on adult stock, early hatched youngsters, eggs, or chicks. When you write, be sure to mention AMERICAN POULTRY JOURNAL; it will help you, the advertiser, and ourselves.

Beef Scrap

NITROGENOUS matter (protein) from vegetable sources will not, as poultry food, take the place of animal protein, such as is supplied in a good beef scrap, meat meal, fish scrap or milk and milk byproducts. Some wholesome form of animal protein is necessary for poultry feeding,—it promotes healthy growth, lessens mortality and increases productivity.

On natural range, where insects and worms are plenty, the fowls and chickens may do very well with little prepared animal food supplied; but when the natural supply falls short, or the birds are kept on limited range, or in confinement, then beef scrap, or some other form of animal food, becomes a necessity.

Good beef scrap is prepared from wholesome waste meat and bones from the butcher's. The proportion of bone varies, but this bone, of itself, is a valuable food as it supplies mineral matter necessary for good frame, strong body, and for well-developed tissues and nerves. Beef scrap should not have an offensive odor, but should have a sweet, wholesome, strong, meaty odor. It should not contain an excessive amount of fat or bone. It should be free from wool, bristles, ground sacking, wood splinters and other foreign matter. It is wise to screen beef scrap and remove undesirable foreign substances, for bristles, wool and ground sacking may kill chicks or even adult fowls.

Good fish scrap is made from fresh, wholesome, waste fish and is excellent for poultry feeding. Both of these products are prepared commercially in

large laboratories, and care must be taken by the buyer to see that he gets freshly prepared, wholesome, unspoiled scrap. If the scrap is lumpy, has a foul odor, and if lumps on being broken show white or green centers, the scrap is unfit for feeding.

In experiments conducted by Purdue Agricultural Experiment Station, testing the efficiency of beef scrap, fish scrap and skim-milk in feeding rations for poultry, the following facts were noted:

1. Beef scrap pen averaged 135 eggs per pullet; fish scrap pen, 128 eggs per pullet; skim-milk pen, 135.4 eggs per pullet; pen having no animal food whatever, 32.5 eggs per pullet.
2. The amount of dry matter in food to produce one pound of eggs in beef scrap pen was, 3.7 pounds; in fish scrap pen, 4.02 pounds; in skim-milk pen, 3.7 pounds; in pen having no animal food, 13.53 pounds.
3. The average food cost per dozen eggs in beef scrap pen was about one cent less per dozen than in fish or milk pens.
4. Beef scrap was shown to greatly increase the efficiency of the grain and dry mash fed.
5. The beef scrap pen produced slightly better fertility and hatchability than the other pens.
6. The birds kept without animal food showed a loss.

Supplied animal food is necessary to success with fowls or ducks and is absolutely essential to securing good growth and health in growing chickens or ducklings. Be sure that the beef scrap, fish scrap, meat meal or milk products you buy are sweet, wholesome and unspoiled. To avoid waste use the fine ground sorts in mash and the coarser sort in a hopper by itself or fed with scratch grains.

Prospects

THE United States Department of Agriculture, on July 1, reported an improvement in crop conditions during

We are getting the Red Sussex GOOD. Mr. S. C. Wood Rocky Ford, Colorado, writes: "I have a 98½ point pullet out of the eggs I got of you last year. Our local judge says she is the best female he ever handled." Write, F. L. PLATT, SWANTON, OHIO.

the preceding month and stated that the total acreage in cultivated crops is slightly less than last year. The following forecast is made for the whole United States, as compiled by the Bureau of Crop Estimates:

Corn—July 1 forecast, 2,870,000,000 bushels; production last year, final estimate, 3,054,535,000 bushels.

All Wheat—July 1 forecast, 759,000,000 bushels; production last year, final estimate, 1,011,505,000 bushels.

Oats—July 1 forecast, 1,320,000,000 bushels; production last year, final estimate, 1,540,362,000 bushels.

Barley—July 1 forecast, 206,000,000 bushels; production last year, final estimate, 237,009,000 bushels.

Rye—July 1 forecast, 44,000,000 bushels; production last year, final estimate, 49,190,000 bushels.

Tobacco—July 1 forecast, 1,190,000,000 pounds; production last year, final estimate, 1,060,587,000 pounds.

Potatoes—July forecast, 369,000,000 bushels; production last year, final estimate, 359,103,000 bushels.

Hay—July 1 condition 93.4, compared with the eight-year average of 82.2.

Pasture—July 1 condition 97.7, compared with the ten-year average of 85.7.

Apples—July 1 forecast, 72,500,000 barrels; production last year, final estimate, 76,670,000 barrels.

Prices—The first price given below is the average on July 1 this year, and the second, the average on July 1 last year. Wheat, 92.9 and 102.8 cents per bushel. Corn, 75.4 and 77.7 cents. Oats, 40.5 and 46.7 cents. Potatoes, 102 and 52.1 cents. Hay, \$12.10 and \$11.70 per ton. Cotton, 12.5 and 8.6 per pound. Eggs, 19.7 and 16.8 cents per dozen.

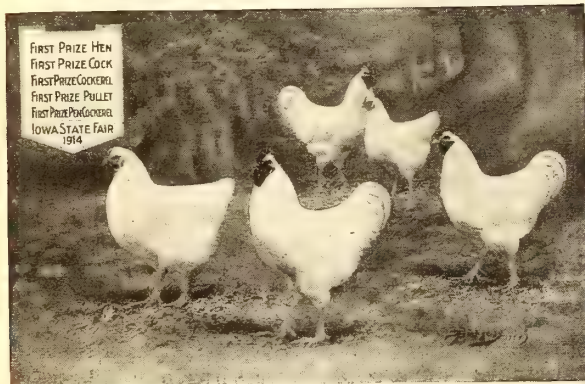

We have, thus far, had a wet season, thruout a greater part of the country, comparable to the similar wet season of 1915. Just what the effect on crops will be remains to be seen. It is quite likely tho, we may have "bumper crops" rather less than those of last year; that there will be a good deal of soft corn and poor quality oats. With somewhat smaller crops and the continued "war demand," we are not likely to experience any lower prices for grain and poultry supplies, in fact we may look for an upward trend in the retail markets.

In such sections as we have visited, or received reports from, there appears to be a scarcity of fowls and the flocks of growing chicks are smaller than common. There is, at present, a slight upward tendency in market prices offered for poultry and eggs and these should improve as the season advances.

RED SUSSEX

I have a wonderful lot of chickens this year.

Write, F. L. PLATT, SWANTON, OHIO.

Eggs at half price—\$2.50 and \$5.00 per 15 from yards worth more than twice the cost

Breeding Pens \$15, \$20 and \$25—one male and four females. Don't put off longer what you have promised yourself for years.

A. E. MARTZ, BUFF ORPINGTON SPECIALIST AND JUDGE Box A, ARCADIA, IND.

Our Cover

MR O. B. Andrews, of Chattanooga, Tenn., has been a great booster for Barred Rocks down South. We take great pleasure in showing one of his fine birds of the Premier Strain on our cover this month. The picture represents the bird just as we found it in Mr Andrews' yards on Lookout Mountain and for the reason of being a natural photograph it tells the story better than a column of descriptive matter. Mr. Andrews' birds have made a very creditable showing by winning in strong competition at Chicago, Memphis and Hagerstown.—L. A. S.

DR. WOODS' NOTES AND COMMENT

LIVING WATER

The fountain in its source
No drought of summer fears;
The farther it pursues its course,
The nobler it appears.
But shallow cisterns yield
A scanty, short supply:
The morning sees them amply filled,
At evening they are dry.
Madame Guyon.

* * *

Some shallow human cisterns remind us of the saying: "On the rampage, off the rampage; such is life—just one blamed thing after another."

* * *

But, as the farmer said, after he reached the shelter ahead of the tempest, "we should worry, we're here ahead of it."

* * *

After a cold wet spring and early summer, it looks as if the weather man intended to turn out some good old fashioned scorching mid-summer days, just to show us that he can if he wants to.

* * *

Be sure that stock birds, all growing flocks and summer hatched chicks have cool, comfortable, airy quarters. Shade is particularly necessary this month and so is shelter from tempests. Drinking water should be supplied often, be clean, cool, and kept in a shady place. To do well the birds must be comfortable. If you find the hot weather oppressive, consider your flocks, and be sure that they do not suffer during the heated term. It pays to make your feathered friends comfortable and it is cruelty to neglect them in hot, suffocating coops or buildings and bare sun-baked yards. Keep your flocks comfortable and they will help to keep you.

* * *

The business troubles of the poultry fraternity have been blamed on almost everything but the Administration and on careless business methods of individual poultrymen. Perhaps our "reformers" might obtain a hint from the following editorial comment of the *New York Tribune*: "How many rainy Sundays have come in succession we fail to remember, but this we know: there can be no such calamity during a Republican administration."

**Carver's

A. A. CARVER, Specialty Breeder - - - **SEVILLE, OHIO**

Progressive Action of Poultry Association

THE following resolutions were adopted by the Indiana State Poultry Association at their meeting on June 22, 1916:

Whereas: The widespread and continued publicity given to cases of alleged misconduct of a few prominent poultrymen has created a distrust in the minds of many wouldbe purchasers of Standard bred poultry and eggs for hatching;

Whereas: There seems to be a desire on the part of some editors to try said cases in the public press without admitting or submitting evidence from the party or parties accused;

Whereas: The said publicity and one-sided evidence is calculated to injure the reputation and business of all breeders;

Whereas: Much of the valuable time of the American Poultry Association at the annual meet and to its detriment is absorbed by discussion of grievances between members that should be settled in the courts;

The *Nashville Southern Lumberman* says: "It is to be hoped that the American manufacturers of rifles and ammunition will serve our soldiers as efficiently as they have prepared the Mexicans." It would seem that even the blindest jingo who declaims about "patriotism and national honor," might read a moral here. It is not pleasant to think of the flower of our young manhood as targets for American-made bullets and shells, fired from American-made guns. How about the "patriotism and honor" of those who deal in war material and promote wars?

* * *

There has been a good deal written in favor of the use of cottonseed meal for poultry feeding. From our experience with it, we believe it will be wise to go slow with this foodstuff. We

Whereas: All such personal fights act as a direct injury to the honor and integrity of the American Poultry Association and the breeders of pure bred poultry;

Therefore, be it resolved: That we earnestly request said editors to discontinue the publication of said articles until the courts have ruled on the evidence and a verdict rendered.

Be it further resolved: That we hereby petition all editors who deem it to be for the best interests of Standard Bred poultry to discontinue the advertising of any individual, farm, firm or corporation that said editor set forth the reason for such refusal, make plain his objections and one announcement in his journal close the case.

Be it further resolved: That we unqualifiedly condemn the practice of cartooning or holding up to ridicule men in public life who honestly defend their positions and have the courage of their convictions.

Be it further resolved: That a copy of this resolution be forwarded to the editors of all poultry journals, with the request that it be published at an early date.

have stopped using it altogether. When used in small percentages, some lots apparently do not prove injurious but other lots cause intestinal disturbance. Even where no more than 5% cottonseed meal is used in mash for laying fowls, we have had trouble with the eggs for table purposes and where larger quantities have been used the eggs have been seriously impaired in table quality. The tendency is to yield a pale oily ring about the yolks, or spots of pale greenish oil in yolks, together with an unpleasant flavor when the eggs are cooked and even an unpleasant odor when eggs

are fried. As we have not been able to secure any advantage through feeding cottonseed meal to poultry and have noted certain decided disadvantages from feeding it, particularly from continued feeding or moderately free use, we believe it best to discontinue it and not experiment further.

* * *

One of our readers wants to know how the short down and tiny feathers are removed from ducks when dressing them. There are certain periods of growth when ducks are more easily picked—more free from small pinfeathers—than at others. An experienced duck grower can readily tell when ducks are "ripe" for killing. In our locality dry picking is a regular occupation of certain skilled individuals—the going price

LEITNER'S S. C. BUFF LEGHORNS

Eggs are half price now. They are the real layers and winners. Satisfaction guaranteed. Circular free. C. H. LEITNER R. F. D. 4, Box 8 ELGIN, ILL.

for dressing being usually six cents per duck. Some few pickers use an alcohol flame for removing the fine down and small feathers. The more general practice is for the picker to rub over the carcass with hand well wet with water, then shaving the skin of the duck with a keen edged knife. Hereabout, a type known as a shoe-knife is used. Skill in dressing ducks can only be acquired through actual experience and it is wise to serve an apprenticeship with a skilled picker.

* * *

A Washington (state) correspondent sends in a lengthy query which was too late for the Questions and Answers department and requests reply in this issue; he writes:

"I have been raising S. C. White Leghorns for market eggs, will have about 1,000 this fall, but desire to increase my flock to about 2,500 layers in the future.

"I have had very poor luck in raising young stock. I have always hatched with incubators and this year brooded with colony brooders.

This season I was inclined to lay my trouble to my breeding stock until I began to make inquiries of people to whom I had sold hatching eggs. I sold a good many sittings, that were hatched and the chicks brooded under hens. Nearly every sitting gave my customers from 13 to 15 chicks and most of the chicks were raised, except those accidentally killed or taken by hawks.

"My own hatches ran from 53% to 75% and I raised less than 50% of those hatched. Although I don't know a great deal about the poultry business I have been hatching with incubators for several years. This year is by far the worst in my experience. In previous years I have used adaptable hovers and raised perhaps 60% of the chicks.

"I have never had any disease in my flocks and the chicks are free from lice and mites. No diarrhoea at all. The chicks just naturally get tired of life and quit. Yet egg customers get good hatches and have almost no rearing losses; the parent stock being the same.

"I have decided to buy from 100 to 200 S. C. Rhode Island Red hens this fall to use for hatching and brooding next spring. If these prove successful will use about 300 the following season and not use brooders at all. Have read your book "How to Raise Chicks" but would like a little further information to suit my particular case.

"My plan is to fence in a piece of land about 200 feet square with 7-foot fence all around and telephone wire stretched across the top, wires about a foot apart, to keep off hawks and turkey buzzards. Turkey buzzards made away with several hundred chicks for me this season.

"Expect to make brood coops about 3 feet square and 3 feet high, and allowing pullets to roost in same until ready to be transferred to laying houses. I can place 100 coops about 20 feet apart on this plot, allowing 25 chicks to the coop and figure that with good luck I should be able to rear about 1,000 pullets, which is the number I desire to raise each year. In every other row I propose to have alfalfa and in the others sunflowers for shade. These I will irrigate so should have an abundance of greens and shade. I realize that the more room the better, but this is about all the room I have to use. Do you think this plan will prove successful?

"For setting the hens I intend to fence a piece the length of the laying house (290 ft.) along the back of same. Will build the nests in one continuous row along back of house. Will the hens get mixed up on nests and quarrel over same? I note you recommend keeping hens shut in except when let out for feed and water. Would evening be best time to let them out? If not confined on the nests, would they make trouble? I have never yet set a hen and know nothing about the management of broodies. Will 300 hens be sufficient to raise 1,000 pullets annually. I plan on setting 15 eggs under each hen and give about 25 chicks to each hen to brood. People here take the chicks from two hens to make a brood and reset the other hen. I have thought I would do this way as others appear to be successful."

That is considerable question and success in this case, as in others, will depend more on the individual than on the method. The artificial hatching and rearing of Leghorns, herein reported, should have shown much better results. Reports of natural broods show that the breeding stock is not at fault. Other Leghorn breeders are getting very good results from artificial hatching and rearing. Evidently much of the fault lies in the care and management, but at this distance we can't say where.

We prefer the natural hen method of hatching and rearing and believe that most people find it easier and more uniformly successful, but the success of our correspondent's proposed plan will depend chiefly upon himself.

Broody hens are troublesome things and a great deal of patience is required in managing them. While Rhode Island Reds are almost invariably good sitters and can be depended upon to give a fair proportion of broodies at almost any season, we do not see how one is to figure definitely upon the size of flock required to meet the demand for brood hens in this case. To raise 1,000 pullets for layers one would need approximately 400 brood hens in the months of April and May. It would take quite a sizable flock to yield that number during the

Record Birds at Reduced Prices

For the first time in the history of Wilburtha Poultry Farms we have planned a summer sale. We offer some of our choicest birds at bargain prices. Many of these superb birds could not have been bought earlier in the season at any price.

S. C. White Leghorns	White Plymouth Rocks
S. C. Buff Leghorns	Columbian Plymouth Rocks
S. C. Rhode Island Reds	Columbian Wyandottes

This sale will include such *White Leghorns* as Harvester, 1st cockerel at Palace, New York, 1915. George 8th, 1st pen cock at Chicago, 1914. *Buff Leghorns*, Prince Charming, 1st cock at Boston, 1915, and 6 other record males. *Columbian Wyandottes*, Wilburtha Prince, 1st cock at Buffalo, 1915. Cock heading 1st pen, Madison Square Garden, 1915-16 and other equally noted birds. *Col. Rocks*, 1st cock at Palace, New York, 1915. 1st pen cockerel, Madison Square Garden, 1915-16, and many others.

We have at Wilburtha Farms, as many, perhaps more, record birds at important shows than any other farm in the world. Prices run from \$15.00 up. Write us today for our *Summer Sale List*.

"Regal Queen," First Boston Hen 1913

REGAL SUMMER SALE

IN ORDER to make room for my large flock of rapidly growing chicks, I am offering for sale 600 selected breeders at remarkably low prices. Here are a few bargains:

- No. 27. Breeding pen of Dorcas stock, consisting of six fine yearling hens and male. A good pen to build up a heavy laying flock. Sale price, \$25.
- No. 18. Well mated pen of five yearling hens and male, all bred from special matings. Value, \$50. Sale price, \$35.
- No. 7. 300 yrlg. hens, splendid value at \$2 each.

Send for Free Sale List, giving complete list of bargains. Eggs from prize matings, \$2.50 per 15; \$4.50 per 30; \$6.00 per 45; \$12.00 per 100. Utility matings, \$6.50 per 100.

Regal Cockerels and Pullets

This season I have over 2,000 early chicks—the best I ever owned. If you want to make a winning at your State Fair, let me quote you prices.

JOHN S. MARTIN, Box 51 Port Dover, Can.

desired period. In fact it is quite probable that one would have to scour the countryside for a supply of brood hens to supplement the home flock. Of course some hens could be reset when broods hatched were doubled up, but some could not be reset and quite a number of those first moved to the hatching nests might refuse to do duty or prove poor sitters.

We like to build nests for sitters in banks of four, eight and ten; made to set that number of hens at one time. Such nests have roofing fabric roofs, wire door fronts and wire bottoms and are placed on the ground in a sheltered place, with a fair sized runway for each group. We prefer to let hens off the nests in the morning and to keep them confined to the nest after they have fed and exercised. We do not like to have more than twenty in the same yard. That is about as many as we can keep from getting badly mixed up. They are liable to mix up on nests when they feel like it and have the opportunity. Even when set together from the same flock they are liable to fight, unless prevented, the first few days when they come off the nest. After they get well used to feeding together there is little trouble.

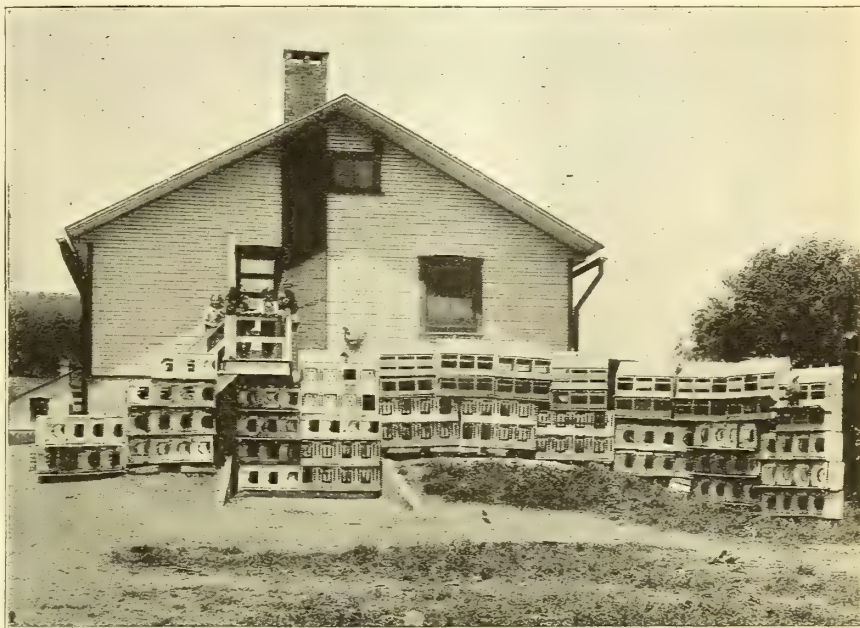

Twenty-five chicks to a brood hen is a comfortable number after the weather becomes settled, but in the cool, wet spring days a smaller flock is better to handle. The proposed rearing place is rather smaller than we should care to use continuously for growing so many chicks. To make best growth the chicks need more range. Unless the range is large, growing several broods on the same plot of ground is liable to be attended by poor results. If you average to hatch nine chicks per hen, you will be doing well. Even with irrigation and the fertile soil of the Pacific Coast, you will probably experience difficulty in growing greens and so many chickens on so small an area at the same time. We do not find an acre of grass range any too large for from 300 to 400 chicks with hens, although we have to cut the grass now and then during a wet season.

* * *

In our May issue we published a letter from C. D. Loehr of California telling of a pen of 11 White Rocks, scoring from 93 to 96 points, purchased of I. K. Felch for \$50. In the June *Item*, Editor Cornman jumped on this with both feet, questioned the score and the probability of anyone being able to buy 11 birds that would average about 94½ points each at an average price of \$4.54 each. In July *Item* "Uncle Isaac" comes back and says he did so score the birds *after he had sold them* and that "C. T. C." need not worry as there are other 95 and 96 point birds left in his yards. When we published Mr. Loehr's letter and the statement of the Felch score, we saw no reason to question it. Good specimens of the popular American class varieties are fairly common in New England and we believed that a veteran breeder and score card advocate, like I. K. Felch, would be apt to know what he was about when he delivered values for a customer's money, or when he scored such specimens by request. We were a bit surprised that anyone who has attended Eastern score card shows should question the paragraph as originally published. We have attended quite a number of score card shows hereabouts, where high scoring specimens have been sold at comparatively low prices, and some mighty good birds have

changed hands, even recently, at from \$3. to \$10. for females and \$5. to \$15. for males. We recall, a few years ago, an exhibit of Silver Laced Wyandottes at Beverly, Mass., where a string shown by a Mr. Simmonds, of Manchester, won all the blues and most of the other ribbons, including several specials. It so happened that Mr. Simmonds was in the market business and had picked up that string of birds as *market poultry* at a price (as we remember it) that was under 14 cents a pound, buying

New England have always been a favorite buying place of those who purchase quality poultry to sell again. Such conditions are not confined to New England, although probably there are more such sales here than elsewhere; we recall that at the last Palace Show in New York City, the blue ribbon pen in a fairly warm class sold for just \$25., on the floor of the exhibition hall, with all rights to the advertising value of the win: and those five birds would score pretty well anywhere—in fact, the buyer

Trap nests used on the Barred Plymouth Rock farm of J. W. Parks, Altoona, Pa.

from several growers. He was a pretty fair judge of quality and put his string into the show just for the fun of the thing to "help out the boys." We do not recall just what that string sold for, but we are under the impression that they were disposed of at an average price of less than \$5. each. It is probable that all had been reared from stock or eggs produced by a prominent Essex County specialist. In fact there are quite a few pure-bred specimens that are sold for long figures by some of our "prominent personages," that are picked up on little known New England poultry plants at prices around \$3. to \$5. each. We know of one instance where a male bird was sold by the grower for \$3. and later on brought \$50. and was considered well worth it by the purchaser. This is not "giving away state secrets," for it is a matter of common knowledge, among the well informed, that certain poultry sections of

considered one of the hens worth the price of the whole pen

J. A. Carruthers, of Colorado, who won the Buffalo cockerel as first prize in our Aldrich Orpington article contest, is mighty well pleased with the bird, he writes: "The cockerel arrived in the very pink of condition. He weighs ten pounds, is very white, has wonderful type and is pronounced by many visitors to be the best bird they have seen in this part of the country. His exceptional vigor and general fine condition, at this time of year after heading a breeding pen for nearly six months, is the highest testimonial to the condition of the Aldrich breeding yards."

there is somebody who wants to talk chicken or chicken troubles. The mail is heavy and is always full of chicken queries or articles about poultry and the American Poultry Journal has to be ready for the mails and delivery by the first of each month. One issue is never out of the way before it is time to hustle on the next number. Everybody takes it for granted that we are always eager and ready to discuss chicken topic—as a matter of fact we usually are—and we consume a considerable amount of chicken and eggs on the family table, besides conducting a modest poultry experimental farm. Yet, in common with most humans, strange as it may seem, we do have times when we would be glad to escape "talking shop." Odd isn't it that that fact should never seem to occur to our friends?—tho we will wager that if we tried to continually talk shop about their business to some of our friends, a howl of protest would go up in a hurry. Well, we had three days of absolute rest the last of June and we did enjoy it. Coming back from a trip to the Government Experimental Farm near Washington, D. C., we stopped over for the afternoon in Baltimore to see some friends. It was some hot that afternoon and we dreaded the thought of taking a train home. Then we discovered

that it was sailing day for the Baltimore and Boston steamship and decided then and there to take the ocean trip home. By great good luck we secured the only remaining stateroom on the ship and evening found us sailing down the bay toward Newport News, Va. We left Baltimore Friday evening and arrived at Boston Monday afternoon, over 10 hours late owing to storm and fog, but we certainly enjoyed the trip and would have been pleased if it had been longer. At Newport News and Norfolk, Va., we had time to look about a bit, altho it was too hot to stay long ashore and we found more enjoyment in watching the negroes stow the freight on the big boat. The ship carried several thousand barrels of new potatoes, cucumbers, green peas, snap-short beans and other early vegetables from Virginia growers to the Boston wholesale market.

Not a soul on board knew that we edit a poultry magazine or keep poultry. We met some very enjoyable and interesting people and had a delightful, restful and entertaining trip. Once outside the capes, we ran into several heavy thunder squalls and a few breezy blows that kicked up quite a sea, but most of the time we were able to stay on deck, on the lee side, snugly comfortable in a steamer chair and enjoying the storm

at sea. We do not believe we ever saw it rain harder, the heavy fall of rain pounded the choppy sea almost flat. A Southern candy manufacturer sat out one squall with us and entertained with a most interesting talk about the growth of his business, illustrating with some very delightful bonbons and chocolates. Sunday night we ran into a heavy fog and had to feel our way to an anchorage in Vineyard Sound, and on Monday we made 140 miles around Cape Cod by daylight on a beautifully calm sunshiny day. On this part of the trip we saw a big fin-back whale, which came quite close alongside and entertained the passengers by spouting twice before it sounded and disappeared. We can heartily recommend this short ocean trip to anyone with a good seafaring stomach and who is seeking just restful relaxation for a few days. We enjoyed it thoroughly, altho we have made the trip many times.

One of our readers complains of a lot of chick food bought at \$3. per bag, that it is "full of little insects, part of the granulated grain looks blueish and all has a faint musty smell," and he wants to know if it is fit to feed. We should return this lot of feed at once and demand our money back. It is evi-

Hundreds of Early Hatched

Aldrich White Orpingtons Ready to Win at the Fall Fairs

OUR early hatched birds are now ready to win at this season's shows, and the quality of our birds this season is better than ever. On account of the increased demand from our many customers, we have reduced our advertising one-half and this enables us to give better values than ever before. If you desire to get your share of the increasing business in the White Orpingtons during the coming season, you should make a good win at an Early Show.

In placing your order for your winners, remember that we are the largest farm in America devoted entirely to breeding the highest quality White Orpingtons and we have devoted our entire time and attention for many years to improve this one breed. With over \$50,000 invested in foundation stock and buildings, no detail is lacking that is necessary to breed the very best quality,

and at the least expense, thus enabling us to furnish our customers high quality at reasonable prices.

Aldrich White Orpingtons have been the largest winners at Madison Square, Chicago and all of America's best shows for years, and at thousands of other shows in all parts of America and Canada our customers have won the most coveted prizes, while their high egg-laying ability has been proven in the National Laying Contests.

Place your order early so we can reserve you a winner. A small deposit at this time will secure your birds and we will sell no one else for your show. Prices of fine Show Cockerels bred from Chicago and Madison Square winners, range from \$10.00 to \$50.00 and Pullets from \$7.50 to \$20.00. Pens, \$25.00 to \$100.00. Utility Cockerels \$5.00 and Pullets \$3.00 each.

Whitewash is an excellent thing to sweeten and brighten, as well as disinfect poultry buildings and coops at this season. A good whitewash for inside and outside use, may be made as follows: Slake one peck of quick-lime in scalding water, keeping the lime just covered with the water while slaking. Strain thru burlap or coarse cloth. Then add two quarts of fine salt dissolved in warm water; one pound of fine rice meal boiled in water to a thin paste; one-fourth of a pound of whiting; one-half pound of glue dissolved in warm water. Mix the whole thoroly and keep for a few days in a covered barrel, stirring the whitewash now and then to keep it smooth. Heat this mixture before applying and put it on thoroly and evenly with a white-wash brush. If properly prepared and applied, it is equal to, and cheaper than paint, and it should not rub off.

* * *

The late J. J. H. Gregory, veteran seedsman and farmer, said of poultry manure: "Unless chemistry is wrong it its teachings, we generally overestimate the value of the droppings from the poultry house as fertilizer. One source of this error has arisen from the fact that the ammonia in hen manure is in a more available form than in barn manure, and therefore crops to which it is applied start off with greater vigor. Average hen manure, taken fresh from the coop, chemists tell us, contains the same amount of potash and phosphoric acid as average barnyard manure, and 1 3/5 as much nitrogen. This would make hen manure (assuming it to weigh when fresh about the same as stable manure, which by actual test I found to be a fact—48 pounds to the bushel), worth about 11 3/5 cents per bushel, gathered fresh, when stable manure is worth \$6.50 per cord. *** I find that a single fowl will drop under the roost about a bushel of fresh manure in a year."

* * *

We visited a successful egg and broiler plant recently. The family was away from home and the proprietor was entertaining himself holding a private recital on his phonograph; we noted that he had a fine library of records and a good deal of it well chosen classical music. "Well," said he, "you caught me loafing and grinding out 'canned music' to get my mind off chicken troubles. Here in the backwoods that phonograph is a real blessing. When things don't go just right and chicken problems are vexing, I shut myself in here and reel off a little music until I get into a frame of mind, where I can tackle the work again with a clear head and renewed vigor. It is wonderful how a little music helps to straighten out difficult and discouraging conditions. I feel right now that I know what to do with that troublesome lot down in the brood-

Unnecessary to Change Your Formula

If you have worked out a ration formula that is bringing you excellent results in strong, healthy birds and plenty of eggs during all seasons, it will not be necessary for you to change your formula in order to obtain still more satisfactory results.

French's Poultry Mustard

is a tonic or conditioner that is added in small quantities to any ration. It is inexpensive because it is added in such small quantities. One of the world's most prominent poultrymen who used a formula that had produced very satisfactory results for him was persuaded to add Poultry Mustard to that ration and the result was that six pullets fed with the mustard addition laid 13½ dozen more eggs from October to April than did six pullets of the same hatching which were fed only the regular ration.

The details of this experiment and a few words from prominent American poultrymen who are using French's Poultry Mustard successfully, is to be found in a 32-page booklet which will be sent on request.

er house. They had my goat this morning, but, believe me, I'm going to put every last one of 'em into the market at a profit—they seemed a discouraging lot this morning, but my little mid-day concert has convinced me that 'most troubles never happen' and I'm going to win." He did! "Canned music" is a simple and easy remedy for the "blues,"—this poultryman's philosophy is worth considering. Try it yourself when things seem to be going wrong.

* * *

Indigestion and intestinal irritation are common summer troubles. The chicks get weak legs, wabbly, droopy, and mope around or have fits. Should trouble start, first stop feeding, then try to find the cause and remove it. Fasting for a few meals won't hurt the brood of chicks a bit. Before giving the chicks the regular ration again, keep them for a few days on a diet of scalded sweet milk, thickened to consistency of cream with well-boiled white bread flour and season with just a little salt, nutmeg and ginger. Return to the regular ration gradually. Boiled flour is prepared by putting good white flour into a muslin sack, tying it up tight close to the flour; then plunge it into boiling water and boil vigorously for six hours. Take the ball of boiled flour out of the sack and dry it in the oven, but do not scorch it. Grate or pound this up and use to thicken the scalded milk. Prevent chicken troubles by common sense management. Keep your chicks comfortable. Provide cool shady, clean quarters in hot weather. Feed plenty of greens and a variety of good wholesome food and supply cool, clean drinking water frequently. Do not allow the chicks to get very hungry, feed often and only a small amount at a time. Do not permit food to lie about to get stale and dirty and sour. What the chicks need most can be summed up in one word—*Comfort*.

* * *

Over fifty years ago Simon M. Saunders, of Staten Island, N. Y., said: "There is neither so much profit, nor so much honor, in gaining prizes with bought birds as with those that have been bred at home." A real fancier can get a lot of satisfaction out of winning ribbons on birds bred, reared and brought to exhibition perfection thru his own study and efforts. Anyone with the price can buy winners. Winning on bought birds may possess advantages in a commercial way, but it is not conducive to the best development of fancier-ship.

* * *

Have you ever noticed how a good many folks veer and shift about in their opinions, like a weathercock on a squally day? There is a reason. In some cases this fickleness of purpose and prostitution of opinion appears to be due to stimulation of the "pocket nerve." The highest bidder, or the man who comes across with paying business, is favored. Elevating commercialism isn't it?

* * *

J. R. Brown, New Berlin, Ohio, writes: "I have read with much satisfaction your notes on page 929, *JOURNAL*. I heartily commend your wise and high moral view taken, as well as your courage to 'speak out in meeting' against what may be an encroachment upon American ideals and the forcing of militarism, if not Chauvinism upon us by our misguided politicians. Thank

Happy Hens

will return to this house which is being freed from all Mites and Lice by fumigation with

Fumoth Fumigators

The new, easy and quick way. No more spraying and exposing oneself to these mites. Two required for a 10 or 12-foot house; one fumigation cleans them all out. Requires only a half hour to do the fumigation, and it is play—not work.

The fumes go into all the cracks and crevices and permeate the straw, killing every insect, which is not possible with spraying. No after odor remains—can return fowls immediately afterward. Fumes kill instantly and not by suffocation, like sulphur or formaldehyde, and not dangerous to man. Used by prominent poultrymen. 2 for 25c, 5 for 50c, 12 for \$1, postpaid. Money refunded if not satisfactory. Also kill Mosquitoes and House Moths. Order today or send for circular.

F. A. THOMPSON & CO. 515 Trembley Ave. DETROIT, MICH.

SEX CONTROL Spok Ahne Langshans

Thos. F. Rigg is breeding Langshans and says: "They are the best ever."

Dr. Prince T. Woods "after many years with many breeds" is getting a lot of satisfaction out of his "Lordly Blacks."

These men are not faddists, but are practical poultry breeders; they are not alone, but hundreds of other practical breeders are finding that the Langshan will lay more eggs, and produce more pounds of meat than any other breed on earth from the same feed. The Langshan is the world's oldest domestic fowl, and our strain is the world's first all-female producing strain. Can spare a few pens, fully pedigreed and guaranteed to give you 75% females or replace free. No extra males.

you for taking your stand on the side of that which is best for ourselves and humanity. Heaven bless you in the work."

* * *

Dr. Frank Crane says: "Opportunity does not knock only once at a man's door. That is a sickly fancy. Opportunities stand in line at my door every day, crowding to get in."

* * *

Right now is a good time to look over your prospects for next season's breeders. Culling out the undesirables should be a continuous process of elimination. Select for prospective breeders the strong, sturdy, vigorous, hardy, healthy specimens that are well developed and matured for their age. In choosing breeding stock be sure that it has been healthy at all stages of growth. So far as is possible it will be wise to breed only from birds that have never had a day's real sickness. This applies to both sexes. It is advisable to know the parentage and ancestry of stock to be used for breeding and, where you can, make sure that the birds you select for breeders have been bred from sound, healthy stock, so that they may have a hereditary tendency to health or ability to resist disease. Take especially good care of prospective breeders. Keep them comfortable and well fed, but do not overfeed; aim to keep them in good sound physical condition.

* * *

Ed. Howe, "The Sage of Potato Hill," says: "We Americans are threatening to prepare for war with the enthusiasm of Napoleon and the extravagance of Boss Tweed. If we prepare vast machinery for war, it will be just our luck that some fool will be in charge of us at a critical time, and use it on too slight provocation."

That is a situation worth thinking about. It may be well to remember Frankenstein. A monster, like the modern war machine, might, in the hands of a powerful group of imperially-minded politicians, even be turned against the people who created it.

* * *

Rats, flies and mosquitoes annually kill more of our people than any foreign foe ever has or is likely to. Why not turn our army loose to make war on and exterminate these vermin and the hordes of insect pests that are destroying so many million dollars worth of crops and growing timber? If we really and truly do value the lives and property of our citizens, there is abundant good work that needs doing without starting a mankill. Maybe real patriotism, like both Christianity and charity, should begin at home.

* * *

After reading many columns of near-fiction and half-truths reporting the sleuthing methods employed by a certain gum-shoe poultry editor, ferreting in American Poultry Association executive meetings, and investigations of numerous poultrymen thruout the country, and now many pages more wherein the self-appointed detectives direct their attention to my humble self;—and an ex-editor, who is seeking to get the present secretary's job away from him, vents his venom in most contemptible falsehoods, in co-operation with the man who once pulled his whiskers and called him a liar beneath contempt,—we cannot help wondering how much longer the fraternity is going to stand for

Sherlock Holmes' methods and looting. From recent developments we are reminded of the remark of Henry

Ward Beecher, that: "Every man should have a fair-sized cemetery in which to bury the faults of his friends."

Make War on Mites

Scrape up, sweep up, scrub up. Scrape right down to fresh clean wood. Then paint and disinfect. Don't rely on whitewash, for says the Washington Experiment Station (Bull. No. 74), "Neither air-slacked lime nor whitewash will eradicate mites." Use

CARBOLA
The Disinfecting White Paint

Snow-white mineral paint combined with the world's strongest germicide. Kills lice, mites, nits and fly eggs, also the germs of roup, canker, white diarrhea, and other deadly diseases. Absolutely harmless to the birds. Unexcelled as a lice powder. Comes in powder form. Mix with water and it's ready to use. Put on with brush or sprayer. Gives a beautiful, smooth white coating on any surface that positively will not peel, blister, or flake.

Use It Instead of Whitewash

to paint health and sunshine into poultry houses, dairies, stables, and cellars. Paints and disinfects at one operation, saving one-half the labor and expense. Endorsed by all the leading Experiment Stations and prominent poultry and dairy farms.

Recent Inventions for Poultrymen

By *Lester L. Sargent, Patent Attorney, Washington, D.C.*

GEORGE K. GILLETTE, of Pembroke, Massachusetts, is the inventor of a self-regulating chicken feeder, the patent rights for which have been acquired by the Watson Manufacturing Company, Lancaster, Pennsylvania. It consists of a box of rectangular shape which is swiveled on a metal supporting rod, passing thru it in a central region so as to permit the tilting of the feeder and its contents upon slight pressure. Two stops on the side of the box, limit the arc thru which it may tilt. A narrow ledge prevents feed from over-

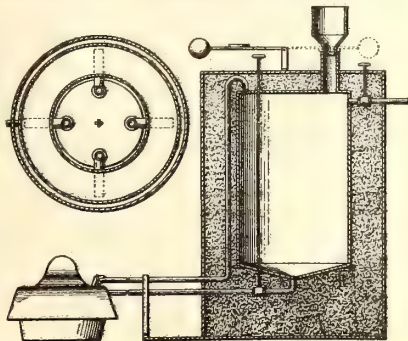

steady supply to flow down to the open portion of the box. The tilting motion of the box also tends to discourage roosting on its edge. The patent is No. 1,184,686.

Poultry Roost, patented June 13, 1916, by David E. Lindbloom, McPhearson, Kansas. Patent No. 1,186,669.

A poultry roost, invented by David E. Lindbloom, of McPhearson, Kansas, can be easily kept in a clean, sanitary condition and free from insects. The roosts are supported from hangers depending from the ceiling, or from braces having offset feet for attachment to the wall and floor respectively. The roost consists of a rod to which tray members are suspended, the rod also serving as a handle for carrying out the tray for purposes of cleaning. Roost and tray are made in short sections so that they can be easily handled. Patent No. 1,186,669.

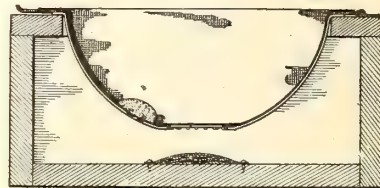

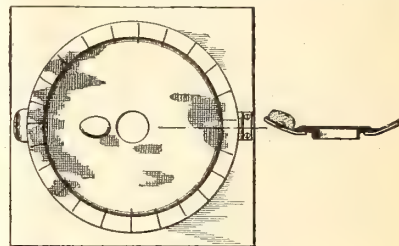

Charles E. Maple, Omaha, Nebraska, has invented a poultry fountain by which water can be kept at the proper temperature for many hours. The water tank is encased in a non-conducting packing that tends to maintain the temperature of the water. In winter the supply tank is heated by a lamp. The drinking pan is disposed at one side of the pan and supplied with water by a

Poultry Fountain, patented June 6, 1916, by Charles E. Maple, Omaha, Nebraska. Patent No. 1,186,412.

horizontal supply pipe. A valve regulates the supply of water or closes it entirely at night if desired. Patent No. 1,186,412.

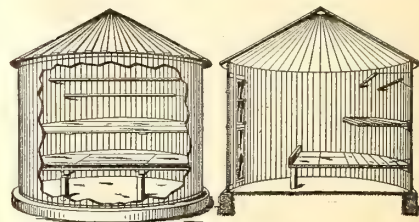

A hen's nest devised by John D. Shivel, Porter, Michigan, has an opening in the bottom of the nest proper and a separate compartment beneath to trap

Hen's Nest, patented June 13, 1916, by J. D. Shivel, Porter, Mich. Patent No. 1,187,187.

the egg as soon as it is laid, where it will be out of reach of the hen, and yet readily removable by the attendant. Patent No. 1,187,187.

A poultry house which may be adjusted to properly accommodate a brood of poultry during any part of its life, is the joint invention of C. C. and G. W. Moore, Unadilla, New York. It has a scratch floor, spaced above the bottom of the housing and a dropping board

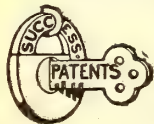

Poultry House, patented June 6, 1916, by C. C. & G. W. Moore, Unadilla, New York. Patent No. 1,186,326.

arranged above the scratch floor and covering about one-half its space. Above the latter are roosting bars. The arrangement permits of a free circulation of air while providing large floor spaces on different levels. Patent 1,186,326.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

UNLESS THE WEATHER MAN makes a change in what seems to be his settled policy, there will be no hot and sultry days in August—at least in the central west. At this writing the days are just comfortably warm with cool nights. The corn crop prospects are not good.

It has been a very favorable season for fruits of all kinds. Also for potatoes, peas and many other crops. We have just completed the harvest of our gooseberries. As usual the supply was not equal to the demand. Oregon Champion was the topper in yield, giving us nearly one-half more than any other variety. All of our new planting will be of this variety. Unlike Downing and Houghton, the berries do not run to small ones on aged bushes. We have quite a planting of Carmen which is of no value. Our Portage berries are so large that people do not want them, the prevailing idea being that the berries are not so good in quality. Mrs. Rigg says this is a mistake. They are certainly of wonderful size and I like them. The bush attains great size and is very productive. Again Red Cross and Diploma currants outyield all others and gave us the best financial returns. They are wonderful varieties. I would plant no other. There is some demand for black currants and we will have about 100 bushes come into bearing next season.

It is necessary this month to keep a close watch for the second (or it may be the one hundred and second) crop of Aphis on the young apple and plum trees. Use Black Leaf 40 about one and one-quarter teaspoonful to a gallon of water.

Go thru the currant field and clip off about one-quarter of this season's growth from each new cane. This will put fruiting buds all along each cane.

During July, I budded several young apple trees. Next season the branches beyond where I put the buds will be cut off and the trees will be changed into trees of the same varieties as the buds. It is the best way to top work young apple trees.

Clean out all obnoxious weeds this month. Now is the time to make the killing.

It has been a poor year for the bees and the honey yield is low. The continual cool weather made conditions bad and we were fooled on our estimate regarding white clover.

* * *

In answer to T. H. Holmes, Minnesota:

One of the chief reasons for the failure of plums thruout the northwest is that they are propagated on tender roots. Thruout the east and south the plum is usually propagated on Myrobalan, a native plum of France, or on Marianna, the wild plum of the south. These roots will not stand the

severe cold of the winters in the north-east. In ordering plum trees, specify that they must be worked on the root of the wild plum of the north.

* * *

I have four letters in which each writer wants to know why I advise planters not to use bush fruits or peach trees as fillers in a young apple orchard. I have heretofore given my reasons for so holding in the planting of an apple orchard, but I think the following from A. C. Weed, Wayne County, New York, is so good that I am going to use his article which appeared in the *Rural New Yorker* as an answer to my inquiring friends. Mr. Weed says:

"Our objection to planting currants and berries among peach and cherry trees or to

planting peach or cherry trees as fillers in an apple orchard is based on the vital difference in the manner of growth and of fruiting of the two groups. Apple and pear trees and berry and currant bushes do not bear heavily if very great wood growth is made and in some cases fruiting may be stopped entirely by too great stimulation. Peach and cherry trees (especially peaches) on the other hand, require heavy feeding and general treatment which will favor great growth of the trees. This difference is well shown by some experiments which have been recently reported from Cornell University. As is well known it is best in most cases to have a stock which grows not much faster than the scion we are to use, but it was found that in the case of sour cherries the strongest growing stock (Mazzard) was by far the best. In the case of peach trees it is useless to look for much fruit, or even for a healthy tree, unless special effort is made to keep them growing very fast. Currant and berry bushes under the same treatment would be likely to make very great bushes but give little fruit.

"It is possible to imagine a case where peach trees might be profitably planted as fillers in an apple orchard. This would be where the owner felt that the apple crops he might fail to get before the trees were 12 to 15 years old would be paid for by the increased crops that could be harvested later from the larger trees. It is certain that while the peaches were in the orchard the apple trees would grow more rapidly, and bear less than they would if the peach trees were not planted there if the land is worked so, as to get the greatest production of peaches."

* * *

A few days ago I received a number of diseased plums from G. B. Hadley, of Iowa. Had not a letter arrived with them explaining what they were, I would not have been able to identify the fruit. They had no appearance of the plum. If you will take a banana skin and turn it inside out you will have something nearly like these plums in appearance. Mr. Hadley said they were taken from a Wyant tree, he having picked a peck from a tree. I could not give him any information as to the nature of the disease or tell him how to spray to rid the tree of the disease. I sent the diseased plums to Prof. S. A. Beach of the Iowa State College at Ames, and secured the following reply:

"The swollen plums which you sent to me are affected by a fungus disease commonly called plum pockets. The fungus is known to botanists as *Exoascus communis* and is very similar to that which causes the disease on peaches known as peach leaf curl. So far as I know no experiments have been carried on for treating plum pockets but it is known that the peach leaf curl may be kept in perfect control by proper treatment and possibly the same treatment would be equally effective against plum pockets. This treatment consists in spraying with some caustic preparation before the buds break, as indicated on page 23 of Extension bulletin No. 35, which is sent you under separate cover. This work should be done early in the spring and not later than the first of April. Either Bordeaux mixture or the lime sulphur wash or even whitewash alone may be used for this purpose. Should you try this treatment next spring I should be glad to have you report the results. If you should try the spraying it would be well to leave some trees unsprayed for comparison with the sprayed trees."

"I would suggest that you pick off the swollen plums which are affected by this disease, since they easily become infested with another fungus, the monilia, which causes the ripe rot of plum fruit and this might spread more readily to the sound fruits in case the plum pockets are left on the tree than it would if the diseased plums were removed."

"This disease does not affect the plums of the European class such as Lombard, Damsen, etc."

"I am referring your letter and the accompanying samples of plums to Dr. I. E. Mulhus, who is now in charge of the plant disease work in this institution. Possibly you may hear from him later."

To the best of my knowledge and belief, this is the first appearance of this disease in northwestern Iowa. Plum growers should read carefully the foregoing letter from Prof. Beach.

* * *

Again the Little Marvel pea has given us our most bountiful crop. I believe this to be the most desirable of all early peas for the home garden. It will outyield Notts' Excelsior two to one.

* * *

L. B. Good, Montana, wants to know something definite about the Hansen hardy hybrid plums. These plums were originated by Prof. N. E. Hansen of the South Dakota Agricultural College. The plums are all hardy in the extreme north and the fruits are of good size and quality, the trees coming into bearing very young. The choice of these introductions, I think is comprised in the following:

SAPA: a cross of the *Prunus Besseyi*, a favorite fruit of the Sioux Indians,

Licecil
Kills Lice

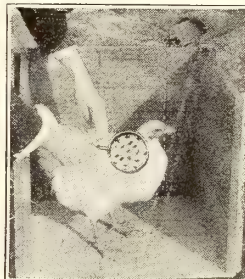

Prove It Yourself

Put a lousy hen in a box, pour a little *Licecil* down inside of box. Lice will soon appear on outer surface of feathers and fall off dead. Treat your poultry

house as directed and get same results. The "Seeing Is Believing" folder tells how other poultrymen fight lice and why they reorder *LICECIL*. A post card brings the folder. Order *Licecil* today and prove it yourself.

To Make Your Hens Lay When Eggs Are High

With a 1200-egg capacity or larger Candee Incubator, you will be able to hatch all your chicks early enough so that they will be matured and will lay when cold weather comes, and when eggs are scarce and high in price.

The higher price you will get for your eggs will soon pay for your Candee Incubator. And after you are done hatching your own eggs, you can start hatching for your neighbors at a profit and selling day-old chicks at 15c each, or more.

Hatch All Your Chicks Early Next Season

with a

Automatic—Sectional

INCUBATOR

1200-Egg Size and Larger

7 REASONS WHY THE CANDEE

(1) Eggs cannot overheat because there is an Automatic Regulator at its heater, and an Automatic Regulator at each 300-egg compartment. The heater regulator controls the temperature of the water in the heating system, and the compartment regulator shuts off the hot water when the temperature inside is correct. This means egg safety and the big hatches of good chicks that a constant, accurate temperature insures.

(2) No lowering of trays by hand to give the eggs the correct temperature. The trays in the Candee remain stationary all the time, because there is an Automatic regulator at each compartment.

(3) Hatches can be started at different times, because the temperature and operation of any one compartment does not affect the temperature and operation of any other compartment.

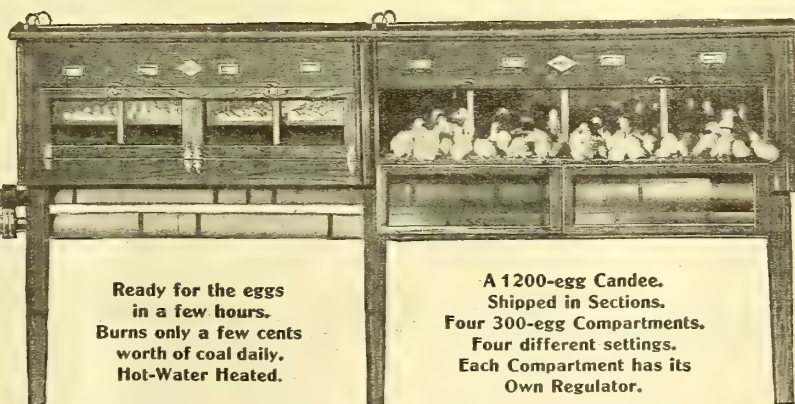

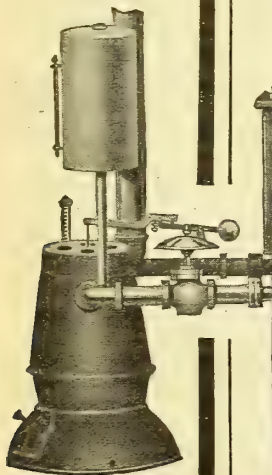

(4) The Candee comes to you all-built in 600-egg sections, that you can easily and quickly set up yourself.

The sections are all ready to set up on their legs. You save the expense of experts from the factory when you install the Candee Incubator.

(5) As it is sectional in both construction and operation, you can add more sections to your first Candee as your business grows.

(6) The Candee principles of construction and operation are the same now as years ago. Years of use of the Candee on thousands of poultry plants and by all of the prominent Colleges and State Experiment Stations have proved that the Candee principles were right at the start and are right now — the Candee Incubator is *not* an experiment.

(7) So confident are we that buyers will be thoroughly satisfied after they install the Candee and give it a thorough test, that we say: "Write Your Own Money-Back Guarantee and Attach It to Your Order."

Ready for the eggs

and Sultan, originated by Luther Burbank.

OPATA: a cross of the *Prunus Besseyi*, and the *Gold* plum.

HANSKA: a cross of the *Prunus Besseyi* and *Prunus Simoni*. Has flavor of the apricot.

WANETA: a cross between the apple plum, a large Japanese variety, and the Terry, which is one of the largest of the American plums.

I am sure that it will be well for planters in the extreme north to give these plums a trial.

* * *

While I think every home garden should contain a few of the fall-bearing strawberry plants, I want to warn my readers that the growers who go into this class of plants in a commercial way are bound to come to grief.

* * *

I was out in the woods the other day and found that the wild gooseberries were plentiful. I examined hundreds of bushes and found each to be in perfect health, with no sign that they had been visited by the currant worm, so destructive to the cultivated gooseberry and currant. Then I spoke what I thought to be words of wisdom to my companions, calling their attention to the fact that the wild things of the woods were exempt from insects and diseases which visited with such disastrous effect the bushes in our gardens. Soon we came into a field of wild raspberries. These bushes were nearly dead, the Anthrose having fallen upon them. I had to retract my "words of wisdom."

* * *

What looked like a bumper crop of strawberries turned out to be a very light one. The plants were very heavily set with bloom and looked fine. But the weather was cold and it rained nearly every day during the blooming season. As a result the pollen was not allowed to develop and the blossoms nearly all blighted. No spraying could have saved them. Our Haviland, Sample and Brandywine as usual, gave us the best crop. Senator Dunlap was about a total failure. I am beginning to believe that Senator Dunlap is "running out." When we quit picking the fruit I mowed off the vines, spaded up the ground between the rows and then gave the bed a good dressing of hen manure. Then hen manure will be worked into the ground after a heavy rain, or if no heavy rain falls within a reasonable time, we will work the manure into the soil when we cultivate the plot. We want a good growth of vines this season.

* * *

I have never known a season when the fruit trees were so free from insects and fungus diseases. Am of the opinion that this is owing to the cool weather. The Aphid has been less than in any previous season.

* * *

A writer in a popular fruit journal says that "one man can easily manage four acres of strawberries. I would like to meet the man who can do this. There is a permanent job awaiting any man who can do it, at our place, at a good salary."

* * *

Now is a good time in which to make plans for the fall planting of fruit trees, bushes, shrubbery and the like. Go over the ground carefully, and lay out the grounds on paper. When the

climate will permit of it, fall planting is very desirable. Out here we cannot plant fruit trees in the fall, but gooseberry and currant bushes, grape vines and many shrubs can be safely planted in the fall.

* * *

In answer to George Merrill, Kentucky: I am sure you will find the Henry Clay apple suited to your planting. It is one of the earliest of all early apples, is beautiful and of good quality and a very profitable commercial variety. It is not hardy here, although I have Duchess tree top-worked to it that has borne four crops of delicious fruit.

* * *

A number of apple trees which by all rules of behavior should have rested this year are loaded with fruit. I think it is owing chiefly to the effects of the heavy rains of last year, just at the time the 1916 fruit buds were forming. One tree stands where it gets considerable water from the house, and this tree has borne consecutive crops for a number of years. As a rule we lack moisture here in July and August. How I wish I had an irrigation plant!

* * *

When we stopped cutting asparagus for the season, the bed was covered to the depth of about one foot with horse and cow manure. This we have found to be the best annual treatment to give the bed.

* * *

J. J. Mathews, of South Dakota, suffered a heavy loss in May by the floods along the Missouri River, which destroyed five acres of bearing strawberry plants and about three acres of raspberry plants.

* * *

Those troublesome bluejays again! Not long ago I noticed that a long row of telephone poles were coming up very unevenly. While looking them over a blue jay put in his appearance. He deliberately pulled up a pole that was showing about an inch of green, broke the growth from the pole and swallowed the pole. He went along the row and would have had his fill of poles had I not said something to him which I cannot here record, and thus drove him away. I do dislike to go gunning for birds, even these robbers, but if these bluejays keep on killing my young corn, I think I will find a way to get rid of some of them.

* * *

I have spoken before of the advisability of having fruit trees intended for spring planting sent from the nursery in the fall and heeled in on the home place. The trees which I received last October and heeled in, started growth at least two weeks earlier than those received from the nursery this spring. The reason is that the trees kept in the nursery cold storage all winter were somewhat dried out while those which I had buried in the ground were moist and ready to start growth the moment that they were planted. By all means order your fruit trees in the fall and heel them in on the home ground. If you live where the climate will permit of it, plant the hardy fruit trees in the fall. Even in this severe climate I find fall planting best for grapevines, currant and gooseberry bushes.

STILES' COLORED Leg Bands

PROVIDE IDENTIFICATION

Identify birds as far as you can distinguish colors. Tell which are yearlings and which are two year olds without handling. Made in Red, White, Blue, Amber, Green, Black, Pink, Light Blue and Ruby. Mention variety when ordering.

ROCK LEDGE FARM - SOUTHBORO, MASS.

David P. Daniels died at his home in Nebraska a few days ago, at the age of 94 years. He was a pioneer, coming to Nebraska from Pennsylvania in 1852. For years he appeared each season before the Nebraska state legislature and urged the law-makers to authorize the planting of vast tracts of sand hills to trees. He was unsuccessful in his efforts and the state lost a grand chance to do good. He was a worker with the late J. Sterling Morton in advancing the interests of horticulture in his state, and his apple orchard was among the first, or the first to be planted there.

* * *

"I am a subscriber of the American Poultry Journal and seeing that you have been answering letters in regard to Florida would like to have you answer a few personal questions for me. We have several men here who have invested in Polk County, Florida, on the highlands, and I have been thinking of investing there myself in a fruit farm. I would like to know if they have frosts there and if the quality of the fruit is good, it being sandy soil underlined with clay from eight to ten feet. This land is sold under the 'Harvey Land Co., of Chicago and is known as the 'Star Lake Section' about two miles from what they call Iron Mountain, supposed to be the highest point in Florida.

"Iowa.

Dr. G. C. Miller."

The high ground in Polk County, Florida, is good ground, as good ground is counted in Florida. The section is not frost proof, regardless of the claims made by the selling company. The frost line in Florida is always just north of the land the booming company has for sale. I have read claims of these companies that were absolutely false. I think the section which my correspondent refers to is all right for fruit growing, but the growers must count on an occasional damage from frost. Were I going to buy land in Florida for the purpose of raising fruit, I would not locate north of the Miami River. South of this river, fruit has never been injured. Once in a while tender vegetables will be injured by frost, but so far the citrus fruits have never been touched. The man who buys Florida fruit and vegetable land on the statements made by land companies is more than likely to regret his action. By all means make a thoro investigation before purchasing—and have nothing to do with the northern land companies offering Florida land for sale.

* * *

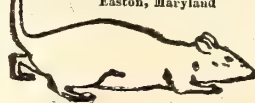

The dandelions have taken possession of the lawns and open fields of this section of the state. I gave up the battle this spring. No use trying to fight them. Our lawn has been one mass of yellow flowers. The bees take advantage of the situation anyway and gather honey at a great rate.

I COULD DIE EATING RAT SNAP

says the rat—and he does! He prefers it to all other food and it is the last he eats. RAT SNAP chemically mummifies the carcass. Prevents all odors. Does not dry up, soil, decay or blow away. Get rid of rats! It is economy. Buy ten big cakes prepaid, for a dollar. Send today. Protect Your Chickens and Feed Supply.

MERCHANTS DRUG COMPANY
Easton, Maryland

The Marvelous Newtown Giant Stands Supreme Among Incubators

A strong statement—but we have *ample reason* to believe it to be *absolutely true*. Our faith is justified by the *consistently satisfactory performance of the machine itself under all conditions and in all parts of the world*.

The Newtown Giant is the only incubator for you if you require the machine which will positively "hatch the most chicks, the best chicks with least labor and at lowest cost." Below are a few reasons for acknowledged Newtown supremacy:—

Supreme in Efficiency

Actual performance in all climates, under all the varying conditions the world over, has demonstrated the Newtown to be the most efficient hatching machine.

Supreme in Construction

This applies to every part of the machine. The most exacting care and the very highest skill are used in manufacturing the Newtown.

Supreme in Durability

The Newtown is substantially built and will last a lifetime. Every part is carefully inspected and strongly put together. Each machine is completely assembled before shipment. This insures accurate fitting and perfect operation.

Supreme in Improvements

This has been the greatest factor in Newtown success. Only those features which stand the most severe tests are adopted. They include the Automatic Coal Feeder, Automatic Regulator at the Heater, Automatic Regulator of Heat, Ventilation and Moisture at each compartment, Automatic Eggs Turner, Automatic Temperature Indicator and Automatic Electric Alarm.

Supreme in Service

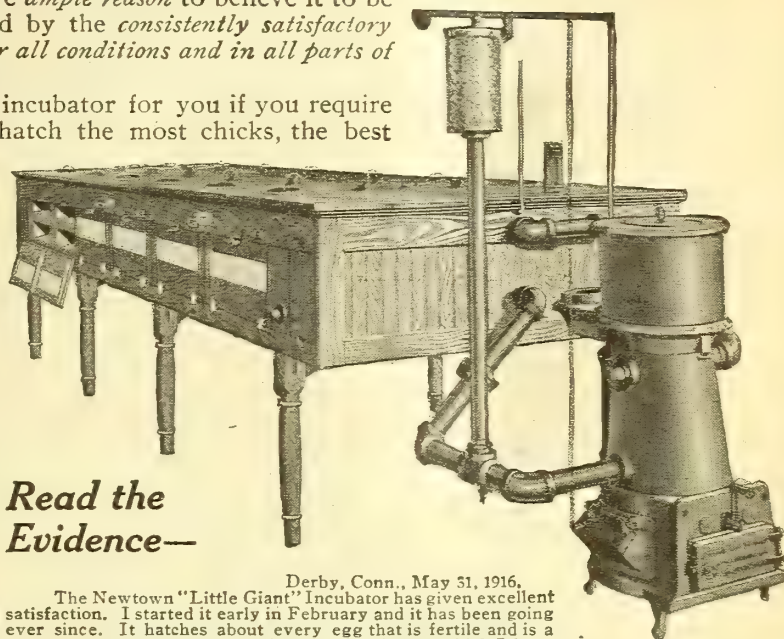

Nothing is left undone to insure that every Newtown user shall get the very best and greatest possible service from his machine. Everything is designed for convenience and service.

Supreme in Satisfaction

Every Newtown customer is a satisfied user. Ask the poultryman who owns one. A great many people who purchased Newtowns last year have already placed orders for increased capacity to be installed at once. This is the final test.

Supreme in Sales

Because they are supreme in Efficiency, Construction, Durability, Improvements, Service and Satisfaction, the sales of Newtown Giant Incubators are more than doubling each season.

Read the Evidence—

Derby, Conn., May 31, 1916.
The Newtown "Little Giant" Incubator has given excellent satisfaction. I started it early in February and it has been going ever since. It hatches about every egg that is fertile and is a very great improvement over the other incubators which I have had of smaller size and different makes, although they were considered to be among the best of the smaller machines. MAPLEDALE FARM, (Judge) W. S. Downes, Owner.

Waverly, Iowa, May 15, 1916.
We have thoroughly tried out our 3000-egg Newtown Giant Incubator and find it highly satisfactory in every way. It keeps the temperature perfect—same does not vary one-fourth of a degree in the various compartments. We were surprised at the small amount of fuel this machine takes, and have taken off two splendid hatches. We are perfectly pleased in every particular, and shall be glad, at all times, to recommend Newtown Giant equipment. RHODE ISLAND RED JOURNAL CO., A. G. Studier, Editor.

Somerset, Mass., June 12, 1916.
Am very much pleased with the way my machine has worked. I do not see how any machine could do better work. One of the things that impressed me most was the Egg Turner and decided me in your favor. After using the turner for one season I can say nothing but praise for it and feel that it has saved its price over and over in the time and labor. I have never had healthier or better chickens than I have had this year. Wishing you the success with your machine that you deserve. ERNEST L. PIERCE.

Reno, Nevada, April 6, 1916.
I am very well pleased with the 6000-egg size Incubator purchased of you this Spring. Your egg turning device is certainly a big improvement over last year's model. We are turning out the best chicks we ever hatched and more of them. Our 1200-size purchased last year, remodeled with this year's trays, hatches 20 per cent. better; 1056 eggs set; hatched 815 chicks, 1st hatch. 1056 eggs set; hatched 822 chicks, 2nd hatch. A. F. SCANAVINO, Manager.

Pittsfield, N. H., May 24, 1916.
We have just closed our hatching season with our Newtown Giant Incubator. Got an average of 66 per cent. hatches of all eggs put in machines hatching over 13,000 chicks. Am much pleased with the turner. It is a great labor-saver. The chicks are well hatched, coming out large and strong. The Newtown products are O.K., and your dealings are on the square. A. N. PEASLEE & SON.

Gossville, N. H., May 27, 1916.
Am very much pleased with my 1800-egg Newtown Giant Incubator. My last hatch averaged 75 per cent. The ease and accuracy with which it runs far exceeds my expectations. K. F. RAND.

Box 92, Wyckoff, N. J., May 12, 1916.
The 1200-egg Giant Incubator purchased at Madison Square Garden is certainly a labor-saver for the busy poultryman. About fifteen minutes each day is all the time it requires and it brings out the finest chicks I ever saw. The Electric Alarm is a big feature but my machine has maintained such an even temperature that the Alarm has never been sounded. TEMPEL'S POULTRY FARM.

Huntington, L. I., N. Y., May 15, 1916.
The 1800-egg Newtown Giant Incubator has given perfect satisfaction. Our hatches have averaged about 80 per cent. all season and all were strong chicks. The machine is very easy to operate on account of the Automatic controls and the Automatic Eggs Turner is perfect. It saves time and turns the eggs thoroughly. The machine is all you claim it to be. BREEZY LAWN FARM, Henry Hung, Owner.

Our new booklet—"Proof of Efficiency"—and complete catalog are yours for the asking. Every earnest poultryman should have them. Better write for them NOW!

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Breeding for Egg Production

Q. I was much interested in Mr. Sharp's answer to J. B. Y., concerning increasing the flock, pages 697-9, April American Poultry Journal. I like his methods of increase but cannot fully subscribe to his idea of holding his breeding pullets down to 40 eggs their first year. We amateurs have been taught thru the poultry journals to favor good layers as breeders and it would seem that practically all large plant poultrymen, who are breeding layers, follow that practice. Also they advertise high laying birds for breeding purposes. If Mr. Sharp is right, where are we at?

I have been in this business about six years and I find I have a great deal more to learn, but I think I have learned something. I have not learned how to

keep my best pullets down to 40 eggs per year or much less than twice that of their first year. I am breeding Barren Leghorns and keep records of all eggs laid, of feed and supplies, etc. Trap-nest part of the time and never force a pullet that I intend to breed from. Do not feed any beef scrap but use some buttermilk and in winter some ground bone. My dry mash is two parts bran, one middlings, 1 corn meal, two ground oats. Give a commercial scratch grain morning and evening and feed sprouted oats at noon.

I have talked this matter over with quite a few readers and all feel that we would like to have you comment more fully on Mr. Sharp's answer. Would like to be informed about breeding for egg production and how fowls are held down to 40 eggs a year when kept for

breeding purposes. How about using high record pullets for breeding? They are often advertised as ideal breeders and their eggs for hatching sold at a high price.

Also we are constantly asked to buy "breeding males to improve our flocks." How about it? If I have learned anything in my six years it is to be very shy of "new blood" for my flock. When I do use a new male, I pick out a few hens to mate with him and watch results very carefully before I breed any of that new blood to my flock. From such matings I never get more than 50% fairly good pullets and far less good cockerels. The great bulk of the chickens from the "new blood" cross have to go to the fattening pen. Would like your frank opinion in this matter. The American Poultry Journal is always fearless and willing to print the truth even if it should hurt somebody.

Columbus, Ohio. J. B.

A. It is really up to Mr. Sharp to explain more fully his views and methods of holding breeding females down to an approximate production of 40 eggs a year and to go into details about how he "rests" breeding stock. Doubtless he will do this soon. We really do not believe that he meant to be arbitrary about that "40 eggs" limit, but think he wished to emphasize the fact that it is unwise to force breeders for heavy laying, or to keep them laying thru the season without opportunity for rest.

Breeding for high egg production, or just how far fecundity may be improved by breeding methods, is a question that is still open for discussion and so far as we can see, proof is still lacking to show that we can really increase fecundity by "breeding for eggs."

The daughters of heavy layers, even when bred to sons of heavy layers, produce a considerable proportion of inferior layers and comparatively few birds of either sex which appear to have the ability to transmit unusual laying powers. The sons of heavy layers show only a small percentage, in most cases, that seem to have the power to transmit to their progeny fecundity that approaches or equals that of the male's dam. Selected birds from a flock of very poor layers have produced some specimens showing unusual fecundity and the average egg yield of all pullets was far ahead of the parent stock. The daughters of a 200-egg hen are quite as liable to be inferior to their dam in egg yield as they are to equal her record. In fact it is difficult to determine whether or not there is a definite or appreciable ability to transmit any inheritance of high egg producing qualities.

Certain selected individuals, that are prepotent, appear to transmit to a proportion of their offspring, a tendency to high productivity, but where this characteristic persists, generation after

generation, it is likely to be the exceptional case rather than the rule. It is, however, apparently possible and practical to considerably increase the productivity of flocks by careful selection of sound, healthy, vigorous birds which show physical characters indicating good layers. Some time ago a veteran in egg farming said that "any healthy, normal, well-fed hen could be depended upon to show a good egg record." Given normal, healthy fowls, he considered that feeding, care and management are the essential requisites of heavy laying. Certain it is that some poultrymen can obtain unusually heavy yields in eggs from very ordinary stock, while the same stock in other hands will not perform well. It is also true that all persons obtaining "bred-to-lay" stock from record layers, do not obtain equally satisfactory egg production from their flocks.

Apparently fecundity, as a hereditary characteristic, is not in the same or a similar class with other characters which we know to be transmissible from parent to offspring. For the daughter of a high record hen, or of a bred-to-lay strain male, to show a desirable egg record the bird must be well fed and cared for. If she is not properly fed she will prove a disappointment as a layer. However, even if she is ill-fed, starved, abused, or even diseased, she will show in recognizable degree such hereditary characters as breed color, comb, shape, number of toes, feathered or bare shanks, etc.

It is not certain that fecundity can be increased by breeding and it is probable that the present day state of productiveness of domestic fowls has been established only thru many centuries of

selection and breeding and that very little can be accomplished or hoped for in a few short years of work at "establishing a strain." But this does not mean that it is not possible to secure improvement by careful selection, severe culling, and common sense breeding from selected stock.

Anatomically every normal hen would appear to be fitted to become a good layer. Certain it is that no hen lives long enough, or remains in condition long enough, to develop all, or more than a small percentage of, the undeveloped eggs on her ovary. In counts made at Maine Experiment Station from 914 to 3,605 oocytes (undeveloped eggs) were found on the ovaries of some 15 hens examined, and only those visible to the unaided eye were counted. Three hens showed better than 1100 oocytes each; five showed better than 1,500 undeveloped eggs each; five better than 2,000 each; and one yielded a count of 3,605 undeveloped eggs. In the investigations it was shown that the number of oocytes visible on the ovary bore no definite or constant relation to the actually realized egg production of the specimen. Apparently actual egg production depends upon many things besides hereditary characters and anatomical differences. It is easy to understand that influences which affect the individual specimen may play a very large part in producing conditions favorable to maturing the undeveloped eggs of the ovary and the actual laying of same. Potentially, from an anatomical standpoint, almost every hen is a thousand-egger or better. It remains for us to develop and obtain the eggs. Of course, many oocytes

never develop and mature. Hens which have made a record of 1,000 eggs in their lifetime are still rare birds.

To return to the question of "holding down egg production" in birds intended for breeders; in our own experience we have found that usually a very heavy layer would produce a relatively small number of strongly fertilized hatchable eggs. Heavy layers are also apt to lay themselves out of breeding condition. We do not like to make a practice of breeding from pullets or of using eggs for hatching from stock that is forced for egg production. Generally, if a pullet, on beginning to lay, starts early, lays regularly and makes a good record for laying on consecutive days during her first three months, she proves a good layer. If after the first few eggs, she produces good sized, normal shaped eggs, we look on her with favor. We like to select such birds, choosing those of best type, vigor and health, and give them special care. They are not as heavily fed as the layers of market eggs; they have more house room and larger range and if they show a tendency to become broody, they are encouraged to rear a flock of fall or winter chicks. They are "rested" or rather kept in condition to be used as breeders by being encouraged to eat no more than is necessary to keep them in good order and have abundant opportunity to exercise and keep fit. When so handled, they lay fewer eggs, but the fertility is better, the hatchability is good and the chicks are desirable.

To get the best results in egg yield, a hen or pullet must be a bit too fat to give best results as a breeder. The heavy layers are encouraged to eat

Kellerstrass White Orpington Farm Sold to the 1733 Ranch

Including all their famous winners now living; all old and young stock; all breeding, show and business records, together with all contracts with nearby farmers raising the famous Kellerstrass strain of Crystal White Orpingtons for the Kellerstrass Farm.

The 1733 Ranch of Kearney, Neb., now owns the greatest flock, the greatest number of high grade exhibition, breeding and laying White Orpingtons of any farm in the world. Every White Orpington of the many thousands now owned by us is a direct descendant of "Peggy" and her famous sons and daughters, many of which were among the first prize winners in the best shows in every country in the world.

The fact that our famous Crystal White Orpingtons are the best is proven

by the great demand for birds of that strain. Without one line of advertising in over two years, the Kellerstrass Poultry Farm has continued to do one of the largest businesses in the world. Just two hours after purchasing this farm's stock and business, we received our first order—a nice one, two, from Holland. Orders are continuing to reach us every day. We are prepared to handle the business and to give full satisfaction to all purchasers of stock or eggs. We have also bought all of the

Dr. Watson Rose and S. C. R. I. Reds

including all his first and second prize winners at the Panama-Pacific World's Fair at Chicago, St. Louis, Kansas City, etc. We now have over 5,000 youngsters in these varieties, also in

Single Comb Buff Orpingtons

as we have bought out the entire flock of this variety owned by Mr. L. E. Porter, including the first prize pullet at the World's Fair, and many other famous winners at Chicago, St. Louis, Des Moines, etc. We are also well supplied with choice quality in White Wyandottes, White Rocks, Barred Rocks, White Leghorns, Turkeys and Water Fowl. Send for catalog and state what breed you are interested in.

Kellerstrass Poultry Book, \$1.00 Large and most complete book of Poultry House and Equipment Plans, \$2.50. The \$1.00 book tells of the methods employed by Mr. Kellerstrass in breeding, mating, hatching, rearing, feeding, housing and selling. Its real worth is many times the price. The \$2.50 book gives complete plans and drawings, together with bill for material, of all equipment on Kellerstrass Poultry Farm at Kansas City.

heavily of rich foodstuffs and the feeder stimulates appetite to the fullest extent without actually "stalling" the birds and bringing on indigestion from over-feeding. We have performed post-mortems on a good many unusually heavy layers and in every instance found them to be decidedly overfat. While the overfat hen may be, and usually is, an uncommonly good layer, we do not want to have breeding stock in like condition.

So far as buying breeding males to "improve flocks by introduction of new blood," that is a matter that depends upon the conditions and the birds or flocks under consideration. A good pure-bred male, properly used, can be made to grade up or improve your stock. That has been proved time and again. But, it is also true that if you have a good strain that has been well bred in line, it is not wise to introduce "new blood" and if it is found necessary to use "new blood" the new specimen, male or female, should be bred in a select mating and careful record kept of the results and of the inbreeding of the offspring. It is disastrous to make haphazard matings with "new blood." When "new blood" is carefully crossed into a strain, particularly where two strongly prepotent lines are used, it generally upsets characters to a considerable degree in the progeny and it takes several generations of careful work to get the line throwing a good percentage of specimens with the desired characters. Breeding is always a matter that requires knowledge of the stock and what is back of it and it is a constant study and exercise of skill in mating to make certain groups of characters nick and produce desired results.

Tar to Drive Out Rats

Editor Q. A. Department: I have been very successful in driving rats away from my place with coal tar. I pour it in their holes and runways and they leave. I live in the suburbs of a city and the rats do not have to go far to find another home. I cannot tell how it affects them, whether it is the odor or possibly because they get the tar on their feet and fur. It seems to be very offensive to them as they move right out, at least they do in Missouri and I am quite sure that Massachusetts rats would do the same. If you want to make a complete job of it, pour the tar into all rat holes and if they make new holes fill them up as fast as they are made. Fix a place for them to go, pile up some old lumber, wood or brush, anything that will make a good rat harbor, and when the rats have taken full possession of this new home run a temporary fence of inch mesh around it and there you have them where the dog can finish the job. If you have not yet found a remedy for rats, try coal tar. It will not cost much in money, time or labor. If the tar is cold and thick, warm it so it will run but do not boil it.

Richmond, Mo.

J. W. McC.

(Note—This was sent us in a personal letter marked "not for publication," but as it is a good thing, we feel certain that our Missouri friend will be glad to have us pass it along to our readers. Next time the rats begin to get troublesome we intend to try the tar treatment. In our case, however, the most troublesome rats come in from the woodland and from the shore of

the pond. Neighbors are not close enough to invite the rats to move there and to drive the pests out of the woods would be some undertaking. We believe that the tar will prove an excellent preventive to keep rats out of the poultry buildings and runs and we intend to give it a trial. Rats are among the worst pests we have and they are known to be disease carriers. We wish it was more easy to get a community organized to fight pests like rats and flies, but such movements develop slowly.—Editor.)

Low Fertility

Q. Please advise me concerning my results with breeding stock the past season. My hatching eggs were only about 75% fertile and my hatches were poorer than usual being from 48% to 64% of the fertile eggs. I kept eight yearling hens, a pullet and a cockerel (hatched April, 1915), White Wyandottes. They were wintered in two 3x6 foot houses placed end to end and equipped with an automatic hopper. All of the birds except the pullet and cock-

erel were purchased last fall. On looking over my records I find that these birds had eaten an average of 10 pounds of feed each per month and laid 12 eggs per bird per month from January 1 to April 30. My laying pen during the same period consumed 7½ pounds of feed and laid 14 eggs each per month. The breeders are now all very heavy. Do you think the low fertility was due to the cockerel or the hens? Would the same cause result in both low fertility and poor hatches and cause eggs to hatch late? Would it be safe to use same hens another season? Would it be advisable to continue the automatic hopper feeding? Please advise about incubator operation.

Kewanee, Ills.

C. C. C.

A. Without an opportunity to observe your flock and conditions under which they are kept, it is difficult to say what is wrong. We are inclined to believe that the flock which disappointed you were kept too closely confined and that they did not get sufficient exercise. The difference in consumption of food and yield in two flocks mentioned, may have

been due to methods of housing and care. Other conditions being equal, the flock fed with automatic feed hoppers should have produced as well or better than the other flock, provided they were not too closely confined and also had sufficient litter under hopper to induce exercise. While the fertility and hatching is not very low for your variety, season considered, it is suggestive of an immature male bird and lack of exercise in rather cramped quarters. If you molt those birds on a liberal sized green range, with plenty of shade and rather scant rations, consisting chiefly of oats and greens, they should be all right to breed next season. The oats can be fed thru summer and fall from the automatic hopper.

We note that you suggest for your incubator operation next season "that ventilator be closed during hatching, use of hygrometer, start temperature at 103 degrees until latter part of hatch, use cloth on egg tray, keep eggs in cool place, watch air cell for indications of moisture conditions." These are good suggestions, except that we would not

S. C. White Leghorns and Silver Campines

THE EARLIEST LAYERS

State of Indiana ss.
St. Joseph County

South Bend, Ind., May, 1, 1916

The undersigned hereby certify to the following facts:

On or about November 7, 1915, Single Comb White Leghorn and Silver Campine baby chicks were hatched on our plant. This stock received nothing in the way of feed and care other than the food and attention ordinarily given our other baby chicks.

The first pullet egg was laid April 1, 1916. On April 4th, there were six pullet eggs. That is, out of approximately ten or twelve pullets hatched, half were laying before they were five months old, although they were incubated in November, and raised during the winter months of December, January and February.

waste time with a hygrometer and it would depend a good deal upon conditions and the machine whether we would use a cloth on egg tray or not. Generally it is best to follow closely the manufacturer's directions for operation of machine. We would, in most cases, prefer to start between 102½ and 103 and after the 14th day let temperature run between 103 and 104, with the understanding that the increase in temperature was due to lively chicks in the eggs and not forced up by lamp heat. The ventilator should be closed during hatching. Eggs while being saved should always be kept in a cool place.

Crossing Strains

Q. (1) Would it be desirable to cross two strains of S. C. Buff Orpington fowls—say C's strain and G's strain? As I understand it both of these strains are bred for utility purposes and I cannot decide if it would be wise to cross them.

A. (1) We would not cross the strains as we do not see how it would benefit you any. By making the cross you

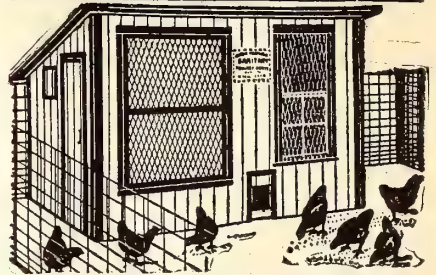

S. C. Buff Orpington from Sunset Poultry Yards, C. E. Siegel, Prop., Olneyville, R. I.

would undoubtedly get a large percentage of offcolor and offtype specimens the first season. It would take you several seasons to breed the flock in to secure a reasonably good percentage of uniformity and quality. Secure sound, healthy, vigorous, well mated specimens of either strain and then breed them and their progeny in-and-in. Always selecting breeders for quality, health and vigor and endeavoring to make up your matings to balance defects on one side with strength on the other.

Q. (2) What is best treatment for hens, which have laid steadily since middle of December, in order to secure early moult and have them laying in November? The hens are one year old, bred to lay, are fat and have range run. All are standard bred.

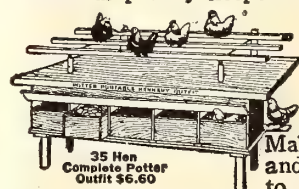

New Washington, Ind. G. J. D.
A. (2) If you intend to breed the hens, why urge them to lay in fall and early winter? For those to be used exclusively for breeding we would be better satisfied to have them begin laying in January if otherwise in good order. To moult them to best advantage, give them a large shady range with open

front quarters this summer. Let their food be largely oats and greens, supplemented with other hard grain for variety. About the first of October introduce the laying ration with a good dry mash, but do not feed too heavily. You will find cabbage a good fall green food for moulting birds.

Copper Drinking Fountain

Q. (1) I have a copper drinking fountain. Is it all right to use for chickens?

A. (1) Yes, if you keep it clean. Do not use medicines in it. You can probably sell it for a price that will buy several galvanized iron fountains.

Q. (2) Have some White Wyandottes about six weeks old and they seem very slow to feather. What is the trouble?

Cincinnati, Ohio. C. B.

A. (2) Some chicks, especially males, are apt to be slow to feather at that age. Give an abundance of fresh greens and a daily allowance of some good animal food. Scalded fresh fish will prove an excellent food to hasten feathering.

Additional Summer Ventilation

Q. What is best way to ventilate a poultry house in summer? Mine have open fronts but have no other ventilation. Should there be openings at back above the roosts? Houses have droppings boards and at back are five feet high and are seven feet high in front. Laurel, Ind.

P. W. S.

A. With semi-monitor top open front houses, we open the monitor windows in summer and in our climate find that sufficient. In a long house an opening about four inches deep by the length of pens, just under the eaves will help cool the house in summer. With colony houses a two foot square window at either side of house, located at rear of side, close to roof and well above the roosts will help in hot locations.

Poor Hatches

Q. I bought several sittings from three well-known reliable breeders this spring and have had poor results with the eggs. Used hens for hatching. From two sittings I did not get a chick. Other sittings gave me fair hatches except one in which I got only three chicks. The eggs were apparently all well packed and arrived in good order. The two lots that did not hatch came in corrugated fibreboard cartons. Eggs from same breeders shipped in baskets lined with excelsior gave me fair hatches. How do you explain it?

N. Y.

J. H. C.

A. We believe that the failure of a good many eggs to give satisfactory hatches is due to abuses during transportation. Egg packages are roughly handled and shaken up until the eggs are no longer fit to hatch. In some cases the eggs are placed close to a heater or steam pipes and so ruined. We have had a few complaints of eggs that did not hatch. In one case two lots were shipped to same party and no hatch reported. The eggs were packed in a corrugated fibreboard package and cells of filler packed with cut clover around the eggs. Eggs from same lot hatched well at home and the only explanation we can make is that the packages were so badly shaken up that the eggs were spoiled in transit. Shippers of eggs in our section are

D. F. Palmer & Son Box 35 Yorkville, Ill.

complaining of unusually severe losses on shipments the past season. Scarcely a lot of eggs goes over our local division of the railroad without excessive loss from breakage. It is all due to carelessness and rough handling by express agents and railroad employees. It is no unusual thing to have two dozen cracked or broken in a 30 dozen case, when packed with strong fillers or heavy cartons. Within the past week we have learned of one case of breakage of seven and one-half dozen in same case and another of nine dozen in a case. Such breakage is inexcusable. Thus far these shippers report that claims for breakage have been settled after a wait of about two months. For shipping hatching eggs the only satisfactory package we have found is a market basket lined with excelsior and each egg wrapped in paper and excelsior. Generally the handles are broken off the baskets but the eggs get thru in pretty fair condition.

Bald Heads

O. I have fifteen pullets, all laying, which seem to have something the matter with their heads. The feathers are all coming out around the comb and they are continuously shaking their heads. I thought it might be lice or mites and I used a head lice ointment and rubbed it well into the base of the feathers, but it does not seem to reach them. Please advise me.

C. G. C.

A. Trouble may be parasitic and it may be constitutional. Try another application of the ointment. Get the birds out on a good green range where there is plenty of shade. If you can't do that clean up the poultry quarters, see that the house is made as cool as possible for summer, make the runs shady and cool, and feed an abundance of fresh raw greens. Plenty of green food, a hard grain ration and little or no mash, will often cure a very obstinate case of baldness in fowls.

Sore Eyes in Chicks

O. What can I do for sore eyes in chicks? Have tried vaseline and it does no good. It isn't roup and their eyes don't swell. Eyes are watery and red on inside. Otherwise they are healthy. Chicks are ten weeks old. Never saw anything like it before.

Nappanee, Ind. I. H.
A. In a wet season this trouble is not uncommon. Be sure that quarters are clean and kept as dry as possible. Avoid use of mouldy litter or bedding. Dissolve a teaspoonful of boric acid in a cupful of water (use boiled water) and use this to bathe affected eyes. In moist mash use one teaspoonful of flowers of sulphur to a quart of mash.

If you were suddenly removed from your present established place of business without funds or influence, what resources have you to fall back upon? Is there anything which you could do sufficiently well to make a stand for yourself in new surroundings? While this is the day of specialties, yet no one should consider themselves equipped for life without a line of resources to broaden an otherwise narrow existence. The resourceful individual knows no discouragement, fears no defeat. He calmly goes around or over any obstacle appearing in his path which he is otherwise unable to overcome.

Poultry Business Universally Attractive

IT IS MY FIRM opinion that no industry nor single occupation is so universally attractive as the poultry business. It appeals to both young and old, rich and poor alike and becomes the more fascinating the deeper one goes into it. It matters not where you live, what you do, or even who you are. You may be just "keeping a few chickens" to utilize the scraps from the table, or the chickens may be keeping you and your family in all the necessities of life. To the amateur or professional the breeding of poultry is a most fascinating occupation.

It fascinated me to raise a few Golden Campines in my backyard in my spare time. My regular employment is that of a machinist and I am only an amateur in the poultry line. To appreciate the Golden Campine, one must picture the graceful and symmetrical form of the birds and the brilliancy of their plumage of attractive golden buff hackle, neat head with large brown eyes, bright and prominent, surmounted by a bright red comb. The distinct barring of green and gold that follows the hackle finishes off the picture wonderfully well and the male, hen-feathered as he is, seems to match up just right with the females.

To do justice to such a bird, one must see it in all its glory and all its activity for it is certainly a hustler. Double mating is not resorted to in breeding the Golden Campine which is most unusual in breeding a parti-colored bird.

Before adopting a breed, it is always exceedingly interesting to go back into their history and follow up the progress that has been made in the breeding of that variety and every poultry keeper, specialist, or fancier, should love the choice of his particular variety better than any other in order to succeed with it. He should be interested in just what manner it was originated, how it should be mated to get the best results in shape and color not forgetting the productive part.

The Golden Campines are layers of nice, white shelled eggs but it should always be remembered with regard to egg production in any breed or variety, that it depends more on the strain than the breed, more on the care and food given the birds from the time they are hatched thru their productive years than it does on the variety or breed. The knowledge the breeder exercises in selecting and breeding his layers and the use of the trap nest will also be weighed in the balance and shown up in the result. I am an ardent lover of the Golden Campines but I want to say that I would not unreservedly praise them as living egg machines—some may be, but some certainly are not! Like other breeds, and I believe it is true of every breed, high producers may be found in

some individuals but not in flocks.

Various crosses have been used to make the Standard varieties of other breeds we have today. Yes, breeds may come and breeds may go—but the Golden Campine will live on forever. The origin of the Campine is not definitely known, being obscured by the mists of antiquity. As far back as can be traced with any certainty, it had its origin in Belgium and no doubt derives its name from the sandy La-Campine plains. Some claim the existence of the breed during the reign of Julius Caesar, while there are numerous traditions about the Campine being of Turkish origin and one story is told of Johanna of Constantinople raising Campines on her estate near the city of Lills, in Belgium, about the

year 1200 A. D. The only real authentic history we have of the breed dates back to Belgium 400 years ago, and their blood relations should be still there, and the Belgium peasantry still raising them unless the present war has been the means of their extinction.

In conclusion let me add that the Campine is coming rapidly to the front and one has only to visit a poultry show a year or two and note the increase each year in the number of exhibits—which speaks so much for their popularity. Personally I have never regretted falling in love with the golden variety of the Campine, that remind me so much of the heather clad hills of my native land—Scotland.

Chicago, Ill.

WILLIAM L. SUTTIE

FEED BY CLOCKWORK

For hen health and big layings, hens must be fed often and regularly—not two or three times a day but every half hour, and the hens must work for their living.

You can increase your egg yield about one-third, save feed, time and work, and in fact, make about 300 percent interest on your investment with a

Scientific Poultry Feeder

Just put in the grain, wind and set the clock and this machine does the rest. It gives big feedings at morning, noon and night of different kinds of grain, fed separately between, at half-hour intervals.

The spreader hanging by chains is easily adjusted to scatter grain in small or large space. Suitable for small or large flock.

Write for PROOF that this feeder will pay for itself three times over in one year with only 25 hens. Free circulars. Feeder guaranteed to operate perfectly or your money refunded without argument.

AGENTS WANTED

Honest and ambitious agents in every poultry community to take care of inquiries and take orders for our feeders. Exclusive territory. Big income to hustlers. Men having other poultry agencies preferred. Also attractive proposition to State general agents.

Success in Exhibiting

My 1915 exhibit was the feature of our local County Fair and Poultry Show in Allegheny County, N. Y., where some 2,000 entries were made and where I won some anticipated prizes. The judge declared of one of my birds "That is the best bird I ever judged—is a better bird than I saw at the recent State Fair Poultry Exhibit in Syracuse." Men there with long strings of birds from many States and all the Barred Rock owners declared they "Had never been beaten." That is why my birds were the special feature of the show.

I want to tell how I produced and how I prepared this exhibit of Barred Rocks in 1915.

PRODUCTION

Mating
Hatching
Brooding

1. The first item of interest in the production of this exhibit was in the mating of the parent family. This mating was done carefully and evidently wisely for we won. Not having won prizes here before I decided to make as good a showing as possible and so began my process of production back in the early springtime. Then it was that I put together a pair of my best birds; the best male and the best female in all my flocks, for a scientific pullet mating. This I did as per written instructions from a noted fancier, but using also my own best judgment. In this mating, color, size and shape and shade and head points and carriage were considered, and in the end I was rewarded with some very fine exhibition pullets and cockerels, all from one mating. After the mating came the selection of well-shaped eggs and of uniform size—the eggs being trap-nested and handled with great care.

2. Then the interest centered in the hatching of the chicks. This was an interesting process in many ways. Four settings of eggs were placed in a neighbor's incubator and were so nearly 'cooked' that only two chicks ever peeped. Then a setting was placed in another neighbor's incubator with the result that ten good healthy chicks were counted. The best results were obtained when a cheap hen brought off 13 chicks from 13 eggs. Then other hatches were obtained from other hens till we had about three dozen chicks that grew under our treatment and became lusty, husky, lively youngsters, the joy of our neighborhood for their clean snap-py plumage and healthy appearance.

3. But the brooding was equally interesting with the hatching or mating. These chickens were brooded under a hen in a home-made brooder, the specifications for the brooder being taken from a poultry paper. This brooder was three feet by five feet and about one foot high, made of pine lumber, divided into two parts, crosswise, one part being furnished with a flooring for the night hovering. At one end of the brooder was an opening to permit the egress and ingress of chicks at will whenever the weather would permit,

there being a law in this household of hens that no baby chick should step foot out o' doors when the ground was wet or cold. This brooder could be moved into the sunshine or shade at will.

PREPARATION

Conditioning
Cooping
Entering

Preparedness applies to placing an exhibit of poultry on exhibition. This preparation begins with the rearing of the flock—feeding and watching and guarding against chick enemies. The very best of feed and water—the owner not leaving everything to the old biddy, for it is to be remembered that this exhibit was reared on a back lot and was in constant danger from cats and skunks and boys and automobiles. However, not a chicken was lost. Every chick grew to maturity. But the youngsters outgrew their home-made brooder and were sent out into the cold world by old biddy and so were given new quarters in a clean fresh grass plot where they ran to their heart's content and spent their time in just growing big and feathering.

YESTERLAI D EGG FARMS Co., Dept. 5 Pacific, Mo.

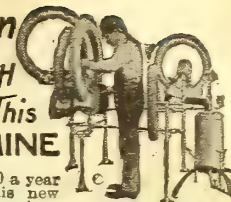

4. The Fair dates approach and these possible show birds must be conditioned and prepared for the worst. The method we adopted for conditioning was the "three tub idea of warm water and handling." The birds were carefully washed and dried with towel and then placed in the sunshine for the more complete drying; the day being warm and ideal for this process. This was done about ten days before the opening of the show. Then in five days the washing was repeated, so that the birds were in the cleanest possible condition when they were taken to the grounds. This conditioning seemed at first unnecessary as the birds looked pretty well and quite clean. But when the washed birds were compared with others not washed then it was that the difference showed itself. There was the same difference there always is after a boy has washed his face and combed his hair. See? And with the washing there was the necessary handling. Every chick was thus handled until measurably tame and unafraid. This proved to be important, as birds not so handled were shy and scared at the approach of strangers.

5. Cooping is an important item in preparing chickens for an exhibit. My coops were my own make. They were made of thin lumber and narrow slats. The slatted fronts were more carefully planed and painted and contained the lift doors. Personally, it appeared that the little attention to paint was more than repaid in the appearance of the coops. Here we found that we were in the lead with clean coops and clean birds, and all in readiness for the blue ribbons. But, one thing more before the drayman comes to take your exhibit to the grounds; I almost forget my tags. What? Why my entrance tags and "one dollar more please for yourself and one member of your family for the whole show." Oh, thanks. I most forgot the dollar. But all these final touches seemed to be worth while, for even a boy must pay for his ticket and wash his face and comb his hair if he were going to a Fair or to Church, and would not a pure-bred, well-bred chick when going to be on exhibition. My clean, newly painted coops with one exception were the only clean coops seen at this exhibit. This had something to do, perhaps, with the wonderful popularity of that particular spot where my birds were located. Why the women wanted to stand around by those clean coops. Other coops were ragged and unpainted and unsightly. There is a reason. But men stood by as well and took notice of my exhibit. Some did not know the variety. "What are those birds?" When informed that they were Barred Rocks they would remark, "Well, they are some birds." "They sure are beauties." Then I began to realize the value of the final touches, the real preparation for the show, of mating, and hatching, and brooding, and conditioning, and cooping and all. Everything counts in the show room, either for or against. Variety counts. The science of mating is something. Good feed and good care and a real live interest day after day will certainly count for much in fitting up your birds. Put your best thought into your production and preparation if you desire to win the blue ribbon. The judge will come across with the ribbons.

Good Things for Everybody

Helen F. Woods
Editor

If I have faltered more or less
In my great task of happiness;
If I have moved among my race
And showed no glorious morning face;
If beams from happy human eyes
Have moved me not; If morning skies,
Books and my food and summer rain
Knocked on my sullen heart in vain,
Lord, thy most pointed pleasure take
And stab my spirit broad awake,
Or, Lord, if too obdurate I,
Choose thou before that spirit die
A piercing pain, a killing sin,
And to my dead heart run them in.
—Robert Louis Stevenson.

* * *

WHOEVER WALKS ABROAD with eyes open, this summer of 1916 cannot fail to be wonderfully impressed with the beauty of the countryside. Of course we admit it to be the wettest season within the memory of the oldest inhabitant, the worst for corn and berries and the most prolific for mosquitoes—but never was the grass more green or the hay crop better, never

the foliage more luxuriant. Showers have been too frequent for the roads to become dusty, yet the rainfall has not been so heavy as to keep the roads muddy. No one can complain of "the long hot season," or of a "long drawn out dry spell." Off across the hills and valleys a faint mist arises from the moist earth in unmatched blue-gray ranges. Or, we awake some morning to find our little corner of the earth an island, isolated from all else by a deep and apparently impenetrable sea of fog. Off yonder where the wide chimneys of a neighbor's house rise majestically above river and woodland, only a deep impervious mist envelops the earth. To the north we are cut off from dense pine woods; to the east, the meadows have drifted off into space; to the south, the river is lost in a sea of fog; and westward, only the dim outlines of our century-old barn resting securely on the

edge of nowhere, remains visible to the eye. All else is space. We have cut loose from our every day environment and drifted off to sea. Not a sound save the twitter of birds and the occasional note of the yellow-billed cuckoo disturbs the illusion of our sea-bound retreat. Suddenly, dark, forbidding, steel-gray clouds bank over-head. The roar of distant thunder rattles thru the fog. The rain descends in slant-like sheets, pounding effectively on surrounding fog banks, until they are forced to break away and retreat into the distance. As suddenly again the radiant face of the summer sun bursts thru the rain and mist, and the earth beams her gladness. Every leaf, every blade of grass, glisten like rarely cut gems in the sunlight. The rain abates, we sight familiar shores, sail steadily into the home port, and safely anchor at our old moorings.

* * *

It is always a delight to associate with those who appreciate the little joys and pleasures of life. Equally enjoyable is association with one who systematically and without hesitation, passes unnoticed the unnecessary little "disagreeables" along life's pathway. The ability to do this is a real art which each of us needs to cultivate. On meeting one of this "good to know" type, there is always a feeling of having unearthed a very rare find—one of those truly great souls who has conquered dominion over self and who stands forth like a beacon light in a fog along a rocky shore. We are all too prone to expect these masters of men from among classes of people who have had cultural opportunities and education leading to their development.

The rule does not need changing as there are always exceptions to otherwise perfectly good rules, as the following occurrence will demonstrate:

A woman of little education and slight opportunity lived in a small unpretentious cottage by the shore of a woodland lake for a quarter of a century or more. When I first knew her she could not be called a poor woman as regards worldly goods, for she and her husband had worked hard and practised economical living for long years and were by the exercise of their own thrift, placed above want. They owned their modest home—had money in the bank, children and grandchildren, all good assets—when a calamity overtook them in the shape of the discovery that the community surrounding their isolated home was one of the marvelously beautiful spots of the country. The community did not at once become a second Newport or Bar Harbor, but

Sunswick Summer Sale

THIS great S. C. Buff Orpington Specialty Farm has carried off the highest honors at the leading Shows of America for many years. You should have some of these magnificent birds in your own yards. They are proven money-makers.

POPE & POPE, Box A, Louisville, Kentucky

"Lice are as common to chickens as fleas to a dog."—LEE'S "COMMON SENSE CHICKEN TALK"

I have many times gone into poultry yards, whose owner said, "My hens have no lice," and taken from 100 to 500 lice from one hen, using Lee's Lice Killer. Lousy hens don't lay well. Lousy parent stock bring weakly fertile eggs and sickly chicks. Lice and mites seek the warm bodies during winter and in spring will travel a mile to get at young chicks. Clean up and urge your neighbor to clean up, now. With Lee's Lice Killer there is no dusting, dipping, greasing or handling. Simply painted or sprayed on roosts, etc. It kills both by vapor and by contact. It gets the lice on the bodies of chickens roosting over it, also the insects causing "scaly leg," also the mites and lice about the roosting places. The Lee products—Lice Killer, Germozone, Egg Maker, etc., are sold by dealers most everywhere, generally one dealer at each town. Full particulars, catalog, poultry book and name of nearest agent sent free on request. Write today.

HARMLESS TO POULTRY DOMESTIC ANIMALS AND MAN

gradually the best sites were bought up, and well to do people built homes and came to live there. The little cottage on the shore of the lake was directly beneath a huge cliff, surrounding which, rose groups of magnificent white pines and feathery hemlocks. One day this property was acquired by a family who had but lately "come into some money." Sundry notices were issued from time to time to the effect that trespassing by the family below the cliff, along the cliff family's beach front, by boat or on foot, was strictly forbidden. Building operations began on the cliff and the carting of building materials and workmen was regularly carried on by means of a winding roadway cut out of the virgin forest, built and owned by the hard working cottager beneath the cliff.

One fine day in late spring the family moved into their new home on the cliff. The following Monday morning, the woman below the cliff, having a particularly large washing (all the grandchildren having been with her over Sunday) and feeling well pleased with the result of her morning's work in the long line of snowy clothes stretching the length of the lot on the beach, and back again to a tree on the boundary line, stood surveying them with evident pleasure. Down the rough and difficult footpath from the cliff, unsteadily came an old man—"My daughter sent me down to tell ye, she don't want your clothes' line tied to that tree. It's on the boundary line and half of it belongs to her and she don't like the looks of your clothes hangin' there." There was little said in reply except that the request was politely granted and within a very few moments the clothing was removed from the line and another place was found to tie to. The old man, half way up the path called back, "Oh, ye needn't take 'em down today, but she don't want ye to hang 'em there again."

"I can just as well change them to-day," came the pleasant reply. When the man of the house returned for his dinner, his wife was changing the line and to use his words he was slightly "put out to have them new folks tell his woman where to hang her clothes." But there was no neighborhood disturbance. Other newcomers who had seen the occurrence, expressed their opinions in no uncertain terms and voted to a man that the family below the cliff would be perfectly justified in closing up their roadway, which all cottagers continued to use for teaming.

"Yes," said the old man, as he sat peacefully smoking his pipe as the last rays of the setting sun shed a path of gold across the lake, "we could shut folks out of our road and make 'em do their teamin' on the side cliff. We could'a hung to our half of that boundary tree, but we've lived on such good terms with this place and these trees fer so long, that we don't care about startin' a rumpus over 'em now. Fact is, my woman and me is kind of proud that we found this place before these new fangled folks and that we hewed the way in here and whoever wills can follow us. We're proud of our road and them as wants to, is welcome to use it. I always meet folks half way in these disputes and if they get to cavortin' too much—I give 'em another quarter."

The circus field with pitched tents and floating banners loomed up at the top of the hill. The notes of a steam or-

gan could be heard clanging out a metallic air. On every hand loud voiced barkers shouted their wares. Gaily dressed girls and groups of small boys hurried thither from all quarters. A great mixed throng of humanity journeyed toward. One lone, small boy trudged sorrowfully down the hill, drying his tears with a frayed edge of his coat sleeve. Men, women and children glanced at the boy—and hurried on. "Why is he going away from the circus?" asked a little girl of her father as they passed the disconsolate youngster.

The father stopped short. "What's the matter son?" he called after the boy.

"Lost me ticket and aint got no more money," wailed the boy in reply.

"Come along with us and we'll see if we can't get you one," and they all went off up the hill, smiling in real circus day fashion.

Thruout the performance during the afternoon, I glanced from time to time at the boy across a line of well-filled, hard, board seats—and his face was a revelation in happiness. One look at the little girl's father showed that his eyes and thoughts were upon the boy, while the whole incident proved an inspiration to those who saw it.

FRUIT JAM

By E. C.

Use an equal quantity by weight of picked over, washed fruit and sugar. Strawberries, raspberries, currants, gooseberries or blackberries are equally good for use in this jam. Place the fruit in a preserving kettle on the back of the range and allow to come to a boil. Heat the sugar in the oven and add to the fruit. Boil until it will solidify when cool by trying a little on a saucer and placing on ice. Some fruits will not require more than forty-five minutes, while others will take from an hour to two hours according to the watery condition of the fruit. When cooked to the proper consistency, place in jam jars or jelly tumblers, seal with paraffin and store in a cool, dark place.

* * *

DELICIOUS CREAMY RICE CARAMEL PUDDING

By Clara Hersom Weeks

Wash one cup of rice and soak it for three hours in plenty of cold water. Drain off the water, place rice in double-boiler with four cups of milk, season with cinnamon and cook two hours.

Put one-half cup of sugar in a small pan on the fire and stir until it turns brown and becomes liquid; then instantly pour into a well-warmed three-pint mold, and turn mold around so that the sugar will coat all parts of it. Do this quickly or sugar will cool and not spread.

Beat two eggs well, add one-half cup of milk and stir into the boiling rice, also add scant teaspoon of salt. Let cook but a moment and pour into the sugar lined mold. Cover mold, place in pan of boiling water and bake in the oven one-half hour. When firm take from oven, let stand ten minutes and turn out upon a flat serving dish. Serve hot with a cold custard sauce.

One of our greatest statesmen was asked the secret of success. He replied, "It is the simplest thing in the world. Do what you have to do right away. Do it as well as you possibly can and keep on doing it."

Helen T. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

A CITY GIRL BECOMES A POULTRY KEEPER

Beauty and Utility of Black Langshans. Easily Handled, Good Layers, Good Mothers and Particularly Good to Eat.

By LAURA L. THRASH, Ft. Wayne, Ind.

IN THE YEAR 1900 I spent my summer vacation with a girl friend on a beautiful farm in central Illinois. My first morning there I was invited to the poultry house and stationed myself near the entrance when the door was thrown open. In about a minute, to my way of thinking, my eyes fell upon the most attractive flock of poultry in the whole United States—namely, a flock of Black Langshans.

As they came forth in groups of threes, fives, tens and dozens, I attempted to count them but the beauty of the flock so bewitched me that I lost track with the number seventy-three in mind. Later I was informed that the double house contained over three hundred beautiful birds all alike. Suffice it to say they impressed me so favorably as to determine the bent of my future career. Honest, I went so far as to say that the man I married must have a farm and sufficient cash to set up in the poultry business with the best Black Langshans to be had. To me, seeing was in truth believing and when my eyes fell upon those evenly typed birds I was convinced that they were the most beautiful sight I had ever seen—even tho I had attended World Fairs.

To begin with the surroundings were ideal and their range was in a pen or field of ten acres, this fact enabled the birds to promenade, doing themselves justice in making their debut before company. I remember I remarked as the husky, proud cocks would step high and carry themselves so far above the average chicken, that they reminded me of living models displaying the fashions in the large cities. It appealed to me as more interesting, and during the two weeks' stay on the farm I thought I was making love with the Langshans. However, don't be surprised when I inform you, three years later my wish came from the farm in 1900 came true.

I got my husband from this farm and also a start in pure-bred Langshans, fifty in number. The girl friend is now my sister-in-law and as yet the same good friends. Up until the time of my marriage, I lived in the city, now I am a regular "hay seed" farmer and a Black Langshan fancier for the following reasons:

First, their beauty as described, with a rich greenish, glossy black plumage, heavy toe feathering, and vigorously built. Hens ordinarily weigh six to seven pounds and I have about one dozen in stock, age two years in April,

that weigh nine and ten pounds each. Their frame is large and can stand the extra surplus. Cocks weigh from nine to ten pounds each. This is much to consider in selecting a favorite breed.

Another very important point to consider is the disposition. Do you fancy a chicken that picks and flies all to pieces like the true adage, "an old sitting hen?" The truth of the matter is I am afraid of them. It is a settled fact the Black Langshans have them all beat in this way; they make ideal mothers. I simply take any old hen off her nest and place her carelessly outside the nest until I have it ready, pick her up, set her on the eggs, and she is ready for business.

Don't think because they are large they break eggs. I dare say a Langshan will break less eggs than the "fluffy ruffle" kind, simply because they are more refined and are careful getting on and off their nests and do not

become excited when you look under them.

Take the wild hen. Even tho she is light, when you go near her away goes two or three eggs. I have witnessed this scene in visiting other yards. Another thing in their favor is the Black Langshan mothers aren't inclined to be ill-favored when other chicks a few weeks older or younger happen to get in her coop. Instead, she will treat them equal to her own, what I call a real mother. So you shouldn't worry if older chicks lose their way and by chance enter another coop because they will not be picked to death, but instead will find a warm welcome.

For example, a neighbor of mine has a blooded variety of small birds. They are wild as deers, last season he was obliged to cut off the ends of bills to save the lives of the baby chicks. The result was two old hens bled to death. He was mad and you can guess the

Diamond Corn Gluten Meal

A hen becomes a profitable investment when it starts to lay. Your pullets should begin to lay when they are four and a half to five months old

Protein fed in the right proportion is indispensable for the development of the young stock. Diamond Corn Gluten Meal contains the necessary protein.

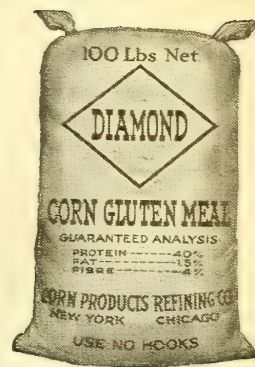

Try this formula for your young stock:—

50 lbs. of Wheat Bran	50 lbs. of Diamond Corn Gluten Meal
50 lbs. of Middlings	35 lbs. of Beef Scraps
50 lbs. of Corn Meal	15 lbs. of Bone Meal

In one case where this dry mash was fed a pullet laid her first egg four months and 10 days after she was hatched. The rest of the same lot were all laying before they were five months old.

The way for you to obtain the same results is to get Diamond Corn Gluten Meal from your dealer, and start feeding your young stock this mash.

THE A & D MFG. CO. P. O. Box 277-A CHICAGO, ILL.

rest. This year he starts with a pen
of blooded Black Langshans.

Now to give them credit for their
disposition, they are not destructive, and
their being contented is without a doubt,
another favorable asset. Their dispo-
sition is in direct contrast to a flying,
roving nature, and since I have had
flower beds near them with only a two
foot fence, I can say up to date, a Lang-
shan has not caused any trouble, even
tho the legs of the giant cocks seem
long enough to step over without much
exertion. Why? Because they are
contented, which is their nature. You
must agree it is more than they could
say of us at times. Another reason I
prize them so highly, is the combs of
the hens are large enough to be pretty,
and at the same time are not prominent.
When combs are large they get frosted
quite easily during the severe cold snaps.

The cockerels' combs are quite large.
However, in most varieties the combs of
cockerels are prominent, and in many
varieties the combs of the hens run the
same size in proportion as that of the
male birds, so a small comb on the
Langshan sets them ahead one more
point to my way of thinking.

Another beauty of this variety is—
they are all pals. They are inclined
to mate up in large groups, making it
a pleasure to cull out a roast, or to
drive them into their house. They all
agree to the decision of their husky
leaders, even tho it means the pot for
them. And when it comes to eating
them, no other fowl can eclipse them.

If you care to enter the show busi-
ness you sure have a "walk away," pro-
viding you have pure-bred Langshans.
Carefully select the birds for quality,
and type evenly, and general appear-
ance. They make a very attractive
sight when on exhibition in a show
room. Try and see for yourself. In
scoring they have advantage over other
poultry in this way; the plumage of a
Black Langshan is even and true to
color, while many others are hard to
mate, particularly when it comes to
marks and trueness of color. Even in
a white variety this trouble is found. It
is the ambition of every true fancier
to develop the best strains of his fa-
vorite bird, or to produce a bird far
superior to anything so far shown. This
is hard to do when you start with one
strain and then jump to another. For
instance, you may have gotten your in-
formation from one breeder, and after
a course of time decide to introduce new
blood in your flock; by so doing you
go to another breeder with an entirely
different strain. It's a mistake. Don't
do it. First study the different var-
ieties and visit the yards as I did when
a girl, and before deciding, make sure
your choice over all; then having select-
ed a strain, it is the wisest to stay with
that and to improve it to the best of
your ability.

It truly behooves us to be careful and
exact in our selection of the offspring,
and to keep an accurate record of all
the matings until such time as we shall
have established for ourselves a strain
that will stand forever.

It took me some years to learn. As
a rule true fanciers and breeders are
often the "small breeders," and they are
comparatively unknown in the show
room. Nevertheless, too often we small
fish in the poultry game decide we have
no chance, but to my way of thinking
we small breeders have the advantage,
if we but knew it.

A truthful poultry fancier I am person-
ally acquainted with, related this experi-
ence, with a blooded strain of a small var-
iety. He said when a strange dog or cat
comes on his poultry farm the very next
day, and for several days after, the egg
record drops fully one-half, while the
home dog continually about the prem-
ises is never noticed by the same hens.
I doubt very much if the Langshans
would notice even a "Ford" car in their
yard!

Another point in favor of the Black
Langshan, is, if you only consider this
variety for market prices you have a
variety to answer for all general pur-
poses. And for capons they are quite
profitable, as they get to weigh from
nine to twelve pounds each after being
caponized. This year capons live weight
are worth eighteen and nineteen cents
per pound. I can back up this state-
ment from my experience, and I can
further say that there is big money in
capons.

As yet, I have my first order after
thirteen years experience, to prove a
disappointment to myself or customer.
I don't mean to say this boastfully, I
only care to have the Black Langshans
get all the credit due them. It has been
my effort to give true statements con-
cerning my selection, also for being a
fond fancier of the Improved Black
Langshan.

MONTHLY PRIZE CONTEST DEPARTMENT

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

EXPERIENCES OF AN AMATEUR.

First Prize Article in American Poultry Journal Monthly Contest.

By JULIUS L. SCHMIDT, St. Cloud, Minn.

WE HAVE ALL heard a great deal about the advantages and disadvantages, for the amateur, of hatching and rearing by natural and by artificial means. Each system has its advocates. Personally, I have found the natural way the most satisfactory and prefer the old faithful hen, set in a soap box.

In January, 1915, I bought a pen of Barred Rocks, cockerel mating, from a reputable breeder, who advertises in this JOURNAL, and paid what my friends called an exorbitant price, remarking that I "was foolish to squander money in that fashion."

I felt at the time that I had more than my money's worth, but I decided to keep rather quiet on the subject for the time being and await developments. I housed them separate from the rest of my flock and gave them a good chance to make good, which they did by shelling out eggs in great numbers.

March first, I began to save the eggs for hatching and during this month the four hens laid 107 eggs—one hen did not miss a day. I set the eggs under a mongrel hen, of which I had a fair sized flock. The mongrel hens proved to be good "brooders," which reminds me of the saying "that there is nothing can beat a scrub hen in eating and sitting." The first hatches did not do so very well, but I attributed it to the fact that I had

Shoemaker's Poultry Book and Almanac for 1916.

Do it right NOW!

The Globe

The book has about 200 pp. with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies.

All about Incubators, their prices and operation. All about poultry houses and how to build them. It's an encyclopedia of chickenhood. You need it. Only 15 cents. Your money back if not satisfied.

EGGS AT HALF PRICE NOW

Send for circular—it contains prices that will interest you and everyone else, and is free for the asking. There are thousands of the best breeders for the coming season hatched during August and Sept. C. C. SHOEMAKER, Box 605, FREEPORT, ILL.

no satisfactory place to set the hens. I decided to sell off some of the fattest mongrel hens to a local hotel and to use their vacated house with a floor space of 12x24 for sitting hens exclusively. I arranged the nests along the walls and kept drinking water in the centre and a good supply of corn scattered about the floor.

Every morning at the same hour I removed the hens from their nests and allowed them plenty of time to drink, eat and dust themselves. As a rule they returned to the nests of their own accord—but I kept an eye on them to see that they made no mistake about it.

Before placing them on the nests I had dusted them all thoroly, and during each hatch I dusted them three or four times more with a good lice powder. Following this rule, I have had very little trouble with lice and the hens are remarkably contented and happy and not so quarrelsome as many broodies "I have met."

When the chicks are hatched, after greasing their heads with a mixture of one cupful of lard and two teaspoonsful of kerosene oil, to ward off head lice, I put them out in open front coops with their foster mother who has just "come out" of a good dusting.

At first I used wooden coops made from dry goods boxes, but I did not like these very well on account of the cracks in the boards being breeding places for lice and mites and therefore requiring frequent disinfection. I bought a dozen round metal coops, having a diameter of twenty-four inches, and fourteen inches high at the eaves. They are furnished with ventilation at the top, admitting fresh air at all times. The coop also has three doors, one a panel door to let the chicks out but keeping the hen inside. Another door is made of wire mesh to keep hen and chicks in while keeping rodents out, at the same time admitting a good supply of fresh air. A third door is provided for closing up the coop on cold or rainy nights. I like this coop so well after using it last season that I ordered more for use this year.

The November following the purchase of the Barred Rocks, I did not have a scrub left on the place, and after culling out all specimens of the new breed, I put eighty fine pullets into winter quarters in the coop I had used for sitting hens in the spring. On the advice of a fancier, I also saved a like number of cockerels to be sold as breeders the following spring. I was a little doubtful as to the advisability of keeping thru the winter these cockerels, for feeding so many "non producers" pulled heavily at my purse. But in January, 1916, the same friend induced me to enter some birds at the local show and I have been thankful to him ever since, for in a large class, I won first and third cockerel on two males entered.

I went home jubilant, well satisfied

with my win—and to my surprise I sold breeding cockerels to my skeptic friends who had insisted I was "stung" less than a year before. It was not long before I had sold off all the cockerels I could spare, most of them being sold locally, but a number out of the state. After counting up cash from orders and the amount of food consumed, I felt well repaid for wintering the cockerels—again I must thank my friend.

Altho I have only three city blocks in the suburbs, I have not been cramped for room in rearing young stock, as they have the run of a number of lots adjoining mine, the nearest house being several blocks away. The only trouble I have experienced from this unfenced range was the result of their getting into a field not far away, when the owner of said field threatened to break

my neck, while he broke most of the ten commandments in the meantime—but he is a good fellow just the same.

This spring I bought more eggs, both matings, from the same breeder I got the stock from last year. I am building another breeding house, 50x14 ft., and divided into eight pens, each to accommodate from five to twelve birds. I have found by experience that it pays to have the best in stock, equipment and food. The best is none too good for me or my birds.

A BOY'S PROFITS WITH POULTRY.

Second Prize Article in American Poultry Journal Monthly Contest.

By H. J. BOROWSKY, JR., Cleveland, O.

IT MAY be of interest to poultry readers to know how one may accidentally drop into a business that he had never thought of being interested in previously. Four years ago, my father, a pipe fitter, was working in the gas fields of Cleveland. One day he found a chicken entangled in a thorn bush, and seeing that it was helpless, took it out and brought it home. I was then eleven years of age.

My father wanted to kill the chicken and eat it, but I begged him to let me have it and he did so. The chicken was a mongrel, but I did not care about that—it looked good to me. It immediately interested me in poultry. One week later I bought three Single Comb White Leghorn pullets and a beautiful male bird with my allowance which I had been saving. After I had bought the birds, tho I had not thought of it before, I was surprised to see what a nice place we had to raise chicks; a long lot with southerly exposure, a number of beautiful peach, apple and pear trees and a good gravel soil.

I bought two piano boxes for fifty cents and a roll of tar paper for two dollars, from which I made a fine colony house for my flock. The pullets began to lay at an early age, one of them at five months and twenty-seven days. A month later all of them were laying. Two eggs was the least I received any day from my four pullets.

I did not know anything about poultry keeping, so I bought the AMERICAN POULTRY JOURNAL every month at the news stand and studied it carefully. The four pullets laid 695 eggs the first year—enough to keep us supplied with fresh eggs. I made \$12 on my little flock that year.

During the first few months of the second year the pullets laid well. The mongrel became broody and I set her, receiving ten chicks from thirteen eggs. I was not satisfied with so small a number of chicks, so I bought twenty more, but six of these died. That left me two dozen chicks. I made two houses from some old dry goods boxes which I got from a local store and housed the chicks in them.

In the fall when the young stock began laying, I killed off the yearling hens. The young birds proved to be good layers as well as very beautiful. I trapped them from the first and one of them laid 224 eggs, which I consider a pretty good record. During the year, the flock laid 4,200 eggs, certainly a very good average for a beginner in poultry keeping. The food cost forty dollars

and I received \$66 for my labor that year.

After that I found that I was very much interested in poultry, my flock having brought me in \$78 the first two years, so I bought an incubator and a hover. The incubator is a good one, as I had read it did not pay to buy too cheap a one. The hover was home made. The incubator was sixty-egg capacity, but after I had run thru three or four hatches, I had no more room to raise the chicks on our lot. I kept on hatching and began to sell chicks.

I sold 265 at twelve cents each, having kept all I had room for. I built a larger poultry house and extended the yard. The house is 12x25 ft. with a scratch pen underneath it. It is divided into two pens.

I killed off twelve of the old hens for table use and they were extra fine eating. We saved the feathers and cured them for pillows. For the year's work, I had taken in \$103.44 and my interest in poultry was on the increase.

I began the fourth year with 72 hens, having killed off all that were not suitable for breeding or keeping thru the winter. My flock laid well and the neighbors were my customers during the fall and winter and in the spring I sold a great many eggs for hatching. I also hatched chicks and sold them for thirteen cents each. At the end of the season I found I had sold 450 chicks at this price and had reared as many for myself as I had room for.

I have kept an account during all this time and I find that I have paid out for my poultry \$212.25 and have received from them \$312.54. In addition to this they have been a source of great pleasure to me and I have found poultry keeping to be a fine employment. I think other boys would do well to engage in it.

OUT OF THE EAST

By P. K. WHITE

When the July issue went to press, Mr. Stahmer and I were at Pittsburgh, intending to travel by auto as far East as Beverly Farms, Mass. On account of family affairs, Mr. Stahmer was recalled to Chicago and his trip East has been postponed until late this fall.

While in Pittsburgh we made a trip to Sharpsburg, Pa., to see the new Red Top Farm owned by John Spencer. If John keeps up his present gait he will have one of the best farms in that section of the country.

Otto J. Eberle is another Pittsburgh suburbanite who has recently acquired a new plant and is rapidly bringing same to completion.

Looks as if Cleveland will hold the record for attendance, for most everyone you can see, says, "I will meet you at Cleveland."

If you are in need of the services of a high class man with proven ability, let me hear from you, as I know two gentlemen with long successful records who are looking for positions.

Aurora, Ills., had four brutal murders some time ago. Police claim that three of them were caused by the publicity given the first one.

Rumor has it that Czar Baldwin will hold the next Pittsburgh show in the exposition building.

Answer inquiries promptly and with a typewriter. You will find that it will pay.

Time to prepare for the fall fairs. Keep your eye on those Southern fairs this year. There is going to be a "flock" of good ones and they are not "hard up" down there.

Exhibit at the big shows this year, you small breeders. You have all to gain and nothing to lose.

Just a suggestion. While attending a motion picture show recently, I witnessed a reel of pictures showing a duck farm located on Long Island, N. Y. It was a series of wonderful pictures and is without doubt, a good boost for the poultry industry. Now, if Bro. Cleveland and Atherton will get busy and make arrangements with some film company to take pictures of the show room, winners, etc., of their coming shows, I am sure it will be a great help to their shows and the industry in general.

Most water is pure. Stirring up the dirty might make the clear the same way.

There are a larger number of fairs scheduled for the fall than ever before. Get busy and start a little heavier advertising, the returns will more than justify the expense.

SEEN AND HEARD IN THE MID-WEST

SHEPARD STRONG

Study carefully the ads in this month's issue. There are some exceptional bargains in choice breeding stock. Poultry breeders desire to make room for the growing stock, so avail yourself of the unusual values offered.

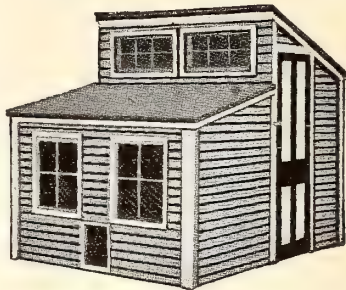

The premium lists of the fairs have started to come in. We find the poultry departments of many of them to be complete and offering every reasonable inducement to the prospective exhibitor. In fact, they are the last word in all that goes to make up a first class show list. However, I am sorry to state that such prize lists are in the minority, the greater portion of them being with the poultry most shamefully misrepresented and this in fairs representing some of the most populous counties in the United States. The following is a typical illustration: The classification is incomplete, the prize money is paltry in proportion to the amounts offered in the other departments and about everything is wrong that could well be imagined; doubtless, the poultry list hasn't been changed since ten years ago, when "old Si Whiskers," who was then superintendent, was its author. Now, whose fault is that? It is your fault, Mr. Poultryman, if you live in a community where such conditions are allowed to exist. Do you think the livestock breeders would allow his interests to be so slighted? No, you will find that he has guarded against that and is the owner of a small or large amount of capital stock of the fair company, so that he has a voice in its policies. What do you do, Mr. Poultryman? You sit back and say you wouldn't wipe your feet on the old fair (I have heard you say so on many occasions) and just let things go on in the same old way. I want you to think about what I am trying to impress on you when you go to the county fair this year and spend a few minutes looking at the miserable *misrepresentation of poultry*. You'll soon hurry away in disgust and at the same time have a pleasing thought of how fine your birds are going to look when you show them at Madison Square Garden or else at your local winter show, to which latter you always consider it your bounden duty, as a loyal fancier, to give your utmost support, both moral and financial. But the fair, which as an institution should be as much the cradle of the fancy poultry business as the winter show; the fair, thru which (if you only knew it) a good proportion of your customers have first become interested in poultry; the fair—well, might as well be in the bottom of the ocean, that for all you are concerned. If you would but realize it, the Board of Managers of your own local fair would be only too glad to have you interest yourself in its councils, so as to make its poultry show also one of the good ones instead of the disgrace that it now is.

Mr. Poultryman, wake up!
A. A. Carver, the progressive Rhode Island Red and Sussex breeder of Selville, Ohio, has recently completed a new breeding house about one hundred feet long. Our congratulations are extended to Mr. Carver on this substantial increase to his plant.

Mention AMERICAN POULTRY JOURNAL when writing to advertisers.

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

TRI-STATE FAIR.

The Memphis Tri-State Poultry Association announces the dates of its ninth annual exhibition as September 24th to 30th, 1916.

This show is held each year at Memphis, Tenn., in connection with the Tri-State Fair of Tennessee, Mississippi and Arkansas. Year by year the size and quality of the exhibit has increased as breeders are attracted by the liberal cash prizes and large specials. Through its policy of honesty and fair dealings and "cash for prizes" the Memphis Show now takes rank with the most stable and successful shows of the country.

The 1916 premium list will offer Four Thousand Dollars in regular and Special CASH PRIZES with competition open to the World. Heading the show will be the two important Specials—"The Open Sweepstakes" for the largest and best display, one breed and variety and a similar special; "The Southern States Sweepstakes," open to the breeders in the eleven Southern states.

The judges secured to date are: E. C. Branch, Lees Summit, Mo.; Chas. McClave, New London, Ohio, and J. C. Johnston, Springfield, Ill. These men have judged at most of the important shows from the Atlantic seaboard to San Francisco and their engagement at Memphis stamps the Tri-State Poultry Show as one of national importance.

The full and comprehensive premium list is now on the press and same, with full particulars, will be sent on request to C. G. Boyer, secretary-treasurer, 33 Porter Building, Memphis, Tenn.

OF INTEREST TO BANTAM BREEDERS.

Mr. Edward Joynson, Bridgeton, Mo., manager of the Henderson Barred Rock Poultry farm, and one of the best known experts in the country, will judge all varieties of Bantams at the Coliseum Show, December 13th to 18th, 1916.

Mr. Joynson is an old Bantam breeder from England, familiar with all varieties, and should be one of the strongest drawing cards in this class.

Mr. W. W. Henderson offers a \$25.00 cup for best display of Bantams, all varieties to count.

R. A. McKinney, president Mid-West Bantam Association, offers a \$10.00 cup for best ten Cochins Bantams by one exhibitor, and \$10.00 for best clean legged Bantams by one exhibitor.

Don't forget to register for premium list, which will be ready November 1st.

Theo. Hewes, Secretary,
Indianapolis, Ind.

BLACK ORPINGTON CLUB TO MEET AT THE COLISEUM, CHICAGO

The annual meeting of the American Black Orpington Club will be held in connection with the Coliseum Show Dec. 13th to 18th. More than \$100.00 in cash prizes, in addition to the Club specials, will be offered upon this variety. The class will be divided between Mr. C. S. Byers, Hazelrigg, Indiana, and Leonard Rawnsley, Columbus, Ohio. Those who have not registered for premium list will

please send their names to the Secretary, Mr. Theo. Hewes, 25 W. Washington St., Indianapolis, Ind.

NEW JERSEY STATE SHOW

Elizabeth, has been selected as the city to hold the state show and judging by the bunch of hustlers on the show committee, it will be a real show. Dates are Nov. 28-Dec. 3. A. J. Churchill, Secy.

A feature of the show to be held by West-

ern Ills. Fanciers' Assn., at Savanna, Ill., Dec. 6-10, will be the illustrated lectures every night. For further details write, E. A. Stouvenel, Secy.

ROSE COMB BARRED ROCK CLUB

Mr. L. T. Robinson, of Union City, Mich., has been appointed Secy.-Treas. of the American Rose Comb Barred Rock Club. A temporary breed Standard is soon to be issued for this new variety and all fanciers interested in this new Barred Rock are requested to join the club.

PEORIA DISTRICT FAIR

Peoria, Ill., will hold its first annual, District Fair Sept. 26th-Oct. 7. They are offering \$2,000.00 in premiums and judging from the gentlemen who are behind the movement, it is sure to be a success. For premium list, write W. O. Ireland, Sec., Peoria District Fair, Peoria, Ill.

NATIONAL BLACK LANGSHAN CLUB

On account of rearrangement of mail routes, the address of the secretary of above club has been changed to Indianapolis. Indications point to a good year in this variety and anyone interested in the club should write, H. A. Reasner, R. F. D., H-2, Box 283, Indianapolis, Ind.

It is a proven fact

that the small man and the big man take equal chances. Because you are not at present a well known breeder is no reason why you should not go in and win at

The Palace Show

even if you do not win it would be well worth your while to meet the breeders and buyers who are always looking for new men with interesting propositions. Think over well what you have to offer—

New York City

may make your reputation one to be envied thruout the trade. From a man only locally known, you can gain thru one exhibit a national reputation.

DECEMBER 5-9

However busy you may be, this is too important to miss. You cannot risk some one else getting the business that you want.

Entries Close November 20th

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and six cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

keep your powder dry!

In other words, be prepared for the Fall rush of business.

Get your share!

Don't let the buyers forget you during the dull Summer months. Don't think because you have nothing to sell now, that you can afford to get out of the "limelight." The advertisers that are carrying good sized space now are the ones who will, in the Fall, reap the benefit of the prestige thus established.

The ranks of the buyers are constantly changing—the new are coming, the old are going.

In time of Peace prepare for War.

Get the Money Your Birds Are Worth

HERE IS SOMETHING SO NEW

so different, so original, and at the same time so immensely practical that every poultry breeder in the United States should immediately send for a copy of this clever selling method. Not only does it explain in detail a new method of selling Standardbred poultry and fixing the true value of fowls, it will also be of tremendous benefit to anyone interested in the breeding and mating of poultry for exhibition purposes. It will, in fact, make you an expert judge of your variety quicker than you can imagine.

Don't Sell Prize Winners for a Song

Time and again you have sold birds that were worth considerably more than what you "guessed" them at when you quoted your customer. Time and again you have sold birds on a repeat order when the quality did not correspond with the customer's first purchase, and you can still remember his letter with the "kick".

Read what Eugene Smith, the well known White Leghorn breeder of Aurora, Ill., says about my system.

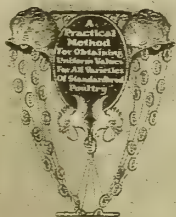

Dear Sir:—Your Selling System fills a long felt want and should be in the hands of every poultry breeder in the United States. It is practical, original and easily applied.

Send \$1.00 for Your Copy

and if upon examination you do not think it is really the most practical method for selling thoroughbred poultry and the best thing ever offered for this purpose, I will cheerfully refund your money. Be sure and mention variety which you breed.

LOUIS A. STAHLER, 1305-542 S. Dearborn St., CHICAGO, ILL.

Holliston, Mass.

The Queen Gets The Chicks

Producing large hatches of strong, lively chicks, able to live through the uncertain period of the first few weeks and develop into vigorous fowls it pays to feed and raise. Many farm folks tell us that the Queen is exceptional in this respect. A perfect Regulator and the proper degree of moisture required are two of the advantages of the Queen. Not a cheap incubator, but cheap in the long run.

OPEN-AIR POULTRY HOUSES

FOR ALL CLIMATES

By Dr. Prince T. Woods, America's Leading Authority on Practical Poultry Keeping

The best house book ever published. Now ready for delivery. Be sure to read it before you build or make alterations in your poultry houses. Just out. 88 pages, 46 illustrations and 5 1/2 x 8 inches in size.

A well written, well printed, well bound (in cloth)—a real book, not a pamphlet or catalog. Just what you are looking for if you want to be successful with poultry. All new. Special illustrations from pen drawings and from actual photographs of construction work. Plainly worded. Easily understood. Tells plainly how to build and what to build so that anyone at all used to handling tools can build a good practical open-front poultry house.

The Three Best "Fresh Air" Poultry Houses

Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. Government workers favor these open-air houses. The "fresh-air house" has come to stay and you will want to build one. It means better fowls, freedom from disease in the egg flocks, better egg yield, better fertility and better chicks.

No Matter Where You Live, If You Keep Poultry You Need This Book

There are nine chapters and every one of them full of live interest and helpful information. Just look over the table of contents: Chapter I—Sunlight and Fresh Air. Chapter II—Why Use Open-Front Houses. Chapter III—Hints and Helps on Building. Chapter IV—Location of Poultry Houses. Chapter V—Dr. P. T. Woods' Improved Open-Air Poultry House. Chapter VI—Another Plan for Dr. Woods' House. Chapter VII—The Gillette Open-Air House. Chapter VIII—H. H. Stoddard's Open-Air Cage Roost. Chapter IX—The Tolman House.

Does this mean anything to you? Greater comfort for your fowls, better returns and bigger profits—If it does appeal to you, then you want this book on open-air houses. If it does not appeal to you, better read it and find out what others are winning success with. Fresh-air methods have helped others to become successful and make bigger profits. Why not you?

The Dollar-Making Line

Andrews' Efficiency Coop Lowers First Cost and Cuts Down Express Charges

Why should you waste time, money and good lumber making heavy, cumbersome shipping crates which you will use only once? Ship the modern way—the Andrews way. Andrews' Efficiency Coops not only save you money on first cost, they are so light that the express charges are sure to be less, and you will use them over and over again. No hammer or nails necessary—"the coop without a nail." You can put them together in a jiffy and fold up and lay away in little space when not in use. They are water-tight, simple, strong and safe. Your birds arrive without injury.

My poultry remedies, *Obaco, Poultry Medicine, Deathmite and Disinfectant and Dip*, will do wonders for your flock. Cure almost any disease and keep every chick in top-notch form. No poultryman should ever be without them.

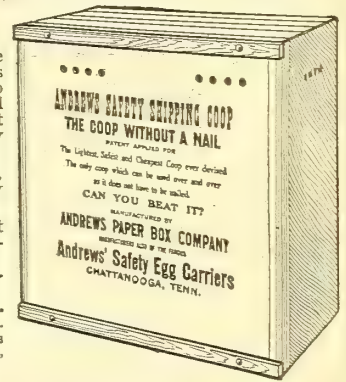

Write for the "Poultryman's Text Book"—FREE. Tells you exactly what to do to make your poultry pay better. Compiled from my personal experiences on Premier Farm.

AMERICAN POULTRY JOURNAL

WE LEAD - OTHERS FOLLOW

Ducks Thrive on Red Comb

"Eleven months' egg record from ten ducks fed only on Red Comb Feed shows 1952 eggs"

"MY record for ten Indian Runner Ducks, fed exclusively on Red Comb Meat Mash and having no run whatever and receiving no green feed except that contained in the Meat Mash, was 1952 eggs for eleven months. Counting up my record for this month (April) I find I have received 763 eggs from thirty-one ducks."—Homer Edner of Du Bois, Pa.

Mr. Edner's letter is a good endorsement of our strong assertion, "There is a Red Comb Feed for every poultry use."

Red Comb Feeds are used all over our country by successful poultry raisers for ducks, turkeys and chickens. Red Comb brings health, strength and vigor. It makes the flock just what you want it to be—a flock of steady, natural layers.

Red Comb Meat Mash

the great egg maker, is made of oat-meal, oil-meal, corn-meal, meat scrap, wheat bran, wheat middlings, alfalfa-meal, and *not over 5% shell and 1% charcoal*. These ingredients are the best earth can produce. And are balanced perfectly by experts.

The Feed You Give Determines Your Success

Feed rations decide the poultry success of every poultry raiser. The feed you give your flock either makes constitutional vigor, making the fowl a steady

layer, or its poor quality lessens the vitality of the bird and poultry profits for you. This point is easily seen as you know the value of proper feeding in every walk of life. Make your flock pay you a bigger profit. Start feeding Red Comb Feed today. See your feedman—insist on Red Comb.

"Feeding Poultry for Profit"

Our famous poultry book gives the poultry experiences and advice of six great poultry experts. It's FREE. Write for a copy now while the thought is in your mind.

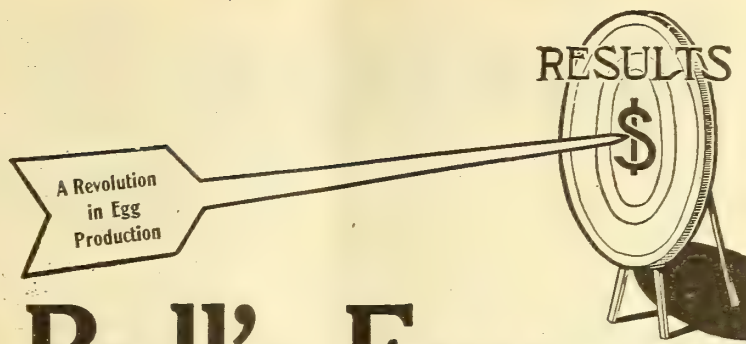

Hales & Edwards Co.

(Formerly Edwards & Loomis Co.)

"Means Health"
Red Comb

A Bull's-Eye

George G. Newell's new book, "A Revolution in Egg Production" tells you how to hit the bull's-eye of *Results*. It shows a method that will

Increase

Your Egg Production

100%

during the molting season and in the winter when you need it most.

It takes nearly all the eggs your hens lay to pay expenses, doesn't it? *Every additional egg you can make them lay is clear profit.*

This book is not a jumble of clippings like many on the poultry industry, but an intelligent, well written guide to success. No man or woman has been in the poultry business so long or knows so much about it that they can afford to pass this offer by.

We said you could increase your egg production 100%. It has been done. You can do it.

Don't rack your brain with doubts!

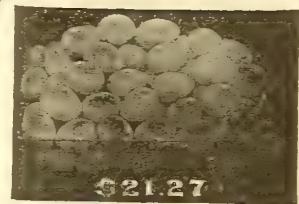

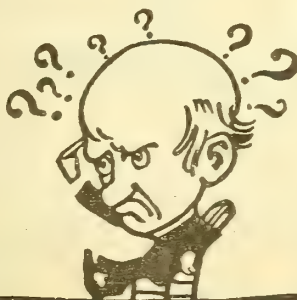

"Procrastination, the thief, stealeth away thy fortune"

THIS!

HOW

*does this,
look to you?*

Many \$3.50 Utility Anconas—Sheppard's strain—will produce eggs to the value of \$21.27 and over within a year. We have abundant evidence to that effect. That's why there is a quickening demand for **Sheppard's Famous Anconas** from every part of the world. Not only are they the World's greatest egg machines and winter layers—with the somewhat amazing egg record of 256 average for a flock—but they're wonderful prize winners as well.

**Sheppard's
Famous Anconas**

Score Nearly All Firsts at
Madison Square Garden

For nine consecutive years my birds have won three times as many first and second prizes at the nation's greatest shows—including recent exhibits—as all my competitors together. You see why they are "famous"—and best, don't you?

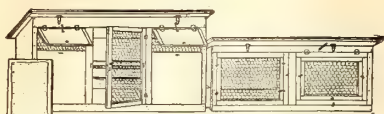

If you want winners—or egg producers—write for catalog. Don't buy eggs, baby chicks or stock until you read the story of Sheppard's Famous Anconas.

MINORCAS Giant S. C. BLACKS

A fine lot of young birds now ready for the early shows from my Chicago, Cleveland, Indianapolis and Pittsburgh winners. Mention American Poultry Journal.

JOHN L. BROWN

1515 W. 7th St.

ANDERSON, IND.

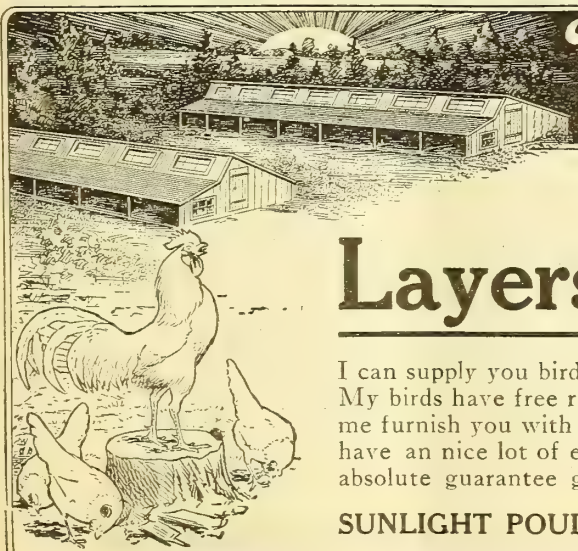

Keep Up with the Procession

THE FACT that your name was a household word to the poultry raising fraternity last year and the year before does not mean that you can lay back on your laurels. The ranks of the buyers are constantly changing—the old are going—the new are coming.

Mr. Advertiser! Do you know that a conservative estimate of the number of new subscribers put on the American Poultry Journal books the past year is

20,000?

Are you using sufficient space to impress these new buyers or merely carrying a "rate holder" on the supposition that "everyone knows us." Month after month our advertisers are finding that the cheapest medium for making sales is the American Poultry Journal—in fact it so outclasses other publications in its field in the matter of returns that many are using it exclusively. *The American Poultry Journal reaches all the buyers worth reaching.*

"SUNLIGHT" POULTRY FARM S.C.W. LEGHORNS

Best Known Layers. Young Strain.

Layers or Show Birds

I can supply you birds that cannot be excelled for type, color or as egg producers. My birds have free range the year around, meaning sturdy, vigorous fowls. Let me furnish you with a pen or a trio, that are fit to win in the early shows. Also have an nice lot of early hatched cockerels at prices that will surprise you. My absolute guarantee given to all; write me today please, for catalog and wants.

SUNLIGHT POULTRY FARM E. N. LEMON, Owner Lynchburg, Ohio

OWEN FARMS

Buff and White Orpingtons
S. C. Rhode Island Reds White Plymouth Rocks
White Wyandottes and S. C. White Leghorns

Will Win Wherever they are Shown

They have demonstrated their superior quality at Madison Square Garden (New York), Grand Central Palace (New York), Boston, Chicago, Cleveland, Pittsburgh, Syracuse, Allehtown, Atlanta, Augusta, Nashville, Memphis, Livermore (California) and Brockton (Massachusetts), by

Winning More Firsts Than All Competitors Combined

In addition thousands of prizes at hundreds of shows all over the world have been won by Owen Farms birds in customers' hands. These include the largest shows in the United States, Canada and the various foreign countries.

MY BIRDS ARE LINE BRED

from generations of winners and win consistently year after year. They have always made good in the past and will make good in the future. Old customers come back to me year after year when they need a bird or birds to complete their strings, and many of my new customers come to me because old customers tell them they will find absolute satisfaction with purchases made here. These facts give me more personal satisfaction than any others connected with my business. Every bird you buy here will be carefully selected by either Mr. Davey or the writer and a careful record kept of same. We are a unit in giving every customer just a little more value than he pays for, or expects. You will receive the benefit of our long years of experience as successful breeders.

Winners Furnished for Any Show in the World

No matter where you wish to win, you will find here the bird of birds you need to win for you. The best part of it is they will be line-bred birds of my own growing that will breed you winning chicks. It will be wise for you to place your order early and secure for yourself the all powerful backing of Owen Farms flocks. I only sell to one customer for a given class for any show; so an early order may prevent your main competitor from securing a bird here to win over you.

393 Owen Farms Birds have won first prizes at Madison Square Garden, N. Y.
No Similar Record has been made by the birds of any other breeder.

1916 QUALITY

It is to your advantage to order early. My flocks now number over 8,000 birds and they are the finest average quality ever on Owen Farms, which means they are the best to be found anywhere. My hatching commenced in early January and continued well into July. This will give me youngsters in their prime for your show, whether it be early or late. You will find among these superb birds exactly what you need for showing, breeding or utility. The winners for your fall fairs as well as you winter shows are among them.

UTILITY QUALITIES

The latter part of May, January hatched pullets in four varieties commenced laying at less than five months of age. This will show you the early maturing qualities in my four largest varieties. (As no Leghorns or Wyandottes were hatched in January these are not included.)

Owen Farms birds are famous the country over for size, bone, perfect health, vigor, prepotency and heavy laying qualities. There are no birds anywhere that excel them in these important functions and they have few equals.

My Birds Live, Grow, Lay and Pay. Husky Utility Cockerels, \$3, \$4 and \$5 each. Pullets, \$2.50 and \$3 each.

BREEDING BIRDS

You are already planning your matings for next season. Your young birds are not fully developed, but you know about what you will need to make your matings the strongest you ever had. Why not place your order now for future delivery? Will select the exact bird or birds you need and hold them until you want them, upon payment of 25% of amount involved. An early order while my flocks are very large will work to your advantage and to mine.

Owen Farms New Illustrated Catalog

will prove a real treat for you if you have not already seen it and is yours for the asking. A careful reading will make you an Owen Farms customer and your treatment here will make you a permanent one.

Satisfaction Guaranteed Every Customer Every Time

This guarantee is backed by my 27 years experience in breeding and selling thoroughbred poultry.

SEPTEMBER, 1916

ARTHUR G. DUSTON—PIONEER POULTRYMAN

ARTHUR G. DUSTON, of South Framingham, Mass., is a specialist breeder of White Wyandottes. He was born in Auburn, Maine, and is 49 years old. In 1888 he moved to Marlboro, Mass., and for a number of years was engaged in the manufacturing business. He began breeding poultry in 1892 and at first bred Black Langshans, Barred Plymouth Rocks, Buff Cochins, Light Brahmas and White Wyandottes. For a time he devoted a good deal of attention to market poultry and particularly to the production of fancy quality broilers. "Duston's Butter Balls," as some customers knew them, were about the last word in delicious, quick-grown, plump broiling chickens. In all probability it was their exceptional value as a quick-grown market chicken that

first influenced him to become a White Wyandotte specialist. Whatever the reason, he discarded all other varieties in 1894 to devote himself to White Wyandottes exclusively. Standard quality and the production of prize winners was ever a hobby with him and he has bred White Wyandottes that have won on merit in big and little shows all over the country.

Naturally his fancy poultry business, the production of breeding and exhibition stock and eggs for hatching grew to such proportions that it demanded all of his time. Duston birds are well known everywhere and he has shipped stock to practically every country where there is an interest in thorobred poultry.

What Uncle Sam Is Doing for Poultry

Illustrated Report of a June Visit to the United States Experimental Poultry Farm at Beltsville, Maryland.

By Prince T. Woods, M. D.

OUR FIRST VISIT to the United States Government Poultry Farm at Beltsville, Maryland, was made in September, 1912. At this time Uncle Sam's poultry plant had only just chipped the shell and gave promise of becoming a lusty chick. Our second visit was made late in June of this year, 1916, and we were very agreeably surprised to find how much progressive work had been accomplished in less than four years. Government work is apt to be slow and to get tangled up in "red tape," but if Uncle Sam's poultry

investigators have experienced any such difficulties, their work does not show it, for, altho not yet fully fledged, the U. S. Government poultry plant is a thrifty, healthy, promising youngster that shows good growth along sensible and practical lines. In a few years much has been accomplished, and, with proper encouragement, the next few years will see much good work done.

Every poultry man or woman, every poultry organization, large or small, should get in touch with Senior Animal Husbandman Harry M. Lamon, Poultry Investigations, Animal Husbandry Division, Bureau of Animal Industry, United States Department of Agriculture, Washington, D. C., and ask the honor and privilege of an opportunity to co-operate with the Government in its poultry work. By such co-operation much good can be accomplished for the poultry interests of this country. From American Poultry Association official sources we were informed that about a year and a half ago the U. S. Dept. of Agriculture honored the American Poultry Association with several requests for co-operation in its poultry work, particularly in connection with the Girls' and Boys' Poultry Clubs, but at that time the President and Finance Committee of the association "did not feel that the necessary expense could be incurred" and, at present writing (July, 1916), we believe that thus far the American Poultry Association has no effort to take advantage of this golden opportunity to accomplish a great good for poultry interests. We believe that had the rank and file of membership been informed concerning this matter, that there would have been a way found to co-operate with our Uncle Sam. Opportunities still stand in line at the doors of organized poultry interests and we hope that they will not be turned aside. In our humble opinion no one could so well and ably standardize and promote pure-bred poultry interests, for the benefit of

all poultrymen, as the work could be accomplished under the direction of the United States Department of Agriculture in co-operation with State Agricultural Departments, poultry organizations and poultry keepers everywhere. The matter surely is "worthy of a thought."

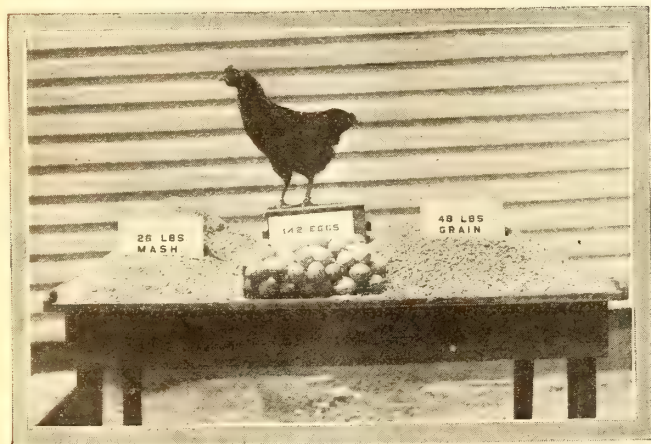

The United States Government Poultry Farm is located at Beltsville, Maryland, some thirteen miles out of Washington, D. C. By train or trolley from the Capital it is easily accessible and the roads are now excellent for automobiles. On our first visit we made the trip over deeply rutted, muddy roads, in a farm wagon from the railroad station, but on our second visit we motored out from Washington in the luxurious comfort of a touring car, driven by Alfred R. Lee, one of Uncle Sam's animal husbandmen. As a guest of our

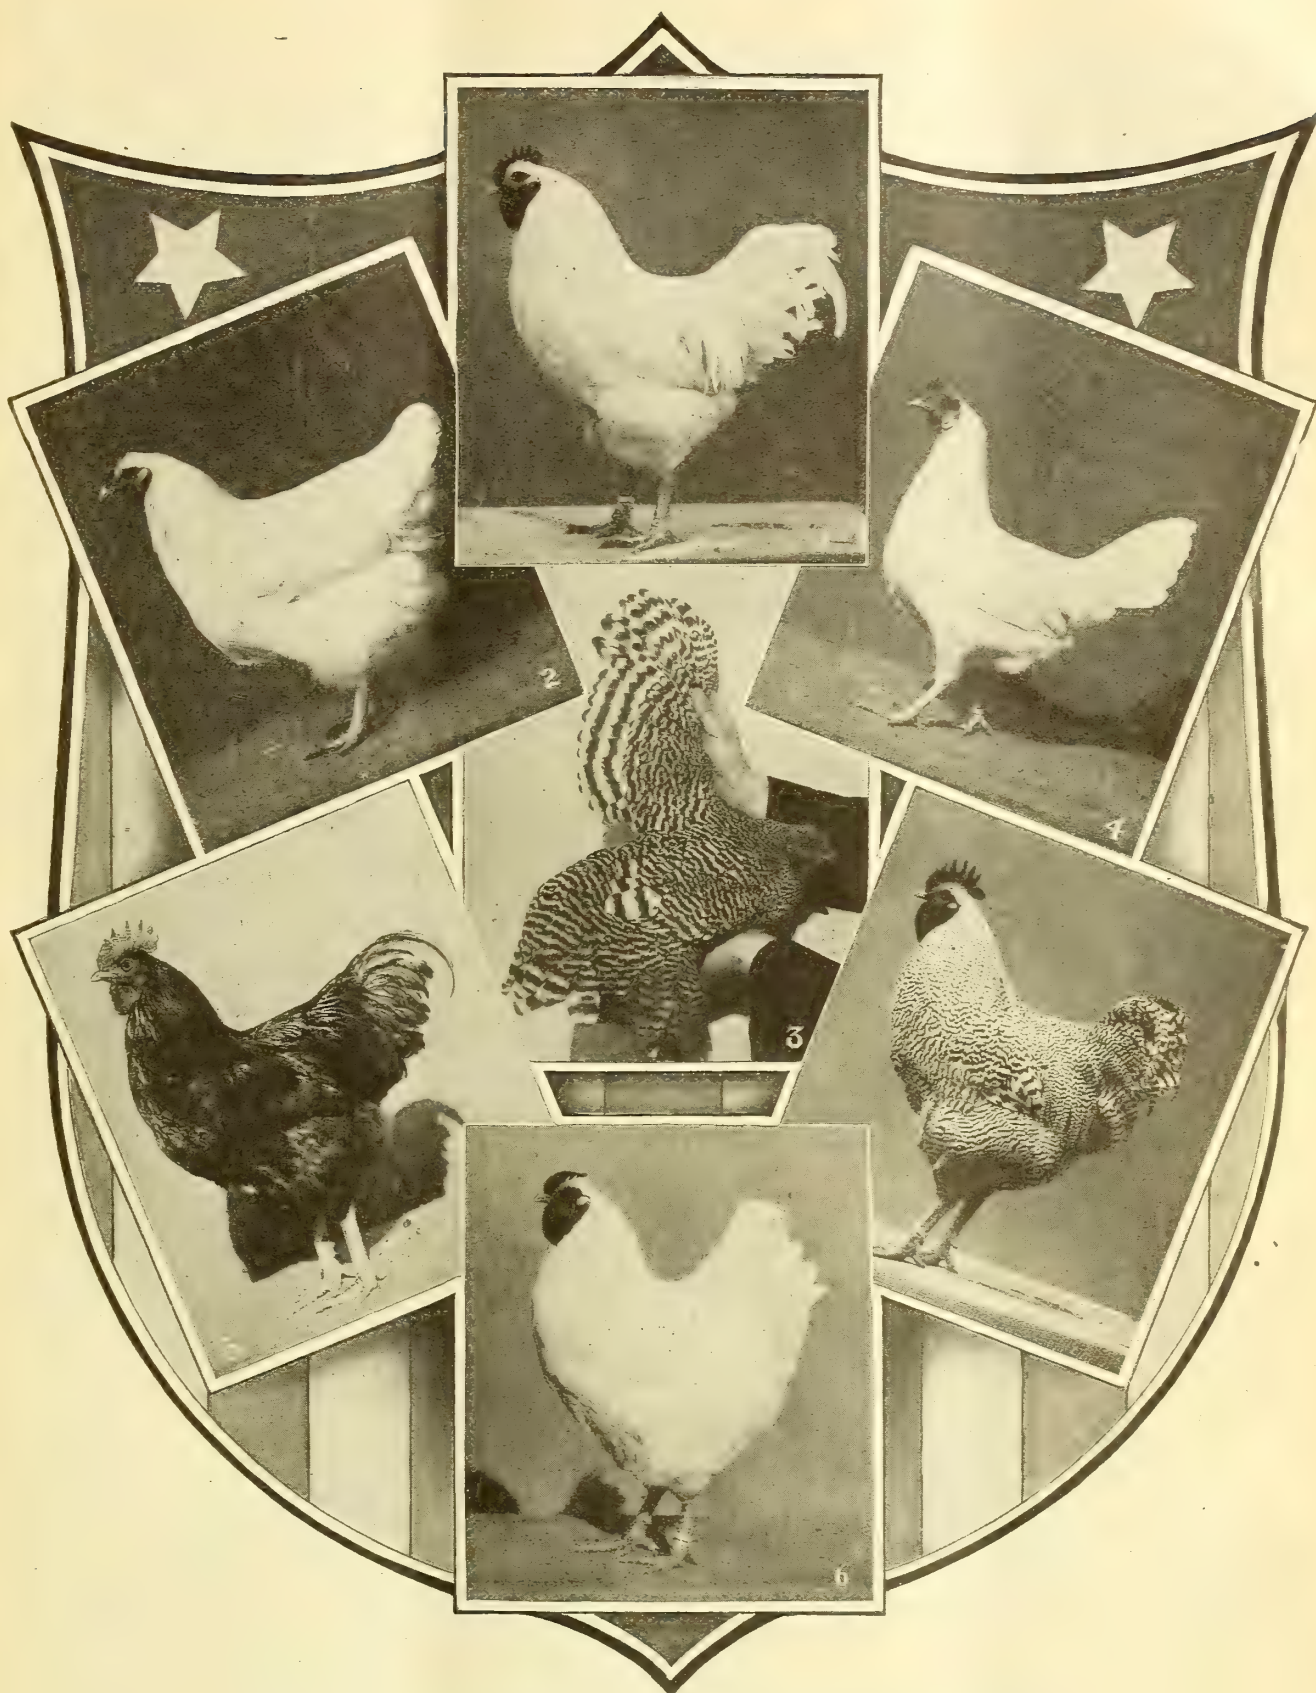

Growing range used for chicks in June, 1916, at U. S. Government Poultry Farm, Beltsville, Maryland.

Uncle Sam, we had a most agreeable and interesting visit in company with Harry M. Lamon, Alfred R. Lee, Robert R. Slocum, Joseph W. Kinghorn, of Poultry Investigations, and a government photographer. Altho it was visitor's day for us, a fact that impressed us most favorably was that our visit did not interrupt the regular routine of experimental work, and these Government poultry husbandmen, in jumpers and overalls, tackled the work in hand as if they enjoyed it and with the enthusiasm that is only born of intelligent and deep-rooted, wholesome interest.

There is a great deal of practical and worth-while experimental work under way, some of it of several years duration. The record keeping system is very complete and the records were open for our personal inspection, tho most of the data is not available for publication until it has been presented in the form of Government bulletins and circulars. There are many interesting poultry breeding experiments with pure-bred stock, including the holding of certain fine males "at stud" and breeding females to them after the manner of breeding other thorobred animals. This plan is working out in a very satisfactory manner. Breeding is conducted to improve both the beautiful and the useful characters, and the prepotency of individuals is studied and recorded. Experiments in using pure-bred males to grade up ordinary flocks are demonstrating the value of the pure-bred male. Breeding to improve egg production has apparently demonstrated the value of using the selected good layers, even from flocks of rather poor layers, for breeding purposes and that the daughters of such selected layers may prove better producers than their dams. We did not observe that breeding from unusually fecund females had resulted in any preponderance of high-record layers in the progeny however, and high record layers appear to be still comparatively rare birds on the plant. Pens of mongrel fowls, selected just as they come from the

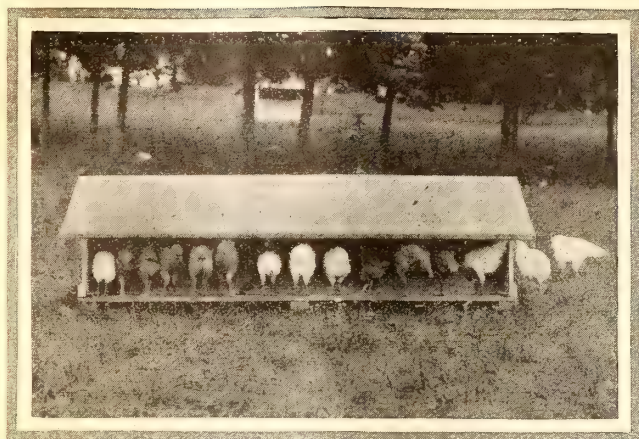

The first year's record of food consumed and egg yield of an average Rhode Island Red pullet. This pullet was in Pen No. 1 at U. S. Government Poultry Farm, Beltsville, Md. She consumed 26 pounds of mash and 48 pounds of grain, and her egg record was 142 eggs for her pullet year. Just compare the size of this pullet with the heaps of raw material and basket of finished product used for illustrating what this small egg machine accomplished.

PURE-BRED FOWL BRED AND OWNED BY UNITED STATES GOVERNMENT.

The above pure-bred fowls are the property of our Uncle Sam and these unretouched photographs, by the artists of the Bureau of Animal Industry, show that quality poultry is being bred at the U. S. Government Experimental Farm, Beltsville, Maryland. (1) White Plymouth Rock cockerel. (2) White Plymouth Rock female. Her record shows 84 eggs in 92 days; 109 eggs in 122 days, and she was bred on Uncle Sam's poultry plant. (3) Pullet-bred Barred Plymouth Rock, showing that the U. S. Poultry Investigators are breeding for quality and beauty, as well as the useful meat and egg values. (4) White Leghorn female. She has a record of 214 eggs in one year. (5) S. C. Rhode Island Red cockerel. The photo does not do him justice, for he is a bird of fine color all over and very uniform in coloring. (6) White Wyandotte cockerel. (7) Pullet-bred Barred Plymouth Rock cockerel. It is worth noting that the birds of Uncle Sam's breeding are well-developed, sound, healthy, vigorous specimens. The beautiful and the useful is well combined here.

One of the large food hoppers in use on the growing range at U. S. Government Poultry Farm, Beltsville, Md. This hopper is filled with dry mash and these chicks posed naturally and especially for American Poultry Journal to show the hopper in practical every-day use.

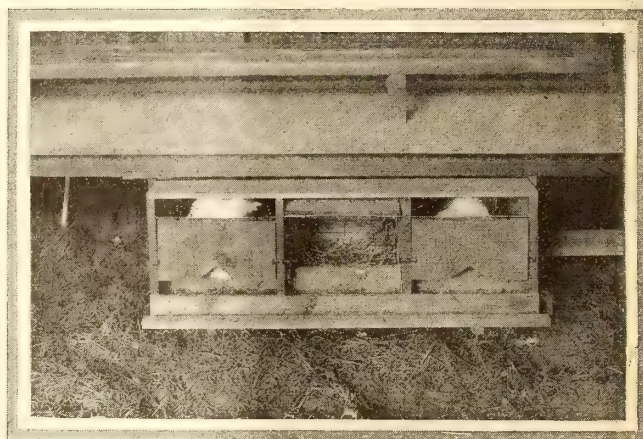

live poultry market, are being compared with flocks of pure-breds kept under like conditions. Breeding, hatching and rearing experiments cover a wide range. There are many feeding experiments being conducted and a bulletin reporting work thus far is shortly to be issued. We saw flocks without any animal food and others on various rations which include different sorts of animal food in varying percentages. Practical and simple, easily prepared rations are being compared with more complex mixtures. In our opinion, the simple rations with a fair percentage of animal food will be found to give as good results as any. One ration that appeared to be giving excellent results, was sufficiently simple to meet conditions in almost any location. This ration consists of dry mash, two parts of corn meal and one part each of bran, middlings and beef scraps; a scratch grain mixture of equal parts wheat, corn and oats; the birds being encouraged to eat about the same quantity of mash as of scratch grain. Twenty-two separate pens are included in feeding tests; six of these in their fourth year.

All experimental work is conducted in an open-minded way, for purposes of observation rather than in an attempt to prove or disprove anything. The records are carefully and accurately kept and the summing up of this data should prove of considerable value to poultry keepers. At the time of our visit there were several hundred fine large pure-bred chicks on the growing range and the chicks of a number of colonies were being weighed, rebanded with larger leg bands and the weights recorded. Chicks are weighed at various stages of growth and the records present valuable data for comparison.

It is no small stunt to keep one breed or variety and breed it to a reasonable state of pure-bred perfection. Uncle Sam, on his farm, is breeding White Leghorns, White Wyandottes, Buff Leghorns, White Plymouth Rocks, Barred Plymouth

Rocks, S. C. Rhode Island Reds, and Buff Orpingtons, and is able to show very excellent quality in all of his varieties. In addition he has a number of flocks of grades and common fowl that are being used in experimental work. There are 70 breeding pens. Recently a pigeon house and fly has been added to the equipment and some interesting breeding work is being done with pigeons of several varieties.

A new and attractive modern residence has been built for the resident poultryman and a number of poultry buildings have been added to the plant since our first visit. At the present time Uncle Sam has a convenient and practical, well-equipped poultry plant, kept in neat and attractive condition, so that it is always ready to receive visitors. All equipment not in actual use, is put in order and stored away under cover until needed. The photographs with this article tell the story of the plant better than it can be told in words. The two long breeding houses are well and substantially built and are models in convenience and comfort. The new cockerel house is one of the best we have ever seen and is fitted with pens for cockerels "at stud," for small special matings, and for surplus males. Scattered over the plant are many convenient colony houses for layers and for growing stock. On the growing range are colony brooder houses and colony coops for growing chicks. In the breeding houses trap nests are used, and these are of a very convenient and inexpensive pattern.

Interior arrangement of a pen in Uncle Sam's long poultry house, showing trap nests in use. U. S. Government Poultry Farm, Beltsville, Maryland.

Plans of poultry buildings and equipment used can be obtained on application to the Department. The Government makes exhibits at fairs and shows, in co-operation with the local management, when desired, and at these exhibits working models of poultry houses and equipment are shown together with a splendid line of charts and instructive poultry pictures.

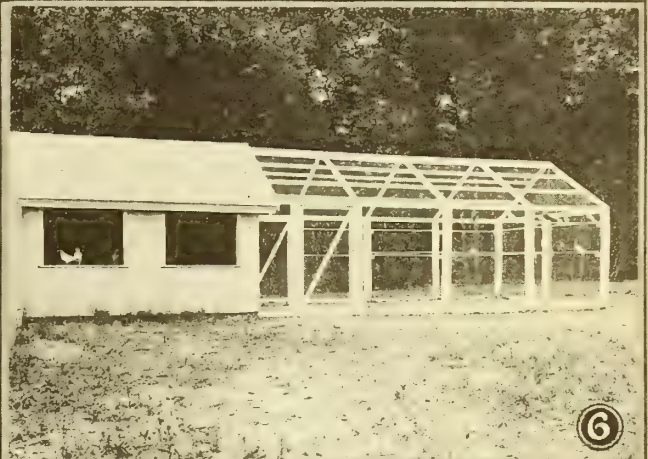

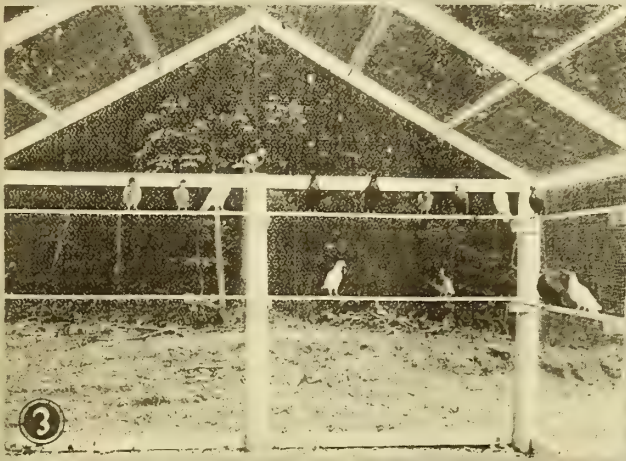

At the farm, moving pictures are being made, from time to time, of various phases of poultry work and photographers are kept busy in making photographic records of the progress of the work on the poultry farm. The Department has several reels of poultry movie films that are available for poultry instruction work and these are so greatly in demand that they are almost constantly in use and requests for them have to be filed well in advance. Also there are many fine lantern slides of poultry subjects used in lecture work before Girls' and Boys' Poultry Clubs and other poultry or rural organizations.

Taken as a whole, Uncle Sam's work, for more and better poultry, shows progress and the development of a Government poultry plant and organization that is well worth while, and one that will undoubtedly do much for pure-bred poultry and for the betterment of every poultry interest.

Group of colony growing coops on a shady woodland range at U. S. Government Poultry Farm, Beltsville, Md.

Do you ever have an idea that savors of originality? Your future success calls for some measure of original thought. Form the habit today, of searching your brain for useful ideas. The ideas are there, but it requires a little mental exertion to reveal them and put them into working.

VIEWS OF UNITED STATES GOVERNMENT POULTRY FARM.

(1) Long cockerel house, equipped with cockerel pens and affording opportunities for special matings and holding desirable males "at stud." (2) Long breeding house No. 1. At the right is a two and one-half story section used for grain, supplies, and as an office. (3) View of the interior of pigeon fly, showing some of the fine breeding birds now being used in experimental work. (4) Residence of the resident poultryman. (5) View of breeding house No. 2, showing the double yarding system. (6) Pigeon fly at end of breeding house No. 2. (7) Colony houses used for experimental pens and for growing stock. At right side of this view is shown a stile which is found very convenient when used in place of a gate. (8) Colony houses and yards in the woods. Wherever you go on Uncle Sam's poultry farm, you find things neat and in order.

THE SURVIVAL OF THE FITTEST

How to Establish a Strain—Breeding for Uniformity—How to Select Good Vigorous Specimens—Selecting for Standard Points. *By Chas. A. Simmonds*

THE amateur breeder is usually quite eager to learn how to breed the best fowls, but alas! after reading the many different "systems" and theories on the question, many of which are couched in technical terms, he is frequently at a loss to know how to proceed.

The breeding of fine fowls is an art. A scientific understanding of heredity is a great help, but the artist at breeding will always excel the scientist in the results produced. The most successful breeders have generally followed systems

of their own and can only tell in a general way how they do it.

An exceptional fowl, one that excels its ancestors, and its brothers and sisters, is frequently produced by chance. Any breeder will thus breed a few good birds, but the true test of a breeder's skill is the average quality of his entire flock. Having produced a bird with ideal qualities, the next step is to produce more like it and eventually fix its good qualities in a strain. The method of mating to accomplish this result in the shortest possible time differs according to whether the desirable characteristics are dominant, recessive or mixed dominant, or according to the degree of its prepotency as a breeder. A skillful breeder can take any strong vigorous bird, regardless of how produced, and eventually reproduce any characteristics which it may possess, even tho they may be recessive characteristics which will not show in the first generation. To bring out the recessive characteristics it is necessary to mate the progeny of the bird together, brother and sister, which will produce progeny one-fourth of which will show the recessive characteristics. These are pure recessives and will not breed the opposite characteristics of the original bird. A strain may be produced from one individual specimen, that when bred in line will produce the desirable characteristics upon 90% of its progeny, and the foreign or undesirable characteristics on less than 10% of its progeny.

In mating and breeding man can only assist nature, he cannot improve on her. In nature only the fittest survive, and this is but a small per cent in any species, tho the per cent varies with the species. The elephant is the slowest breeding animal known, but it has been estimated that if each elephant born were to live till it had past its period of prolificacy it would be but a comparatively short time till the world would be covered with elephants. Upon the rapidity with which a species in the wild state reproduces must, to a large extent, depend the per cent of its progeny that live to reproduce their kind. Thus it is that while a species may gradually increase and replace an inferior species which is decreasing to finally become extinct, nature continues to maintain the proper balance between the different forms of animal and vegetable life. This process of natural selection has been termed, "The survival of the fittest," because the specimens which in the wild state live to reproduce their kind are those best fitted to procure food, withstand the devitalizing effects of parasites, excessive heat or cold, and escape destruction by beasts and birds of prey. Also in the case of males (especially in polygamous species) it is either those who can best please the females by beauty of plumage or voice, or defeat in battle rival males for the possession of the females that leave the largest number of descendants. In the majority of species the beasts and birds of prey take a much larger toll than all other agencies of destruction.

In the breeding of domestic poultry we find that while the characteristics that determine fitness in the domestic fowl are very different from the characteristics demanded by nature, we can find no system of selection superior to nature's. We can, however, secure the desired results in a much shorter time by not only eliminating the unfit but also those that being impure in their characteristics or mixed dominants fail to breed true to their type.

The advocates of line-breeding have frequently referred to the uniformity of coloring in wild birds of the same species. The fact is, if one will study as carefully and from as close range a flock of wild fowl he will find about as much variation in color as one unfamiliar with the Standard requirements would be able to find with an equal amount of study of some of the best flocks of domestic fowl. There is always a difference in individual specimens, no two are alike, and variation, if not too great, is an advantage, as without it there could be no selection either by nature or man. The reasons that there is generally more uniformity among individuals of a wild species than those of the breeds produced by man are because nature is more rigid and persistent in selecting toward a certain type and because by this rigid selection she eventually increases the per cent of the blood of the desirable and prepotent ancestors and decreases the per cent of the blood of the ancestors having undesirable characteristics. Thus the characteristics of the individuals of the species are the dominant blood characteristics of a comparatively small number of ancestors, and are possessed in comparatively equal degree by each individual specimen.

As previously stated, average quality is the true test of the value of a strain. It is from strains showing a large per cent of uniformly high class birds that the exceptional birds capable of winning the blue in the strongest competition are invariably produced. To secure uniformity in any reasonable length of time it is necessary to line-breed. Uniformity could be more quickly secured by inbreeding. The disadvantage of inbreeding lies in the difficulty experienced in trying to eliminate the defects of the original ancestor. The bird that can be mated to its own progeny for several generations with good results is very rare. If there is any constitutional weakness it will be reproduced in greater degree each succeeding generation as long as the inbreeding is practiced.

An out-cross destroys uniformity and must be followed by rather close inbreeding to "fix the type." Most line-bred strains were started by close inbreeding. Some of the best strains owe their merits to but one ancestor. If one bird far excels the others of the breed or strain, his good qualities can only be fixed in a strain by making his blood the dominant blood of the strain. The old way is to mate this bird to his progeny for several generations, producing birds $\frac{3}{4}$, $\frac{7}{8}$, $\frac{15}{16}$, etc., the blood of the original male. The fault of this system is that the mating is too close, there is not enough chance to eliminate the defects of the original bird and extreme care is necessary to prevent these defects becoming magnified in the progeny. The type of an exceptional fine specimen can be fixed in a strain with but little inbreeding by the following system:

Male A being the bird whose type it is desirable to fix in the strain, he is mated the first season to females B, C and D, none of which should be related to him. The second season, the best pullets from females B, C and D are mated back to their sire, male A, producing stock carrying $\frac{3}{4}$ the blood of male A and $\frac{1}{4}$ the blood of either female B, C or D. Also select the best cockerel from each of the females B, C and D and mate each to a sister of male A; these matings will produce stock with $\frac{1}{4}$ the blood of A, $\frac{1}{4}$ the blood of either B, C or D, and $\frac{1}{2}$ the blood of a sister of male A.

For the third season's matings, select the best pullets from each of the three cockerels used the second season and mate them to male A, which will produce stock that is $\frac{5}{8}$ the blood of male A. Also select the best pullets raised from male A the second season and mate a few of them to the best son of each of the three cockerels used in the second season's matings, which will also give you chicks with $\frac{5}{8}$ the blood of male A. The chicks raised the third season should be a uniform lot and if proper selection has been practiced will show an improvement upon the good qualities of male A, with a lessening of his defects.

The fourth season all cocks and hens should be discarded, breeding only from cockerels and pullets. The proper way to mate this season, and as a general rule in the future, is to head each pen with a male as distantly related to the females in the pen as you can find without going outside your own line. You may find it an advantage to introduce a little new blood in order to improve some fancy point, but should not require it to increase the vigor of your stock, not unless you use less than three matings a season.

If it be an extra fine female instead of a male from which one desires to start a strain, a similar system can be used by changing her mates in the middle of the breeding season. In this case no eggs should be set for two weeks after changing the males, as one would not be sure which male was the sire of the chicks hatched from the eggs produced during this time. A strain being well established, there should be enough high class birds raised each season to make inbreeding unnecessary.

The amateur should not attempt to start a strain of his own until he has mastered the art of mating and breeding. The best course which he can pursue is to select some reliable breeder who has established a superior strain and purchase a pen or two mated by him. He can then send back each year for stock, or can buy eggs from the breeder's best pens and raise stock that being of the same line will "nick" with his own birds and give him the advantage of the improvement the breeder has been making in the strain. Of course, it is very necessary that in starting to breed along these lines one should select a breeder from whom to purchase foundation stock who practices line-breeding and breeds his own winners, instead of buying them. However, there are few breeders who would not occasionally buy a bird of another strain if they were to find one strong in some point in which their own line was weak. But having secured such a bird, they would be very careful to prove out its breeding well by experimental matings before introducing its blood into the entire strain. They would then introduce only the per cent of its blood necessary to produce the desired result.

The best system of mating depends upon the breed and strain. Nine breeding failures out of ten are due to the breeder rather than the particular system which he followed. It is absolutely necessary that one breed only from the best, both as to individual quality and blood lines, if one would hope for improvement.

When selecting breeders, vigor should always receive first consideration; one cannot keep up the size and shape of a strain or produce brilliant colored plumage without keeping up the constitutional vigor. If one will isolate the best chicks when they weigh 2 or 3 lbs. each and watch their growth he will be in better position to select his breeders the following season and can improve the rapid growing or economical meat producing qualities of his strain. We hear a great deal about the "egg type" hen. Shape (as type here means) is largely a matter of feather. The length of back depends largely upon the carriage of tail—a high tail gives a short back, a low tail a long back. The breadth of back depends to some extent upon the length and looseness of the saddle plumage and the length and looseness of the under plumage has much to do with the apparent length of leg. What is generally considered the best egg type conflicts in several points with the most vigorous type. The head of a bird is the best indication as to its vigor. It should be deep and broad across the skull, the beak should be strong and well curved, the eyes large, bright, and the more red the better. The comb and wattles should not be too small and should have a bright red color, also if you would select good layers be sure they are smooth and fine in texture and the face free from wrinkles. This is the best indication of a good layer I know. After the head, look to the shanks; these should be of good size, smooth and round and parallel when viewed from front or back. The general body type should be well proportioned or symmetrical and filled out properly in all sections. Examine your birds to ascertain their true type so as not to be deceived by feathers. Good length to plumage, especially in saddle and tail of males, is a good indication of vigor, but if too loose and fluffy it indicates inactivity.

I have now told you how you can select good vigorous

specimens to use in your breeding pens. Selecting for Standard points differ with the variety, as every one knows, but always remember this, that a bird fairly good in all sections and with no serious defects is much more valuable for breeding than one exceptionally fine in a few sections but possessing serious defects. To select the birds of proper blood is more difficult, but if you have trap-nested for several generations and kept records of your breeding operations you are in a position to mate intelligently. The breeder who knows the dam as well as the sire of every chick will make as much progress in three years as the breeder who knows only the sires of his chicks will make in ten. The breeder using trap-nests and keeping pedigrees will soon eliminate the dominance of blood lines that fail to produce high class stock in good proportion. But where one does not know which one of eight or ten hens is the mother of a cockerel he has selected to head a breeding pen, he is quite apt to make the mistake of

FIRST PRIZE WHITE ROCK PULLET
NEW YORK PALACE SHOW DEC. 1915 OWNED BY
LEWIS P. DÖERHOEFER ANCHORAGE, K.Y.

using a bird from a hen that (being mated to a fine male) has produced him a small per cent of high class birds and a much larger per cent of culls, but knowing that both the sire and the dam of the bird have produced a large per cent of uniformly high class birds, one can reasonably expect their progeny properly mated to do the same. The amateur should realize that there are many details which must be carefully attended to if one would produce high-class stock. Breeding is only half, feeding and care are equally important.

EGG LAYING CONTEST IN KENTUCKY.

Plans have been perfected for holding a big egg-laying contest at the Kentucky Agricultural Experiment Station, beginning November 1st. Every breeder of poultry who thinks he has an egg-laying strain of birds should write to the Experiment Station for a copy of the booklet giving the rules and regulations.

It is planned to start with fifty pens of five pullets each. Data will be kept in regard to the number of eggs laid and the feed consumed.

American Poultry Association Convention

Forty-First Annual Meeting at Cleveland, Ohio, August 7-11, 1916,
One of Harmony, Unity and Progress.

By Prince T. Woods, M. D.

Be united—united—UNITED!

—Schiller.

Divide and command, a wise maxim:
Unite and guide, a better.

—Goethe.

There with commutual zeal we both had strove
In acts of dear benevolence and love;
Brothers in peace, not rivals in command.

—Homer.

FROM THE OPENING ADDRESS by Frank E. Hering at the first regular session on August 8th, 1916, the watchwords of the Forty-first Annual Convention of the American Poultry Association, held at Cleveland, Ohio, were—Harmony, Unity and Progress. The Association has been navigating troubled and uncharted waters, particularly since the San Francisco meeting. Misguided, tho perhaps well-meaning, efforts to "divide and command" had brought the ship of state, in stress and storm, close upon the rocks of a lea

shore and shipwreck seemed inevitable. At Cleveland, Pilot Frank E. Hering came to the helm with a clearly defined course to "unite and guide," pointed out the channel of Fraternalism and Co-operation and the safe harbor of Harmony, Unity and Progress.

An "old timer" who has attended every annual meeting of the American Poultry Association for the past fifteen years said that the Cleveland convention was "the most harmonious and satisfactory American Poultry Association meeting held in many years." In general this appeared to be the view of the majority of those who were in attendance. The meeting was an unusual one in that business was transacted smoothly and speedily, well within the schedule of the program, without the customary lengthy and unnecessary wordy debates, and the delegates were given an opportunity to take advantage of the entertainment provided by the local committee and to enjoy the institute lectures.

Later on, when we can obtain the report of the official stenographer, we hope to be able to publish the greater part of Mr. Hering's address and we trust that it will be fully given in the official proceedings. Mr. Hering is a specialist in organization work and he spoke earnestly of the importance of conducting Association affairs along the lines of progress and fraternalism. It is the aim of all national and international organizations today to increase confidence and promote harmonious dealings among persons having allied interests, rather than to disrupt things by inviting suspicion and lack of confidence on the part of the public. It was pointed out that it is unwise to have too much legislation and too little co-operation; that extensive rulings, stringent regulations and investigation proceedings are apt to prejudice public opinion against an organization; that it is not advisable for an association to devote much of its attention to police work or court proceedings, particularly when it is possible to place such matters in the hands of the proper government authorities who have the power to act and are prepared to take prompt action. It was urged that reorganization along practical and business lines is much needed; that the Association as it stands today is not as effectively organized as it should be for the best interests of the whole poultry fraternity. It was also demonstrated that the American Poultry Association has not been making the most of its opportunities, particularly in the matter of co-operating with the United States Department of Agriculture and the agricultural departments of the separate states in the promotion of constructive work in poultry husbandry. The policy of the international organization should be the building up of all poultry interests in all branches of poultry husbandry and any publicity that tends to tear down instead of building up, or which may destroy the confidence of the public, is greatly to be deplored.

The first regular business session was called to order on Tuesday morning, August 8, by Vice-President Arthur A. Peters, of Denver, Colorado. About 360 members, representing all sections of the United States and Canada, were present and registered. The usual preliminary exercises included addresses of welcome by representatives of the Cleveland City Government, the Chamber of Commerce, the Cleveland Poultry Breeders Association and the Ohio Poultry Breeders Association. President Frank C. Stier, of the last named association, made an eloquent address of welcome, urged reorganization along modern, practical, business lines for efficient co-operation and the promotion of harmony, unity and progress. Mr. Stier, by the way, was one of the hardest worked members of the local entertainment committee and he and his associates have the hearty and cordial thanks of all delegates for the warm welcome, the splendid entertainment, the all around good time and the prevailing good fellowship which was characteristic of the Cleveland Convention.

Sincere regrets were expressed that illness caused the unavoidable absence of President E. E. Richards, and to him were extended the best wishes of all members and the hope that he may speedily be restored to health. President "Dick" has many friends who greatly missed him at Cleveland. One of the pleasing features of the opening session was the presentation of a gavel to Vice-President Arthur A. Peters by the Ohio poultry breeders. The gavel was made from white lilac wood by veteran breeder Charles McClave, of New London, Ohio.

Following is statement of the finances of the American Poultry Association as presented by the committee:

Itemized Statement of the Financial Condition of The American Poultry Association, Together With a Full Report of All Transactions Covering the Fiscal Year, Expiring June 30, 1916.

To the Finance Committee, E. E. Richards, Chairman.

American Poultry Journal

Entered as Second-Class Matter August 9, 1886, at the Postoffice at Chicago, Ill., under Act of March 3, 1879

SUBSCRIPTION PRICES.

Single Copies, 10c.
United States, Cuba, Mexico and
United States Possessions (except
the City of Chicago), 3 years (36
issues)\$1.00
Canada, 3 years (36 issues)..... 1.75
Foreign, 3 years (36 issues)..... 2.50
Chicago, 3 years (36 issues)..... 1.50
Chicago, Canadian and Foreign subscrip-
tions require additional postage and there-
fore the slight difference in prices.

Owing to the high quality of the peri-
odical which we are publishing at the price
asked for publications of inferior value, we
have discontinued the practice of entering
yearly subscriptions to American Poultry
Journal, but will enter subscriptions for 3
years (36 issues) for ONE DOLLAR
mailed to any point in the United States,
except Chicago. See above rates for Chi-
cago, Canada and Foreign subscriptions.

TRIAL SUBSCRIPTIONS—In order
to acquaint prospective subscribers with
American Poultry Journal, we will mail
one copy a month for six consecutive
months to any point in the United States,
its possessions or to Cuba or Mexico for
25c. The trial subscription offer (6 months
for 25c) is for new subscribers only and
not subject to renewal for a period of less
than three years.

If you change your address, give both
your old and new address, as well as your
subscription number when notifying us of
the change.

Notary Public.

IN THE DISCUSSION of separate breed
standards, it has been urged that such
books will result in supplying a de-
mand for a standard of one breed
only, for those breeders and novices
who desire information on that breed
alone and do not care to learn the
required characteristics of other
breeds. Without intent to reopen the

discussion, or to question the so-called demand, we
think that the man who studies only the standard
characters of his chosen breed, and neglects to com-
pare his favorites with other breeds and varieties,
will never make very great progress as a breeder.
We really learn most things in this world by com-
parison, we must have intelligent comparison in
order to really know, and fix our knowledge of a
subject.

The medical student, in order that he may become
really proficient in his study of human anatomy,
takes a course in comparative anatomy. His studies
in embryology are made by comparison of various
forms of embryonic life. The physician uses com-
parative tables in his study of health and disease.
The veterinary student takes a course in human
anatomy along with his study of the comparative
anatomy of the domesticated animals. Everywhere
we find that the human mind learns best, and best
retains what it learns, where the study is made
comparative. Attempt to learn without comparison
results in a one-sided viewpoint and in a confusion
or jumble of ideas, or, at best, an indefinite under-
standing.

Watch the specialist fancier in the show room
and you will find—altho the successful specialist has

already compared his favorites with other varieties
—that he spends quite a little time in sizing up the
exhibits in classes other than his own and in noting
progress in other breeds,—whether he knows it to
be so or not, he finds some degree of comparison
necessary to a more complete understanding of his
special variety. If you care to make inquiry, you
will usually find that the successful specialist—be-
fore he fixed on one variety—was a breeder of
several breeds and varieties. Consciously or un-
consciously, the human mind and vision must have
comparison in order to learn and see intelligently.
Think that over, when you are considering the
study of your breed by its separate standard only
and without comparison with other breed standards.

That we may better understand the time in which
we live, we study history for comparison. In every-
thing we think, say, or do, we must compare and
qualify. If we are to become proficient as fancier-
breeders of poultry, we will compare the character-
istics of our favorite variety with those of other
varieties,—our interest and study will not be limited
to one breed alone. We need a written standard
of ALL KNOWN breeds and varieties of poultry—a
comparative standard, prepared in such form that
we can easily and readily compare the characters
of several varieties — not "officially recognized"
breeds only, that are confined wholly to separate
specialty chapters.

This being our view of the subject, we were much
pleased to find—on a recent visit to Washington,
D. C.—that George M. Rommel, Chief of Animal
Husbandry Division, Bureau of Animal Industry,
United States Department of Agriculture, has al-
ready prepared a comparative study of the standard

of some of the leading popular breeds which the U. S. Government desires to use for instruction of Department agents. This comparative standard,—we think it entitled to be called that—is compiled from the American Poultry Association American Standard of Perfection for 1915, is made up of 36 typewritten pages and entitled "Characteristics of Some Popular Breeds of Poultry." We understand that a copy of this comparative standard was sent to the American Poultry Association some time ago, together with suggestions that the American Poultry Association co-operate with Uncle Sam's poultry investigations for the benefit of poultry interests. We believe that the matter was turned over to a prominent member of the committee on standards, but we are still waiting to learn what will be done about it. To us, this plan for presenting the characteristics of the popular breeds in convenient form for intelligent study and comparison, seems well worth while and a progressive step. We believe the standard committee would make a decided hit with students of poultry culture by adopting the plan and publishing such comparative tables.

The tables for comparing the several breeds use the standard descriptions of various sections, and, in breeds like the Plymouth Rock, Wyandotte, Rhode Island Red, Orpington and Leghorn, group and compare characteristics in shape of head, beak, eyes, comb, wattles and ear-lobes, neck, wings, back, tail, breast body and fluff, legs and toes; and in color, the varieties are compared. Altho the five breeds mentioned are included all thru the comparative tables, for illustration here we will quote only one section for three breeds to show the reader the method employed. It is a good plan and worth developing. Below is given the comparative study of Plymouth Rocks, Wyandottes and Leghorns under the heading:

BODY AND FLUFF.

PLYMOUTH ROCK.

MALE.

Body, rather long, broad, deep, full, straight, extending well forward, connecting with breast so as to make no break in outline; fluff, moderately full.

FEMALE.

Body, rather long, moderately deep, full, straight from front to rear and extending well forward, connected with the breast so as to make no break in outline; fluff, full, of medium length.

WYANDOTTE.

Body, moderately short, deep round; fluff, full-feathered, well rounded.

Body, moderately short, deep, round; fluff, full-feathered, well rounded.

LEGHORN.

Body, of moderate length and fairly deep, carried nearly horizontal but sloping very slightly down from front to rear; fluff short.

Body, moderately long, fairly deep, carried nearly horizontal but sloping very slightly downward from front to rear; fluff, rather short.

We will not trespass further upon the standard or space by quoting more, as we believe that the above will suffice to indicate what can be done and should be done. If our standard makers will adopt this idea and develop it as it should be developed, we believe it will lead to a better wording of standard descriptions and make the standard more useful, more helpful and more easily understood by both beginner and veteran in poultry culture. To us it seems well worth while and decidedly "worthy of a thought."

(NOTE.—At the Cleveland Convention this matter of the "Comparative Standard" was brought up by Secretary Campbell, who read a letter from the Bureau of Animal Industry, U. S. Dept. of Agriculture, requesting co-operation and expressing a desire to use the compilation mentioned in instruction of Department Agents and in the work of Poultry Investigations. Unfortunately we were not in the hall at the time this matter came up, but from report of our representative we believe that the delegates present did not fully appreciate the importance of this work or understand just what the Department of Agriculture

proposes and desires to accomplish. The Convention voted to refer the matter to the Standard Revision Committee. We hope that the committee will see the importance of the "Comparative Standard" and of having our "Uncle Sam" co-operate in the work and that some progressive action will be taken by the Association thru its committee at an early date.—P. T. W.)

IN TALKING WITH MEMBERS at the Cleveland Convention of the American Poultry Association, we found that there is a very strong sentiment for the progressive reorganization of the Association along modern business lines. The old plan of \$10 life memberships was well enough forty years ago, and in the early years of the organization, but times have changed and to be successful and progressive an association must meet changed conditions and come up to date. A good many new members have been added of late years who simply pay the \$10, become life members and then show no further activity. To be an effective organization any such body must have membership fees that are sufficient to sustain that body. An international organization, like the American Poultry Association, cannot live and continue to do business on a \$10 life membership basis. Neither is it practical or business-like for such an association to attempt to secure its revenue by entering into the general publishing business. In fact, any attempt of so loosely organized a body to secure the larger proportion of its funds thru a publishing or other general business is liable to prove disastrous in the final accounting.

It has been suggested by many members that the life membership fee be considerably increased to a sum that is practical and businesslike. That those who do not, for any reason, desire to pay an increased life membership fee be given an opportunity to pay a reasonable and fair assessment of annual dues. This is a practical proposal and could be readily accomplished. Any persons who are now \$10 life members, who are opposed to the plan, who do not feel that they could afford such an advance, or who do not have the good of the organization sufficiently at heart to co-operate in such an advance, could be carried thru life on the \$10 membership that they have already paid. We believe that the number of members who would really oppose such a progressive change and who would decline—for any reason—to cheerfully meet the advance in fees and dues would be very small. The plan would apply to all members having sufficient interest to co-operate and to all new members who come in after such change in laws may be made.

It is argued that possibly such a change might keep out of the Association some prospective members who could not pay such dues. We believe that the number so kept out of the American Poultry Association would be exceedingly small and that provision can be made that they can easily be identified with and have representation in the international organization thru the State and Provincial Associations. Those unable or unwilling to join the American Poultry Association under such a plan could become members of County, State and Provincial Poultry Associations having low priced annual dues and provision could be made for such associations to have membership and representation in the American Poultry Association thru delegates proportionate to the number of members in the small local or State or Provincial organiza-

tion. Several plans have been proposed for such reorganization of the American Poultry Association along modern business lines and we hope to see them bear fruit at an early date. Personally we would favor a \$50 life membership fee for the American Poultry Association, with the alternative of annual dues of \$5, and we would cheerfully welcome such a change for the good of our international organization. It would probably necessitate some changes in the present methods of governing the parent body, but we believe that such changes would be in the line of real progress.

Using Advertising.

ARE you really *using* the results you get from your advertising? Do you make the most of the opportunities that it brings? Or, do you simply buy and fill advertising space, and let it go at that?

A while ago a prominent poultry specialist told us that his advertising made him a lot of trouble but made very few sales. He said that he got a great many inquiries, "*too many*" since they caused him to "*waste postage and printed matter*," but out of these many inquiries he made "*very few sales*." When we inquired into his selling methods, we found that he "never uses" personal "follow up letters" and that he doesn't believe in soliciting business by personal letters. He simply mails a catalog and circular to each inquirer and on rare occasions writes a brief personal letter to the prospective customer when the query seems to demand it.

How can anyone expect to do modern business in that manner? While some sales are made direct from advertising, most sales are made by *personal cor-*

respondence with the prospect. One advertiser, who uses a follow up system, told us that he made the majority of his sales, and some of his biggest ones, on the *third* letter,—he uses three "follow ups," if necessary, after the initial reply to the query. An advertisement is pulling well when it brings queries to the advertiser; it is up to the advertiser to turn those query prospects into actual customers. The store merchant does not sell to every prospect who enters the store to look and ask questions, but if he is a good salesman, or employs good salesmen, he does not let those prospects stand around and look without paying them considerate attention. He makes an effort to sell them goods and his business is in proportion to his ability as a salesman.

The poultry breeder's business is a mail order business and in such a business attractive printed matter, good circulars or a good catalog are helps, but selling live stock is essentially a personal

TO OUR READERS.

Our subscribers are our friends and we use every effort to protect them in every way. We believe that every advertisement in this issue is signed by trustworthy people, and to prove our faith we will make good to our subscribers any loss sustained by virtue of their having purchased fowls or goods from one of our display advertisers.

All we ask is, that in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad is inserted, and in case of loss notify us of the fraudulent misrepresentation of the advertiser, giving us full particulars as soon as it occurs. In all cases in writing to advertisers say, "I saw your ad in American Poultry Journal."

business and correspondence promptly handled, with due regard to giving it an element of real individual personal interest, is essential to getting best results. From our viewpoint it would seem that many advertisers are failing to make best use of the results their advertising brings. The following extracts from a letter from a New England reader illustrates the point we wish to drive home:

Mr. Editor:

I have had some experience with prominent advertisers in poultry publications which leads me to think that many breeders of poultry are more expert at breeding than in selling their product. For instance:

I decided to buy 500 baby chicks of a certain breed. Last February I wrote to a prominent advertiser for price on 500 chicks for March delivery. After waiting fourteen days I wrote a second time, with no results from either letter. Then I wrote to other advertisers, who replied promptly, and I placed my order. The first mentioned advertiser finally answered my letter *thirty-five days after I wrote it* and solicited my order.

I wanted to buy a brooder and after looking thru the paper I selected an advertiser who uses large space. I received a prompt reply to my inquiry for prices and descriptive matter, but I was informed that my inquiry had been referred to their local agent, who would be pleased to attend to my wants. A week elapsed and then I got a letter from a man who lives in the country about 15 miles from my place, stating that he was agent for this firm's goods and if I wanted a brooder and would come out to his place, he would be pleased to show me one in operation. I had no time to travel 15 miles to look at a brooder, so I ordered one from another firm who had sent descriptive catalog and promised to ship direct and promptly.

Deciding to build a poultry house, I answered several ads, and from some firms received prompt and complete replies and information. One advertiser, who offered a sample of material and a plan for a dime, did not reply and I received nothing. I wonder why such men spend good money for advertising when they do not answer queries?

Some advertisers take care of an inquiry in splendid shape—others do the opposite. Possibly these others are men who say "advertising does not pay."

I do not care to mention names and I have no bone to pick with anyone, for my wants were supplied by some enterprising men who know how to answer an inquiry and how to make sales, but the other fellows lost sales that they might have had and the fault was their own. I expect to be in the market this fall for stock, houses and equipment, and my orders will go to the advertisers who make prompt replies, who answer my queries and who are sufficiently enterprising to try to make sales.

PROSPECT.

It hardly seems necessary to say more. "Prospect" in his letter has pointed out reasons why some advertisers do not make sales. Anything worth having is worth an effort. If business is worth while it is worth going after and the way to make advertising pay is to go after your prospects—all of them—and keep after them in an effort to have them buy whatever you have to sell. Your ad in this JOURNAL brings the prospect—the inquirer's letter—to your place of business; it is up to you to interest him in your goods or stock, to answer his questions promptly and convincingly and, thru your salesmanship, a square deal, and generous treatment, to make a permanent customer of him. One good sale creates another. One neglected prospect turns dozens of other prospects aside. Make use of the results from your advertising.

Individuality.

INDIVIDUALITY is the state or quality of being individual, separate or distinct; the possession of individual or distinctive character,—in short, possession of personality. How much individuality do you possess? Are you really a separate and distinct individual or just a plain human sheep? It is decidedly pleasant to meet and know people who possess welcome individuality and whose definite oneness gives to them the magnetism of real personality.

Recently, waiting for a train in a crowded metropolitan railroad station, we had the inclination and an abundant opportunity to observe several thousand hurrying humans of all degrees and walks in life. Aside from a difference in carriage or walk there seemed to be little noticeable individuality among the men; all wore conventional and uncomfortable clothing of the same or a similar type—there was nearly as much sameness to these males of the species as one would find in a flock of sheep.

With the women it was different. Tho there may have been deference shown to the prevailing mode of Dame Fashion, it wasn't noted by a mere man like the observer. What we did note was that every hat seemed different, every gown seemed to emphasize the individuality of the wearer, and, strange as it may seem, those feminine garments looked a great deal more comfortable on such a hot day than did the conventional masculine, unyielding hat, stiff collar and cuffs, the tie with a strangle hold, and warm coat and trousers, as much of a sameness as peas from a pod. We wonder if the female of the species does possess more individuality than the male; or is she gifted with greater power of expression and the sense to use it?

A New Article Contest.

ATTENTION, READER! Here is a new article contest that should interest you—a subject that can be made interesting to all and a prize well worth competing for.

M. C. Wilson, Oil City, Pennsylvania, offers a Show Pen of his "beauty and business" Rose Comb White Leghorns to the reader of **AMERICAN POULTRY JOURNAL** who submits the best article on the following subject:

"Why all International Egg Laying Contests should award the prizes to the hens laying the *most pounds of eggs*, instead of the largest number of eggs."

This contest is open to all who read this journal. Articles should be about 1,000 words long and written on one side of paper only. Announcement of winner will be made in November issue. We reserve the right to publish or reject any or all articles and no articles will be returned.

The contest will close October 2nd. All articles must be in our hands by that date or show a postmark not later than September 30, 1916. The award will be made by the editorial staff of **AMERICAN POULTRY JOURNAL**.

Send all articles to Dr. Prince T. Woods, Editor **AMERICAN POULTRY**

Fresh Air.

EVERY time we ride on a railroad train or enter a stuffy, smelly theatre, we wonder how the long-suffering public can stand it, and wonder more just how much disease such suffocating and foul air conditions are responsible for.

Theatre managers are waking up and becoming alive to the fact that poisonous air is bad for their business, and some have installed a makeshift apparatus, more or less elaborate, for providing a better air supply. It seems likely that in the near future places of public amusement will be well ventilated and will get a daily airing and sunning to sweeten them,—let us hope so, for humanity's sake. Even jails, now-a-days, are beginning to recognize the right of prisoners to a free supply of fresh air to breathe.

But the modern railroad coach, where people sweat and steam in a super-heated atmosphere, wearing outdoor clothing, is about the most ill ventilated, suffocating, disease-breeding, plague spot that was ever inflicted on mankind. You pay a big price to occupy hot, uncomfortable, insanitary, back-breaking seats in a roasting contrivance of steel and wood, that jolts while it bakes, and that is never under any circumstances adequately supplied with air for the contained passengers. Generally the windows will not open, but if they do, you can count on being pelted with cinders and sooted with smoke; comfort of passengers is the very last thing considered—if considered at all—by the Twentieth Century railroad. In summer, you can travel with comfort, and breathe freely, in a modern automobile; you can secure fresh air and a moderate degree of comfort in the open trolley car, but on a railroad train you sit uncomfortably, swelter and suffocate and absorb the germs of all known and some unknown diseases, all on payment of a very extortionate price for the accommodation received.

Just why it is that railroad coaches cannot be made reasonably comfortable, well-ventilated and sanitary, is a matter that is difficult to understand. Possibly the public is to blame for not demanding better accommodations. Possibly some of the over timid ones, who fear drafts—that bugbear of superstition—are to blame for the tight shut carriages. But

Tinley Park, Illinois, U. S. A.

it does seem that even director-milked, much-abused and bankrupt railroads might at least provide cinder-proof window screens in all passenger cars and windows that will open and stay open.

There is a good deal of humbug about drafts causing people to "catch cold." It is an old superstition and many folks fear drafts with a fear that is akin to panic. The fear is the thing that is largely responsible for the catching cold; that and foul air. Foul, shut-in air of public conveyances, is poisonous air and it is what causes one to catch cold. Some day it will be as much a crime to compel people to breathe poisonous air as it would be to give them poisoned food. Do not be afraid of a good substantial draft of fresh air—welcome it and breathe deeply. Get plenty of good fresh air into your lungs and you will not catch cold. Breathe deeply. A draft of cold air in an over-hot public conveyance may chill you, if you have been foolish enough to sit and swelter in outdoor wraps, but it is not liable to chill you if you breathe deeply and wear sensible clothing sensibly. Don't be afraid of fresh air! Insist on getting it! Don't sit in the breeze of an electric fan in a closed ill-ventilated room or car—the fan is simply stirring up dead air, dust and germs—look at the fan's air current in a ray of sunshine and see for yourself what you are forced to breathe. If you do fear fresh air, try to overcome such foolishness, and do not let your fear of fresh air and the draft bogey cause you to interfere with the comfort of others and make you in part responsible for a foul air menace to health.

A. A. Peters for American Poultry Association President.

A MAN'S past record is a reliable signboard to his future. When an association has had the opportunity to

LEITNER'S S. C. BUFF LEGHORNS

Eggs are half price now. They are the real layers and winners. Satisfaction guaranteed. Circular free. C. H. LEITNER R. F. D. 4, Box 8 ELGIN, ILL.

study a man's qualifications for the presidency by watching him at close range as vice-president and acting president for three or four years and can express only words of praise for the fairness, dignity and ability with which he graces the office, it should not be found difficult to elect such a man to the presidency.

Arthur A. Peters, of Denver, Colo., has served the American Poultry Association as its vice-president for four years and during a great part of this time as its presiding officer. Mr. Peters now announces his candidacy for President of the association. No man in it is better fitted for the office or is more deserving of the honor.

Thru the nomination ballots of the last three elections of the association, many members have expressed a desire that Mr. Peters become a candidate for President of the American Poultry Association and his many friends will be glad to learn that he has now entered the field.

At the Cleveland Convention, Mr. Peters expressed his appreciation to those in attendance for the courteous manner in which the rulings of the chair were received thruout the convention, no question having been raised as to the chair's decision in any matter coming before the convention. Mr. Peters in announcing his candidacy quotes Abraham Lincoln as saying, "In lieu of a written platform, a man's past record for efficiency in action should be considered his platform."

Mr. Peters has shown himself during his term of office to be a man in every way worthy of the support of the members of the association. His record is a good one and a credit to the association. Vote for him when the time comes and in the meantime speak a good word for him to your friends.

Poultry Publishers' Association.

DURING the Cleveland Convention of the American Poultry Association, a Poultry Publishers' Association, for

the advancement of poultry interests and co-operation among poultry publishers was organized. Some thirty publications in all sections of the United States and Canada were represented. The following officers were elected: President, James W. Bell; 1st Vice-President, Henry P. Schwab; 2nd Vice-President, F. E. Harries; Secretary-Treasurer, J. A. Kohl; Executive Committee, E. E. Althouse, D. E. Hale, Grant M. Curtis.

Our Cover.

THE beautiful Buff Orpington adorning our cover this month is the property of Maurice Delano (Owen Farms, Vineyard Haven, Mass.) When we handled this bird at the last Madison Square Garden show we looked him over very carefully and believe he typifies very closely the desires of the American fanciers regarding the shape and color of the breed. The even shade of color blending perfectly in all sections is very much in evidence in the picture, which shows the bird exactly as he appeared at the show, and where he was one of the winners.—L. A. S.

"REGAL QUEEN"
First Boston Hen, 1913

The Early Bird

ALL over the country beginning with early September, large fairs are held. The poultry exhibits are always of great interest to the crowds and the attendance at these fairs is five to ten times as great as at the regular winter poultry shows. If you are not in shape to make an exhibit why not let me fit you out with a string. Early chicks are scarce but I make it my business to have plenty of them. As a business proposition you cannot afford to overlook this opportunity. A good winning will bring you plenty of orders for stock and eggs. Nothing will attract prospective buyers more than fine, well matured cockerels and pullets at the early shows. That I can furnish you with the necessary quality is shown by my own winnings at the New York State Fair, covering a period of ten years. While I get out a large number, yet my supply is not unlimited and you should have your birds reserved early. As a rule prices do not range as high as they do for the winter show winners.

Fine show cockerels range in price from \$10.00 to \$25.00, and pullets from \$8.00 to \$20.00. Exhibition pens \$25.00 to \$75.00.

FREE—Send for catalog and summer sale list, giving description of several hundred breeders I am offering for sale. Send one dime for Regal White Wyandotte Book telling all about White Wyandottes.

John S. Martin Box 51 Port Dover, Can.

Dr. Woods' Notes and Comment

SEPTEMBER.

O sweet September, thy first breezes bring
The dry leaf's rustle and the squirrel's laughter,
The cool fresh air whence health and vigor spring
And promise of exceeding joy hereafter.
—George Arnold.

Early pullets, intended for winter layers, should be housed in winter quarters this month.

* * *

Be sure that the houses and yards are clean and in good order. If runs were planted to greens last month there should be a fair supply to start the newly housed birds.

* * *

In housing, do not crowd the pullets, see that they have abundant yard room, do not close them up too snugly in the houses at night. Open-front, open-air quarters are best. If the pullets when on range were properly managed, they have been having the regular laying ration for some time. If they have not had it, do not make an abrupt change in ration, make the change a gradual one. Feed an abundance of greens.

* * *

Fall colds in young stock are caused by too close, poorly ventilated sleeping quarters and by crowding. Use open-front houses. Train the youngsters to use the roosts, if necessary; do not permit them to bunch up in little groups to sleep on the floor. Colds sometimes follow crowding on the floor at night. With good housing, good care and good feeding, fall colds can be prevented. Just keep the birds comfortable.

* * *

Market the culls. Be sure that only strong, healthy, vigorous specimens are put into winter quarters. It never pays to hold on to weaklings. A clean bill of health, sound constitutional vigor and an abundance of vitality are essentials for young or old stock, whether kept for laying or for breeding. Winter only the best healthy specimens and keep them healthy by good care and management.

* * *

Have the vegetable cellar in readiness to store away a good supply for winter use. Cabbages, beets, mangels, white carrots, squash, pumpkins, and potatoes are all good for winter poultry feeding and are easily kept.

* * *

Cull or waste apples make excellent winter food for poultry. Frequently they can be obtained without cost other than the trouble of picking and carting. They feed to best advantage when boiled and mixed with the moist mash.

* * *

Cabbage is an excellent fall food for poultry of all ages. In fact, we believe that cabbage is a better fall food than it is a winter food. Waste cabbage should be fed freely at this season. Later on, when cabbage is fed, do not use any that has been frozen. Frozen cabbage, or frozen roots like beets or mangels, are liable to cause indigestion or bowel trouble and so check laying.

* * *

Be sure to cremate all dead fowl or chickens. If buried they are liable to be dug up by dogs or foxes and the remains scattered about the premises. If

the carcasses are burned, that disposes of all danger of disease from that source: if the remains are permitted to be scattered about, there is always a chance that infection may result.

* * *

Sometimes fall colds will occur in young stock, in spite of good care. If taken when the sneezing first starts, the following remedy is usually effective:

UNCLE SAM'S WORKERS FOR MORE AND BETTER POULTRY.

The above portrait group of the men who are in charge of the Poultry Investigations of the Bureau of Animal Industry, United States Department of Agriculture, and who are promoting Girls' and Boys' Poultry Clubs thruout the country and making the Government Poultry Farm experimental work of great value to all poultry interests, was taken at the request of the Editor of American Poultry Journal in July, 1916, at Washington, D. C. In the front row, from left to right, are: George M. Rommel, Chief of Animal Husbandry Division, Bureau of Animal Industry, and Harry M. Lamont, Senior Animal Husbandman in charge of Poultry Investigations. In the second row, from left to right, are: Alfred R. Lee, Animal Husbandman in Poultry Investigations; Robert R. Slocum, Assistant in Poultry Investigations, and Joseph W. Kinghorn, Junior Animal Husbandman in Poultry Investigations.

H. W. HALBACH

::

WATERFORD, WIS.

Mix half a teaspoonful of spirits of camphor with a tablespoonful of sugar and dissolve the whole in two gallons of water, giving the birds no other drink than this for a few days. Camphorated oil or petrolatum rubbed into the nostrils is also an excellent remedy.

Be sure that pullets are leg-banded, for identification, when housed for the winter. Colored celluloid bands are excellent for this purpose, as they are easily noted without need of handling the birds.

Unless the eggs are to be used for hatching purposes, it will be well to house the pullets without any male companions to bother them. Virgin pullets will generally begin laying earlier, will lay better, and will make better develop-

ment than pullets that are being constantly annoyed and nagged by husky male mates.

Michael K. Boyer is opposed to flock matings. He believes that small flocks do best, and says: "Flocks of 100 head should be the limit—fifty would be better. But this is for egg farming only; when it comes to breeding, the flock system is entirely wrong. While there may be good fertility there will not be as good, strong chicks. Breeding pens should vary—according to the breed—from six to fourteen females to a male."

Our experience, and that of many New England poultry keepers, goes contrary to Uncle Mike's quite positive assertion. We have been using flock matings for breeders and layers for a number of years—and with several breeds—

with entirely satisfactory results. We have found—and there are plenty of practical poultrymen whose experience will agree with ours—that flocks of 100 to 150 females, mated to from five to nine males all running together, will, if properly housed and cared for, yield excellent fertility, good hatchability, and fine, large, strong, sturdy chicks. In fact, flock matings are used very largely to produce eggs for hatcheries and for market chicken growers, and in such work the profits depend a good deal upon good hatches; good, strong, large chicks, that will thrive and grow rapidly, and stand the stress of forced feeding without going "off their legs."

Where exhibition excellence is desired in the progeny, then small matings are necessary—in fact, best results will be secured from pairing—but where eggs

Hundreds of Early Hatched

Aldrich White Orpingtons

Ready to Win at the Fall Fairs

OUR early hatched birds are now ready to win at this season's shows, and the quality of our birds this season is better than ever. On account of the increased demand from our many customers, we have reduced our advertising one-half and this enables us to give better values than ever before. If you desire to get your share of the increasing business in the White Orpingtons during the coming season, you should make a good win at an Early Show.

In placing your order for your winners, remember that we are the largest farm in America devoted entirely to breeding the highest quality White Orpingtons and we have devoted our entire time and attention for many years to improve this one breed. With over \$50,000 invested in foundation stock and buildings, no detail is lacking that is necessary to breed the very best quality,

and at the least expense, thus enabling us to furnish our customers high quality at reasonable prices.

Aldrich White Orpingtons have been the largest winners at Madison Square, Chicago and all of America's best shows for years, and at thousands of other shows in all parts of America and Canada our customers have won the most coveted prizes, while their high egg-laying ability has been proven in the National Laying Contests.

Place your order early so we can reserve you a winner. A small deposit at this time will secure your birds and we will sell no one else for your show. Prices of fine Show Cockerels bred from Chicago and Madison Square winners, range from \$10.00 to \$50.00 and Pullets from \$7.50 to \$20.00. Pens, \$25.00 to \$100.00. Utility Cockerels \$5.00 and Pullets \$3.00 each.

and meat are the chief consideration and labor saving is necessary in order to show profits, the large flock matings are proving both desirable and satisfactory.

* * *

In handling large flocks, reasonable cleanliness is essential; but the most important consideration, besides good care and good management, is to use only sound healthy specimens and to keep them healthy. We believe, where large flocks have failed to give good results, it will be found that the birds have not been well fed and cared for; that sufficient attention has not been paid to breeding for health, vigor, and vitality; that the culling out of undesirables has not been constantly practised; and that the fault—if any—has not been with the large flock or the flock mating, but was a fault of management or of the manager. Of course, it is essential in any sort of mating that only well-developed, fully-matured specimens should be used for breeding purposes.

* * *

Among the evils that have been charged up to "large flocks" are crowding on the nests, egg eating, feather pulling and comb picking. None of these evils are the result of large flocks, per se, in fact all of these habits occur quite as frequently in small flocks as in large ones—and are chiefly the fault of the poultry keeper. Where a sufficient number of nests are supplied from the start, there is very little crowding on the nests. The worst egg eater we ever saw was in a little flock where there were only four females and a male. Egg eating is easily cured. Simply file—with a fine flat file—the points of the beaks of offenders down to the "quick" and leave a few china nest eggs lying about. The egg eating will stop promptly. It will not start again if you keep the birds busy and well fed, and keep nests clean, gathering eggs often. So-called "incurable" feather-pulling and comb picking are not "incurable" at all, and are preventable bad habits, which result from idleness, lack of exercise, insufficient greens and bad management. These bad habits are quite as common in small flocks as in large ones. The size of the flock has nothing to do with it. Provide plenty of green food, keep the birds supplied with incentive to exercise, keep them comfortable, well-fed and busy, and you will have little trouble. If either feather picking or comb picking starts, it can be checked by prompt action in removing the offender and correcting the fault in management which started the trouble. Usually, if the flock are promptly put out on a good sized out-door range the trouble soon stops. When this is not possible, the use of poultry bits on the offenders will stop the picking and pulling. Bits can be obtained from poultry supply houses, or can be made by fastening a piece of soft wire, of suitable size, in the bird's mouth so that beak cannot be completely closed. Filing the point of beak will usually stop picking and feather pulling. We have never yet had to use a bit. One crowded flock, that had been closely housed for seven months, started feather pulling and had the habit well established before they could be properly attended to. By May first, bare heads, necks and rumps were the rule, rather than the exception, in that flock. We advised putting them out into a pine grove in which there was a little clearing that was showing green grass. By the middle of May the birds were put on this pine grove range, without shelter

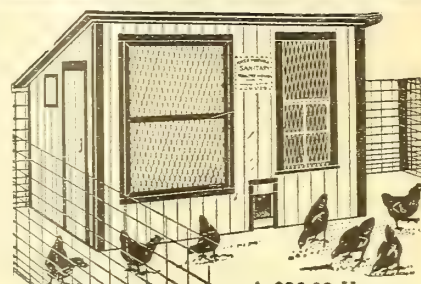

Don't Build—It's Cheaper to Buy Potter "Redybilt" Poultry Houses

Don't build—you can buy better, cheaper (ready built) hen houses, roosting and nesting fixtures, coops, hoppers, etc. We buy No. 1 high grade cypress lumber in carloads, cut and fit all parts perfectly in our big factory and deliver the complete house, coop or fixtures in convenient sections, all ready to be set up better and cheaper than you can build them yourself. Potter Poultry Houses, Roosts, Dropboards, Nests, etc. have been sold for over 10 years. Used by thousands of poultrymen. You start right when you buy them and save money, too. A clean, sanitary hen house means healthy hens and lots of eggs.

of any kind—covered nest boxes were
scattered about the grove—and the birds
roosted in the trees. They were fed
twice a day on a mixture of hard grains
—no mash or beef scrap—and had to
scratch for the balance of their living.
The bad habits stopped at once. The
flock laid splendidly all summer. In the
fall they had moulted out so fine, smooth
and glossy that they looked like pullets,
and selected specimens were housed,
wintered and bred without developing
the bad habits again.

* * *

It seems to us that a good deal of the
dissention, disturbance, and lack of prog-
ress toward more general prosperity in
poultrydom, is due to over-promotion of
selfish interests, too little real fraternal-
ism, lack of friendly co-operation, and
the whole largely born of ignorance,
jealousy and greed. An effort to become
better informed—an educational effort—
efficient co-operation for the interests of
all, rather than to satisfy the greed of a
few, with a good live boost for real
active, constructive team work on the
part of breeders everywhere who have
common interests, would be followed by
an overthrow of "bossism" and better
conditions generally. Why not get to-
gether and work together? Cast out the
greedy ones, if necessary, or if they will
not mend their ways and inject a little
real harmonious co-operation for the
good of the *whole industry*—not one or
two little branch specialties, but *every
poultry interest*. Attempting to do busi-
ness on the "tickle me and I'll tickle
you," or the "scratch my back and I'll
scratch yours" plan is mighty poor busi-
ness policy and it is not good common
sense.

* * *

If you are an employer, or just a
parent, do not be stingy and niggardly
with praise for work well done. When
it seems necessary to find fault,—count
fifty and think it over first. Then make
your correction as moderately as you
are able. Honest praise of worthy ef-
fort will stimulate the one so praised to
still greater effort. A well placed "well
done" or "that's a good job" will often
work better for your interests than
would an increase in wages. Grudging
approval of good work, or harsh criti-
cism of a poor job, will often stir up
ill-feeling that results in less satisfactory
work and time killing. We have seen a
laborer fairly "hump himself" to make
a still better showing, just because a
hearty and cordial "that's a good job"
from his employer. In one such case
the worker said to us, "make me feel so
good, I work like two men all the week."

The story is told of a farmer, who,
when the hired man reported that in
mowing a newly set orchard he had cut
down two trees, said: "Yes, I know that
is a hard place to mow, you did well not
to damage more than those two trees."
And the hired man said: "I'll do better
tomorrow."

A raise in pay, in these days of climb-
ing prices especially, is always a wel-
come event; but well-merited praise of
work well done supplies a wholesome
stimulus that mere money cannot buy.
Criticism when tempered with kindness
and justice is better received and more
effective.

MOLTING HENS

SHOULD HAVE
PURINA CHICKEN CHOWDER

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

NINETY-SIX DEGREES on my east porch at eight A. M. That is the recorded temperature as I sit down to write these lines. We have had excessively hot weather for more than a month, and a lack of rain. While some of the growing things have suffered, we have kept about everything feeling and looking and doing well by constant cultivation. The corn was in danger of "firing" for several days, but is now all right, and if we get a big fill, will be a very big crop.

While the fruit trees and berry bushes have not made as much growth as usual, they are all right and will go into winter with good ripe wood. I believe the strawberries will be better next season because of the check in growth this summer. I know this is contrary to the teachings of the wise men, but it has been my experience thruout a series of years.

This month is the time to plant currant and gooseberry cuttings. This, too, is contrary to the teachings of most of the wise men. They tell us to wait until late fall, tie the cuttings in bundles and put them in the ground, setting out the cuttings in the spring. But don't do it. Make the cuttings *now*. Take wood of this season's growth, but so there will be two buds which may be placed beneath the surface of the ground, and one or two buds above the ground. Plant them in a sheltered trench in good soil in the garden. Place the cuttings about six inches apart. Be sure to firm the ground well. In fact, pack the ground at the base of the cuttings. *This is the secret of success. I take a two by four piece of timber and a cross handle, and pack the soil in the trench as hard as possible. Then fill the trench, but do not pack the surface soil. When the ground freezes, mulch the cuttings. By next fall the bushes will be more than a foot high and nicely branched. Then they are ready to be planted where wanted. In two years they will be in bearing.

* * *

The worker bees are now killing the drones and it is a merciless slaughter that is going on down in the bee yard. Two or three bees pounce upon a drone and tear off his legs and wings and head. There is no sentiment in the bee household. He who cannot or will not contribute to the support of the family is immediately put to death. The drones have served their purpose and now must die. And it is not a bad philosophy. There is no nursing of weaklings, only the strong being permitted to live and

bring young into the world. I think the basic ground of bee society is a better one than that of the human family.

* * *

Pursuant to a call issued several months ago, a large number of fruit growers recently assembled at St. Louis and organized the National Commercial Apple Growers' Association.

This Association is not intended as a horticultural society for the discussion of theoretical or cultural subjects, nomenclature, etc., but it is a business proposition for business men engaged in the business of apple growing. The National Commercial Apple Growers' Association does and will include the fore-

First Golden Wyandotte cock and champion male, San Francisco, Cal., November, 1915. Bred and owned by J. S. Pennington, Plainfield, Illinois.

most apple growers of the country, as letters and reports from every section indicate that progressive growers are willing and anxious to join in bettering this nation-wide movement. The organization of this Association came as a necessity. Generally, the past season was unsatisfactory to a majority of commercial growers. The lack of unity, poor quality apples and the attendant low prices broke the market early. It is to avoid a repetition of these conditions that this Association was formed. The future plans of the Association and its benefit to the members will have the same cause and effect when compared to the past, as that of a large, leaderless, undirected crowd to the trained, well-directed army. Team work, efficient cooperation of the united whole is our purpose, and as long as growers, in their present disorganized state, represent the leaderless crowd, then just that long will they be imposed upon from every source. The time is ripe for the organization of this Association, and the time is now for every reliable commercial apple grower who is looking to the future welfare of his own business, and the apple industry in general, to join hands and make it a SUCCESS from the very start.

In brief, the apple growers who will become members will have a permanent official organization, which undoubtedly will become a strong force that will be recognized by apple buyers and every other interest that may be connected with the handling of apple crops. The members of this organization instead of being at the mercy of unscrupulous interests, will have a strong, forceful association, which will insure a square deal to everyone.

P. C. Stark, of Louisiana, Mo., for some time has been at work on plans for the organization of such an association. No man in all America knows the needs of the apple producers of the country quite so well as does P. C. Stark, and I think we all owe him much for his life work in our interest. I hope every apple producer in the country will become identified as a member of this association. Send your membership application to H. C. Irish, 1227 Childress Avenue, St. Louis, Mo.

* * *

I have always read your articles in American Poultry Journal with great interest and find them very helpful. Now I would like to ask, do you consider the Kickapoo Valley in Crawford Co., Wis., a good fruit growing section, also what do you think of their proposition to investors? The proposition offered is this: first, a charge of fifty dollars per acre for trees, preparation of soil and planting; second, a charge of thirty dollars per year per acre for a period of eight years, for pruning, spraying and supervision; third, a charge of one hundred and fifty dollars per acre for land. This to be taken from one-half of the fruit crop when trees start to bear. Now, this seems to me to be rather a one-sided contract in favor of the Association. I may be mistaken, but I would like to own an orchard and care for it myself, but lack the capital. I will be very thankful for any information you can give me on the subject. Am sending herewith one of the Association booklets, so that you may be better able to judge in the matter.

Wisconsin.

Edward E. Krause.

I know nothing as to the financial standing of this company. The district in which they are operating is a fairly good fruit district. I agree with my correspondent that it appears that this is "a rather one-sided proposition in favor of the company." I strongly advise all readers of the AMERICAN POULTRY JOURNAL to leave an orchard proposition of this kind severely alone, because they can do much better for themselves by going into any of the tried and known fruit sections, near the great markets of the country, and buying land outright, doing their own planting, etc.

GROVER DEEGE 814 Jefferson St. QUINCY, ILLINOIS

I picked my last Royal Purple raspberries August 2. They are, as I have previously stated, the most productive and profitable of all raspberries here with me. I am going to urge all AMERICAN POULTRY JOURNAL planters in the mid-west to put out some of these berry bushes. They just smiled at the severe dry weather which took about all the life out of the red and black varieties.

* * *

As a reader of your interesting horticultural department in the Journal, I write to ask your assistance with some black currant bushes which do not bear any fruit to speak of. The bushes are three or four years old and late last fall I cut out a large part of the wood and put lots of hen manure around them in the spring, and dug about them keeping the ground cultivated. They were covered with blossoms this spring, as they have been before, but the blossoms did not make fruit. I feel like pulling them out, as they are not worth the room they take. They do not seem to be troubled with worms, but this year I have noticed a few of them with a striped bug similar to a cucumber bug, and the leaves are rusty looking where they have been attacked. If you would give me some information in American Poultry Journal, I would be very grateful to you.

Wm. Halliwell.

None of the black currants are as productive as the red varieties. Yet my correspondent's bushes should certainly produce better than they are doing. I am of the opinion that these bushes are of the Black Naples variety, which is only moderately productive. I advise my correspondent to plant a few Boskoop bushes near his present planting. I have never seen the insect to which Mr. Halliwell refers on any of my bushes. If this is an eating insect, the bushes should be sprayed with arsenate of lead. If a sucking insect, spray the bushes with Black Leaf 40. For rust, spray with sulphocide.

* * *

In answer to Lora C. Longhar, Wis.: Peter is a fall apple, originated by Peter M. Gideon, of Minnesota. It is a seedling of Wealthy and is as hardy as its parent. It has not been largely planted, for the reason that the fruit so closely resembles Wealthy that many growers have considered it identical with it. It will keep from four to six weeks longer than Wealthy. By all means plant a few trees of this variety.

* * *

I have a number of inquiries from people in the mid-west regarding the planting of the Stayman Winesap apple. I cannot recommend this apple for the mid-west prairie country. In the Virginia, North Carolina and Pennsylvania fruit districts it is a wonderfully fine and profitable apple. I think the best apple I ever put into my mouth was a Stayman, raised in the mountain orchard of F. R. Field, near Ashville, N. C.

W. P. Williams in answer to an inquiry of a New York planter, has this to say of the behavior of Stayman in Iowa, and upholds my position:

I notice some talk of the Stayman as a New York apple. I want to say a word about this apple. In planting our orchard we used Stayman and now have about 600 trees. It is a good grower if the one-year trees are used. The trees are very often irregular shaped and I hardly think it would be a long-lived tree. The fruit seems not to be so valuable as we expected, being dull colored and not so good a keeper as we thought. However, it is good-sized and a good apple, and probably we have made no great mistake in planting it. I believe it would not color so well with you even as it does here. My trees are young and it may do better after a while, but I hardly think we will plant it again.

* * *

In the beginning of these notes I mentioned how the thermometer registered ninety-six on my porch, and how the sun

Sex Control Spok Ahne Langshans

One breed that delivers the goods. This is what our customers have said this year:

North Carolina:—"Hatched 12 chix from 15 eggs; we consider this very good."

Texas:—"Hatched 8 chix from 15 eggs; we call this good enough."

Chicago, Ill.:—"The 16 chix arrived in fine condition, they jumped and flew in a way to do you good to see; we appreciate your treatment."

Waterloo, Iowa:—"The 8 chix arrived in good condition, all eating and doing fine."

was scorching hot. Since then the clouds have gathered and now the rain is falling. Everything in the garden is laughing in glee and thankfully drinking in the sparkling drops of water—the first they have had in three weeks. Some one has said that the kindest thing God ever gave to man is shade and I am inclined to believe in the full truth of that statement. But when the rain falls on the scorched earth after a three weeks dry spell, it seems that nothing could prove a greater blessing. Just outside my study window a robin sits in an oak tree and is pouring out his thankfulness in a song which is as earnest a prayer as ever went up to God from any tired and care-worn man.

* * *

I have been getting twenty-five cents per quart for red and purple raspberries. That is a big price and a very profitable one. This fall I should dig out all my St. Regis bushes. This much boomed variety is of no value here. It is not an abundant bearer and the berries are very small. Of all reds, the King is the best, but I shall make all future plantings of Royal Purple.

* * *

On August first, I extracted several hundreds pounds of honey. It is selling at fifteen cents a pound. Most of the colonies run for extracted honey made about 150 pounds each. Comb honey, with an average to the hive of 96 pounds, is bringing twenty cents a pound. There is no more pleasing and profitable side line for the poultryman, orchardist or gardener than bee keeping.

* * *

I have tried, I think practically all of the early cabbages, and have found that after all the Jersey Wakefield is the most dependable.

* * *

Most of the buds put into the fruit trees during July "took" all right. I have top-worked several trees to more desirable varieties and in two years will be gathering fruit from the branches made by the buds. It is interesting work too. Sometimes when I am tired or worried I go out and put in a few buds on a tree of only ordinary value. It is such a simple thing within itself, this thing of putting a tiny bud into a branch of a tree. Yet in two years we behold quite big branches laden with fruit. So in budding one is building the frame work of a bearing tree. And so it is all thru life. It is not always the big things that are the greatest blessings.

I have a Senator apple tree in full fruit for the first time. I planted but one of these trees, believing them too tender for this climate. Yet this tree has withstood thirty-eight degrees below zero. It is a fine growing tree. The fruit is large and very beautiful. I am most favorably impressed by the Senator, which has none of the weakness of most Senators. I have top-worked by budding a number of trees to this variety. If an Iowa orchardist had his planting to this variety and the trees did as well as this one has for me, he would have a gold mine.

* * *

Hon. Roland Morrill, the peach King of Michigan, writing Wm. P. Stark, Neosho, Mo., under recent date, said:

"You can add one new feature to the list of merits of the J. H. Hale now. We had the worst visitation of Curl Leaf this year that we have had in twenty years, and where not sprayed the J. H. Hale proved the most resistant of the entire list. So now I have seen

Keep Their Houses Clean

Mites and lice breed by the millions these early fall days. Don't let them get a foothold in your growing flock—the birds you expect to lay high-priced eggs this winter. Make their houses bright cheerful and sanitary and prevent the existence of all vermin and disease germs by painting and disinfecting at one operation with

CARBOLA
The Disinfecting White Paint

A snow-white mineral paint combined with the world's most powerful germicide. Ride the premises of vermin, yet cannot harm the birds. Comes in powder form. Mix with water and it is ready to use. Can be put onto any surface with brush or sprayer.

Use It Instead of Whitewash

in poultry houses, dairies, barns, cellars and piggeries. Will not blister, flake or peel. Used and endorsed by experiment stations and many of the largest poultry and dairy farms.

Spring Grove, Pa.

DIAMOND CORN GLUTEN MEAL

FOR a profitable egg yield, hens must have more protein than corn or straight grain can supply. You want an *available protein* and a *low-priced protein*.

Diamond Corn Gluten Meal is the most concentrated and lowest priced corn-protein on the market—guaranteed 40% protein, 1.5% fat, 4% fibre.

This is the reason that Diamond Corn Gluten Meal is the chief protein ingredient in the feeding formula used by successful poultrymen.

The following is one dry mash formula which has given excellent result:—

100 lbs. Wheat Bran
100 lbs. Wheat Middlings
100 lbs. Diamond Corn Gluten Meal
50 lbs. Corn Meal
50 lbs. High Grade Beef Scraps
25 lbs. Linseed Meal

If your dealer does not carry Diamond Corn Gluten Meal, write us and we will advise you where same may be obtained.

P. J. FERRIS, Box A, CUYAHOGA FALLS, OHIO

every orchard test that is important in this region, and the J. H. Hale has proved superior in each and every one to any other variety grown here. You speak of Southern planters 'having fits' over the Early Rose. That about explains my state of mind over the J. H. Hale. I only wish I had a thousand acres in bearing now."

* * *

On August first, I was selling Henry Clay apples for two dollars a bushel. This is a very fine, extra early apple, not quite hardy enough to endure our test winters unless put on some hardy stock, such as Delicious, Duchess or Wealthy. I have had them winter kill. A few years ago I gave a neighbor one of these Henry Clay trees. It has never been injured by the cold, having withstood thirty-eight degrees below zero, while all my plantings of the variety the year this tree was planted died out. How do you account for that? I cannot. I now have several Duchess trees top-worked to Henry Clay and it is from them that I am selling the apples at two dollars per bushel.

* * *

Nine years ago a farmer not far from my place put out twelve acres of what he supposed were Wealthy apple trees. They came into bearing last year and every tree proved to be the worthless Haase variety. It is a great loss to my friend and he apparently has no redress. The trees were bought of a nursery company, making a very low price. Do not under any conditions buy these cheap trees. It costs money to grow a good tree, and therefore a good tree is worth all that it costs. I have been very fortunate in my purchases of nursery stock. During all the years in buying many trees I have only once received trees which were untrue to name. That was when I bought of a local nurseryman, letting my heart get the better of my head. I always make a special effort to keep clear of cheap nursery stock.

* * *

The death of Wm. Orr at Orr's Mills removes one of the strong men of the Empire State. Wm. Orr had an individuality all his own and left a strong imprint for good upon his immediate county and state. I was very fond of this man of sterling character, having met him when a guest of my most beloved friend, his son, D. Lincoln Orr.

* * *

Here is a compliment to Theodore Hewes. A few days ago I received a letter from A. W. Turner, of Quebec, Canada. In that letter Mr. Turner wrote: "How is Theodore Hewes? I met him at the New York Show several years ago. I often recall the fact that he was always busy shedding sunshine, and remember well his talk to a few of us beginners in the poultry business. I have profited greatly on the advice he gave us."

* * *

In answer to C. B. Farley, Michigan: The Holland Long Branch currant is not planted commercially in this country. It is a low growing stocky bush, with fruit of good size. It does not come into bearing as young as other currants, but is productive. Note what you say about planting five acres of currants and your apparent dislike of London Market. For years, Michigan commercial currant fields have been of this variety, and growers in enlarging their fields plant it as a rule. So I took it that it was admirably suited to Michigan soil and climate and market conditions.

Three Oaks Columbian Wyandottes

Breeding and exhibition stock at reasonable prices. Write wants. Address
Ralph Woodward, Box 200, Grafton, Mass.
Pres. National Columbian Wyandotte Club.

Single Comb Black Minorcas at the last Madison Square Garden Show formed the largest class this variety has ever had at that show. The first prize cock and the first prize cockerel shown in the above illustrations were bred and are owned by the Whatglen Farms, Frank McGrann proprietor, Lancaster, Pa. Their fine type and color made them easy winners.—L. A. S.

W. B. Cross, one of the largest apple producers in the West, says, "If I were to plant an apple orchard of 100,000 trees, I should plant 30,000 Black Ben, 10,000 Delicious, 5,000 King David, and the rest Winesap, Jonathan and Rome Beauty."

* * *

J. S. Moore of Iowa has planted 2,000 Black Ben apple trees. Black Ben, an apple of fair quality, is large and beautiful, hardy and a wonderful bearer. It sure is the "barrel filler."

* * *

It is really amusing what a number of Eastern gentlemen are saying in the poultry press as to the sentiment for the

score card in the West. Here in the mid-west the score card is looked upon as a farce by the men who have progressed beyond the first class lessons in poultry breeding and exhibiting.

* * *

A man in my home county who lived upon a New York farm until he was thirty years of age, and who always had an abundance of Baldwin apples, planted twenty trees of this variety this spring. There is grief in store for this man.

* * *

September is a very pleasant month for the fruit grower. He knows just about what the apple crop will be. The grapes are ripe and the fun of handling

them is enough to make any man thank God that he gave us the grape vine. Then there are a thousand and one things to be done, the doing of which is real pleasure to the person who really loves to grow fruit. In a word it is glorious out in the open in balmy September.

SCRANTON'S FAMOUS S. C. R. I. REDS Now Owned by Rau & Fry, Indianapolis, Ind.

That superb flock that, for the past eight years, has been producing each season many of the really sensational show birds, winning first honors at such shows as *Hagerstown, Cincinnati, Chicago* and *New York*—winning the past season in America's greatest show, *Madison Square Garden, N. Y.*, the coveted first prize on *Cockerel, Pen and Display*, besides *second and fourth Pullet, fourth Hen, and third Pen, color special Male and champion S. C. Red of the show.*

100 Early Cockerels Bred by Scranton \$10.00
From His Madison Square, N. Y., Winners, Each

Capable judges who have seen these birds, pronounce this season's youngsters the best Mr. Scranton has ever produced. We firmly believe they are not excelled anywhere. The opportunity we offer the readers of this Journal is, therefore, one that will appeal strongly to those who seek *type, color, vigor, size, laying ability*, whether they desire breeders that will stamp these qualities upon their present flocks, or show birds that will bring home the prizes. In addition to these cockerels, we will make during September and November very low prices on yearling

males, hens, pullets and pens, because we must reduce quickly the number of birds on hand. Write us for prices on birds for any show. We have the goods—rich in individual quality and the blood that produces birds of lustrous surface, deep red undercolor, strongly colored breasts and good type.

We can help you win. Special Fall Sale List now ready. Send for it. Photographic group of *First Pen, Madison Square, N. Y.*, suitable for framing, sent for a two cent stamp. Address

Grand Hotel, INDIANAPOLIS, IND.

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Lawn Clippings.

Q. Do you consider lawn clippings, dried, a good food for chickens in the winter? How should they be fed?

New Brighton, Pa. C. E. K.

A. Lawn clippings, particularly when they contain clover, make excellent poultry food. Cure, or dry them under shelter to preserve the green color. When thoroly dry, store them away in sacks. Before feeding the clippings, place them in a pail and cover with scalding water, cover the pail and let them steam until nearly cool; then mix with mash or with a little bran and middlings. Feed at one meal five times a week, as much as the birds will clean up quickly.

For Two-pound Spring Friers.

Q. (1) I am new in the poultry business and undecided on the kind to raise.

Of White Wyandottes and White Leghorns, which would make the best for two-pound friers in the early spring? Which would bring the most in dollars and cents?

A. (1) While the Leghorns grow quickly and make excellent broilers and friers, we believe that you would find the Wyandottes more satisfactory for your purpose.

Q. (2) I have an old apple orchard—about one acre—and, not being cultivated for some time, it is set with weeds, dock, etc. I would like to get it into clover and grass. What is a good way to get rid of the weeds and when would be a good time to start on it? I want to clean out the weeds and get a nice sod for next spring's chickens.

Doylestown, O.

S. C. H.

A. (2) Would mow the weeds, plow up the land and then use it as a run for

a good sized flock of fowls for a few weeks. Then smooth out the lot by working well with a harrow and sow to rye. In the spring when the frost is coming out of the ground, sow your clover and grass seed mixture. When the rye is ready to cut, the grass and clover should have made a good start. You will not get a sod that will stand up under chickens the first spring.

Gapes.

Q. I have 100 chicks running in same flock. They are six weeks old. A few of them have the gapes. Have used a gape remedy without results. The chicks have not been on the ground yet. Feed them a commercial developing mash and scratch food. Use dry clean straw for litter and keep the runs sprayed and clean. Opened one chick and found four worms in its throat, each about $\frac{3}{8}$ of an inch long. Have removed afflicted chicks from the flock.

Buffalo, N. Y.

J. B.

A. We do not recall having a case of gapes reported before where the chicks had not had an opportunity to run on infected ground. You must have introduced the parasites in the feed or straw. Remove the worms from affected chicks by means of a gape worm extractor. You can obtain an extractor from any poultry supply house. A timothy head, from which the seed has been rubbed with the fingers, can be used as an extractor for removing gape worms. The worms are found in chick's wind-pipe. Disinfect the runs with a 3% solution of sulphuric acid. In using an extractor it is introduced into the wind-pipe and then withdrawn with a twisting motion. Extractor may be moistened with a very weak solution of creolin, a few drops in a cupful of warm water.

Mating Blue Orpingtons.

Q. How should Blue Orpingtons be mated to produce good standard color?

Middleborough, Ky. F. H. C.

A. Haldie Nicholson, in AMERICAN POULTRY JOURNAL 1915 Year Book, says: "For the benefit of the breeders of this variety I will explain how I mate my Blues. I will take a Standard male. This bird calls for lacing on breast; hackle, back and wing bows should be blue-black with bright brilliant top color: tail to be blue-black: body a dark, slaty blue; black or brown eyes and blue-black legs. Mate to this bird a Standard colored female, which calls for about medium color, and properly laced. This mating will produce you both show cockerels and pullets. I will call this mating No. 1. I will call this next mating No. 2. Take out of your flock the lightest blue cockerel that you have, with breast devoid of lacing and mate to him your darkest laced female and again you will get results. Mating No. 3—in to this mating put your very darkest blue male, which is a shade or two, as one might say, from black. Mate to this cockerel your very lightest blue pullet, and again you will get good results. Mating No. 4—this pen will contain some of your off-colored birds. First, take your splashed cockerel (and, by the way, this bird's plumage is white, blue, and will also have some red feathers and occasionally black feathers) and mate to this bird the black pullets which you have gotten from your blue mating, and again you will get good results from this pen. Mating No. 5—this pen will contain your solid black cockerel from your Blues. Mate to him your splashed pullets. This last pen I do not recommend, as the percentage of Blues is very low.

Open-Front House Questions.

Q. Have an 8x10 shed-roofed house, front two-thirds open, covered with wire. Left it open all last winter and went thru some very cold weather with no ill effects, except that egg production dropped lower at such cold times. Why do Woods' houses all call for a monitor roof? Why are cloth curtains required? When cloth curtains are used the house seems close, yet house it cleaned at least twice a week.

G. H. S. Collingswood, N. J.

A. The Woods' type of semi-monitor top open-front poultry house does not call for any cloth curtains; the open front is always open, covered only by the fine mesh wire netting. Cloth curtains have been recommended for shallow houses with a wide expanse of open front, but only for the purpose of keeping out snow and rain. We never use a curtain on an open-front house of the Woods' or Tolman's type, unless the house is in use for brooder flocks of small chickens. The monitor top is used to get sunlight into back part of house and to provide additional ventilation in hot weather. It also gives desirable head room in a part of the house where it is most needed. In shed-roofed houses that are shallow and have a considerable expanse of open front, cloth curtains may be used to keep out rain and snow, but these curtains should never entirely close the open front. Houses of the Tolman or Woods pattern will be found

Parks' Strain of Bred-to- and-do-Lay Barred Plym. Rocks

Lead (by 15 Eggs) the Entire Missouri Laying Contest of 100 Pens (From all Parts of America and Foreign Countries)

Showing what careful selection, trap-nesting and pedigreeing for EGGS since 1889 has accomplished. Remember, they outlayed all other birds entered in the last contest, laying more eggs than the famous English Strains did in either the Missouri or Storr's Contests and best of all, they lay them 5c winter eggs as the contest record of 134 eggs for January showed. All this without sacrificing standard requirements as our winning records show.

Demand for mushrooms bigger than supply. Send for big book of expert authority, "The Truth About Mushrooms," it's free. A postal card will bring it.

BUREAU OF MUSHROOM INDUSTRY,
Dept. 296, 1342 N. Clark St., Chicago

warmer than the open-front shed-roofed houses. Cold weather seldom, if ever, causes a noticeable check in egg production where the flocks are properly cared for in well-built, properly-proportioned, open-front buildings.

Dark B. P. R. Pullets with Dark Legs.

Q. Do thoroughbred Barred Plymouth Rock pullets have dark colored beaks and legs at the age of three months and younger? I am very anxious to know. All my pullets are very dark with bluish color in beaks and legs, but the cockerels all have yellow beaks and legs.

Geer, Wash.

D. W. F.

A. You undoubtedly obtained hatching eggs from a cockerel mating, which will account for the dark pullets. Dark pullets often show dark spots in beaks and shanks and more or less dark color in front of shanks. Part of the off-color may fade as the birds mature. The Standard calls for yellow beaks, shanks and toes in both sexes.

Market for Guinea Pigs.

Q. Years ago I raised Guinea Pigs for pets, but today it is claimed that there is a great demand for them. Where and how can I find this market?

Atlanta, Ga.

J. C. H.

A. The demand is very limited. Thru the physicians in your neighborhood you may be able to get in touch with the laboratories of certain medical schools and hospitals where there is a demand for Guinea Pigs. Pet stock dealers in most cities will handle a limited number. Judging from the offerings in medical magazines, the supply must be much greater than the demand. Healthy 10 to 16-ounce pigs are most in demand.

Off-Color in White Wyandottes.

Q. Last winter I purchased a pair of White Wyandottes from a prominent breeder. (I paid \$20 for the pair for breeding purposes.) As far as looks go, I thought I had a bargain. At present I have thirty chicks from them and they are well developed in every way; being good sturdy chicks. To give you an idea of the size I would say that cockerels nine weeks old weigh 3 pounds each, which I think is a good weight.

Recently in going over these chicks, I have been surprised to find a number of feathers like the one enclosed. While very few of them have the black pigment extending down to the quill, as is the case with the feather I am sending you, others show more black in the fluff part. These feathers appear in different parts of the body, rather more on males than on females.

I want you to advise me if it would be best to kill off all these birds and start again, or by a process of elimination to gradually work them better. While I have been keeping poultry for some time, this my first adventure in the fancy. Please answer at length thru the JOURNAL.

Fredericton, N. B.

A. The feather enclosed shows a little peppering of black, a blue tinge in the fluff and a black streak on lower part of shaft. Similar off-colored feathers are not infrequently found on very excellent and well bred White Wyandottes.

It is apparent that, as you believed at first, you secured an excellent bargain. The breeders are evidently healthy and vigorous and have yielded excellent chicks that have developed very well.

STILES' COLORED Leg Bands

PROVIDE IDENTIFICATION

Identify birds as far as you can distinguish colors. Tell which are yearlings and which are two year olds without handling. Made in Red, White, Blue, Amber, Green, Black, Pink, Light Blue and Ruby. Mention variety when ordering.

A Regulator at Each Compartment Safeguards the Eggs and Saves Much Labor

Because there is an Automatic Regulator at each 300-egg compartment of the Candee Incubator, the eggs cannot overheat—the thermostat expands and stops the flow of hot water into the compartment when the temperature is right, without your being there to see that this is done.

Double Temperature Control

You need not be there to lower the trays to prevent overheating of the eggs—the Candee trays are stationary and do not need to be lowered at any time.

There is also an Automatic Regulator at the Heater that controls the draft, giving double regulation and double temperature control.

You can start hatches at different times in the Candee, because each compartment operates separately without interfering with or affecting the temperature or eggs in any other compartment.

Shipped All-built

Each 600-egg Section of the Candee is shipped all-built, and each section easily passes through any ordinary size door opening.

The hot-water pipes are all in place inside the machine, and any handy man can install it. The Candee Incubator comes to you all ready to set up on its legs.

Additional Sections can be added as your business grows without disturbing the first installation. The exclusive Candee principles of construction and operation are covered by broad patents, which principles are unchanged after years of use. The Candee is not an experiment.

Candee Equipment is sold on the broad proposition "Write Your Own Money-Back Guarantee and Attach It to Your Order."

Write now for your copy of the big free catalog, which contains pictures of Candee-equipped plants in every part of the country. Tells why the State Colleges and Experiment Stations use the Candee.

Building plans drawn to scale furnished free of charge.

EASY TO USE
HARMLESS TO POULTRY DOMESTIC ANIMALS AND MAN

The few off-colored feathers are nothing to worry about, even should the birds continue to show some off-color when they have their adult plumage. It probably is simply an indication that the breeding pair are not closely related and that they are good, strong, vigorous specimens.

We certainly would *not* kill off the chicks and make a fresh start. Just forget the off-colored feathers. Select the young stock for health, vigor, vitality, size, shape, and other good Wyandotte qualities apart from color. While you will find few white birds that do not show a little ticking or peppering of black pigment—if you search close enough for it—you can by careful breeding eliminate most of it. Mate the best pullets back to their sire. Mate the cockerel which is best in all characters,—the most like his sire,—back to his dam. Keep on breeding the best, selected, healthy, vigorous specimens of this flock in on each other and we believe you will find the results satisfactory. Bear in mind that success in close breeding depends upon careful selection and breeding for health,—and, in making up a mating, try to avoid having the same or a similar defect on both sides of the mating; balance a defect on one side of a mating with strength on the other.

Naphthalene-Kerosene Mixture for Lice.

Q. (1) Please give me formula for mixing naphthalene flakes, kerosene and crude carbolic acid to make a lice killer.

A. (1) Naphthalene flakes....1 lb.
Kerosene (coal oil)....1 gal.
Crude carbolic acid....1 pt.

Dissolve the naphthalene (crude flakes) in the kerosene and then add the crude carbolic acid.

Q. (2) Will moth balls do as well as naphthalene flakes? I cannot get the flakes.

A. (2) Naphthalene moth balls will serve if crushed and powdered before adding to the kerosene. Naphthalene flakes have been higher in price and less easy to obtain since the European war. Formerly we paid from 6 to 8 cents a pound for the crude flakes, but now the price is 25 cents a pound.

Q. (3) How is this lice killer used? Macon, Ga. L. R.

A. (3) To rid hens of lice paint the inside bottom of a box or barrel with the lice killer; place the hen in the box and confine her there for ten to fifteen minutes, using a piece of coarse open-weave burlap to confine the hen and partly confine the fumes. Do not shut the hen in too closely or you will suffocate her; remember that she must have a little pure air to breathe. The treatment must be given in a moderately warm place so that fumes are given off freely. After treatment the hen should run in the open air. Do not get bottom of box or barrel too wet with liquid; if feathers are wet with it the kerosene will blister the tender skin.

We prefer to use blue mercurial ointment one part mixed with three parts petrolatum, a little applied above and below vent of fowl and under the wings. This is an effective remedy for lice and less apt to injure fowl or plumage. The naphthalene-kerosene-carbolic mixture is better for use to get rid of mites about poultry houses and roosts. To build-up, coops, roosts and equipment, it may be applied with a brush or as a spray and it proves an effective mite killer.

RECORD LAYING FEMALES REGAL-DORCAS LINE
 BRED AND OWNED BY JOHN S. MARTIN. PORT DOVER, ONT.

Years ago Mr. Martin began to trapnest his fowls, beginning with one female he called "Dorcas," that was a prolific egg layer. With this specimen as a foundation, mated to one of his choice exhibition males, he began the breeding of a line of Wyandottes that possessed exhibition qualities with great egg laying ability. Above is shown nine of the highest egg record females of the past season. It will be noted that these females show plenty of modern Wyandotte characteristics and show room type as compared with the present day Standard. Fine feathers, fine form and useful qualities should be the requirements as set down by the American Poultry Association in their Standards for all breeds.

SQUAB BOOK FREE

for 1916, telling how a Mich. hired man now works for himself breeding PR squabs and selling for \$5 doz., how an Ind. man sold 4652 PR squabs for \$1265 in 1915 and cured himself of desire to leave the farm, how a S. C. man ships PR squabs 125 miles to city hotel by parcel post at \$4.25 doz., how another earned one thousand dollars with PR stock from start with only one pair, how a Texas judge bred 8 pigeons until they amounted to a flock of 164 in one year, how a Vermonter bred 25 pairs to 800 pairs in two years. You can do the same. More money-making experiences. *Write today for this big free book.* How to get six dollars a dozen, how to start small and grow big. We ship breeders everywhere, safe delivery guaranteed. Read how one of our customers gets as high as \$8 a dozen for squabs in Pittsburgh and makes a net profit of ninety dollars a month. Note his selling methods. Reading matter which is alive with selling as well as breeding ideas. Squabs well sold are easily

Leg Weakness in Baby Chicks.

Editor AMERICAN POULTRY JOURNAL—Leg weakness in baby chicks, which seems to be prevalent thruout the state, and which, from information at hand, seems to be causing serious losses among flocks in adjoining states, has been in evidence on the plant of the Mormac Poultry Farm, Norwich, Penn., this season, and while it has been claimed that there is no known cure for the disease, the following treatment worked out and being applied at the above named farm is preventing the disease and effecting a permanent cure among chicks affected before preventative steps were taken. The trouble occurred at ages ranging from ten days to five weeks and the beneficial effects of the treatment were in evidence three days after being applied. The chicks treated separately were unable to walk when placed in a pen by themselves and the cures so far obtained resulted in from nine to eleven days treatment. No losses have resulted from the disease and at this writing no new cases are visible among the flocks.

As a natural preventative the chicks should be kept on the ground as much as possible, dry floors of wood or cement being avoided. As soon as the disease appears among the flock give one teaspoonful of tincture of nux vomica in each quart of drinking water every other day, giving on alternate days extract of clover which may be obtained by steeping one-half pound of dry cut clover in one gallon of boiling water, this to be given as a drink without diluting. Once each week pure water may be substituted. On days when nux vomica is given a noon feed of greens or fine cut clover thoroly steamed should be provided, alternating with fine ground green bone on days when the clover extract is given. Feed grain, grit and charcoal on the ground, thus compelling the chicks to stay on the ground much of the time. Continue this treatment, which may be applied as both a preventative and a cure, until the trouble disappears.

Norwich, Pa. H. R. Moran.

(NOTE—The above is good common sense treatment and well worth a careful trial by those who have similar trouble with small chicks. We are always glad to receive letters of this sort. When you have helpful information and experience to offer to brother poultrymen, pass it along. Every time you help a fellow worker you help poultry interests and yourself.—Editor Q. A. Dept.)

Government Bulletins.

Q. Where can I get a list of Government free bulletins on poultry culture?
New York. H. A. C.

The Marvelous Newtown Giant Stands Supreme Among Incubators

A strong statement—but we have *ample reason* to believe it to be *absolutely true*. Our faith is justified by the *consistently satisfactory performance of the machine itself under all conditions and in all parts of the world*.

The Newtown Giant is the only incubator for you if you require the machine which will positively "hatch the most chicks, the best chicks with least labor and at low-est cost." Below are a few reasons for acknowledged Newtown supremacy:—

Supreme in Efficiency

Actual performance in all climates, under all the varying conditions the world over, has demonstrated the Newtown to be the most efficient hatching machine.

Supreme in Construction

This applies to every part of the machine. The most exacting care and the very highest skill are used in manufacturing the Newtown.

Supreme in Durability

The Newtown is substantially built and will last a lifetime. Every part is carefully inspected and strongly put together. Each machine is completely assembled before shipment. This insures accurate fitting and perfect operation.

Supreme in Improvements

This has been the greatest factor in Newtown success. Only those features which stand the most severe tests are adopted. They include the Automatic Coal Feeder, Automatic Regulator at the Heater, Automatic Regulator of Heat, Ventilation and Moisture at each compartment, Automatic Eggs Turner, Automatic Temperature Indicator and Automatic Electric Alarm.

Supreme in Service

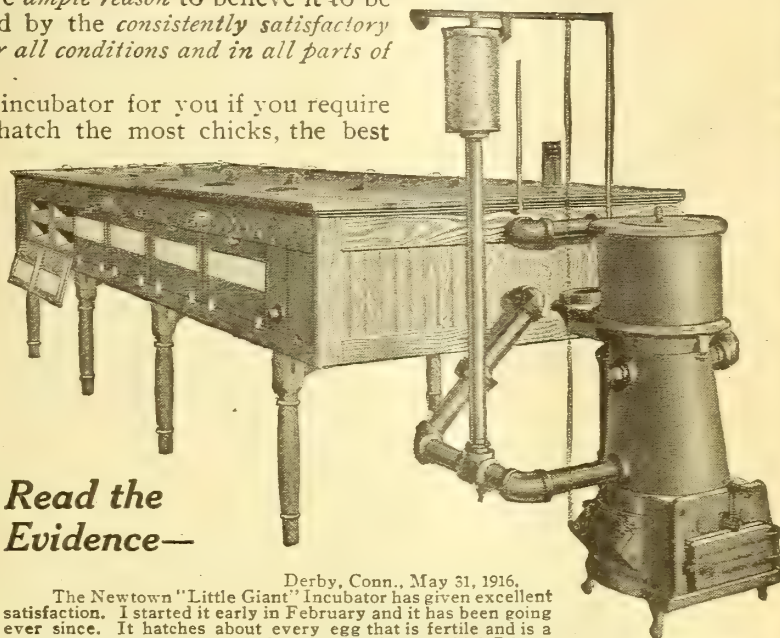

Nothing is left undone to insure that every Newtown user shall get the very best and greatest possible service from his machine. Everything is designed for convenience and service.

Supreme in Satisfaction

Every Newtown customer is a satisfied user. Ask the poultryman who owns one. A great many people who purchased Newtowns last year have already placed orders for increased capacity to be installed at once. This is the final test.

Supreme in Sales

Because they are supreme in Efficiency, Construction, Durability, Improvements, Service and Satisfaction, the sales of Newtown Giant Incubators are more than doubling each season.

Read the Evidence—

Derby, Conn., May 31, 1916.
The Newtown "Little Giant" Incubator has given excellent satisfaction. I started it early in February and it has been going ever since. It hatches about every egg that is fertile and is a very great improvement over the other incubators which I have had of smaller size and different makes, although they were considered to be among the best of the smaller machines. MAPLEDALE FARM, (Judge) W. S. Downes, Owner.

Waverly, Iowa, May 15, 1916.
We have thoroughly tried out our 3000-egg Newtown Giant Incubator and find it highly satisfactory in every way. It keeps the temperature perfect—same does not vary one-fourth of a degree in the various compartments. We were surprised at the small amount of fuel this machine takes, and have taken off two splendid hatches. We are perfectly pleased in every particular, and shall be glad, at all times, to recommend Newtown Giant equipment. RHODE ISLAND RED JOURNAL CO., A. G. Studier, Editor.

Somerset, Mass., June 12, 1916.
Am very much pleased with the way my machine has worked. I do not see how any machine could do better work. One of the things that impressed me most was the Egg Turner and decided me in your favor. After using the turner for one season I can say nothing but praise for it and feel that it has saved its price over and over in the time and labor. I have never had healthier or better chickens than I have had this year. Wishing you the success with your machine that you deserve. ERNEST L. PIERCE.

Reno, Nevada, April 6, 1916.
I am very well pleased with the 6000-egg size Incubator purchased of you this Spring. Your egg turning device is certainly a big improvement over last year's model. We are turning out the best chicks we ever hatched and more of them. Our 1200-size purchased last year, remodeled with this year's trays, hatches 20 per cent. better; 1056 eggs set; hatched 815 chicks, 1st hatch. 1056 eggs set; hatched 822 chicks, 2nd hatch. A. F. SCANAVINO, Manager.

Pittsfield, N. H., May 24, 1916.
We have just closed our hatching season with our Newtown Giant Incubator. Got an average of 66 per cent. hatches of all eggs put in machines hatching over 13,000 chicks. Am much pleased with the turner. It is a great labor-saver. The chicks are well hatched, coming out large and strong. The Newtown products are O.K., and your dealings are on the square. A. N. PEASLEE & SON.

Gossville, N. H., May 27, 1916.
Am very much pleased with my 1800-egg Newtown Giant Incubator. My last hatch averaged 75 per cent. The ease and accuracy with which it runs far exceeds my expectations. K. F. RAND.

Box 92, Wyckoff, N. J., May 12, 1916.
The 1200-egg Giant Incubator purchased at Madison Square Garden is certainly a labor-saver for the busy poultryman. About fifteen minutes each day is all the time it requires and it brings out the finest chicks I ever saw. The Electric Alarm is a big feature but my machine has maintained such an even temperature that the Alarm has never been sounded. TEMPEL'S POULTRY FARM.

Huntington, L. I., N. Y., May 15, 1916.
The 1800-egg Newtown Giant Incubator has given perfect satisfaction. Our hatches have averaged about 80 per cent. all season and all were strong chicks. The machine is very easy to operate on account of the Automatic controls and the Automatic Eggs Turner is perfect. It saves time and turns the eggs thoroughly. The machine is all you claim it to be. BREEZY LAWN FARM, Henry Hung, Owner.

Our new booklet—"Proof of Efficiency"—and complete catalog are yours for the asking. Every earnest poultryman should have them. Better write for them NOW!

Beef Scrap—Breeding Questions.

Q. (1) I am enclosing a sample of beef scrap. Does this appear to you to be fresh, and would you advise feeding it to growing stock?

A. (1) We would not feed it to any stock. The scrap appears old and in poor condition, also it is poor scrap and contains a large amount of coarse bone and some foreign matter.

Q. (2) I have a fine bunch of S. C. Black Minorca chicks, but they were hatched late, June 25, 1916. I purchased the eggs from a prominent Eastern breeder and have every reason to believe that I got good value for my money. Will these do for breeders next spring? Would you advise a cockerel from this flock at the head of my pen, or should I purchase another bird? Should I get a cock or cockerel? Should this bird be purchased from the man I bought eggs from?

A. (2) If the pullets are well developed, healthy and vigorous, would breed them in the spring. If necessary, you can breed them to your best cockerel, but we believe you would secure better results by mating the pullets with a yearling cock. The pullets should prove better breeders in their second season, if properly managed. Would state your case to the breeder from whom you bought eggs. Ask him for one or more good yearling hens to mate with your best cockerel and a good yearling male to mate with your pullets. At this time you could probably obtain a pair or trio of birds of same strain and family as your young stock, and at bargain prices. This would give you a fine start in the spring. Do not cross a foreign strain on your stock.

Q. (3) Would like to have the following terms explained so that a beginner can understand them: Pullet mating, cockerel mating, single mating, double mating.

H. E. F.

Kyle, S. D.

A. (3) Pullet mating and cockerel mating are terms applied to different family matings under the double mating system. In double mating, as practiced, there are practically two varieties in one, i. e., one family line in which the cockerels generally come lacking in Standard exhibition color and requirements, while the majority of pullets answer Standard description, is used to produce exhibition females and is spoken of as a pullet mating line, or family, or strain; while in the cockerel mating line the males are Standard and the females are short on Standard exhibition qualities, this family line and mating being used to produce exhibition quality males. The cockerel mating family line and the pullet mating family line, in order to secure the highest percentage of exhibition specimens of the desired sex, are each kept distinct as if different varieties and are not crossed. However, we believe that a skillful breeder could take stock from either family of a double mating and work it into a strain that would develop a fair percentage of good quality in both sexes or of either sex, as he might desire and work for. The single mating is one in which a single family, usually with females and males both, close to

Standard requirements, is bred to produce good exhibition quality in both sexes in progeny.

While the double mating advocates in most varieties may go to extremes, practically creating two separate varieties within one, it is also true that the single mating breeder, altho he may breed but one family line or strain, cannot avoid making several different kinds of matings in his yards and some of them extreme ones. While some birds will be produced that score high in Standard quality, and rare specimens may be produced that will seem to be in advance of the Standard, all specimens will show some defects and some of them will present a good many defects and still prove good breeders. Breeding is an art which calls for knowledge of what is behind the birds and skill in mating them so as to balance defects with strength. We will find many different kinds of mating in any fancier's yards—be he double or single mating advocate—and generally we will find some extreme matings that are yielding good results. By extreme matings, we mean that either one or both sides of a given mating might be counted decidedly defective when appraised by the Standard, yet the breeder,—from his knowledge of the birds and their blood lines and his experience in mating,—expects, by carefully balancing defects on one side of the mating with strength on the other, to obtain a good percentage of specimens of Standard quality in the progeny.

Eye Troubles—Sitting Hens—Size of Eggs.

Q. (1) There are a few points I wish to discuss not from the beginner's viewpoint but problems that baffled this year for the first time in a long experience with fancy fowl. A flock of chicks from eggs sent by one of our foremost breeders, fed carefully and well housed, began to exhibit eye-trouble about the seventh day. There was no symptom other than the sealing of the lids. At first I greased the lids with a bit of olive oil, but after a few days even this would not keep the lids open. The chicks naturally became emaciated and in a short time died.

A. (1) Eye trouble of this sort is liable to occur in long continued damp, or wet, warm weather. Mouldy or musty litter, runs, food, or anything musty in chicken quarters may start the eye infection. Sometimes caused by irritating dust or use of strong disinfectants, but dampness and mustiness are common causes. Removal of cause is, of course, the remedy and method of prevention. In very damp seasons it is difficult to keep things free from mustiness.

When trouble is first noticed, cleanse the eyes with a weak solution of boric acid—about a level teaspoonful in eight ounces of water. Use freely. If this does not promptly relieve the "wet eyes" or "gummed eyes," cleanse eyes first with a 3% solution of boric acid in water, then with water alone, and, with a medicine dropper, drop into each eye a few drops of a freshly prepared 25% solution of argyrol. (Obtainable of your druggist). Repeat twice a day until there is improvement, then less frequently until a cure is effected.

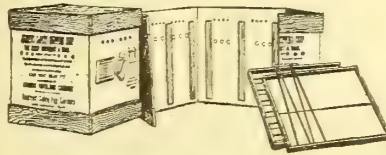

Q. (2) Sitting hens seemed to have a strong tendency to bowel derangement. Tho perfectly healthy, fed on whole corn and well dusted for lice, several developed such a looseness of the bowels

Bring In More Money By Paying Out Less

Practically every time you ship poultry, to shows or consumers, you're losing money—you're paying out too much for wooden koops. You can use them but once or twice—you have to pay extra express charges because they're so heavy. And you lose lots of time making them.

Buying Andrews' Efficiency Koop and Koop de Luxe, you save money. They're so cheap that it pays even if you only use them once. But you can use them over and over again. No hammer or nails. Put together easily, fold easily. They are light, strong and waterproof. Absolutely the most efficient and best way to ship poultry. Try a half dozen. You'll be convinced the very first time you use them.

Koop de Luxe

that they were unable to retain excreta until off the nest, and befouled the eggs so frequently that it became necessary to remove them. None of these birds was set beyond the time of one hatching and was not confined to the nest, i. e., she could feed and exercise at will.

A. (2) Musty food, dampness, and lack of sufficient exercise when off the nest, also too much sameness to ration and consequent indigestion. Infection from fouled floor or earth is also a common cause. Make your runs for sitters long and narrow, with nest at one end and food at the other, to compel exercise. Much of feeding corn is poor quality and has been treated to make it appear bright and then kiln dried to preserve it. Poor corn is a common cause of trouble.

Q. (3) Can the size of eggs be regulated in any way? Many of the yearling hens laid rather small eggs for long periods at a time. Would this indicate insufficient feed?

A. (3) To a limited extent size of eggs can be improved by good and liberal feeding. By selection in breeding, breeding from fowls that habitually lay large eggs, you can improve size of eggs.

Q. (4) Purchased a prize-winning hen, yearling, and she was shipped from New York to Saint Louis. Tho in good condition apparently, the bird never laid an egg and after some months died. The only peculiarities about her were slow, deliberate movements, a disposition to remain apart from the flock, and a lackadaisical, languid expression. She was never greedy for food, yet very fat and heavy behind. On dissecting her I found what looked like a tumor or at least an ovary had become enlarged so as to look like one. This was slightly more central than an ovary is usually located. On opening it, the surface was striated yet firm like a hardboiled egg. There was no sign of an egg save a few clusters no larger than pin-heads. The fowl's liver was very large and she excreted a yellowish fluid.

A. (4) Bird had diseased ovary. Tumor and heavy, pendant abdomen may have been caused by obstruction of oviduct. There is no cure in such cases. Usually the condition is not identified until after death of specimen.

Q. (5) Please compare the practical values of crude carbolic acid and crude petroleum. Is the former perfectly safe to use on the interior of coops for little chicks when allowed to thoroughly dry in before the coop is used? I can obtain the carbolic more cheaply than the petroleum. Reference is made here to the lice and mite killing properties.

A. (5) Crude carbolic acid is obtained from coal tar, is chiefly a mixture of cresol and phenol,—a dark, oily liquid having a strong tar odor. It is poisonous and will burn and is not adapted to use on fowls or where their bodies will come in contact with it. It is used as a disinfectant. As a spray to get rid of red mites it may be mixed with kerosene in the proportion of one pint of crude carbolic acid to one gallon of kerosene. It may be prepared for use with water as a disinfectant in following manner:

Procure one pound of concentrated lye, 3 quarts of raw linseed oil and two gallons of crude carbolic acid. Dissolve the lye in a small quantity of water; give it time to dissolve so as to use as little water as possible, and while you are waiting get ready a five-gallon stone crock with a wide mouth and also provide a stirring paddle.

I COULD DIE EATING RAT SNAP

says the rat—and he does! He prefers it to all other food and it is the last he eats. RAT SNAP chemically mummifies the carcass. Prevents all odors. Does not dry up, soil, decay or blow away. Not mixed with other food. Ready for instant use. Surest, quickest, safest, cleanest, most convenient and sanitary method of exterminating rats and mice.

Get rid of rats! It is economy. Buy ten big cakes prepaid, for a dollar. Send today. Protect Your Chicks and Feed Supply. **MERCHANTS DRUG COMPANY**

NOVAK POULTRY FARM Route 1 Racine, Wisconsin

Pour the linseed oil into the crock and then slowly add the lye solution, stirring constantly. Keep stirring until you have a smooth liquid soap. Now gradually add your crude carbolic acid, stirring constantly until you have a smooth, clear, dark brown liquid. This is your "saponified cresol," a disinfectant fluid that will mix with water in any proportion. For use as a disinfectant about occupied poultry houses, use two tablespoonfuls of this disinfectant to a gallon of water. To clean incubators, or brooders, or equipment, before storing them away until another season, use the solution double strength, or four tablespoonfuls to a gallon of water.

Crude petroleum (mineral oil, rock oil, Seneca oil) is a dark-yellow, brownish, or greenish-black oily liquid. It has antiseptic properties and is used externally in skin diseases. It is valuable for ridding roosts and drop boards of vermin. Applied to poultry house floors with an ordinary sprinkling can, it lays the dust, destroys disease germs and helps to insure freedom from lice and mites. Altho it will stain the feathers when birds come in contact with it, crude petroleum is comparatively safe to use about the poultry house, both as a disinfectant and as a vermin destroyer. Apply to roosts in the morning, so that it will dry in before roosting time. When used for painting interior of nests, leave the nests in the open air until thoroughly dried out.

Q. (6) In a flock of chicks was a runt which did not develop until long after the others. Then she spurted and made the best pullet of the lot—from a fancy viewpoint. Would it be unwise to breed from this bird? Was it possible that worms could have retarded her growth? I have never seen worms offered as the cause of poor development but once and am curious to know if this was merely a "sensational appeal."

St. Louis, Mo.

H. R. D.

A. (6) It is possible that worms were cause, but if such was the case it seems strange that others in flock were not affected. The pullet may simply have been a weakling at start and not equal to fighting its way with the rest of the flock. While we do not believe in breeding from birds that do not develop well, or that are freaks of one kind or another, we can see no reason, if you care to bother with the pullet, why you should not breed her and keep a careful record of her progeny. If the results are not good you can easily stop the experiment and get rid of the birds.

Correction.

In the article "Hail to the Beautiful White Orpington" by S. B. Brennan, on page 918, July A. P. J., first column, the paragraph beginning "The White Orpington, altho a heavy fowl" should have contained the following statement:

Six pullets picked out at random laid 135 eggs during the month of December. The average of these six pullets was between 155 and 160 eggs each per year and the flock average of 35 hens and pullets was above 135 eggs each per year.

Readers Experience Department

A Boy's Success.

BELIEVING that the study of breeding and rearing poultry is one of the most interesting and instructive for the youth on the farm and thinking other boys might profit by my experience, I decided to write about it for the JOURNAL.

1915 was a banner year in my work with poultry, tho I must admit my years have not been many. I am a high school graduate of seventeen, but I have been reading poultry journals and exercising my love for poultry since I was a small youngster. My advent into the ranks of prize winning exhibitors came last January, when to my great surprise and joy I learned that I had won first prize and shape special in a class of thirty Barred Plymouth Rock males at the

Peoria Coliseum Show, Peoria, Ill., J. C. Johnston judging the class. However, it is but fair to say that this bird was not of my own breeding, as were the other birds I exhibited.

In my particular variety, mating is a big problem for any breeder and especially so for the novice. Nevertheless I have been fairly successful in my methods of mating. First of all, I have considered the health and general condition of the birds, knowing that this is of the highest importance in the production of fertile eggs and healthy, livable chicks.

The birds in my pens have the run of a large orchard and consequently did not lack for green food during good weather and when conditions were not suitable for out-of-door grazing, the

flocks were supplied with cabbage, beets and waste apples. I keep them well supplied with corn, wheat and oats, as well as bran, beef scraps and oyster shells. At noon each day they get a little variety in the way of table scraps. Water always before them. The housing I have had to use for them is not of the best, but I have made it a point to see they were well supplied with fresh air, even tho the method employed is crude.

Due to the fact that I can be with my flock a good part of the time, I have learned to know some of the best hens' eggs and have been able to pedigree the chicks from ten or fifteen of the hens. During the cold weather I gather the eggs four times daily to prevent their chilling, as I endeavor to hatch out a good number of early chicks. The eggs intended for incubating are kept in a cool room where there is no danger of freezing. I place these eggs on a layer of excelsior, but do not allow the eggs piled one on the other. I use both incubators and broody hens for hatching purposes—but favor neither! In fact, I sometimes combine the two methods. The chicks are fed after the following method: When thirty-six hours old a mixture of hard boiled egg and oatmeal is given and fed thereafter about six times a day for a week. I then give mixed grains, chick size, in clover chaff. Water is kept before them at all times and they are supplied with a run of fine gravel. As the chicks increase in size, coarser ground grains are supplied and they are not fed as frequently. They have a fine grass run in the orchard all the time, where there are plenty of windfall apples during the summer and late fall. I use a few good mothers for rearing chicks and the rest are brooded by means of fireless brooders. About the orchard I erect shelters where the chicks may run if overtaken by a sudden shower. Notwithstanding this, I lost a number of chicks last season thru heavy drenchings. These were mostly chicks that were slow in feathering. During the summer I encouraged the largest ones to roost on out-of-door roosts and they showed the effect of this treatment in splendidly developed bodies and glossy plumage.

In the late fall, during corn husking time here in the corn belt, my birds all received an abundance of corn and en-

Want Winter Eggs? Then Get Busy Now

Egg prices are rising—will soon reach the high point of the year. Winter eggs pay big profits, but you can't get them by wishing for them. Act! Have your hens laying well when eggs mean money. At this time every bird in your flock needs

Pratts Poultry Regulator

the *Guaranteed Poultry Tonic and Conditioner*. A natural egg-maker—makes hens want to lay. It tones them up—increases appetite—assists digestion—stirs up the sluggish egg-producing organs—drives the hens to the nest—insures profits for you.

Pratts Poultry Regulator will keep your old hens laying steadily until they molt, then shorten the molt and hurry them back to work. It will push your pullets to early maturity, start them laying sooner than usual and keep them at it all winter.

America's original poultry conditioner—imitated but never equalled. Small in cost—great in results. Sold by dealers everywhere on a money-back guarantee to satisfy you. In packages, pails and sacks. Refuse imitations. If your dealer does not have Pratts, write.

Pratts Poultry Disinfectant is non-poisonous and pleasant to use. Inexpensive, too. It will keep your poultry house sweet and clean, kill disagreeable odors, exterminate disease germs and protect the health of your fowls. You will also find it excellent for use in the home wherever a safe, powerful disinfectant is needed. Chicken lice just naturally hate **Pratts Powdered Lice Killer**. Try it and you will see why!

Close-to-Nature Co., 38 Front St., Colfax, Iowa

tered on the long cold winter with sufficient fat to help them resist the cold. When the show season came around, I made a mistake as to the date of the show where I proposed exhibiting my birds and so did not prepare them as I probably should have, had I known the show was coming off so early. However, the birds I exhibited were in such good healthy condition and so used to being handled as the result of the kindly treatment they always receive, that they did not really need much prinking or training for the show room and made my heart glad by coming out victorious.

I would like to say for the benefit of other boy exhibitors that altho my methods were far from ideal, I believe any one may do as well as I did my first year as an exhibitor if he will only try hard and is possessed of the proper love and knowledge of his birds.

Morton, Ill. RUFUS J. RICH.

Chronic Complaining.

I would like to say a few words in praise of AMERICAN POULTRY JOURNAL for the stand it has taken in opposition to the chronic complainers. If there is any one thing that will hurt the poultry industry it is the columns of complaints that have been published in some of the poultry periodicals during the past few years. The day has passed when the general public were willing to listen to drawn out recitals of all the aches or pains of yourself and family and troubles your "in-laws" have inflicted upon you. Such complaints even when ridiculous as many I have read lately have been, make very monotonous reading.

Along this line, here is something well worth remembering. The idea is not original with me, but I have forgotten where it originated, but I would like to have all poultrymen and women remember it for the good of the fraternity, and some of the chronic complainers better paste it in their hats. Here it is:

"It does not take a smart man to find things to complain of, but it does require a man out of the ordinary to overlook drawbacks and find those things which are worthy of praise and support."

It is also worth noting that the chronic complainers seldom, if ever, have a remedy worth offering and that as a general thing their complaints and investigations are brought about in hopes of blinding others to their personal weak spots. Following AMERICAN POULTRY JOURNAL's stand, I would like to suggest a slogan: "Look for the Good" among poultrymen.

Baltimore, Md. FRANK ARLINTON.

The S. C. White Orpington—Why?

Five years ago, when I started in to breed White Orpingtons, it was my opinion that any breed bred right was a good breed, and I still believe it; but after my five years of handling White Orpingtons, I have come to the conclusion that it is a leader among the breeds.

As I am a back-lot poultryman and have in my home town quite a number of chicken fanciers, I have been in a very good position to judge the good points of nearly all the popular varieties. It is my opinion that there is not another variety that can compare with the White Orpington in its grand massive bearing and white plumage. They are among the most admired birds in the poultry shows, with their huge

Egg-o-hatch

A new invention by Geo. H. Lee
Maker of Lee's Lice Killer, Germozene, Egg-o-latum, etc.

Applied to eggs during incubation, it strengthens the chick and weakens the shell, so that at hatching time you have a strong chick and a weak shell instead of a weak chick and a hard, tough shell that causes so many to die just at hatching time. Also eliminates moisture troubles.

Egg-o-hatch means better hatches and stronger chicks

It is easily proven. Apply to half the eggs and run the other half as usual, then note results. Fifty test hatches gave average of 96 per cent for Egg-o-hatch eggs and 81 per cent for eggs not treated, right in the same machine. Last five summer hatches average 95 per cent and 67 per cent. For 5 cents to cover mailing, we will send one sample with full directions free, sufficient for 50 eggs. A full size package will run 600 or 700 eggs one hatch, or three 200 to 250-egg hatches. 50 cents postpaid, or at dealers.

Mention AMERICAN POULTRY JOURNAL when writing to advertisers.

bodies, wealth of plumage, and symmetrical lines; they attract more attention than any of the other varieties.

Some claim that they do not like the white plumage, it is so hard to keep clean; when you hear a statement like that, look to this breeder's pens and runways and I believe you will find why he does not like white plumage; filth and white plumage do not combine for beauty. If you will keep pens and runways clean, renew the litter often, and whitewash at least twice a year, there will be no trouble in keeping the white plumage clean.

In the winter I get more eggs from my Orpingtons, as compared with the breeders of the other varieties here; first, because the Orpington is naturally a winter laying variety; second, because of the care and study that I give my birds. In the summer they lay as well as any, and for the month of April my flock has averaged seventy per cent. Then when I kill an Orpington for eating they make a meal in the meat line for a good sized family. Also when dressed for the market they do not present the unfinished appearance that the darker varieties have on account of the dark pigments.

The Orpington breeders are all acquainted with the fast maturity of the Orpington chick, and when this knowledge becomes general, coupled with the other excellent points of the Orpington, we can have no better proof that the White Orpington as now bred by our best fanciers is a fowl which will pay the utility breeder as well as the fancier, and it will continue to be popular with that largely increasing number who wish the "dual purpose fowl."

I admit that the White Orpingtons are not as perfect in the exhibition line as some of the older established breeds. There is still a slight top color to the males, and around the hackle of the females; the combs are a little weak, not quite as firmly fixed as they could be. This is an incentive to the real breeder rather than a drawback. Stay white plumage and good combs are here on the individual birds and will soon be on the entire flocks.

In summing up, I would say that we do not want an Orpington of the Cochon type, neither do we want a hybrid possessing, as some would have us believe, the egg laying proclivities of the early type. Let us insist on the true Orpington characteristics, then we will have to go a long way to find a grander looking bird to suit the fancier, and a better "dual purpose fowl" to suit the utility man, than the S. C. White Orpington.

Augusta, Ga. LOUIS C. GERCKE.

More and more the world will be ruled by its intelligence, and intelligence does not countenance anger. It is a waste of good material—energy needed by the individual in constructive work. By and by, we will learn that the man easily provoked to wrath, belongs with the state's other dependents—the criminals and insane.

Feed CRY-CO, a purified shell grit. 89¢ Pure Carbonate of Lime. Hard, sharp and cubical, better than oyster shells, need no other grit. Better results, cost 1¢ per pound. Ask your dealer, write for booklet. W. A. REUBEN & CO., ST. LOUIS, MO.

American Poultry Association Convention

(Continued from Page 1057)

the Association. This we present in much condensed form to save space:

BUDGET FOR 1917-18.

Expenses of President.....	\$ 450.00
Expenses of Vice-President.....	150.00
Secretary, salary, traveling expenses, clerical hire, supplies, bond, etc....	5,687.50
Expenses of Treasurer.....	150.00
Expenses of Election Commissioner..	550.00
Expenses of Executive Board.....	1,000.00
Expenses of Welfare, Grievances and Appeals Committee, including salary, clerical hire and counsel fees	525.00
Expenses of Standard Committee....	2,300.00
Expenses of Judiciary Committee....	125.00
Proceedings of 1916 Convention, Publication, \$1,200; postage, \$400.	1,600.00
Bulletin, publication and mailing....	500.00
First edition Plymouth Rock Breed Standard Book, 3,000 copies.....	2,000.00
First edition Wyandotte Breed Standard Book, 3,000 copies.....	2,000.00
Market Poultry and Egg Standard, 5,000 copies	1,725.00

Total.....\$18,762.50

The report of the committee on breed standard books brought up considerable discussion. It appeared to be the opinion of the majority present that the Association is unwise in going extensively into the publishing business and particularly into the production of expensive breed books, which must be sold at a high price in order to show any profit. Owing to the expense already incurred it was decided to go on with the publication of the Plymouth Rock and Wyandotte books and to limit the editions to 3,000 copies of each, owing to present high cost of paper and publishing, and to feel out the public demand for such books before going more extensively into breed book publishing.

A good many members were of the opinion that the Association should secure its revenue from membership fees rather than in attempting to enter the general publishing business for such purpose. Many plans of reorganization were informally discussed by members. The consensus of opinion appeared to be that the life membership fee should be considerably increased and that those who do not desire to pay such an increased life membership be afforded the opportunity to pay annual dues.

One of the most progressive acts of the convention was the introduction and adoption of the following resolution:

WHEREAS, the Federal and State Governments are actively engaged thru a competent organization in disseminating useful and essential information concerning poultry culture, and

WHEREAS, poultry fanciers and breeders have the right to expect and to receive from the Federal and State Governments such aid in advancing the interests of Standard poultry as can be given only by intelligent co-operation with the Federal and State agencies, and

WHEREAS, the members of Congress and of State Legislatures, if they were fully and intelligently informed as to the utilitarian value of poultry breeding, would, unquestionably favor larger appropriations for carrying on poultry work, and

WHEREAS, it is manifestly to the interests of the American Poultry Association to co-operate with these agencies in promoting the interests of poultry culture;

THEREFORE, BE IT RESOLVED, that the President of the American Poultry Association appoint a committee of three to serve without compensation to take such action as may be necessary and to submit its report to the 1917 meeting of the American Poultry Association, outlining in detail methods by which this Association can best co-operate with the Bureau of Animal Industry of the U. S. Department of Agriculture, with the various State and Provincial Departments of Agriculture, and with the Poultry Departments of Agricul-

Ready to Win

Let us furnish you with birds prepared to win at the fall shows. Remember, our Buffs won at Madison Square Garden last winter, 1st Cock; 1st, 3rd and 4th Cockerel; 2nd Hen; 1st and 3rd Pullet; 1st Pen and best display—a record unapproached by any other strain. Look up our wonderful record at Pittsburgh and Syracuse on Monmouth White Leghorns.

S. C. Buff S. C. White

"The Twentieth Century Dual Purpose Fowl"

We have cockerels and pullets from these famous prize winning birds. Better than ever in color, type and quality, sure winners anywhere. Also fine yearlings and two-year olds. We are prepared to furnish pens, trios, and 50 and 100 lots.

Our birds are large, hardy, and vigorous. The pullets mature quickly and are unexcelled as layers. Many of our breeding hens have produced more than 180 eggs during their pullet year. Start now and start right with Monmouth Leghorns—Buffs or Whites. Write at once for price list and full particulars. Tell us your needs. We can help you.

MRS. HATTIE D. REED
 Chestnut Terrace Maicellus, N. Y.

tural Colleges and of Experiment Stations, in order to advance the purposes for which this organization exists.

Secretary Campbell made an eloquent address urging the adoption of this resolution and that the committee appointed be instructed and empowered to take immediate action in co-operation with government poultry work. The following committee was appointed and instructed to undertake the work without unnecessary delay: Frank E. Hering, South Bend, Ind.; Prof. James E. Rice, Ithaca, N. Y.; Charles D. Cleveland, Eatontown, N. J.

William O. Jennings presented a lengthy report for the Committee of Investigation on Poultry Huckstering. The report as presented to the convention dealt largely in generalities and from it one gained the impression that the investigation proceedings had been mostly "much ado about nothing." Some general allegations were made that huckster dealers made use of considerable exaggeration and misrepresentation in advertising and the committee recommended that steps be taken to distinguish before the public such hucksters and hatcheries as resort to unfair means to secure business and that those who employ fair and square methods be encouraged. We understand that a more detailed report of the investigations has been given to President Richards. After considerable discussion the convention decided to receive the report and to discharge the committee.

It appeared that the Investigations Committee had expended \$485 of its \$500 appropriation, but we did not learn that any positive charges of wrong doing were presented. The members evidently considered that it is much better to leave this sort of investigation and sleuthing to the proper authorities and it was recommended that the detailed reports be examined with a view to turning any real evidence of wrong doing over to the U. S. Post Office Department, so that in case any action is necessary it can be taken by those with authority to act. The committee was apparently very desirous of continuing its activity, but the majority of the convention desired to have it dismissed. Members expressed themselves as deploring the undesirable publicity that had resulted from making public proceedings in such investigations and several delegates, talking on this subject, called attention to the fact that dishonesty on the part of buyers and ignorant or inexperienced customers is quite as much in need of being remedied as similar alleged shortcomings on the part of breeders, dealers, etc. It was urged that the seller quite as often needs protection from the customer as does the latter from the former. It was suggested that a practical campaign along educational and helpful lines is the best remedy for all troubles of this nature and that undue publicity given to unfair complaints is prejudicial to the best interests of all concerned.

Editors De Lancey and Hale arbitrated their differences on the "Rule 17," afterward "Rule 30," covering the advertising-solicitor-judge controversy, before the Executive Board and agreed to settle the matter there for all time and to keep the discussion from the floor of the Convention. Both presented their views in an able manner and held to their agreement. The board disposed of the question by putting the decision in such matters wholly up to the show secretaries most concerned.

The Executive Board made the following report of findings in the Carl Dare and H. M. Jones trial, which occupied considerable time and much discussion. The report was brought up on the floor of the convention and the assembly concurred with the Executive Board in its findings:

"Your Executive Committee has considered with the utmost care and attention all the evidence offered up to and including this date, in behalf of the complainant, Grant M. Curtis, and in behalf of Carl Dare and H. M. Jones, the accused parties, in the matter of the charges regularly filed with the Committee of Grievances and Appeals of this Association, such charges having been referred to this Executive Committee. And your Committee is of the opinion and hereby rules and decides that the evidence brought forth by complainant is not sufficient to justify the expulsion of said Dare and Jones from the American Poultry Association.

"However, your committee is of the opinion that inasmuch as the complainant is ill and unable to attend the sessions of this committee and as it has been said that further evidence may be filed, therefore your committee recommends all the subject matter and evidence in these cases, except the prayer in the petition for the expulsion of said Dare and Jones to said Committee on Grievances and Appeals for such further action in the premises as it may deem advisable.

"Your Executive Committee also desires to state at this time that it is unalterably opposed to the publication in the poultry press or thru any other means of publicity of any charges against members of this Association prior to and in advance of the filing of regular charges against such members as provided by the constitution of the American Poultry Association and the hearing of such charges by the proper committee or committees of the American Poultry Association.

"Your committee calls attention to the fact that said constitution provides a regular and orderly manner in which charges may be preferred against members, which charges will be heard by the Committee on Welfare, Grievances and Appeals, and if necessary by the Executive Board, and a decision subsequently rendered, after all evidence has been presented by both sides, in accordance with the usual rules of procedure; and your Executive Committee believes that until said Committee on Welfare, Grievances and Appeals shall report its findings upon any such charges that no member of this Association should assume the privilege of making public the whole or any part of such charges; and your Committee deprecates the fact that in the cases of said Jones and Dare, publicity has been given before your committee had the opportunity of hearing such charges."

R. G. Bailey of Lewiston, Idaho, introduced a resolution as follows:

"Resolved, that the official stenographer be and he is hereby instructed to, at this and future conventions of the American Poultry Association, make note of every resolution, motion, speech, comment, or other spoken words of the delegates and, after the convention, to transcribe the notes and make three copies thereof, which shall be turned over to the Secretary, by him placed in the archives of the American Poultry Association and constitute its official record. That a committee of three, of whom the Secretary shall be one, shall be appointed by the president to make a condensed report of the proceedings comprising only resolutions, motions and seconds, and that as soon thereafter as convenient this condensed report shall be printed in the Quarterly Bulletin of the American Poultry Association. That any member in good standing who desires a full report, or any part thereof, of the proceedings, shall be furnished a certified copy thereof by the Secretary at the actual cost of making such a copy."

This resolution was discussed at length by the Executive Board, but was not referred to the Convention for action. It is a step in the right direction, means a considerable saving to the Association, as well as a more accurate record of proceedings than the customary edited and expurgated edition, and this or some similar resolution should be acted upon favorably at an early date. The appropriation for publishing and mailing the "official proceedings" is \$1,600.00 and this should be an easy and desirable way to save at least \$1,000 annually.

U. R. Fishel was re-elected treasurer by the Executive Board. O. L. McCord was unanimously returned to office of election commissioner by vote of the entire convention and responded with an appropriate speech.

The following committees were appointed:

Finance Committee—President E. E. Richards, John S. Martin, Henry Steinmesch. Welfare, Grievances and Appeals Committee—Earl Hemenway, A. C. Hawkins, H. H. Collier. Judiciary Committee—Arthur A. Peters, Frank E. Hering, Grant M. Curtis. Legislative Committee—J. D. Veach, Frank E. Hering, Robert Seaman. Education and Experimentation Committee—Mrs. Florence Forbes, Harry M. Lamon, James E. Rice. Standard Committee—Grant M. Curtis, E. E. Richards, W. S. Russell, W. R. Graham, A. C. Smith.

The following poultry judges licenses were granted:

General—A. T. Modlin, Topeka, Kans.; Walter Burton, Arlington, Texas; William Miller Higgs, Victoria, B. C.; W. A. Bonner, Casanovia, Mich.; J. F. Nelson, Grove City, Pa.; R. L. Leitch, Van Nuys, Cal.; G. W. Masterson, Duarte, Cal.; Chas. A. Greenfield,

Butte, Montana; M. L. Andrews, Bryant, Mo.; Wm. H. Allen, East Providence, R. I.; Wm. F. Auerwald, Harmerville, Pa.; W. H. Laabs, Waupaca, Wis.; H. D. Reid, Victoria, B. C.; Walter T. Bowers, Honey Grove, Texas; William Walker, New Westminster, B. C. Special Licenses—Fred A. Poertner, Berea, Ohio, Orpingtons and all Buff varieties; Rufus Eldridge Bruce, New Orleans, La., American and Mediterranean; John W. Zimmer, Anchorage, Kentucky, American, Mediterranean, Asiatic and Bantams; Herbert V. Tormohlen, Portland, Indiana, Mediterranean; Olin Colip, Atlanta, Indiana, all Wyandottes; Frank C. Cole, Van Wert, Ohio, American and Mediterranean.

A poultry business survey committee to report on business conditions in the poultry industry at next convention was appointed, consisting of: Frank B. White, E. C. Lowry, A. G. Philips.

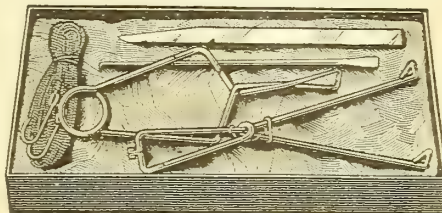

Invitations for the 1917 Convention were received from Pittsburgh, Penn.; New Orleans, La.; Louisville, Ky.; St. Louis, Mo.; Milwaukee, Wis.; Buffalo, N. Y.; Ashville, N. C.; Washington, D. C.; Norfolk, Va.; Providence, R. I., and for 1918 from Butte, Montana.

MONTHLY PRIZE CONTEST DEPARTMENT

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

NET COST OF PRODUCING EGGS

Being Figures Taken From a Twelve Months' Record of a Flock of Hens From One to Six Years Old. First Prize Article American Poultry Journal's Monthly Contest.

By FRED M. ROBINSON, Dallas, Texas

MY OVERHEAD and fixed expense is as follows:—Labor, feeding and cleaning house 10 minutes per day at 15 cents per hour	\$.75
One hour per month, marketing eggs15
10% depreciation on equipment of \$35.0029
5% interest on investment of \$100.0041
Total	\$1.60

Actual time for feeding and watering in morning takes one and one-half minutes, at night feed, water and gathering eggs, three and one-half minutes. I buy my grain in lots of six hundred pounds and it is put in trunks and is ready to feed without handling. Feed, water and nests are close together so there are no extra steps or lost time. I use drop boards and clean every two or three weeks, this takes twenty to thirty minutes.

Disinfecting, etc., takes balance of time. I have three customers that take all the eating eggs I have to spare. They would come for eggs but I can save time by delivering to them once a week. I ride a wheel to and from my work and do not have to go out of my way at all to deliver, only from the street to the door. My grocer brings me peach and tomato baskets that hold three to five dozen eggs and I use those for delivery.

My hens are housed in cheap open-front house covered with roofing ma-

terial, which makes the equipment cost very small.

In order that this report may be better understood, I want to show under what disadvantage I am operating.

I am right in the city, on paved street, a corner lot, 75x150 feet. The back lot used for the poultry is 24x75 feet which has a barn 30x24 feet and a small house 6x10, leaving 45x24 feet for use of pens and yard. This is what I started on March 13, 1908. Later I converted 7x30 feet of the barn to my use. I bought 13 hens at a cost of \$6.50. This is the only money I have ever invested that was not produced by the hens and I now have 120 matured hens and capacity for 150 matured hens and 200 chickens per season.

This was used for a horse lot before I took it and had a layer of cement paving on top of the black dirt and three to five inches of cinders on top of that which I have covered with six to eight inches of mixed dirt. I give this information so that it may be seen that I have to buy all that is eaten as there is no range for the stock. Following you will find my report attached:

RECORD OF F. M. ROBINSON, DALLAS, TEXAS.

Month.	Number Hens.	Overhead Fixed Charges.	Food and Supplies.	Loss by Death.	Total Cost.	Dozens Laid.	Monthly Net Cost Per Doz.	Sale Price Per Doz.
1915.								
May	96	\$1.60	\$ 7.00	\$2.25	\$10.85	88	\$0.123	\$0.25
June	87	1.60	6.50	.75	8.85	72	.123	.30
July	81	1.60	6.25	2.25	10.10	50	.202	.30
August	78	1.60	6.25	1.50	9.35	43	.217	.30
September ...	71	1.60	6.00	3.00	10.60	34	.312	.35
October	68	1.60	6.50	1.50	9.60	33	.291	.40
November ...	64	1.60	6.00	1.50	9.10	27	.338	.42½
December ...	56	1.60	6.25	1.50	9.35	38	.246	.50
1916.								
January	120	1.60	11.85	.75	14.20	59	.241	.50
February	110	1.60	12.30	.00	13.90	99	.140	.42½
March	81	1.60	9.40	1.50	12.50	119	.105	.30
April	70	1.60	9.50	.00	11.10	100	.110	.30
Totals.....		\$19.20	\$93.80	\$16.50	\$129.50	762		

762 dozen eggs produced at a net cost of 17 cents per dozen.

Commercial mixed feed costs per 100 pounds	\$1.75
Bran costs per 100 pounds	1.35
Steel clipped chops costs per 100 pounds	1.75
Oyster shells costs per 100 pounds	1.50

I feed my own lawn clippings, but do not make any charge of this as they have to be disposed of and it saves carting expense. I have not taken any salvage on sacks at five cents each returned to dealer or for fertilizer.

My loss by death is large as I keep my hens as long as they will set (if they are good mothers) as I sell many day old chicks and set 60 to 70 hens per season. I figure them at .75 each. Setting so many hens reduces my egg production but they average 110 to 120 eggs per year at a net cost of \$1.58 per hen for the year and net cost of eggs per dozen, 17 cents.

AN AMATEUR'S SUCCESS WITH POULTRY

A Backlotter Tells How He Supplies Eggs and Poultry for the Family Table and in Addition to This Realizes a Fair Income From His Poultry. Second Prize Article American Poultry Journal Monthly Contest.

By EARNEST F. DRECHSLER
Schenectady, N. Y.

FOUR years ago, when I was married and moved into my home, I became acquainted with one of my neighbors, who had some Rhode Island Red chickens. As I had a lot 70x160 I had plenty of room and decided to have a few chickens to supply us with eggs.

I bought 18 pullets two months old for 60 cents apiece. I had enough lumber to build a coop 6x8 and built a covered open-front scratch shed 4x10 facing south. In these I kept the chickens on rainy days and during winter. After I had the chickens, I started to read about poultry in magazines and

papers, and reading a lot about trap-nests, I decided that as long as I had chickens I might just as well do the thing right. I made four trap-nests out of half-inch lumber and put them in a dry-goods box, which I attached to the scratch-shed. In this way I had nothing in the house itself except roosts, dropping-board, mash-box and water, thereby giving the chickens the whole floor space. As I had never had chickens or did not know anything about them, I decided to go slow and learn as I went along.

In spring with trap-nest records of six months before me I decided to raise my own chicks. As I had never handled any baby chicks, I figured one hatch would be enough. During the winter my 18 pullets had layed enough eggs to allow me to pay \$15.00 for a breeding bird and \$8.55 for a Belle City In-

when writing to advertisers.

One installation, now being made, of

Blue Hen Mammoth Incubators

has a capacity three times as great as the whole year's product of any other mammoth incubator manufacturer.

Other installations of the Blue Hen Mammoth for practical poultrymen have led to repeat orders and to the replacement of mammoth incubators of every other make with Blue Hen equipment.

Why? Because Blue Hen Mammoths are superior on every count. **GREATER CAPACITY IN LESS SPACE means minimized cost for buildings.** We can show you how a 6,400 egg Blue Hen Mammoth, measuring only 20 feet, can be placed in your present dwelling, eliminating expense of a new building entirely.

AUTOMATIC EGG TURNER. Every egg turned in five seconds in any square-tray Blue Hen Mammoth—from 800 to 20,000 egg capacity. Slowly, smoothly, easily—just as the mother hen does it—by our Patent Egg Turner. No eggs broken, no germs ruptured.

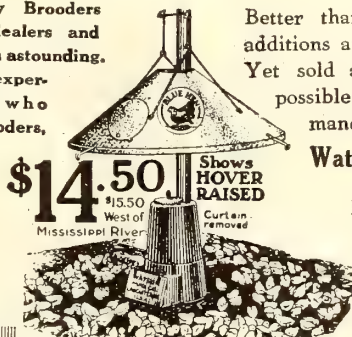

PROPER SUPPLY OF AIR AND PROPER TEMPERATURE IN EVERY COMPARTMENT. Ample moisture—individual regulator for every tray—a real heater, with automatic control that does control—fire is always visible—a unique pre-heated air system. A nursery that is practical. Heavier in construction—durability assured. Easy to add units. No complicated plumbing.

Send for list of users—and testimonial booklet which shows why practical poultrymen in every locality—are replacing other makes with the Blue Hen Mammoth. **CATALOG FREE.**

DEALERS and farmer-agents can secure exceptional opportunity to represent us in unoccupied territory. Easy sales and good profits assured on Blue Hen Mammoth Incubators, Blue Hen Lamp Incubators and the

Blue Hen Colony Brooder

On Blue Hen Colony Brooders alone, the sales by dealers and farmer-agents have been astounding. Men without selling experience and dealers who never before sold brooders, have easily made many profitable sales by showing the Blue Hen Catalog to practical poultrymen.

Better than ever with the 1917 additions and improvements.

Yet sold at the same low price, possible only by increased demand and larger production.

Watson Manufacturing Co.
Drafter 21
LANCASTER, PA.

Now is the time to get the facts—to investigate our selling proposition. The wide-awake man will get the choice territory and the big sales.

RESULT OF POULTRYMAN'S SUIT AGAINST THE AMERICAN EXPRESS COMPANY.

John W. Ward, Jr., Dark Cornish Breeder, of Pennington, N. J., the Victim of a Technicality Growing Out of the Carmack Amendment Regarding Inter-State Shipments.

I FEEL it my duty to relate my experience to brother poultrymen all over the country relative to the outcome of my suit against the American Express Company for the loss of eight of my birds, now almost two years ago, on September 21st, 1914, the birds being smothered during the trip from Pennington, N. J., to Allentown, Pennsylvania, owing to the "one-horse" service given by the American Express Company in transporting them on a day which proved to be exceedingly hot during the middle of the day, the cool in the morning when the birds were shipped. I repeat, I feel it my duty to relate the outcome of the case in order that brother poultrymen may in the future be on their guard more and more, for tho the rulings in the various states may not be the same as in New Jersey, still the decision in my case is likely to be brought up as a precedent in any state and so bring about the same final results as in my case, which came to a very abrupt termination in the Supreme Court of the State of New Jersey, and which I am now reporting to brother poultrymen.

On September 21st, 1914, as above stated, I shipped from Pennington, N. J., to Allentown, Pennsylvania, for the fair to be held in Allentown, by the American Express Company, seven coops containing twenty-nine Cornish birds, among which were John Bull, Uncle Sam, Lady Alice, and five others. They were properly cooped in coops which I had used for the most part of three years previous, with the exception of one coop, built new in 1913, which I had used but for one season, showing at Warrenton, Virginia, and Madison Square, New York, so that the coop had safely carried fowls for a greater distance than from Pennington to Allentown. It is also a striking fact that the newest coop, which had been used but one season, had more cubic inches of air space, per compartment, than had any of the others, yet five of the eight deaths occurred in this coop, plainly showing to anyone with half an eye that the coops must have been stacked somewhere along the road during the heat of the day. Also in the new coop, most of the deaths occurred at one end of the coop, seeming to show that while one end had been left uncovered, the other end had had stuff piled upon it. The birds were shipped from Pennington at 7:37 A. M., but did not reach the Allentown Fair Grounds, but 78 miles distant, until 6:30 P. M. or in other words, the AMERICAN EXPRESS COMPANY put them over the road at the REMARKABLE SPEED of 8 miles per hour, or about as fast as a good WHEELBARROW could make it. Making proper train connections, the birds should have reached Allentown, according to time-tables published at the time, in TWO HOURS AND FIFTY-TWO MINUTES, instead of the time they did make, namely, TEN HOURS AND FIFTY-THREE MINUTES. Certainly an example of American Express SERVICE (?) and EFFICIENCY (?).

I was waiting for the coops at Allentown when they arrived, and it was then found that eight of the birds, of a value of from \$800.00 to \$1,000.00 were smothered.

At the time of shipment no shipping receipt or bill of lading was actually given me, tho as soon as word was received of the death of the birds the agent sent one to my residence, filled up so as to limit liability to \$5.00 for each bird. The birds evidently had been smothered through piling other goods upon their coops, thus depriving them of proper ventilation on a hot day.

The claim was presented to the company, but all they would offer was to pay \$5.00 for each bird lost, the amount stipulated in the bill of lading, which was not actually delivered at the time of shipment. The Express Company having refused to pay anything like a reasonable compensation, suit was brought in the New Jersey Supreme Court April 5th, 1915.

The Courts of New Jersey had decided in the case of Hill vs. Adams Express Company, 82 New Jersey Law Reports, 373; 81 Atlantic Reporter, 889, that where a bill of lading had been given to a shipper with a clause limiting the amount of liability, that the burden was upon the carrier to show that the shipper understood and assented to the limitation of liability contained in the bill of lading or receipt, and that in the absence of proof of this fact the carrier was subject to the common law liability for the value of the goods shipped, if damaged or lost.

In a later decision, November 16th, 1914, in the case of Spada vs. Pennsylvania Railroad Company, 86 New Jersey Law Reports, 187,

QUINCY POULTRY FARMS A-2700 Maine St., QUINCY, ILL.

92 Atlantic Reporter, 379, the highest court in New Jersey held that the Carmack Amendment to the Inter-State Commerce Act controlled in all inter-state shipments, and that a shipper's acceptance of an inter-state bill of lading would bind him to all valid stipulations thereof, thus overruling the rule as established in the case of Hill vs. Adams Express Company, above mentioned, so far as inter-state shipments were concerned, but still leaving the law of New Jersey, as indeed I am advised it still is, that in case of shipment within the state, the burden is upon the carrier to show that in accepting the bill of lading the shipper knew of the stipulations and actually assented or agreed to them. This case, I am advised, establishes two different rules in New Jersey, the one applicable to shipments outside the state boundaries, where the stipulation in the bill of lading, if accepted, would bind the shipper, the other applicable to shipments within the state, where the shipper was not bound to any stipulation to which he had not actually agreed. This decision would, however, prevent me from maintaining my suit, since my shipment was an inter-state shipment, but reliance was placed on the fact that no bill of lading actually had been given and accepted, and that the stipulation limiting the liability to \$5.00 per bird was put in the bill of lading after the shipment and attempt made to deliver so as to make it appear that I was bound by the terms of the bill of lading.

The trial of the case was delayed a term or two, and came on for trial in February, 1916. The taking of testimony to prove the loss and value of the birds had started when the court called counsel's attention to a decision of the New Jersey Court of Errors and Appeals, which had been rendered after the starting of the suit in this case, and which had then only been made public a few days before, in the case of Standard Combed Thread Company vs. Pennsylvania Railroad Company, 95 Atlantic Reporter, page 1002, which held that whether the carrier had issued a bill of lading or not, under the Carmack Amendment and the regulations made by the Inter-State Commerce Commission pursuant thereto, the carrier was required to publish and submit with its traffic a uniform bill of lading, and in the absence of a disclaimer by the shipper and the payment of a ten per cent higher rate, the terms of the uniform bill of lading are declared applicable, and inasmuch as the uniform bill of lading submitted by the Express Company and filed with the Inter-State Commerce Commission contained the stipulation that the value of the birds was limited unless a higher rate was paid by the shipper, the court ruled that I was, under the decision of the higher court, without remedy beyond the amount of \$5.00 for each bird lost.

Accordingly the suit stopped then and there, the company agreeing to pay the \$5.00 per bird, while I was forced to see myself deprived of the right to recover the actual damage done to me by the neglect of the American Express Company, owing to the court's interpretation of the effect of the Carmack Amendment in the case of inter-state shipments. At the time suit was started no such interpretation had been made by the New Jersey Courts, and we were proceeding in the belief that I could collect my actual loss where it could not be shown that I had agreed to accept a limitation of the company's liability.

It is thus clear that poultry fanciers shipping across state boundary lines, in order to make sure of being able to collect damages should their birds be lost thru the action of the carrier, must be careful to pay the highest rate of charges established by the uniform bill of lading published with the traffic list filed with the Inter-State Commerce Commission.

I was plainly the victim, as was the American Express Company the beneficiary, of a technicality, growing out of the Carmack Amendment. Had my birds been shipped and lost under exactly the same conditions within the boundary of the State of New Jersey, I could have recovered their full value.

Very fraternally,

JOHN W. WARD, JR.

Secretary-Treasurer American Cornish Club.

Of Interest to Judges

Now that score card judging is taking the center of the boards, breeders who are anxious to enter the field should not fail to take a course in score card judging during the Indiana State Fair, the week of Sept. 7th, 1916. This school has turned out many of the headline judges and at the present time the terms for tuition are very reasonable.

If interested, write at once to Theo. Hewes, 25 W. Washington St., Indianapolis, Indiana, for full particulars. Remember one or two shows will more than pay for your tuition and there is

a big demand for competent score card judges.

Home and the Table

Good Things for Everybody

Helen J. Woods
Editor

Let me go where'er I will
I hear a sky-born music still:
It sounds from all things old,
It sounds from all things young,
From all that's fair, from all that's foul,
Peals out a cheerful song.
It is not only in the rose,
It is not only in the bird,
Not only where the rainbow glows,
Nor in the song of woman heard,
But in the darkest, meanest things
There always, always something sings.
'Tis not in the high stars alone,
Nor in the cups of budding flowers,
Nor in the redbreast's mellow tone,
Nor in the bow that smiles in showers,
But in the mud and scum of things
There always, always something sings.
—Emerson.

"WE HAVE A PLANT," writes a friend, who lives in the cramped, unsightly part of a great city, "that is filling our days with loveliness. It was given to me three years ago when only a single three-inch stock, with one modest pink blossom at the top. You will appreciate the pleasure it has given us when I tell you that it has blossomed continuously every day but two since that time. At times there have been as high as thirty blossoms on it at one time and in summer when we get just a little of the western sunlight in our windows, the pale pink of the bloom deepens to a wonderful rose tint. The plant is now more than a foot high and has grown stocky with branches and new shoots. It was the first plant we have had in this house since I came here to live and many of the other families have enjoyed it as much as have we. I have taken off eleven slips and started each of them in a little paper pot and when one tiny pink blossom would burst on top, I have given them one by one to different neighbors in the house. They have all grown

and some are almost as wonderfully developed as mine. The name of the plant is "Patience" and now we call this the "Patience House" and have this plant as a constant reminder of the wonder of the world and the beauty thereof. It was Grandma's idea naming our house for the plant, and wasn't it a happy one? I like the name much better than I do many of the names I see on modern apartment houses up town, when I carry home our needlework, and I often think of it as I come back down our closed in street and see the number of pink blossoms nodding from windows in different parts of the house. I'm sure we have all reflected a little of its glory besides cultivating in some measure its patience, persistence and worth. We all love flowers here. One day Beaby Jean found a fringed gentian in full bloom at the corner of our block, close by the dump and tho we cannot imagine how it came there, we have all watched it grow and blossom and light up our corner of the earth."

Each year a great many birds migrate to our vicinity, some of them stopping all summer and well into the winter, and others just for a week or two at stated seasons. The bird lover must ever be on the alert when a strange call or one not heard for some time reaches the ear. This season we have welcomed several flocks and pairs of unusual birds in this vicinity. It is naturally an ideal place for nesting, being partly surrounded by woodland thickets, and a fine supply of water constantly on hand for bird baths. All kinds of berries and seeds, dearly loved by birds, grow in plenty, not to

mention the overwhelming supply of caterpillars, moths, bugs and worms which would soon devour our vegetation but for the practical assistance given by the birds in annihilating these nuisances.

Early this season we started in to keep count of the varieties of birds found nesting here, and of the migratory flocks passing thru but good enough to stop over for a few days and brighten up the landscape for us by the beauty of their plumage or the joy of their songs. Among the number keeping tabs we lost count, but did not any the less enjoy the association with and interest in the birds. Early one morning a series of wonderful notes issued from the limbs of an old apple tree just below the house. At first we thought it to be an unusually fine voiced cat bird, but the variety of calls and the constant movement from limb to limb and tree to tree suggested the well known habits of the mocking bird. Being familiar with the bird in its native southern haunts, I was convinced that we had a real live mocking bird in our orchard, tho I had never before seen or heard one in this part of New England. I hurried out of bed and down the dew-wet grass, barefoot, and by the aid of a field glass watched him as he hopped from limb to limb, thrilling out his wonderful notes meanwhile. There was then no mistaking Mr. Mockingbird. It was he, in all his glory. That evening his mate came with him and sang long after dark, in the moonlight. For more than a week they kept up an almost continual chatter and song, in and about our orchard, meadow and along the shore of the pond. We thought at first they were going to nest in a thicket along the outlet of the pond, but in the course of a week or so we no longer heard their cheerful notes and contented ourselves with the wonderful variety and sweetness of other bird notes issuing from the throats of birds that come early and stay late.

Rudy's Perfection Wh. Wyandottes

My strain is noted for its egg production and exhibition qualities. My customers all over the country laud my square deal business methods. I guarantee to give you extra good value for every dollar you pay me and if you are in the market for line bred birds I will be glad to tell you just what I have for sale. who is not even appointed a "filling" member of an unimportant committee, forms the staunchest stuff of which human society is composed.

The innocent bystander is watching society, whether in an organization, a community, a state or a nation. He is getting the perspective which an active participant leader can never get and by which a successful leader must eventually be led. Woe to the leader who cannot calm his oratory to the point where the murmurings of the people and the thoughts of the bystander may be read. His opportunity for progress-making has been wasted and his end draweth near.

* * *

PRESERVED CITRON.

By H. R.

Pare the citron and cut into small oblong pieces. Make a syrup, using three-quarters of a pound of sugar to one pound of fruit. Add the citron to this and set on the back of the stove and allow to cook slowly until clear. Add the juice of a lemon or a little pineapple juice for flavoring. In making jelly, citron is invaluable to add to any fruit juice which will not jell easily.

* * *

PINEAPPLE HONEY.

By Mrs. W. R.

One pineapple pared and eyes removed and grated. Boil one quart of water and two pounds of sugar and then add the grated pineapple and boil until like jelly.

* * *

PEAR HONEY.

By Mrs. E. S.

Pare and run thru a food chopper or grate two pounds of cooking pears and one orange. Add one and one-half pounds of sugar and cook for twenty minutes or until about the consistency of marmalade.

* * *

PEAR SYRUP.

By Mrs. E. T.

Use good cooking pears. Wash them clean but do not pare. Cut them into small pieces and boil until soft and strain thru a jelly bag. To each pint of juice add three-fourths of a pound of sugar. Boil until the thickness of table syrup and store in wide mouthed bottles, corking tight when cold. This makes an excellent syrup for use with hot cakes or waffles.

Shoemaker's Poultry Book and Almanac for 1916.

Do it right
NOW!

HAPPENINGS of INTEREST

in the POULTRY WORLD

W. F. Fry, who has been connected with *Reliable Poultry Journal* for the past few years has severed his connections with that publication and recently formed a partnership with Fred Rau, of Indianapolis, Ind. In a letter recently received from Mr. Fry, we are informed that they have purchased from Ben H. Scranton, Rising Sun, Ind., his entire flock of S. C. Reds, the good will of the business, all records, etc. This is one of the most important transactions that has taken place in the poultry world this season, as Mr. Scranton has long been looked upon as one of the leading S. C. Red breeders and a fixture in the throbred poultry business. Mr. Rau is by no means a newcomer in the fancy, as he has been breeding poultry for the past twenty years. We predict great success for this firm.

* * *

One of the largest, if not the largest, contracts ever made for day-old chicks was recently made by the Watson Manufacturing Company of Lancaster, Pa. The figures reach stupendous heights. The contract covers a period of two years and calls for the delivery of 3,000,000 day-old chicks at specified and regular intervals to the various stores of one of the largest chain system stores company in the United States. To fill this contract it will be necessary for the Watson Manufacturing Company to erect an entirely new plant, consisting of a series of buildings, the main building of which will be 300 by 80 feet in dimensions and two stories high.

* * *

At the August meeting of the Association of Instructors and Investigators in Poultry Husbandry held at Columbus, Ohio, Harry M. Lamon, of the United States Department of Agriculture, was elected to the board of directors. An invitation has been extended to this organization to hold its next annual meeting at Washington, D. C., to review the work that "Uncle Sam" is doing in Poultry Investigations and to visit at the Government Experimental Farm in Beltsville, Maryland.

* * *

The 1733 Ranch, Kearney, Neb., recently purchased the poultry business of the Kellerstrass Farm, including all poultry, ribbons, records, etc., in fact everything pertaining to the business. Thus endeth the career of one of the most advertised and best known poultry farms this country ever had.

* * *

H. W. Sanborn, Attleboro, Mass., after nine years of effort in producing S. C. Rhode Island Reds, has sold his entire stock and good will to Frank E. Turner, of Attleboro, Mass.

Do you ever have an idea that savors of originality? Your future success calls for some measure of original thought. Form the habit today, of searching your brain for useful ideas. The ideas are there, but it requires a little mental exertion to reveal them and put them into working.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

A MULTIPLE compartment incubator has recently been patented by Wilhelm Schwalge, Elmhurst, Illinois. Individual heating pipes branch out into each compartment from a main heating

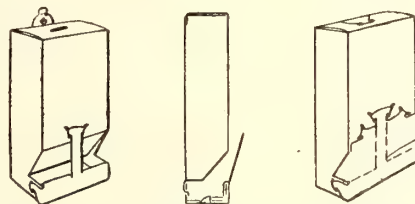

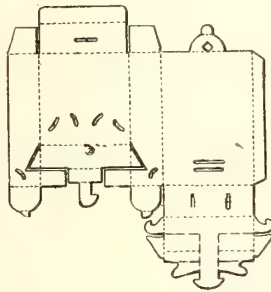

Incubator, patented by W. Schwalge, Elmhurst, Ill. Patent No. 1,187,934.

pipe extending lengthwise of the incubator between the compartments. An air admission controlling device is provided in each individual conduit, making independent regulation of the compartments possible. The conduits leading to the compartments farthest from the heater are relatively larger than the conduits to the nearer compartments,

the sizes of the passageways being proportioned to effect equal distribution of the heated air. Patent No. 1,187,934.

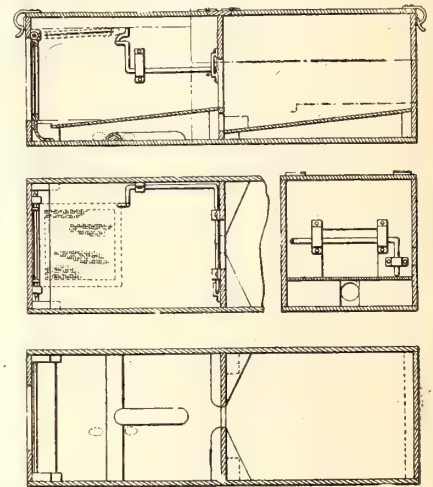

A combination feed-hopper and poultry-food carton has been devised by Walter A. Becker, North Chattanooga, Tenn. The carton is stamped from a single blank and folded to form a poultry-food carton. By tearing away two flaps along perforated lines, the carton is readily converted by the user into a poultry feed hopper. A half interest in the patent is owned by S. Russell Dow, Chattanooga, Tenn. Patent No. 1,189,779.

Combination feed hopper and poultry food carton, patented July 4, 1916, by W. A. Becker, North Chattanooga, Tenn. Patent No. 1,189,779.

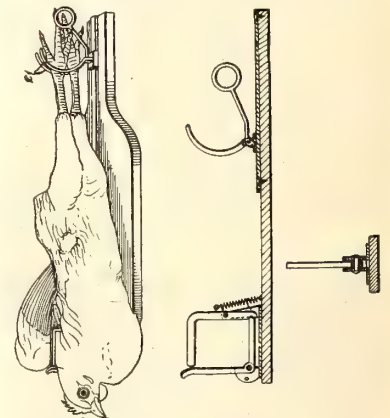

A trap nest that is also designed to break hens of the egg eating habit has been devised by Albert K. Bodenhorn, Punxsutawney, Pennsylvania. The nest is subdivided into two compartments, the inner compartment—to which it has been found the hen will invariably proceed—is the laying compartment. On passing thru the doorway between the two compartments the back of the hen will brush against a latch that will release the trap door of the outer compartment. The floor of the inner compartment is inclined slightly so that the

egg will roll to one end and thence thru an opening into a space beneath the outer compartment where the hen cannot get at the egg. Patent No. 1,190,093.

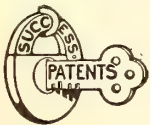

Trap nest, patented July 4, 1916, by A. K. Bodenhorn, Punxsutawney, Pa. Patent No. 1,190,093.

The new stretcher for caponizing purposes shown in the accompanying illustration is the recent invention of Sardis E. Mohler, Fremont, Ohio. The device has pivotally mounted levers, which may be locked in the desired adjusted position, conveniently. Patent No. 1,189,854

Stretcher, patented July 4, 1916, by S. E. Mohler, Fremont, Ohio. Patent No. 1,189,854.

INTERNATIONAL BABY CHICK ASSOCIATION.

An Organization to Foster, Promote, Improve and Protect the Baby Chick Industry and All Allied Branches of Poultry Industry.

By PRINCE T. WOODS, M. D.

WE HAVE attended a good many meetings of poultrymen and of professional organizations, but for sustained interest and enthusiasm, for unity in purpose, for co-operative helpfulness, for mutual betterment, where the good of all was the prime consideration and selfish personal interests did not intrude, we do not recall ever before meeting with a group of men and women engaged in the same line, or allied callings, where such harmony and unity prevailed as did at the meetings in "Parlor J" at the Hollenden Hotel, Cleveland, Ohio, August 7 to 11, 1916.

"Parlor J" was the Baby Chick Headquarters during the Convention of the American Poultry Association and here was developed a new practical poultry organization, the International Baby Chick Association, which its members hope will prove one of the most useful, helpful and constructive co-operative associations that has developed in the interests of poultry husbandry. The egg which hatched this sturdy fledgling was laid at Atlantic City in 1913, hatched and brooded at the big poultry shows thru the winters of 1914, 1915, 1916, until at Cleveland in August, 1916, we have a hardy, fledgling that gives promise of speedily maturing adult plumage with very desirable quality and characteristics. Several millions of dollars are represented in equipment alone in the baby chick industry and among the thirty representatives of the baby chick industry who were present at the initial meetings for organization, a very considerable amount of capital invested in this important branch of poultry husbandry was represented.

The objects of the International Baby Chick Association are "to foster, promote, improve and protect the baby chick industry and all allied branches of

poultry husbandry." This gives a broad field for activity and the association intends to begin at once an active, constructive and helpful educational campaign. While a part of the work will look to a betterment of conditions in the operation and business of the hatcheries themselves, the work will not stop there. It is proposed to co-operate with the breeders in order to secure better eggs for hatching and better quality in the eggs. Transportation companies will be co-operated with in an effort to secure better handling of baby chick shipments and a campaign instituted for the instruction of express company employees in the proper care of shipments of chicks. An effort will be made to educate the ultimate customers, the buyers of baby chicks; not only to demonstrate to such buyers what they may reasonably expect in quality for a stated price, but also how to care for baby chick shipments on arrival and how to grow and develop the chicks to satisfactory maturity. It is a big field of endeavor and a big work, but the workers are many and there will be instructors a plenty who will be glad to co-operate. The I. B. C. A. antagonizes no one, but it stands ready to co-operate with everyone for the greatest good of the whole poultry industry.

Any person or persons, firm or corporation, who is or are interested in the objects of the association, may become members. Memberships are of two kinds: Active and Associate.

Active members consist of persons directly or indirectly interested in the breeding, hatching, shipping and rearing of baby chicks, whose application for membership shall be submitted in writing, endorsed by two members in good standing, and who have been passed upon by the membership committee.

Associate members consist of persons engaged in educational work in poultry husbandry who are elected by the Board of Directors at a regular meeting. Such members are welcomed for the purpose of promoting educational work in all branches of poultry culture and it is hoped to include all prominent representatives of National and State or Provincial Poultry Experimental Depart-

ments in the United States and Canada and such other countries as may desire to become identified with the association. Associate members are exempt from payment of initiation fees or dues, but are expected to co-operate with the association in educational work. Already Harry M. Lamon, of the U. S. Department of Agriculture, Prof. James E. Rice of Cornell University Experiment Station and Prof. C. T. Patterson, of the Missouri State Poultry Experiment Station, have applied for associate membership and been duly elected.

The charter of the association will remain open until October 9th, 1916, to enable those who desire to become identified with this association to enter as charter members. For active members the initiation fee is \$10, which includes dues for the first year or balance thereof, and the annual dues thereafter are \$5.00.

The government of the association is by a board of nine directors. At the organization meeting the following directors were elected: H. H. Knapp, Tyro, Ohio; Dr. Prince T. Woods, Silver Lake, Mass., and H. D. White, Saugatuck, Mich., for three years; C. J. Fisk, New York City; George Cugley, Springfield, Ohio, and U. R. Fishel, Hope, Ind., for two years; W. J. Curtiss, Ransomville, N. Y.; Fred H. Thayer, Baltimore, Maryland, and Mrs. W. H. Hopple, Tiffin, Ohio, for one year. At annual meetings hereafter three directors will be elected to serve for three years.

While a majority of the organizers of the International Baby Chick Association are members of the American Poultry Association, such membership is not obligatory. The I. B. C. A. is an entirely independent organization and not affiliated with the American Poultry Association in any way, altho, of course, thru its members belonging to both associations it can be well represented at American Poultry Association conventions at any time when it proves desirable. It has been suggested that the American Poultry Association may perhaps amend its constitution so that organizations like the International Baby Chick Association may be admitted to the American Poultry Association with

"High Scoring," —Big Layers"

E. C. Branch, Lee's Summit, Mo.—
"Can recommend your goods from start to finish. Have used your incubators for years. It was a Cyphers Incubator that Missouri Belle (score 94½-egg record 237), Anna Belle (93½-egg record 201), Minnie Belle (93½-egg record 211), and Verda Belle (93½-egg record 223) were hatched, as well as a number of other hens with egg records of 200 and over. They were raised on Cyphers Foods from start to finish. We have finally discarded all makes of incubators except Cyphers."

Why Not Get Into The Big Money Making Class?

It's Easy With Cyphers Helps

START now by feeding Cyphers Laying Mash. Boost the egg yield and keep the hens laying right through the fall. The biggest profits of the year are made at this season. Cyphers Growing Mash and Developing Food will hurry up the young pullets and round out the early show birds.

Later on you will want Incubators, Brooders, Remedies, Poultry Supplies—the best always, of course. Get acquainted with us now, through Cyphers Foods, so that you will know just what to get and where to get it when the need comes. We supply full equipment for poultry raisers. 21 years at it. **Write for Our Free Books**, "Poultry Foods and Feeding" and "The Profits in Poultry Keeping," packed with practical money-making suggestions for poultrymen. **Write for these books today**, and ask for current low prices on Cyphers Poultry Food.

keep your powder dry!

In other words, be prepared for the Fall rush of business.

Get your share!

Don't let the buyers forget you during the dull Summer months. Don't think because you have nothing to sell now, that you can afford to get out of the "limelight." The advertisers that are carrying good sized space now are the ones who will, in the Fall, reap the benefit of the prestige thus established.

The ranks of the buyers are constantly changing—the new are coming, the old are going.

In time of Peace prepare for War.

representation on the Executive Board in the same manner now provided for State and Provincial associations. That the I. B. C. A. not being affiliated with the American Poultry Association proves no hindrance to the former association co-operating with the American Poultry Association was demonstrated when President Knapp of the I. B. C. A. introduced the representatives of the Adams and American Express Companies to the American Poultry Association meeting and ably conducted the discussion designed for the illumination and education of these representatives of transportation companies in regard to the views of poultrymen and hatcheries on the proper handling of egg, chick and poultry shipments.

The officers elected by the board of directors to serve the International Baby Chick Association for the ensuing year are: President, H. H. Knapp; 1st Vice-Pres., C. J. Fisk; 2nd Vice-Pres., Dr. P. T. Woods; Secretary, H. D. White, Saugatuck, Mich.; Treasurer, C. J. Fisk.

During the meetings of August 7 to 11, which were held almost continuously from 8 A. M. until late in the evening of each day, plans for future work were discussed and able addresses were made by several prominent poultrymen, instructors in poultry husbandry and an expert in agricultural advertising.

A special meeting of the International Baby Chick Association will be held during the Palace Poultry Show, New York City, early in December.

POULTRY FANCIERS' CLUB.

Founded at Cleveland, O., Aug. 9, '16.

AT THE annual meeting of the American Poultry Association held at Cleveland, Ohio, August 8 to 10, many old members and veteran breeders and fanciers were present, who were pleased to note the harmonious feeling prevailing among the delegates, as well as the disposition of the latter toward existing conditions in the American fancy of today. The result was that these old fanciers assembled in one of the committee rooms of The Hollenden Hotel, on August 9th, and founded the Poultry Fanciers Club with the avowed purpose of advancing the interests of the poultry fancy and reviving the true fancier's spirit.

The charter members of this new social, fraternal and progressive poultry club are: D. Lincoln Orr, E. B. Thompson, Chas. McClave, J. H. Drevenstedt, Harry M. Lamon, Robert Seaman, D. E. Hale, C. F. Rankin, H. P. Schwab, J. H. Wolsieffer, C. D. Cleveland, and S. T. Campbell.

The officers elected for the first year are: President, D. Lincoln Orr, Orr's Mills, N. Y.; Vice-President, Chas. McClave, New London, Ohio; Secretary-Treasurer, J. H. Drevenstedt, Buffalo, N. Y.

Membership will be limited to members of the American Poultry Association who have been identified with the standard bred poultry industry for twenty-five years or more.

The annual meetings of the Poultry Fanciers' Club will be held during the week of one of the leading poultry shows as designated or voted upon by the executive committee or its members, at which time and place the dinner and banquet will be the yearly re-union of its members as well as the social and fraternal function.

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

ST. LOUIS, MO.

At a meeting of the St. Louis Poultry Show Association it was decided to hold the next show in the Coliseum Thanksgiving week, November 24 to 30 inclusive. The association has been reorganized and a state charter will be applied for. Chas. Key Culom was elected secretary-treasurer of the organization and the following officers were re-elected for one year: Henry Steinmesch, president; J. A. Rau, vice-president, and a Board of Directors composed of the foregoing and Judge W. W. Henderson, William Westhus, E. W. Mahood, T. L. Horn, C. L. Schaper, George J. Deuber and Wm. C. Smith.

The newly-organized St. Louis Pet Stock Association and the St. Louis Pigeon Fanciers' Association will combine with the poultrymen in the next Coliseum show. Robert Joos of Chicago will place the ribbons in the pigeon department and R. C. Knill and Charles S. Gibson, president and secretary, respectively, of the National Pet Stock Association, will judge the pet stock exhibits. A complete list of poultry judges will be announced in the near future.

It is announced several specialty clubs will make St. Louis the official show this year, and Secretary Culom is in touch with a number of state and national organizations in an effort to land the annual meetings for the Mound City.

Monthly meetings of the St. Louis Poultry Show Association are being held in the private dining room of the Marquette Hotel.

HANOVER, PA., FAIR.

September 12-15, 1916.

This is the last call for entries for the coming poultry exhibition at Hanover, Pa., week of September 12th.

Manager C. N. Myers and Asst. Jas. T. Huston anticipate a good big entry of quality birds to be entered long before the entries close September 5th. In fact, with increased cooping facilities, the additional coops will hardly be sufficient. The management, however, will return all entries as soon as the coops are taken up. You had therefore better make your entry today. Be one of the live ones who desire to show at a real poultry exhibition, an exhibition which has been built right, and where national reputations have and are being made.

Judges Geo. L. Young, Chas. H. Wells, J. Harry Wolsieffer, Chas. Nixon and Dr. A. T. Beckett will be on the ground bright and early Tuesday morning September 12th, and these gentlemen come knowing that strenuous work awaits them in all the classes.

Remember one or two birds will have the same attention from the attendants, as though your entry consisted of a dozen. We want your entry, we want your presence; once you come to Hanover you will be a regular visitor.

Entries close September 5th.

NATIONAL COLUMBIAN WYANDOTTE CLUB MEDALS FOR 1916-17.

The National Columbian Wyandotte Club will offer at all forthcoming poultry shows in the United States and Canada that will give notice in their premium list, and will mail a copy of same to the secretary of the club. Notice to be printed in premium list.

The National Columbian Wyandotte Club will award gold, silver and bronze medals, and if two or more members compete at this show first prize winners in all classes are entitled to points toward the championship, proportionate to the strength of the competition, and are also offered a set of five special club ribbons as follows: One for best cock, for best hen, for best cockerel, for best pullet and for best pen. An invitation is extended to all to join this club. A payment of \$2.00 entitles you to full membership to November 1st, 1917. Be sure you are a member in good standing before the entries close for this show.

Address for catalog and membership card, also detailed plan of awarding championship medals.

NATIONAL COLUMBIAN WYANDOTTE CLUB, D. G. Keyler, Sec.-Treas.

Trenton Jct., N. J.

The Eastern N. M. Poultry Association at Portales and Clovis will entertain the American Poultry Association state meet this year. They are preparing an especially

attractive list of special prizes and the breeders that are looking for more business should make it a point to make this show. The El Paso and Amarillo, Texas, shows are the week just previous to this show, so come and make a good showing with them and then on to Portales and Clovis. Premium list September 10th. Address the secretary, Jno. L. Reid, Portales, N. M.

AMERICAN CAMPINE CLUB.

The recent election of the American Campine Club resulted with the entire present staff of officers being retained for the year 1917. They are as follows: President, M. R. Jacobus, Ridgefield, N. J.; first vice-president, N. E. Luce, Los Angeles, Cal.; second vice-president, J. H. Prudhomme, Thurmont, Md.; secretary-treasurer, Mrs. C. H. Owings, Dumont, N. J. The executive board will consist of the president and secretary, together with C. A. Phipps, Wayland, Mass.; S. V. R. Martling, Ridgefield, N. J., and Mrs. A. A. Carver, Seville, Ohio. The sixth annual business meeting and club show will be held at Grand Central Palace, N. Y., December 5-3, 1916.

The National Columbian Wyandotte Club has just issued its fifth quarterly and is one that will prove very interesting and helpful to all Columbian Wyandotte breeders. This booklet contains 8 pages, 9x12, on the best paper to show up the half-tone illustration. It has many valuable articles by prominent fanciers, and interesting news items pertaining to our club. Write for this literature and list of breeders in your locality. Address D. G. Keyler, Sec.-Treas., Trenton Junction, N. J.

WHITE WYANDOTTE CLUB

H. J. Riley, the well known White Wyandotte breeder of Bryan, Ohio, has announced his candidacy for Sec.-Treas. of the National White Wyandotte Club. He is at present a member of Executive Committee.

American Poultry Journal has known Mr. Riley a number of years. He is what we call a man among men, the type that reflect credit on any organization and we do not hesitate to indorse him for this honored position.

THE AMERICAN BUCKEYE CLUB

Offers during the show season of 1916-17, a silver cup for best pen, provided there are two or more exhibitors in the class. Also its Club ribbons for best colored male, best shaped male, best colored female, and best shaped female. Competition open only to Club members. Specials will be sent direct to winners by Club Secretary on note from show Secretary, verifying the winnings. Address, H. W. Deem, Natl. Secy., Eaton, Ohio.

The National Golden Wyandotte Club have a new catalog published and if interested in this breed, write for a copy. J. S. Pennington, Secy., Plainfield, Ill.

The twenty-first annual exhibition of the Western Connecticut Poultry Association will be held at Danbury, Conn., November 30 to December 2, 1916. Silver cups to the value of over \$300 will be offered as special premiums in addition to the regular cash premiums. Geo. W. Weed and E. W. Otte will place the awards. For premium list and full particulars address the secretary, H. G. Ward, 57 Main St., Danbury, Conn.

The White Wyandotte

appeals stronger to the fancier as it has the most beautiful body formation and for meat and egg production they cannot be excelled, and equaled by few, and this is very prominent in the World's Best Strain. We now have, ready for the show room, cockerels and pullets, many matured and in the pink of condition; cocks and hens in new feather, ready to win the coveted honors; if you prefer we will condition them. Past has caused this strain of exhibition and utility birds to be known by their trade name, **The World's Best.**

SEPTEMBER BARGAINS

Owing to the fact that our matings have produced such grand quality and the success we have had in bringing the largest number of fowls to maturity we are having a special sale on birds the first 15 days of Sept. You will receive the regular literature with prices discounted for the first 15 days.

Send for our special sale list and avail yourself of the opportunity to secure birds at bargain prices.

Where Does the Money Go?
Where Did It Come From?

Those are the big questions. Be able to answer them by keeping accurate records in our new, simple,

Poultry Account Book

This book contains space to keep a detailed daily record for one year of Eggs Laid, Value of Stock Sold, Eggs Sold, Eggs and Stock Used for Table, Expenses for Labor, Feed and Miscellaneous. With the aid of this book you can tell where your leaks are, where the profits come from, and it will serve as a guide to making your business more profitable. Printed on good quality writing paper suitable for ink. Price 25 cents.

American Poultry Journal Pub. Co., 542 S. Dearborn St., Chicago

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **six cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

FARMS WANTED.

WANT TO LEASE A PLACE suitable for small poultry plant in good town. Reference furnished. Address Poultry Plant, c/o American Poultry Journal, Chicago, Ill. 9

Don't cheat yourself or others

HERE IS SOMETHING SO NEW

so different, so original, and at the same time so immensely practical that every poultry breeder in the United States should immediately send for a copy of this clever selling method. Not only does it explain in detail a new method of selling Standardbred poultry and fixing the true value of fowls, it will also be of tremendous benefit to anyone interested in the breeding and mating of poultry for exhibition purposes. It will, in fact, make you an expert judge of your variety quicker than you can imagine.

Don't Sell Prize Winners for a Song

Time and again you have sold birds that were worth considerably more than what you "guessed" them at when you quoted your customer. Time and again you have sold birds on a repeat order when the quality did not correspond with the customer's first purchase, and you can still remember his letter with the "kick".

Read what Eugene Smith, the well known White Leghorn breeder of Aurora, Ill., says about my system.

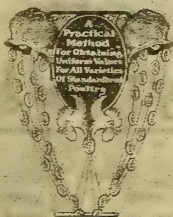

Dear Sir:—Your Selling System fills a long felt want and should be in the hands of every poultry breeder in the United States. It is practical, original and easily applied.

Send \$1.00 for Your Copy

and if upon examination you do not think it is really the most practical method for selling thoroughbred poultry and the best thing ever offered for this purpose, I will cheerfully refund your money. Be sure and mention variety which you breed.

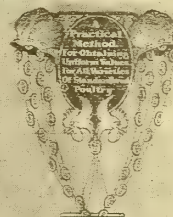

LOUIS A. STAHLER, 1305-542 S. Dearborn St., CHICAGO, ILL.

190 Main Street

Holiston, Mass.

The Queen Gets The Chicks

Producing large hatches of strong, lively chicks, able to live through the uncertain period of the first few weeks and develop into vigorous fowls it pays to feed and raise. Many farm folks tell us that the Queen is exceptional in this respect. A perfect Regulator and the proper degree of moisture required are two of the advantages of the Queen. Not a cheap incubator, but cheap in the long run.

QUEEN INCUBATOR CO., 105 Bryan Ave., Lincoln, Nebr.

Get This Poultry Book

—it leaves nothing to chance or guesswork. Tells positively How to Start Pullets Laying in Sept. & Oct.—How to Get More Eggs in Winter—Fattening Pullets—How Breeders Get Fertile Eggs—Mating, Forcing, Feeding, etc. "Feeding Secrets of Famous Poultrymen" is sent complimentary by manufacturers of **Darling's Meat Crisps**—a highly concentrated, sanitary poultry feed. To get book, address **DARLING & COMPANY, Dept. 2, U. S. Yards, CHICAGO**

AMERICAN POULTRY JOURNAL

"WE LEAD - OTHERS FOLLOW"

Red Comb Feeds Will Do More to Increase Your Poultry PROFITS than Anything Else!

RED COMB, the universal favorite poultry feed, increases constitutional vigor, improves the breed and makes steady, natural layers. Red Comb Feeds increase poultry profits because they help the flock in nature's own way—giving it the choicest whole grains properly balanced to make health and strength. Red Comb Feeds, absolutely, will not force the egg. Rich, heavy feeds that do, injure the bird's breeding qualities, health and future egg-producing power. Poultry keepers are making a fine profit from their flocks right now. You can, too. One woman writes that her hens paid a yearly profit of \$3.06 each. Another that her hens lay all winter long.

Poultry Experts Use Red Comb Read What They Say

C. E. REED: "My five White Plymouth Rock Hens in the International Egg-Laying Competition were the heaviest-laying pen of White Plymouth Rocks ever recorded in competition. They were raised and conditioned on Red Comb."

CHARLES THORGREN: "Red Comb is the best conditioner I ever saw. I have fed Red Comb for more than eight years."

MRS. J. H. HARNLY: "The high honors accorded my birds proclaim loudly the excellent conditioning value of your Red Comb Feed."

J. E. YOUNG: "Red Comb makes the hens lay and keeps them in the pink of condition."

W. H. HARDIN: "A pen of sixteen S. C. White Leghorn pullets, fed on Red Comb, averaged 28 eggs apiece during December. He writes: "Red Comb Feeds are giving excellent results."

Red Comb is a scientifically balanced ration—backed by 46 years' experience. Red Comb contains the minimum of grit. Percentage guaranteed on each bag. Made with no grit if preferred. Feed Red Comb and join the profit makers.

Make your start today with a healthier, better producing flock today. See your feed man. Insist on Red Comb. Our book, "Feeding Poultry For Profits," gives the poultry experiences and advice of six poultry experts. Write for a copy today. Address

HALES & EDWARDS CO.

Red Comb

WORTHY OF THEIR NAME

Our recent win at Nashville, Tennessee: Cock, 1-2-3-4; Hen, 2-3-4-5; Cockerel, 1-2-4-5; Pullet, 1-2-3-5; Pen, 1-2-4-5. Competition cannot dim the fame of the **WORLD'S BEST**

White Wyandottes

and not only for their great winning record but for their meat and egg producing ability as well, have they come to be *America's most wonderful fowl*. The blood lines and sturdiness of the World's Best Strain have established themselves as "Perfection Marks" for all breeds and each breeder is now endeavoring to bring his strain up these marks. By their wonderful breeding, exhibition and utility points our fowls have made themselves worthy of their name

THE WORLD'S BEST

They are sold on their quality and this quality has again been demonstrated in the show rooms this fall. At the Indiana State Fair we were the only exhibitor to win in every class and at the Great South Bend Fair, the Hagerstown of the West, we won every first, second and third. Send for literature.

THIS!

HOW
does this
look to you?

Many \$3.50 Utility Anconas—Sheppard's strain—will produce eggs to the value of \$21.27 and over within a year. We have abundant evidence to that effect. That's why there is a quickening demand for **Sheppard's Famous Anconas** from every part of the world. Not only are they the World's greatest egg machines and winter layers—with the somewhat amazing egg record of 256 average for a flock—but they're wonderful prize winners as well.

Sheppard's Famous Anconas

Score Nearly All Firsts at
Madison Square Garden

For nine consecutive years my birds have won three times as many first and second prizes at the nation's greatest shows—including recent exhibits—as all my competitors together. You see why they are "famous"—and best, don't you?

If you want winners—or egg producers—write for catalog. Don't buy eggs, baby chicks or stock until you read the story of Sheppard's Famous Anconas.

Learn How To Speed Up Your "Egg Factories"

These 2 FREE BOOKS Tell You How

THEY give you proof after proof where remarkable results in egg production have been secured by the use of Cyphers Balanced-Ration Poultry Foods. Also the facts about why they will hurry up your young pullets and quickly round out the early show birds.

Now is the time to begin to speed up your "egg factories." The high prices of eggs will give you big profits. Cyphers Laying Mash—a balanced ration of sound grains, blood meal and alfalfa ready mixed for feeding, and Cyphers Scratching Food are two essentials at this time of year.

These books will post you, too, regarding the many other Poultry Supplies you will need, including Incubators, Hovers, Remedies, Lice Paint and Powder, etc., etc. By following the "Cyphers Way" you will assure greater poultry success. Write tonight for these two Free Books and our latest lowest prices on Poultry Foods; also name of nearest agent.

CYPHERS INCUBATOR COMPANY, Dept. 30
Home Office and Factory: BUFFALO, N. Y.
New York Chicago Boston Kansas City, Mo. Oakland, Cal.

The "Cyphers Way"

"Like so many other successful from Shell to Showroom poultrymen, our best layers and show birds for several years have been hatched in Cyphers Incubators, reared on Cyphers Brooders and fed on Cyphers Poultry Foods from the egg to the showroom. By long personal experience we know your entire line of Poultry Supplies is so far superior to all others we would not think of making any changes. The Cyphers represents the standard of excellence with us."—JOHN S. STEERS, Breeder of R. I. Reds, Barred Rocks, White Orpingtons and White Wyandottes, Dry Ridge, Ky.

This S. C. White Leghorn—hatched and raised the "Cyphers Way"—Laid 288 Eggs in 365 Days as a Yearling.

Barred Plymouth Rocks

BUY your exhibition and breeding birds from a firm that has been in the business for 25 years. We are specialists in barred rocks, have bred them in large numbers for a quarter of a century and we can give you selection no small breeder possibly can. 34 premiums at the big Kentucky State Fair and the great armory show at Louisville last year, prove our unequalled quality.

WINNINGS, KENTUCKY STATE FAIR, SEPTEMBER, 1916:
 5 firsts, 4 seconds, 5 thirds, 1 fourth, 1 fifth; Cash Prize for Best Barred Plymouth Rocks.

Incubator Eggs, \$7.50 per Hundred

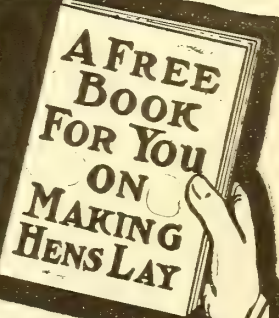

We have over 1500 birds this year, bred to perfection in color and barring, and when you buy this stock you get the best in America today. Our quality is wonderful, yet our prices are the lowest of any of the big breeders. Don't make the mistake of purchasing before you get our catalog and mating list. Send today for 40-page catalog.3

POPE & POPE, Box A, LOUISVILLE, KENTUCKY

CAUTION: Any Bone Cutter claiming to be MANN'S without F. W. MANN-CO. cast on its surface, is an imitation. The genuine MANN'S is made only in Milford.

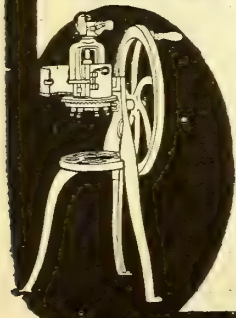

Make Your Hens Lay

Write today for our free poultry books and learn at once what it might take you, alone, years of costly experience to find out. You know how eager fowls are for bugs and worms. Our book tells why. Briefly, it's the animal food they want, and **must have**, in order to thrive best. Chicks, laying hens, cocks, all need it—to develop frame, muscle, feathers, to produce many eggs, to produce fertile eggs. To replace bugs and worms in winter, or, for yarded fowls, feed freshly cut raw bone, prepared with

MANN'S LATEST MODEL BONE CUTTER

Try One Free—No Money Down

This feed is four times richer in protein (the egg-making, body-building element), than corn is, and it is more easily digested and assimilated. **Save** money by cutting down your grain ration. **Make** money by getting more eggs when eggs are worth most and by having better eggs for hatching stronger chicks, earlier and heavier broilers.

Mann's Latest Model Bone Cutter cuts the bone (and all adhering meat and gristle) into a fine, soft mash that fowls of all ages relish and can put to immediate use in producing profit for you. It turns easily, cuts rapidly, never clogs, wastes nothing. We sell it on **10 Days' Free Trial**, without money or deposit in advance—so you may be sure it is right. We even pay its freight back if you are not satisfied.

WRITE FOR FREE BOOKS TODAY. To read them is to know how to feed poultry for most profit.

F. W. Mann Company, Box 56, Milford, Mass.

OWEN FARMS

*White Plymouth Rocks, White Leghorns,
Buff Orpingtons and White Orpingtons.*

**Made a Typical OWEN FARMS Winning
At New York State Fair, Syracuse, Sept. 11-16, 1916**

Where they won 12 out of a possible 20 firsts, 8 seconds, 9 thirds and 9 fourth and fifth prizes. A total of 38 regular awards. The most important of all firsts—*first prize pen*—was won in each variety. 28 Owen Farms' birds won the blue. 8 birds of all other exhibitors combined, won the blue.

Among the Important Specials were the American White Plymouth Rock Club Silver Cup for the Best White Rock, any age or sex; the Onondaga Hotel Silver Cup for the Best Ten Specimens in the Single Classes in Buff Orpingtons; Display Cash Specials, and Cash Specials for most points on Pens. Full details regarding other specials have not come from Mr. Davey as I write this ad.

My S. C. Rhode Island Reds and White Wyandottes

were not shown at Syracuse. Important sales in these varieties made me decide to give my customers the benefit of my best early birds. Later you will realize I am stronger than ever before.

1916 YOUNGSTERS

Since Mr. Davey left for Syracuse, I have spent nearly every minute of day light filling nearly fifty orders. Have handled scores of early birds in each of my six varieties and realize even better than I did before the wonderful average quality that is in my flocks.

You will find here exactly the bird or birds you are needing, whether you wish them to win your show, to breed you winners, or strong, husky utility birds to lay and pay and breed you birds with these characteristics inherent.

You will not be disappointed in any purchase you make of me. Write fully and frankly just what you wish the birds for, and if you will give me all particulars it will greatly help me in writing you. My fine catalog, giving all details regarding my birds, my farms and my generous business methods will help you decide to buy here.

Other Owen Farms Victories

AT MADISON SQUARE GARDEN, NEW YORK, (WHERE 393 OWEN FARMS BIRDS HAVE WON THE BLUE), NEW YORK PALACE SHOW, BOSTON, CHICAGO and the other leading shows of the country have become history.

Wherever Owen Farms birds are exhibited you will find the standing of that show has been raised. Shows that do not have Owen Farms exhibits are considered incomplete. You can help increase the prestige of your show by adding Owen Farms quality to your exhibit and swell your own winnings by calling to your aid the all powerful backing of Owen Farms.

October and November

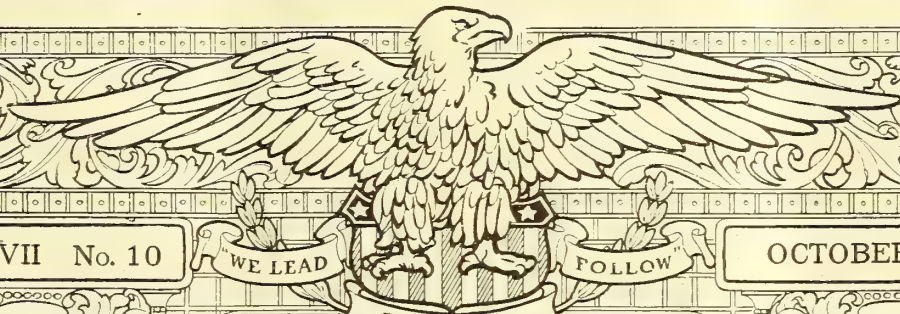

are the months to book your orders. Delivery can be made at your convenience, but an order placed while my flocks are complete will mean the reservation for you of just the bird or birds you desire. Nearly 20,000 shipments have been made during the past few years to the thousands of Owen Farms customers all over the WORLD, and thousands of these shipments have been repeat orders. ABSOLUTE SATISFACTION to a customer means he will come back, and this is the basic note of my business methods. Why not learn by personal experience just what my "SATISFACTION GUARANTEED EVERY CUSTOMER EVERY TIME" means?

My Birds Live; Grow, Lay and Pay. Owen Farms New Illustrated Catalog

will prove a real treat for you if you have not already seen it and is yours for the asking.

AMERICAN POULTRY JOURNAL

VOL. XLVII No. 10

OCTOBER, 1916

GEORGE H. LEE—PIONEER POULTRYMAN

GEORGE H. LEE, of Omaha, Neb., is 49 years old and was born in Le Claire, Iowa. He has been dealing in poultry for twenty-eight years and is a manufacturer of incubators, brooders and poultry and stock supplies. He has bred Barred Plymouth Rocks, Buff Leghorns, S. C. White Leghorns and Pekin ducks.

The "Mandy Lee" Farm is conducted largely as an experimental plant for the well known "Mandy Lee" incubators, brooders and supplies, but, as Mr. Lee says, they have "combined pleasure and experiments with profit in handling the fancy and market trade and have a very select trade on eggs for private

families and really consider this the best end of the poultry business."

Mr. Lee's extensive business interests in Omaha have never permitted him to give much attention to exhibiting at other than local shows, where a liberal share of the premiums have been won, and no attempt has been made to show at long distance from home.

He believes that anyone with a liking for poultry and sufficient pluck and push can make a comfortable living with poultry and is certain that there is abundant room in this country for many more successful poultry keepers and a bigger, better poultry industry.

What "Uncle Sam" Is Doing for Poultry

American Poultry Association Is to Co-operate with the National, State and Provincial Agricultural Departments of the United States and Canada for Progressive Work in Developing All Pure Bred Poultry Interests. Uncle Sam's Simple and Practical Trap Nest. How to Make It. *By Prince T. Woods, M. D.*

ONE of the most important acts of the American Poultry Association at its Forty-first Annual Convention, held in Cleveland, Ohio, was the adoption of resolutions providing for co-operation with the National, State and Provincial Agricultural Departments, colleges and experiment stations, of the United States and Canada, for progressive work in developing all pure-bred poultry interests. The Committee on Government Co-operation as appointed

ation be granted, but for the reason that the 1915 Standard was not ready for distribution, the Finance Committee could not see their way clear to furnish the necessary funds for co-operation at that time.

"The Government has in its employ twenty men doing poultry work thruout many states. They have organized, in several of the states, Girls' and Boys' Poultry Clubs, having a membership of about ten thousand. I hope this co-operation may be granted and not wait twelve months, but let us join forces now. The Department paid the American Poultry Association a great compliment in extending this invitation asking for co-operation."

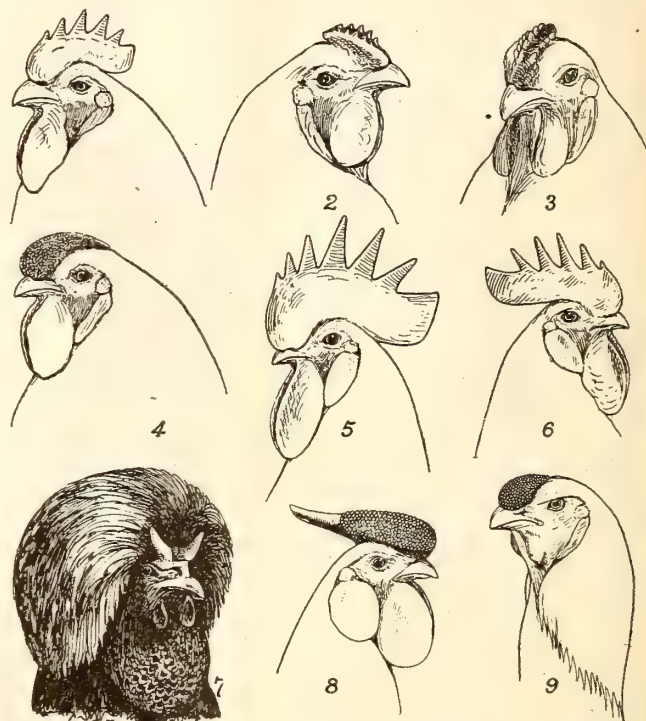

As we understand the action of the Cleveland Convention, Secretary Campbell's request that co-operation become im-

includes Frank E. Hering, South Bend, Indiana; James E. Rice, Ithaca, N. Y.; H. B. Donovan, Jr., Toronto, Ontario, Canada; Charles D. Cleveland, Eatontown, New Jersey.

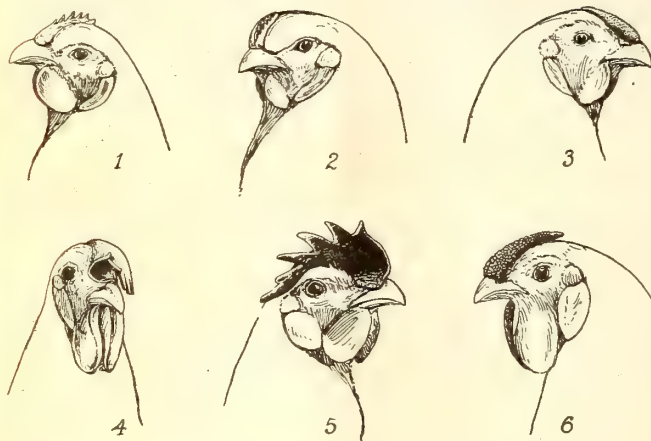

Secretary Campbell, speaking before the American Poultry Association Convention on behalf of the resolutions for co-operation with Government agricultural departments, said: "This is a matter in which the American Poultry Association should be, and I believe is, vitally interested. Two years ago your secretary received from Dr. A. D. Melvin, Chief of Bureau of Animal Industry, a request for the American Poultry Association to co-operate with the Bureau of Animal Industry at Washington, D. C. The receipt of the request was acknowledged with thanks and the secretary wrote to Harry M. Lamon, who has charge of the poultry department. The matter was referred to the Finance Committee of the American Poultry Association with the request that co-oper-

mediately effective was granted and the committee empowered to begin work at once. There is a great opportunity here for the American Poultry Association to do much good for "every poultry interest" and incidentally to accomplish much for its own welfare as an international poultry organization, and to do progressive work for all pure-bred poultry interests in both the United States and Canada. You, friend Reader, should do your share to help boost the good work. Effective team work and co-operation in all branches of poultry husbandry was never more needed than it is at the present time. Efficient co-operation should begin right NOW, and all who are interested should keep everlastingly at it.

This series of articles, of which this is the third, is concerned chiefly with Uncle Sam's poultry work, which is a great work well begun and showing much progress; but we hope later on to tell our readers something about the fine work that the Canadian Government Agricultural Depart-

1. SQUIRREL

2. WRY

Taking moving pictures of a good hatch at U. S. Government Experimental Poultry Farm, Beltsville, Maryland. Here you can see Messrs. Lamon and Lee, of "Poultry Investigations," in their working clothes; Mr. Lamon is at right of the tray and Mr. Lee at the left.

necessary when the hens are laying freely and during hot weather.

This trap-nest may be attached to the underside of the dropping board, with the front facing the pen and arranged so that it can be easily removed, or it may be placed on the walls of the pen. If the nest is placed under the dropping board, the latter will serve as a top for the nest, and the rear of the nest may be of wire to allow good ventilation in warm

One of Uncle Sam's S. C. White Leghorns, U. S. Government Poultry Farm, Beltsville, Maryland, having her picture taken just like you or I. An unusual poultry portrait.

weather. If the nest is placed on the wall, slats or wire should be inserted from the front of the nest to the wall at a sharp angle to prevent the hens from roosting on the nest.

When the hen enters this nest her back raises the door (c), which releases the catch or trigger (a) and allows the door to shut. The catch should be set so that its edge just holds the door, which position is regulated by the screw or nail at the lower inside edge of the catch. A washer should be placed on the screw (d) between the catch and the side of the nest to prevent this catch from sticking. The guard (b) around the catch keeps the nesting material away from the catch. The length of the catch which supports the door and the triangular notch in the door may be varied slightly for very small or very large hens.

CONSTRUCTING A THREE-COMPARTMENT NEST.

Cut four $\frac{7}{8}$ -inch boards for ends and partitions, 12 inches wide by 19 inches long, enough $\frac{1}{2}$ -inch boards $39\frac{1}{2}$ inches long, laid lengthwise, to cover the top, back, and bottom, and one strip $39\frac{1}{2}$ inches long and $1\frac{1}{2}$ inches wide for the front of the nests. Cut three pieces of $\frac{1}{2}$ -inch boards 12 inches long and 3 inches high to insert in the nest to hold the nesting material away from the door.

Nail the top, back, and bottom to the ends and partitions (see fig. 2), insert the 3-inch strips in the nests, and make the guard (b), nailing it to the left side of the nest. Bore a hole in the catch (a) large enough so that the catch will move freely when screwed into position on the side. Place a washer on the screw between the catch and the side of the nest. Place a screw at the lower edge of the catch to stop it when set, so that the catch will just hold the door.

Make the doors (c) of $\frac{7}{8}$ -inch material, 12 inches by 6 inches, and cut a triangular notch in the center 4 inches wide. Put two screw eyes in the top of the doors and bore holes in the front of the nests 2 inches below the top (inside measurement), thru which a $\frac{1}{8}$ -inch wire is run to support the doors.

Attach a narrow strip to the front of the nests for the hens to jump upon when entering the nests. Place a button or block of wood on the front of each partition to hold the door when the nest is closed.

If the nests are to be placed directly below the dropping board, a wire top should be used on the nest, except for a 5-inch strip of wood on the front edge of the top to stiffen the nest.

Address Before the A. P. A. Convention

Frank E. Hering's Stirring Speech, Setting Forth His Ideas for the Reconstruction and Future Progress of the Association Was a Feature of the Convention. We Believe Everyone Interested in Poultry Will Find the Following Report, Giving the Gist of Mr. Hering's Remarks, of Vital Interest.

I WANT to talk to you just a few minutes upon certain constructive policies that I think you men and women ought to consider here. I belong to a number of organizations. I have the privilege of representing the South Bend Chamber of Commerce in the National Organization; I have the pleasure of representing a number of our local civic and commercial bodies, and a number of local organizations, and I feel we have not made the most of our opportunities in this association. I think we have not had the proper vision, in its larger aspect. The man who insists on remaining in the valley, the things he can see are limited in number and just in proportion as that man rises out of the valley and comes along the top of the ridge, he sees things in their greater aspect and importance, and sometimes we are so opposed to things that we forget the larger aspect; and as it has been said by one of the members here, this organization ought not to legislate in the interest of any individual; it ought to legislate in the interest of all individuals, and when it does that, it is legislating in the interest of the poultry culture thruout this country. (Applause.)

I sometimes think we have too many individualists in this organization, and I am not saying this in the way of unkindly criticism. As a matter of fact, you people are individualists. E. B. Thompson would never stand where he stands today, nor the Hawkins, the Fishels, nor the Papes, and the hundreds of other men I might mention, if they were not individualists, if they did not have sufficient belief in their own methods of

producing, and sufficient confidence in themselves to work alone along certain lines that they have laid down, if they did not have that belief, they never would have achieved the success they have; and so in this organization you have a condition of affairs that makes for individualism, and whenever I sit in any committee of, for instance, five, I expect five distinct opinions, and whenever I find that any two of them agree, I find there is something wrong with one of them.

Let me submit this to you: As individuals, we ought to be individualistic in our tendencies, but when we sit here in deliberation for three or four days trying to enact legislation, trying to bring about measures that will not necessarily limit the degrees of usefulness of the six thousand members of this organization, but is aimed to be of interest to half a million people who are interested more or less in poultry culture in this country, when we sit here we ought to forget some of our individualistic tendencies, and make compromises, we ought to act collectively and have a vision not concerned with this man's interests, but a vision for the good of this organization and the general good of poultry culture thruout this country. (Applause.)

You know we have not taken advantage of the very greatest things that lie before us. Let me call your attention to two or three of the things I would call a survey. You know surveys are becoming very popular in business institutions. You know since the advent of the National Advertising Association, of the Rotary Club, the Chamber of Commerce and other

organizations, men have learned that they should make surveys of their business, should take the balance at the end of the year, and if there has been any great loss in any one column, they determine the cause of that loss. They ought to know their business from the scientific viewpoint, and we ought to legislate from the scientific viewpoint; we ought not to leave it as a matter of sentiment; we ought to determine what to do, and then do it. We have in this country the treasury of the Federal Government, and understand the Federal Government is not so separate and apart from you and me; the Federal Government is our government; your taxes and my taxes help to maintain that government; in time of war, your children and my children will be called upon to protect that government; we are an integral part of that government, and I submit that if hundreds of millions of dollars can be appropriated annually from the Federal Government for use of cotton growers and their interests, and to the Forestry Service for reforestation, I submit to you that we men and women of this organization are entitled to our just share in the advancement of poultry culture in this country. (Applause.)

You have sitting in this body a loyal member of the American Poultry Association, a man that has achieved distinction, I understand, before he became associated with the Federal Government in a high and important position. You know the attitude of this man toward the American Poultry Association; you know, so far as his individual tendencies are concerned, he would draw the association closer to the Federal Government—and what have we done to meet this man half way, to meet what this man wants to do? The Federal Government has resources far beyond our own. It has instructors and has the wealth that we do not have at the present time; and let me submit this to you, get away from the idea that five or six thousand men can ever represent the American Poultry Association in its larger degrees of activity. This association—and remember that my specialty has been organization work practically thruout my life, so I know what I am talking about—I tell you, men, that this organization, as a result of three years of intelligent effort co-operating with the Federal Government, and other means I shall name, ought to have instead of six thousand members upon its rosters, one hundred thousand people upon its roster.

Every man and woman that you add to the roster of the American Poultry Association, in whom you have awakened interest in poultry culture, you have added from the selfish viewpoint,—the returns that come into your pocket.

Don't you see that is largely a matter of education? I know that as the result of my four or five years interest in this organization. In one business organization to which I belong in South Bend, business men who live just outside the city limits, when they sit down at luncheon with me, I insist upon talking poultry, and a great many of those men, just by way of amusement, are now interested in poultry, so you see it is only a matter of proper education.

How are you going to educate these people? You know as well as I do that the finances of this organization, so far as any very large material amount of money is concerned, are decidedly restricted. You know just as well as I do that we cannot do, with the money in this organization, the things we want. You know as well as I do we have every ambition in this organization, we have certain reforms we want to bring about, we have certain things we want to do, and every one of those things demands money. You people don't want to tax yourselves additionally; that is unpopular. Why not use the aid of the Federal Government? I understand that there are some twenty special instructors in the Federal Government. In our state of Indiana, we have a splendid young man at the head of the poultry department in our university; we have a splendid man as our County Agent, Mr. Borden, the official officer of those people living on farms, and he is the busiest and most popular man in the county.

If anyone wants to know anything about poultry, he can be consulted. We ought to bring these men in contact with this organization. Let them feel we want their friendship; let them talk the things we are standing for, and then you will find this organization greatly increased in numbers. The facilities today for education are a hundred fold more than they were years ago. I taught in one of the universities for

six years. I want to tell you that we get our impressions thru the senses, seeing, hearing, feeling, tasting and smelling, and the one sense stands out above every other sense, the sense of seeing. You can see a thing and you get your conception of it, and you won't get that conception if you spend twice the amount of time in any other line; so we have the moving pictures. I doubt if there are twenty people here who are not interested in moving pictures. You may not be interested in some of the movies, but you are interested in others.

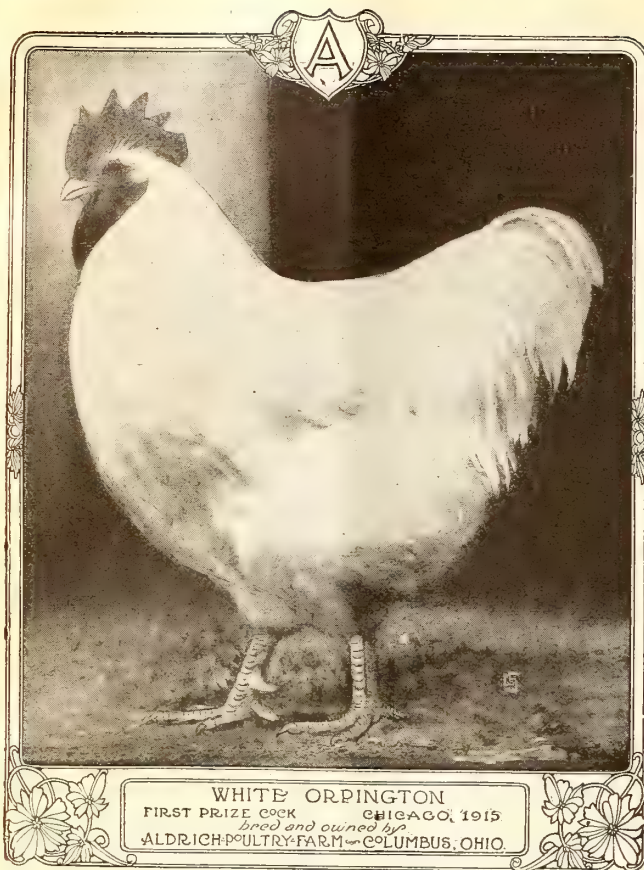

My friends, this is one organization that I know of that ought to use moving pictures, that is using moving pictures to a minimum. Let us show people upon the screen what our standard bred fowls are, let us give them the information they ought to have, and give that information in the tenement district of the city, as well as in the smaller locality; let us educate and co-operate with the State and Federal Government. Let us get our State and Federal Government to make an appropriation, and let us educate and educate, and your Scranton school of correspondence will be benefited, and your particular farm will be benefited, all those things will be

Barred Plymouth Rock, first prize cock great Armory Show, Louisville, Ky., November, 1915. Also won special for best shaped and colored male in keen competition. Bred and owned by Pope & Pope, Louisville, Ky.

benefited just in proportion as we educate the millions of people in this country who are not poultry breeders.

First, let us work with the Federal and State Government; second, let us educate thru the means we have at hand, and, finally, let us organize. It is the easiest thing in the world to organize, and remember that is one thing of which I know what I am speaking about. I say it is a shame—I am not laying the responsibility upon any one person, because we are all equally to blame, we cannot blame any officer for what we ourselves do not provide for. I say it is a shame that this organization has only six thousand members. I say that instead of putting restrictions in our constitution to keep people interested in poultry out of this association, we ought to tear down absolutely every fence except certain fundamentals that they must necessarily accept, if we are going to be an organization at all, and bring tens of thousands of people into

this organization; I say it is a shame to erect fences of technicalities to keep people out of this organization; I say that it is a shame to say to those people, "We are on the inside, and you chaps will have to climb that fence to get in here, if you want to." You cannot go into any state, the American Poultry Association, and dictate to the state legislature how it shall give the money of that state for poultry culture, but I say that this organization can sacrifice anything short of absolute essentials to bring into close contact with this organization, those people who, for one reason or another, are outside the bounds of this organization. Let us tear down some of these fences, and instead of making it hard for a man to join, let us make it easy for him to get in. (Applause.)

In St. Joseph County we have an organization of 150 members, and I dare say in Ohio we have 300 members who are not members of this organization, and it would not be a very difficult thing to get that entire association and to have them send a representative here to pay a per capita tax of five or ten cents, if this association would make it worth while.

Another thing I want to speak about: We find the air of suspicion permeating everything; you can stand in that lobby downstairs, and there is suspicion. Now, I believe you are honest men and women, and as soon as I come to the conclusion that you are not, in self-respect I am going to withdraw from among you; and I am tired of hearing that the only dishonest man engaged in buying and selling poultry, is the poultry breeder. There are dishonest breeders, but God knows there are as many dishonest purchasers as there are dishonest breeders. (Applause.)

I say, I am in favor of purging this body of every man who can be shown to be wilfully and maliciously working against the honor of this association. At the same time, I believe that this association ought to help the honest breeders in the association to get their rights against dishonest purchasers. I have known purchasers to go to this White Leghorn breeder and to that White Leghorn breeder, and after he has harmed the business interests of four or five of the White Leghorn breeders, these White Leghorn breeders will get together and someone will casually mention the name of "Smith" who purchased a fine pen from him and refused to pay or sent it

back, or refused to accept it on a technicality, and some other Leghorn breeder will say, "I had the same experience with that fellow. You will find he is a dead beat." He was using one after another of you specialty breeders. In your town you have a credit association, haven't you? And if there is a dead beat in the town that purchases from a grocer, he doesn't get farther than two grocery stores before those men know about it; and here we have not got in the American Poultry Association, you breeders have been so short-sighted, that you have permitted the lances to be thrown at you without taking any measure for your protection; and I know there is just as much and more dishonesty on the other side. (Applause.)

Don't you think it might be advisable to have a credit bureau in the American Poultry Association, and if a man is found whose actions are not absolutely open and above board, his name should be posted on the record of your secretary, so that that information is open to all of us? Don't you think we ought to do that? I say we ought to enact some constructive legislation, and I voice the sentiment of the gentleman that preceded me, do not let us indulge in personalities. Let us grit our teeth and determine this, to see that equal and exact justice is done to everybody. We are here in the interests of the American Poultry Association, not as men, not as individuals, not as a group; we are here today to put this association where it ought to be because it is to our particular interests to do it, and because we want to work, even in business, toward an ideal; we want to feel that we are interested within ourselves, and to feel that we are associated with honest men, and feel that this industry shall have an interest for a million, two million, five million people in five, fifteen and twenty years in the future. I thank you. (Applause.)

The American Embassy at Paris, France, writes us that their office is visited every day by people who desire to learn of American methods and equipment in the poultry field, and that they will be glad to receive copies of catalogs, price lists, etc. Address American Commercial Aattché, 36 Avenue de l'Opera, Paris, France.

Care and Growth of R. C. W. Leghorns

Selection of Breeding Birds—Methods of Feeding and Housing, Hatching, Rearing and Proper Development of the Chicks. A Contest Article.

By Anna Martin Clarke, Kelso, Okla.

FOR many years, the Leghorn has been recognized by thousands of people as a typically egg laying breed. While the R. C. White Leghorn is a comparatively new breed, it certainly is a coming leader in the poultry world. They are sufficiently hardy to meet the climatic conditions of all parts of the United States and Canada.

Chicks of this variety develop rapidly and mature much earlier than the larger breeds. Five and one-half and six months old pullets, if they have received good care, are ready to lay. They do well in confinement or on range and require less food per bird than many larger breeds. For egg laying the year round, the size, weight and number of their eggs, out-distance their competitors. The eggs from my flock average twenty-four ounces per dozen. They are fine foragers and therefore make a fine fowl for the farmer.

As an exhibition bird the Rose Comb White Leghorn cannot be beaten and few sights are more attractive than a flock of these birds scattered over a lawn or busy at work in the orchard or field.

In order to produce fertile eggs that hatch strong livable chicks, only vigorous full sized breeding fowl should be put into the pens. Great care should be taken in selecting a healthy and vigorous male, upon whom one can safely rely to fertilize a good per cent of the eggs. As a rule, good results may be obtained by mating fifteen or eighteen hens to a fully matured yearling cock.

We use males with fine body, of good length, heavy breast and with a good concave sweep to tail. Legs should be of good length with good yellow shanks. Good comb, square in front, and a good spike straight back and with white flat ear lobes, and dark bay eyes. He should be out of heavy laying dam. With him, we mate hens with heavy breast and good length of body, tail well developed but carried a little lower than that of the male. Legs not too long, set well apart, with clear white medium sized ear lobes, and with the comb corresponding with that of the male. We make it a practice to breed from no birds unless perfectly healthy and absolutely white in quills of tail and wings.

In feeding, the flock should be given a well balanced ration or at least allow them to balance their own ration by having access to a variety of grains, animal, vegetable and mineral foods necessary for good bodily development, and for heavy egg production.

The method of feeding which has given us the best fertility is as follows: Night and morning, one quart to each twenty fowls of equal parts cracked corn and whole wheat. In extra cold weather they are given an extra feed of shelled corn at night. At noon, we feed a moist mash composed of fifty pounds of bran, fifty pounds middlings, twenty pounds beef scrap, to which is added a like quantity of steamed alfalfa or clover. We keep grit, oyster shell and dry crushed bone before them at all times.

Our fowls are housed in roomy, open-front houses, free from dampness and drafts and altho the thermometer goes as low as fifteen below zero, we have not had a single frosted comb. We keep a foot of clean dry straw on the floor of the scratching shed where they are fed morning and evening.

Breeding birds should not be forced for egg production. We allow the breeding birds free range, the females in the breeding pen having been selected from the best layers of their pullet year and the males sons of good layers.

During the hatching season, if the weather is cold, the eggs are gathered several times a day and kept in a dry cool place where the temperature does not go above sixty degrees or below forty. Only strictly fresh eggs are incubated, none older than two weeks being used.

The R. C. White Leghorn is rightly called a non-sitting variety. It is very seldom that one stays on the nest over night and if removed at once will start laying again in a week.

It is therefore necessary to hatch the chicks under hens of sitting varieties or in an incubator. Eggs from this breed are good sized and uniform in shape and color. From 215 eggs from my flock of Leghorns placed in a machine last spring, I got a flock of 178 strong likely chicks.

In using an incubator, we regulate the machine and see that it is running in good shape before putting the eggs in, and then keep it running at 102 degrees the first week. After the third day we turn the eggs night and morning, changing the traps from side to side once a day. In the hatch spoken of above, we tested out nine eggs on the seventh day, leaving 206 in the machine. The second week the temperature kept at 103 degrees and we tested again the seventeenth, taking out eleven more eggs. The 195 left in the machine were turned

Feeding time at Windcrest, Home of Ward's Champion Dark Cornish, Pennington, N. J.

the last time on the eighteenth day and then cooled twice daily until the evening of the twentieth day, when they began to pip. The doors were not opened any more until the evening of the twenty-first day, when we found 178 well-hatched fluffy chicks.

I brooded them in an upstairs room with a stove, as it was cold weather, and we had no other means of caring for them. The floor of the room was covered, and a heavy litter of mow sweeping provided. The little fellows seemed to feel right at home at once and arranged themselves in a circle around the stove with every appearance of being comfortable and happy. The temperature was kept around ninety-five degrees for about a week and was then gradually decreased to seventy-five degrees by the end of the tenth day.

They were not fed until they were forty-eight hours old and the first feed was hard boiled egg ground fine, shell and all, mixed with same dry bread crumbs and fed in a shallow

Chicago, 3 years (36 issues)..... 1.50
Chicago, Canadian and Foreign subscrip-
tions require additional postage and there-
fore the slight difference in prices.

Owing to the high quality of the peri-
odical which we are publishing at the price
asked for publications of inferior value, we
have discontinued the practice of entering
yearly subscriptions to American Poultry
Journal, but will enter subscriptions for 3
years (36 issues) for ONE DOLLAR
mailed to any point in the United States,
except Chicago. See above rates for Chi-
cago, Canada and Foreign subscriptions.

TRIAL SUBSCRIPTIONS—In order
to acquaint prospective subscribers with
American Poultry Journal, we will mail
one copy a month for six consecutive
months to any point in the United States,
its possessions or to Cuba or Mexico for
25c. The trial subscription offer (6 months
for 25c) is for new subscribers only and
not subject to renewal for a period of less
than three years.

If you change your address, give both
your old and new address, as well as your
subscription number when notifying us of
the change.

Notary Public.

IT IS EASY to make a start in the poul-
try business. It is not difficult for
anyone of average intelligence to
learn the essentials of poultry keep-
ing. Beginners frequently have un-
commonly good results the first sea-
son, when the land is new to poultry
and all equipment is new, clean and
bright.

Poultry profits are particularly attractive to those
who enjoy figuring them on paper. Yet, poultry
keeping for successful results, year in and year out,
is not as easy as it seems on the surface of things.
There is no bonanza—no get-rich-quick, extraor-
dinary profits—in poultry keeping. As a side line,
with other paying work, for the back-lotter, for the
farmer, for the suburbanite, poultry keeping pays
a good return for the attention given and it is inter-
esting and healthful work, that keeps the poultry
lover out of doors and that supplies helpful relaxa-
tion from other lines of endeavor. As a specialty
business, for the experienced and skilled, it can be
made to pay a fairly good living and, under favor-
able conditions, *something more*.

It is surprising how many intelligent professional
and business men, successful in their line,
look upon the poultry business as an
undertaking into which they can safely
plunge without previously acquiring
knowledge of the work, experience, or
skill. It is easy enough to "plunge," but
usually the experience follows promptly,
discouragingly, and in large bunches. In
any other calling such men would expect
to have to begin at the bottom and work

up as they learned the business. But it is so easy
to put money into poultry, so easy to get in beyond
one's depth at the start, the figures on paper are so
attractive and seductive, that one is tempted to
make the plunge, without previous experience, only
to find out that knowledge and skill are necessary if
one is to get the money out again, and that one
must learn the business from the bottom up if one
is to make it pay.

Sometimes we think that first-season success is
about the worst thing that can happen to the opti-
mistic beginner. He gets to thinking that poultry
keeping is "dead easy," with a few short months'
or one of two season's experience he thinks he
"knows it all;" and, after that, he is a lucky man if
he does not ride quickly to a distressing fall. While,
if one is at all observing, the essentials of successful
poultry keeping are easy to learn, we do not believe
that any man has yet lived long enough to know all
about it. We have been at it many years, but we
had to unlearn a lot we thought we knew at the
start, we have to unlearn a lot as we go along, we
try to learn something new and useful every day,
and we have been at it long enough to realize what
a vast lot of things there are that we do not know

and have yet to learn about poultry.
Every time we attend a meeting of poul-
trymen, or visit with a brother poultry
keeper, we obtain new light on some
phase of poultry keeping and learn some-
thing. When we find that we are getting
too old to learn, or get to thinking that
we know it all, it will be time for us to
quit before the axe falls.

Beginners will be wise to study the sub-

ject well and to learn all they can before embarking in the poultry business. Start the work first, if you can, as a side line with your other work that pays the living expenses. Look before you leap and don't plunge headlong until you have a pretty sure knowledge of where you are going to land. Study poultry books and journals. Attend some Agricultural College short course in poultry if you can. Visit poultry plants, attend the shows, talk with practical and successful poultrymen—most of them are willing enough to talk. Do not believe everything you hear and read,—use your eyes, ears, and powers of observation.

Remember, tho you may be able to grow poultry, to breed pure-bred fowls, to raise good chicks, that it takes salesmanship to sell your product. When considering your location and the development of your prospective poultry plant, besides figuring on what you will raise and how to do it, consider also how you are going to market at a living profit what you produce.

If you would succeed, start at the bottom and work up, just as you would in any other line of endeavor. When you make a start, put good whole-souled thought and effort into making a success of the work.

Proportionately, we do not believe that there are any more failures in the poultry business than there are in other callings, but it is a business where experience and skill count large, where strict attention to the details of the work are necessary, where common sense and an ability to observe things intelligently are essential, and where losses may come quickly if one fails to learn the essentials and to attend strictly to business.

If you have a fondness for poultry work, are willing and eager to learn, will sacrifice personal pleasures for the sake of attending to business when occasion requires, have plenty of pluck, perseverance and push, and don't get bitten too hard with the "know-it-all bug," you can succeed with poultry.

Start wisely and make haste slowly.

FOR A NUMBER OF YEARS we have been using fish scrap or fish meal for feeding breeding and laying stock and growing chickens. We have found such stock feeds made from fish waste to be desirable, satisfactory and economical. Such fish scraps and meals as we have used have given only good results and we have not had any sug-

gestion of taint or flavor of fish in either eggs or meat.

While we have used the dry scrap or meal, and have used waste fish freely, there are several sorts of moist fish flakes which we have not used and are not prepared to recommend for poultry feeding. Among the last named moist-pack fish flakes we have had one sample that was heavily salted and we do not consider such salt fish food desirable for poultry feeding, altho it might be freshened first and then used with comparative safety.

Such fish scraps and meals as we have used, generally run from 45 to 54 per cent protein, from 16 to 35 per cent bone, from 2 to 8 per cent fat. We think it is safe to say that the best commercial fish meat feeds (dry) will run better than 40 per cent available protein or flesh forming food. The mineral food in the contained fish bone will show a large

per cent of lime phosphate. The manufacturers guarantee that, when fed according to directions, no fishy flavor will be imparted to eggs or flesh of poultry.

Altho a considerable industry has developed along the Atlantic and Pacific coasts in the preparation of stock food and fertilizer from fish waste, this industry is still in its infancy and the greatest sources of supply have scarcely been touched. Along our Southern coast thousands of tons of waste fish are still dumped into the ocean to get rid of it, instead of utilizing this valuable supply for stock food and fertilizer. Here is a source of national wealth, and of inexpensive, tho valuable food and fertilizer, that is in need of much greater commercial development.

Uncle Sam has turned his attention to the importance of this comparatively new industry and publishes results of investigations in a press circular on "Stock Food from Fish Waste" and in Bulletin No. 378 on "Fish Meal: Its Use as a Stock and Poultry Food." His investigators say that: "The use of fish meal in this country at the present time for feeding purposes is so limited that it may be said that in commercial quantities it has scarcely begun to be marketed." Also, "Nearly 120,000 tons of valuable stock and poultry food, high in protein, can be produced annually from the wastes of the salmon and sardine packing industries, and of the menhaden fish-oil and fish-scrap factories along the coasts. This is exclusive of additional wastes from tuna packing companies and does not include a large additional tonnage of valuable stock food that could be made from dog fish, now the bane of the market fisherman. * * * According to conclusions reached by the investigators, a vast amount of fish waste, which now is being used wholly for fertilizer and fish-oil, can readily be made to yield a better quality of fish-oil and a vast tonnage of a highly concentrated feedstuff. They point out that there will be little loss of fertilizing resources, because most of the valuable fertilizing elements in fish, which are retained in fish meal, will be available in the manure of the animals fed on this form of concentrate."

Experiments conducted by the Bureau of Chemistry show: "That after pressing out an unusually high-grade oil, the fish residue could economically and easily be turned into fish meal, which cattle, pigs and poultry would eat readily and which, in addition, kept as well as meat scrap, meat meal, or other high protein concentrates. The only requirement was that the fish residue should be made into meal while still fresh."

In our own feeding of fish scraps and fish meals we have used only such as showed a very low per cent of oil or fat; using those made chiefly from fresh fish waste, like cod heads, or from waste fish of sorts that are practically free from oil. In addition to being produced by packing establishments, desirable fish scrap is made as a by-product in the preparation of fish glue and it has been stated that oily fish cannot be used for making good glue. From the fisheries of the Great Lakes it is possible to obtain, at a low price, eel pouts which supply a desirable fresh fish food that is free from oil. Fish food for poultry feeding can be obtained anywhere that there are extensive fishing interests and fresh fish for poultry feeding—for immediate use while fresh—is easily prepared by simply scalding or

boiling the fish and mixing same with the mash. It is good for poultry of all ages.

In feeding of fish scrap, a German authority suggests that the daily ration for fowls should not contain more than 10 per cent and for chickens not more than 5 per cent of entire ration.

When buying fish scrap, secure a freshly prepared product and be sure that it is dry and free from lumps. Fish scraps or meals which have been wet and heated during shipment or storage, are not fit for feeding and will be lumpy, the caked parts showing green color on breaking up the lumps.

Fish scrap, meal or flakes which have been heavily salted, or which contain above 3 per cent salt, should not be used for poultry feeding. Certain forms of fish scraps or meals are prepared from fish residue that has been treated with acid and such are good only for fertilizer. Acid treated scrap should never be used for poultry or stock feeding and the purchaser should require a guaranty from the manufacturer that acid or injurious chemicals have not been used in the preparation of the fish scrap or meal.

High Cost of Feeds.

AT THE present time it looks like another winter of high cost of grains and milled feedstuffs. The "high cost of living" appears to be with us to stay for a while.

To offset this, business circles continue to show prosperity which looks like the lasting kind. Poultrymen are getting rather better prices for market eggs and poultry than in previous years. The demand holds good. Cold storage supplies are reported as shorter than common for the season. Prices of new-laid eggs and fresh-killed poultry should show a firm upward trend, with no great falling off in demand. The demand for breeding stock is, we believe, improving considerably. A good many people are starting with poultry to help lower the "high cost of living" by producing their own table

eggs and poultry meat, and we believe they will find such poultry keeping satisfactory. A wholesome interest is being shown in the exhibits at fall shows and the big winter exhibitions should create and stimulate greater interest in pure-bred poultry. Taking everything into consideration, the coming season should prove the best one in a long time.

The wise poultry keeper will carry only as many birds thru the winter as he can care for properly and feed well for best results. In feeding well he will consider the high cost of feeds and lessen his feed expenses by carefully planning his ration, but he will not take chances by using low grade feeds. It does not pay to use inferior foodstuffs simply because the price per hundred pounds seems cheap. The quality feeds are cheapest in the long run.

It is possible, however, to cheapen the ration of stock birds in a legitimate manner without injury to the birds or fall-

TO OUR READERS.

Our subscribers are our friends and we use every effort to protect them in every way. We believe that every advertisement in this issue is signed by trustworthy people, and to prove our faith we will make good to our subscribers any loss sustained by virtue of their having purchased fowls or goods from one of our display advertisers.

All we ask is, that in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad is inserted, and in case of loss notify us of the fraudulent misrepresentation of the advertiser, giving us full particulars as soon as it occurs. In all cases in writing to advertisers say, "I saw your ad in American Poultry Journal."

ing off in yield. Good, bright, green cured cut clover is selling at a low price this fall and it will help to cut down the cost of the mash and at the same time supply good and desirable food. Waste vegetables are plenty at this season and can be stored to help cut down the feed bill, and they make excellent winter

food. Elaborate feed mixtures are not essential to good results and they are unduly expensive.

Since wheat has been so high we have fed very little of it and for grains are using chiefly cracked corn and whole oats. If good, well-filled, sound, sweet grain is used, a mixture of equal parts by weight of wheat, cracked corn and whole oats will make as good a scratch grain as any. On cold evenings a full feeding of whole or cracked corn will help to fill out the ration. A dry mash made of 50 pounds best cut clover, 100 pounds each of wheat bran, white middlings, cornmeal, ground oats and gluten, with 50 pounds each of fine ground beef scrap and fish scrap, will give you as good a mash as may be had. A daily feed of greens, or of chopped raw or cooked vegetables, will help condition of the birds, stimulate production and keep down food cost. Feed the birds well, but don't waste the food.

Keep nests clean to prevent losses thru dirty eggs. Clean up on egg sales at least twice a week. Do not carry over winter any birds which you do not need as producers, breeders, or for sales stock. Keep only productive birds and don't carry any "boarders" or "wasters" in your flocks. You can make this a good and successful poultry year if you put real effort into getting results and making sales.

Attention Anconas!

ANCONA breeders, we want your attention. The latest AMERICAN POULTRY JOURNAL article contest is for your benefit.

H. Cecil Sheppard, of Berea, Ohio, originator of Sheppard's famous Anconas, offers a \$50 cockerel as first prize for the best article on Anconas, especially setting forth the truth about this breed and why Anconas have become so popular. As a second prize, for the next best article on this subject, he will give a \$30 sitting of eggs.

Here is a splendid opportunity to get Sheppard's high grade stock thru a little effort to help boost the breed at the same time.

The contest is open to all readers of the JOURNAL. Articles should be about 1,000 words long and must be written on one side of the paper only. Announcement of the winners will be made in the December issue. We reserve the right to publish or reject any or all articles and no manuscript will be returned.

The contest will close on November 1st. All articles must be in our hands by that date or show a post-mark not later than October 30, 1916. The articles will be judged and prizes awarded by the editorial staff of AMERICAN POULTRY JOURNAL.

Send all articles to Dr. Prince T. Woods, Editor AMERICAN POULTRY JOURNAL, Lock Box 4, Silver Lake, Massachusetts. Do not delay, start your article now and see how good and how interesting and helpful you can make it.

RED SUSSEX

Excellent values in Cockerels and Pullets. Well bred and well grown.
F. L. PLATT SWANTON, OHIO

AMERICAN WHITE ORPINGTONS

WILL WIN FIRST PRIZE
FOR YOU ANYWHERE

We can furnish you a Cock, Hen, Cockerel, Pullet or Pen from the "best line of males in the country." Every individual American line-bred bird of eight years' standing. Pure white color, massive type and heavy laying ability are so intensely bred into these birds that they are acknowledged supreme by all. The most reliable reproducers of any strain. Ask any judge or breeder that knows, "Who has the best White Orpingtons?" "Woolery Farm, of course!" These birds are American line-bred and they win and lay. No breeder today can give you more in real value, nor will go further to give you the best satisfactory service.

We are the originators of the American bred White Orpington, and want all good breeders to know and appreciate their value. Get our winnings at the National Club shows, Chicago Coliseum, Madison Square, Hagerstown, Cincinnati, Indianapolis, and remember we bred every one of these winners, his sires and grand-sires. If you breed strictly Woolery Farm's American-bred strain you breed the best, and if you can advertise them you will find a ready market for all your surplus stock and eggs. Write us your requirements today; we can fill them promptly. New Catalog-Mating List ready January 1st. Register your name for one now.

WOOLERY FARM, Ralph Woolery, Prop., Box A, Bloomington, Ind.

Fashion Plate Buffs

Buy this Strain to make sure your wins and profit by this trap-nested, line-bred blood to improve your flock. Cockerels and pullets in good finish and the best line of cocks and hens ever offered. Send for the *Fashion Plate Book* and read the record of our Buff Orpingtons—free.

Your Dictionary.

AN AMERICAN humorist, on being presented, by the publishers, with a new edition of their dictionary, wrote: "It is a fine big book, very interesting, and I have read it thru and looked at all the pictures, but it does not seem to be very connected."

How often do you, Mr. Reader, consult a modern down-to-date, standard, unabridged dictionary of the English language? Have you one such book in your home? In your business office? Occupying a prominent and easily accessible place? If not, why not?

Happening to be in a supposedly modern business office recently we desired to consult the dictionary. It was only found after a diligent search. When found it proved to be an edition that was out of date 20 years ago. Our good opinion of the management of that office suffered a considerable depreciation.

In our home and in our office a modern dictionary occupies a prominent place. It proves a most useful and frequently consulted book. Besides using the dictionary for the purpose of determining the spelling, pronunciation, and meanings of words; our children, our employees and ourselves find the dictionary to be a great storehouse of general and technical knowledge. For history, biography, geography, colors, construction of mechanical appliances, statistics, various lists of equivalents, lists of animals, fruits, flowers, foods, flags, etc., etc., in fact as a complete and concise handy reference library the modern large dictionary is the first book consulted. If child or adult wants to know the spelling, pronunciation, use, or meaning of a word, the advice is "look it up in the dictionary and then you will not forget it."

Do you own and use a modern up-to-date dictionary? Or is your dictionary incomplete and years behind the times? The book should occupy a convenient place in your home and in your office. It should be one of the most frequently consulted volumes you possess. Its use should be encouraged. Although, as the humorist said, the various subjects may not be "very connected"; you will find that if you own and use a good modern dictionary that its daily use is intimately connected with everything in your every day life and that it will prove of great usefulness and educational value.

Own a modern large dictionary. Use your dictionary for the purpose of easy access to a vast wealth of useful and necessary information.

Get Together.

IN the September number of *Everybody's* "Big" Theo. Hewes makes the following remarks concerning some of the business of the Cleveland Convention:

"We have heard so much about the two famous hucksters from Iowa that everybody was particularly interested in giving them the onceover. Many of the fanciers knew Mr. Carl Dare, but they had never met Mr. Jones; and when he was pointed out to different members, the same remark was heard from all sides: 'Now, is that the fellow?' When he presented his case before the Executive Committee, after being dragged away from his business and worried for the past six months, I give it as my honest opinion that no man, at any time or place, ever came before the Executive Committee of that body who made a better impression on that committee; nor a man who had his case in better shape to present—testimonials and affidavits that the man who made the charges against him couldn't get on a bet; but there he was, to be charged with something that the man who made the charges had been doing all his life. Did they expel him from the American Poultry Association? Well, I guess not!"

Mr. Hewes knows more of the inner workings of the American Poultry Association Executive Board than the writer of this editorial and possesses more first hand information on this particular case than we do, and, we believe that the public at large is entitled to this personal expression of his "honest opinion." We heard a good many members of the American Poultry Association express the same opinion, tho in different words.

It is a great pity that some of the most active members in the American Poultry Association have seen fit to so often waste the Association's time by "preferring charges" against fellow members that are not sustained by the evidence and that frequently may be the result of misunderstandings and jealousies. There has been altogether too much of "preferring charges," too much "going on record," and too much ill-conceived publicity, in matters where the actual wrong doing turned out, on cold analysis, to be simply a rather bitter difference in opinion. Such quibbles, played up to the public in sensational press reports, do injury to everybody in the business and cannot possibly do good. For a long time, in certain poultry circles, there has been manifested altogether too much jealousy, too much greed for personal gain and glory, too much desire to compel obedience, and not enough of the real "get together" spirit of wholesome co-operation for the good of all and of the whole poultry industry.

We are glad that the Cleveland Convention developed such a strong spirit

of harmony, unity and progress and that the desire to "get together" was so real and so well promoted. Harmony and co-operation were the watchwords and everyone seemed disposed to give suspicion and jealousy a decent burial.

This poultry business is your business and ours. We cannot accomplish anything worth while by fighting one another and such action can result in much harm. We can do a great deal of good for the industry, and for ourselves as individuals, by harmonious co-operation. If we do efficient team work, "One for All and All for One," we can accomplish much good, and by helping brother poultry breeders and fanciers will so help the whole poultry industry, and benefit ourselves as a matter of course.

★Red Star Brand★

Makes Hens Lay

Procure a supply at once and so insure having lots of high-priced eggs this winter.

Better and cheaper than other forms of animal food for poultry feeding. Averages above 50% protein—35% very soluble bone—2% fat.

Made From Fresh Fish Free From Oil

We use nothing but *fresh cod and haddock* in making this scrap. Consequently it is uniform—clean—sweet—appetizing. Unlike much commercial "beef scrap" which contains dead animals and other waste and is often dangerous and injurious.

Red Star Brand Fish Scrap has been used in the ration at all North American Laying Competitions where world's highest official laying records have been made.

Write the manufacturers today for samples and poultry book—FREE.

C. H. LEITNER R. F. D. 4, Box 8 ELGIN, ILL.

"REGAL QUEEN", FIRST BOSTON HEN, 1913

Let's all work to make an end to personal squabbles, to spiteful preferring of charges and to hateful jealousies. There is law in the land to punish wrong doing and, if we know of such, let's put the matter in the hands of the proper government authorities. Too much police work—particularly the ill-advised kind—is not good for a helpful, fraternal organization.

Cultivate the real fraternal spirit, boost effective co-operation in the whole field of poultry husbandry. A little love, faith, and trust in the honesty of human kind will do real good, where suspicion, jealousy, and harsh treatment may drive even a good man to wrong doing.

Get together! Do some real fraternal team work for the good of all. Forget your troubles, most of 'em never happen anyway.

Use a Typewriter.

USE a typewriter, Mr. Poultryman, you need one in your business. Do not say that you cannot afford one or that you cannot learn to use a machine. You can. You cannot afford to be without one. Any man, woman or child who can read and write, can quickly and easily learn to use a typewriter.

Prices on modern typewriters accommodate themselves to any purse. You can buy first-class new machines at prices that range from \$45 up to \$125. Second-hand machines, in good mechanical and workable condition, may be had from \$15 upward. Many machines can be purchased on the installment plan with a small first payment. If you write letters, you need a typewriter.

A typewritten letter is easily read and it commands immediate attention. Many publishers give preference to typewritten manuscripts and some require that all articles be typewritten. The pen-scribbled letter, or manuscript, is often very difficult to read, it leads to mistakes, and it suggests that you are drifting along far behind the times.

Be progressive and up-to-date. Nowadays it is more than ever necessary that every man and woman present a good appearance and be well dressed in order to make a success in life. Typewritten letters give your correspondence a well-dressed appearance, indicate that you are progressive and alive to modern methods of doing business. They secure for you

an immediate hearing, eliminate mistakes and misunderstandings, and saves the time of the person you address.

Once you begin to use a typewriter, you will not be bothered with scratching out illegible, pen-written scrawls. It is easy to learn to use a machine and even children in the lower primary grades learn quickly. If we were superintending a public school system, we should insist on introducing modern typewriters into the primary grades where children are learning to read, spell and write. We believe that the time will soon be here when no primary grade school will be complete without typewriting equipment and that the use of machines will be combined with hand writing thruout the school life of the children.

Get a typewriter. Use a typewriter. You owe it to yourself and to the success of your business.

Our Cover.

BLACK Orpingtons, when they are bred right and have the type and that beautiful green sheen which the Standard calls for, are a most handsome variety of fowls. The Foxhurst Farms of Lime Rock, Conn., have made a specialty of this variety for years and so well are their birds bred, that year after year they win highest honors at Madison Square Garden, New York. We take great pleasure in showing on the cover of our Magazine this month an unretouched picture of the 1st prize cockerel exhibited at the last show. The excellent type and beautiful sheen is very much in evidence in the picture. We handled this bird and looked him over very carefully and would say that he was a deserving winner in the large class exhibited. It further proves that when one variety of fowls is bred right and mated skilfully along scientific lines then the characteristics of the breed and strain become fixed to a certain extent and a larger percentage of the offspring will resemble the original ancestors more closely than if they were bred otherwise. Foxhurst Farm birds have a type that approaches very closely the Standard, and carry the plumage characteristics that give them an individuality that catches the judge's eye and generally makes him select Foxhurst birds for the pacemakers.—L. A. S.

BEAUTIFUL and USEFUL are REGAL WHITE WYANDOTTES

In the show room no strain has created more attention. At the great New York State Fair last fall my birds carried off the Manning Silver Trophy for the best ten birds in the show (9,300 exhibited). At the Hagerstown Show I was awarded the Hamilton Trophy for best bird in the show (6,000 on exhibition). Thus at these two great shows the only trophies open to all breeders were awarded to Regal White Wyandottes.

While I am proud of my winnings, I am prouder still of the grand utility qualities of my birds. They are wonderfully vigorous and my big January and February cockerels and pullets are a picture of sturdy health and beauty. Canadian winters are cold and it takes robust stock to produce good fertility and strong chicks in the winter months. By breeding from my best winter layers year after year, I have succeeded in getting a strain of birds that will give splendid results even under the most adverse conditions.

Think this over. White Wyandottes are very popular and very profitable, but if you wish to get the best possible results, does it not seem reasonable that it will pay you to start with the best strain of the breed? This fall I have the best lot of birds I ever offered.

5000 — Cocks, Hens, Cockerels and Pullets for Sale — 5000

SPECIAL—To make room for young stock I am offering during October 50 special value pens at \$25, \$35 and \$50; also 100 early hatched cockerels at \$10 each. In writing, state whether you want birds of exhibition or Dorcas breeding.

FREE—Send for catalog and sale list, giving description of several hundred breeders I am offering for sale. Send one dime for the Regal White Wyandotte Book, telling all about White Wyandottes.

JOHN S. MARTIN Box 51 PORT DOVER, CAN.

DR. WOODS' NOTES AND COMMENT

A little sun, a little rain,
A soft wind blowing from the west,
And woods and fields are sweet again,
And warmth within the mountain's breast.
A little love, a little trust,
A soft impulse, a sudden dream,
And life as dry as desert dust
Is fresher than a mountain stream.
—Stopford Brooke.

* * *

October! Busy month! Time to be making all things snug in winter quarters. We will get some fine warm weather yet, but make the most of it.

* * *

According to no less than a dozen poultry journals for September, at hand at this writing, the Cleveland Convention of the American Poultry Association was the most harmonious, most satisfactory, and most progressive that has been held in many years.

* * *

Arthur A. Peters, of Denver, Colorado, appears to be the favorite candidate for next president of the American Poultry Association. He has proved himself an honest, fair, able and dignified executive officer and he has fairly earned promotion to the presidency thru competent and creditable work and thru being the hardest worked presiding officer of the association for the past four conventions. Boost and work for Peters for the presidency.

* * *

Frank E. Hering, chairman of the American Poultry Association Committee on Government Co-operation, has started the work of this important committee with his usual promptness and characteristic activity. In a personal letter he says: "I believe that we should all emphasize the indisputable fact that the Federal Government is the greatest agency to promote poultry culture, and that it is to the interest of every man interested in poultry to see that the Federal Government and then his State Government does everything possible to advance poultry interests."

The U. S. Government already has a good start in effective and worth while poultry organization and it is unusually well equipped to do progressive work. The new American Poultry Association Committee on Co-operation is well chosen and the chairman is alive to the desirability and necessity of efficient co-operation on behalf of all poultry interests. We are pleased to quote the following excellent statement of purpose made by Chairman Hering in a letter dated September 1, 1916, addressed to Harry M. Lamson, Senior Animal Husbandman in Poultry Investigations of the U. S. Department of Agriculture: "I have before me a letter from our mutual friend, Dr. Woods, and I am writing him, enclosing a copy of this letter so that he may know that as chairman of this committee, I intend to do what I can as early as I can, and as completely as I can, to carry out the resolutions adopted at Cleveland."

We believe that it is the duty of every person interested in poultry culture to endeavor to co-operate with the National, State and Provincial Departments of Agriculture in all work for the promotion of pure-bred poultry interests, that all who undertake such co-operation will be benefited, and that much good can so be accomplished for better conditions in every branch of the poultry business. Lend a hand!

Never had so many good ones to sell as now
H. W. Halbach

Get the Best

WHETHER you want a show bird that can win, or breeders that can be depended upon to improve the quality of your flock, a prepotent sire or a prolific female, it will pay you to make your purchase where quality has been the watchword from the beginning—from the strain that has produced the most sensational winners in the big shows for years, from the breeder who can and will give you the best values. In

White Plym. Rocks
You Can't Beat Halbach's

The unparalleled win of my birds at the great Coliseum, Chicago Show, December 13-18, 1915, was the final link to the chain of victories that has given them the undisputed championship.

1-2-3-5 Hen

2-3-4 Cockerel

1-3 Young Pen

1-2 Old Pen

ALL CHAMPIONSHIPS

In the opinion of experts from every section of the country there never has been shown to date a string of White Rocks that so nearly approached the highest ideals of the breed. And every individual was bred on my farm—is the product of years of careful breeding—represents bred-in quality; not accidental quality. It is in the blood. You who buy of me may possess it—and it will be reproduced. I have hundreds of birds of superlative merit, closely related or directly descended from my great champions. Any one of them will breed the quality you seek. Every one of them is vigorous, active, prepotent. Everyone of them is worth many times the price I ask for them as individuals for their breeding value alone. My thousands of satisfied patrons the world over are proof that my birds make good—invariably—in show room or breeding yard. And when I say to you that never in all my years of experience have I had so many good ones to sell as now, it means that Halbach's guarantee of satisfaction signifies more to you this year than ever before.

Write Me for Show Birds or Breeders, I'll Please You

Without exception my personal attention is given to every order. Whether you buy the lowest priced bird on my place or an outstanding exhibition specimen, it is my honest endeavor to fill your order just as I should wish to have one of mine filled by you. And every time, if what I send is not satisfactory in full measure, my customer may return it and get his money back. Write me today for what you desire to obtain. Make up your mind to own White Rocks from the real Champion Strain and you can win. Large catalog, 20 cents.

H. W. HALBACH

R. 1, Dept. H

Waterford, Wisconsin

Altho we have been in close correspondence with him more than a year, we had not met and gripped hands with Robert G. Bailey, of Lewiston, Idaho, until the Cleveland Convention. Bailey is a Virginian, transplanted to an Idaho ranch, and he stacks up every inch a man and true blue. We enjoyed an interesting visit with him on the moonlight lake trip and are frank to say that he improves with better acquaintance. From his good and efficient work on the floor of the convention we believe that he is a man that the American Poultry Association will do well to cultivate and to elect to office when opportunity offers. The organization needs all such honest and fearless men, who can and will "speak out in meetin'."

* * *

Have you stored away the small potatoes, cull apples and waste vegetables to be used as winter vegetable food for your flocks? If not, it is time to get busy. Grain will, in all probability, rule high in price, plenty of vegetable food is not only good for the birds, but it helps to cut down the grain bill.

* * *

This month is "last call" for fixing leaky roofs and repairing poultry quarters to put same into good condition to resist the storms of the coming winter. Get busy!

* * *

Remember that when birds are first housed and yarded in the fall, after running on range, that a liberal supply of fresh succulent greens daily is doubly important. Feed plenty of greens and vegetables. Do not feed frosted or frozen vegetable food.

On cool frosty evenings a full feed of corn, whole or cracked, just a short while before roosting time will be relished by the fowls and will help toward better results. Send the birds to bed with full crops. A small percentage of old process linseed meal—not over ten per cent—in the mash and about five per cent sunflower seed added to the scratch grain will help the moulting birds to finish feathering quickly and in better condition. Feed sufficient meat food, plenty of greens and keep the birds well fed. Cabbage is a fine fall food until there is danger of the cabbage freezing before eaten.

* * *

Eastern growers report a fine clover crop and good, green, well-cured cut clover is being offered at attractive prices for poultry feeding. Good cut-clover is a fine winter food for addition to mashes either dry or moist.

* * *

Do not have litter too deep in the scratching pens. Deep litter is wasteful, gets badly fouled before it is changed, attracts dampness and is liable to become mouldy and thus a menace to health. Better use light, dry, shallow litter, just enough to keep the birds scratching, and change it as often as necessary. Clean, bright, dry litter that is quickly broken up is much to be preferred to deep, soggy, damp litter that quickly becomes foul, musty and mouldy.

* * *

Clean nests, clean eggs. Foul nests, dirty eggs. Keep the nests clean. Use only sweet clean nesting material and renew it often.

Theo. Hewes says: "In the many conventions I have attended (more than twenty all told) there was undoubtedly a better general feeling (at Cleveland) among the members and a disposition on the part of every individual, whether on the Executive Board or representing only his own individual vote, of getting together and of doing something for the poultry business, of believing in his own honesty and having absolute faith in the other man. The key note speech of Mr. Hering brought out this point stronger than all else: that as men and women we are honest, and we believe in the honesty of others. The character-destroying, one-sided evidence which has been filling the press for the past sixteen months was greatly deplored, and the breeders of the United States and Canada are a unit in their opinion that it is time for this nonsense to stop."

* * *

There are several candidates in the field for the office of secretary of the American Poultry Association. However, the present secretary, S. T. Campbell, stands for re-election on his record as an efficient officer and one of the best organizers that the American Poultry Association has had. We believe that he has sufficient strength with the members to be returned to office by a handsome majority.

* * *

See that all buildings are well cleaned and disinfected and get the young stock properly housed while warm days and good weather last. Provide roosts for young and old stock and see that the birds use them. Do not permit sleeping on the floor on cold frosty nights.

Aldrich White Orpingtons ARE NATIONAL CHAMPIONS

First Cock, Chicago Coliseum, 1915

rooms but lay as large a number of eggs during the year as any variety bred for egg production only. Why not take this fact into consideration and purchase your foundation stock from the strain that is **bred to lay as well as to win** when you can obtain it at prices no greater than those asked by any reliable breeder who sells stock bred only for egg production and not good enough for show.

If you want the most beautiful, hardiest and quickest growing variety of fowl, try the **White Orpingtons** and send for our beautiful catalog and let us quote you prices. It is free if you mention American Poultry Journal.

High Egg Production and Show Qualities Combined

We have perfected our strain until customers may now expect birds that will not only **win in the show**

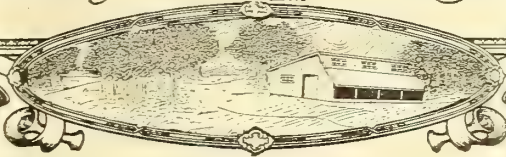

First Cockerel, Coliseum, 1915

ALDRICH POULTRY FARM
5080 N. High Street Columbus, Ohio

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

OCTOBER is a glorious month out in the open. There is much to do in the garden and with the fruit producing bushes. This getting ready for winter is rare sport for those who love horticultural work.

The currant and gooseberry cuttings should be planted this month where the planting was not done in September as it should have been. Follow the directions given in the September AMERICAN POULTRY JOURNAL and you will have full measure of success.

This is the ideal time to plant the peony and many other hardy flower plants, as well as shrubs. The peony roots should be planted so that the upper eyes are about two to three inches

beneath the surface of the soil, with the plants about three and one-half feet apart. The newly set plants should have a little straw or litter placed on them when the weather is fairly set in for winter, *but not before*.

Fall is the ideal time for the planting of hardy fruits in all sections where the winter is not too severe. Here in the mid-west it is not well to plant fruit trees at this time of year, but currant and gooseberries are best planted in October and November. I have planted yearly grapevines in a small way, with entire success, but would not advise the planting of a commercial vineyard in the fall.

The fruit tree trunks are being

brushed and cleaned now and as soon as the trees are dormant they will be given the regular fall spraying, with scalecide. We get the destructive insects by so doing and what few escape are caught by the spring dormant spraying.

* * *

I take great pleasure in presenting to the readers of the AMERICAN POULTRY JOURNAL the likeness of the man who has done more to promote the interest of fruit raising in the Northwest than any other man—Charles G. Patten, of Charles City, Iowa. Mr. Patten was a farm boy in Northern New York, reared in the general mixed husbandry of that region. At an early age he went to Wisconsin. He was impressed with the need of apples for that section and began to raise seedlings. In 1864, he removed to Charles City, Iowa, out on the broad, unplanted and but thinly settled prairie, with no trees or shrubs within miles, except the meagre growth along the few streams. Mr. Patten maintained from the first that the wide prairie region with its exceedingly cold winters could never secure the best hardy apples and other fruits except by the planting of seeds of the hardy Russian sorts or seeds of any other hardy kinds. In 1861 he began to advocate publicly the breeding of hardy fruits along this line. It was uphill business for this enthusiast, but he kept on with his work. His foresight has been vindicated, for it is now accepted that in regions demanding unusual qual-

McKean, Jr.

ities in fruit trees or other plants, strains or races must be developed natively in the region itself.

The winter of 1872-73 virtually annihilated the nursery stock and all fruit trees in the prairie section of Iowa and Minnesota. As Prof. H. L. Baily said: "Mr. Patten then saw clearly the vision of a new horticulture for the cold prairie country and knew he had a work to perform."

He began a systematic crossing of apple and incidentally pear, plum and

CHAS. G. PATTEN.

Plant breeder and originator of apples which have solved the problem of apple production for the Prairie State and the extreme Northwest.

other fruits. For years he has carried on this work, developing several apples which are now accepted and proved to be of great worth to this section. In 1869, Mr. Patten secured seed of the Duchess of Oldenburg from Wisconsin. One of the resulting seedlings is what is now known as Patten's Greening, a greenish, yellow apple, keeping in Iowa and Minnesota until March. It is now a recognized standard for the prairie country, and has made apple growing possible far to the north. There is also the Iowa Brilliant, a beautiful apple of high quality and hardy in tree. It is a seedling of Fameuse. Also the Eastman, hardy and of high quality, and the seedling of Fameuse. Silas Wilson, and cross of Ben Davis and Jonathan is extremely hardy, as is also Iowa Beauty, a seedling of Golden Russet. Summer Pear is the best apple of its season here. It is a seedling of the Duchess.

At the present time Mr. Patten has more than 20,000 seedlings growing on his place near Charles City. Most people would have named and introduced many of these novelties years ago, but Mr. Patten has been very cautious and has never introduced a fruit until it had been thoroughly tested and proved to be of exceptional merit.

Mr. Patten is now in his eighty-second year. He has given to the world something of great and lasting value. His son, E. C. Patten, is thoroughly interested in the great work carried on by the grand old man, and will see to it that nothing of worth thus created is lost.

High Record Bred LEGHORN COCKERELS

Pure Bred American Stock THE LORD FARMS' STRAIN

(The Genuine Goods)

For years we have been gradually adjusting our farm and methods to the production of a heavier laying strain of S. C. W. Leghorns. We have tried out all systems and the only one that is dependable is to trap-nest every bird 365 days in the year. This we have now accomplished at great expense, and are now able to offer our fall crop of cockerels, all bred from high producing hens that were mated to cocks and cockerels bred from extra high producing females. These birds will cost you

**\$5.00 to
\$15.00 each**

Don't expect to get genuine high record bred birds at any lower prices. No breeder can offer the real goods at less prices and get by.

We have never made a business of selling our highest record females,—money cannot buy them, and for several years to come we shall not have hens for sale with records of 200 eggs or better. That's the reason that today we can offer genuine high record bred males, and next spring we shall be able to furnish you with eggs from 200 egg stock or better from hens that have honestly made the records we claim for them.

Besides striving for larger egg production, our strain has been steadily improved in size, good color of plumage, and shape, and special effort has been made during the past six years to improve the size and color of the eggs.

We are one of the largest producers of W. Leghorns in the U. S. and have enthusiastic customers in every state in the Union.

Get in line now to really improve the utility qualities of your stock.

Here is a gem from the pen of Henry Collingwood of the *Rural New Yorker*:
Give me the power to put running hot and cold water with proper fixtures in every farmhouse, roses in the dooryard and vines and flowers on every house, and I will quickly settle the big trouble and problems, because these things will lead to that broader charity and true understanding which we must all have before we can "get together" to right our wrongs.

* * *

For two years my garden has been destroyed by some insect eating the plants off at the ground. They are especially destructive to my tomatoes and beans, killing nearly the entire crop. I find little striped spiders in the ground, and the ants, all kinds, are dreadful this year, so it must be either of these doing the damage. I have searched magazines and horticultural books for information, but have failed to find any. We are new subscribers to the American Poultry Journal and all well pleased.

Texas.

Mrs. W. K. Danley.

I do not know the name of the insect that is playing havoc in the garden of Mrs. Danley. In all my years of gardening, I have never had such an experience. The fact that ants are present at the base of the plants is conclusive evidence that the work is being done by an insect which the ants are feeding upon. Ants carry aphids into trees and then milk the aphids. I think that is what they are doing in this case. But the question before Mrs. Danley is, what will prevent the damage? I cannot tell. Last spring I set out four rows of strawberry plants on ground which had been heavily manured with stable litter for years. I knew I would have trouble with the white grub. So I tried an experiment. I made a mixture of sulfocide and water—two gallons of water and one pint of sulfocide. I poured this along three rows of the plants, close up to the plants. I did this three times during the season about two weeks apart. Not a plant was injured in these three rows, while in the untreated row nearly all the plants were destroyed by the grub. I do not know that my correspondent can rid her garden of the troublesome pest by this same process, but I advise her to try it.

* * *

Ralph Peters, Homestead, Florida, asks for the post office address of Dr. G. C. Miller, of Iowa. I have misplaced Dr. Miller's address. Will he please communicate with Mr. Peters?

* * *

J. H. Yearsley, Idaho, writes:

Sprayed the lawn with sulphate of iron, two pounds to the gallon of water, to kill dandelions and not injure the grass. I have cleaned my lawn out twice, but the wind and irrigation water re-seeds the dandelions and it is necessary to spray about three times a year. Spray when there is no rain.

* * *

Unless all past experience means nothing, the apple crop in the mid-west in 1917 will be light. This season, following the wet summer of 1915, the trees bloomed full and the crop would have been big had it not been for the exceedingly dry weather. Inasmuch as the trees did not this season get sufficient moisture in July and August when the buds for 1917 apples were forming, the trees will carry but few fruit buds into winter quarters.

* * *

Being a reader of American Poultry Journal, especially the horticultural department for poultry keepers, would like to ask a favor in regard to spraying. I am inexperienced and starting this spring to go in fruit and poultry raising. I set out 100 peach and 100 cherry trees and they are showing up fine and strong. Would like to know if I should spray for prevention of scale, what to use and when to spray and how often.

Illinois.

Mr. Krigshauser's letter supplies a text for a sermon and one which I feel like giving my readers. I believe firmly that the dormant fall and spring spraying of fruit is of vital importance and that the failure of fruit growers to so spray is responsible for a very large share of the loss of fruit and damage to trees. Of the two dormant sprays, I have proven that the fall application is the more important. Not only the scale, but the Aphis is in condition in the fall to be successfully attacked. For years I used lime sulphur and had but little success. A few years ago I began using Scalecide and have accomplished more in one year with this remedy than I did in all the years when using lime sulphur. Scalecide being of an oily nature will crawl down into the rough places in the bark of old apple and pear trees, killing the scab fungi, which hibernates on the latter and the spores of canker, etc., on the former, even going beneath the dead bark, where lime sulphur cannot possibly reach. It cleans the tree of all scale and Aphis. Then we give the trees another dose in the spring, when dormant, and we get the few insects we missed in the fall. By all means do not neglect these two most important sprays.

* * *

I am a subscriber to the American Poultry Journal and am an interested reader of your department. I noticed in the August issue that you use Black Leaf 40 for Aphis. Will you please tell me just what it is and where to get it or how to make it? My apple trees which I planted last fall are suffering from Aphis, as are some young chestnut trees. Have used whale oil soap, but when I get it strong enough to kill the Aphis, it turns the leaves yellow and dries them up.

Is poultry manure good for young trees? I dug about one-third of a bucket of fresh manure around each young tree this spring. Would more have hurt them and would you advise using litter cleaned from the floor instead of clear manure. Would it not be a good idea to mulch them this fall with litter and dig it in next spring? I have about forty trees: apple, peach, pear, plum, cherry and nut trees.

S. H. Boynton.

Black Leaf 40 is a nicotine preparation and can be bought of any seedman or dealer in fruit growers' supplies. It is an effectual remedy for ridding trees and vines of Aphis when trees and vines are in leaf. The spray is made up of 1 pint Black Leaf 40 and 100 gallons of water. If a pound of soap, any laundry soap, is boiled in water and added to the mixture it will adhere to the foliage better.

Yes, poultry manure is good for young fruit trees, if properly applied. The amount Mr. Boynton placed around each tree was surely plenty. I would not want to use more per tree. I would advise you to mulch the trees with straw or very coarse stable manure this fall. If you use the straw from the hen house floor you are very liable to get a much hen manure with it. Such mulching of young trees is extremely dangerous. Scatter a little of the hen manure around each tree next spring and spade all in well.

* * *

This year the grapes stood still during the extreme hot weather. As a result a large portion of the very late varieties failed to fully ripen.

* * *

Along one side of the field given over to my poultry is a patch of elderberry bushes about 300x50 feet. These bushes are now loaded with ripe berries which fall to the ground and are eaten by the fowls and young stock. The field is fairly alive with birds who are very fond of the berries.

An important fact about

Sefton Boxes

is the big savings they have made for shippers of all kinds of goods, in preventing damage and loss.

If you ship poultry, eggs, produce of any kind by express or parcel post, use Sefton Boxes; they're the best you can get and that means the most economical.

OHIO MARBLE COMPANY
10 S. Cleveland St., Lima, Ohio

A pair of red squirrels had a nest in an oak tree just over the line of our property. The other day I noticed the mother squirrel coming down the tree with a baby squirrel in her mouth. She was holding the little one by the back of its neck. She came on a five foot woven wire fence, across a five-acre field, and into a very large tree standing but a few feet from our back door. Having deposited her baby in a new nest far up in this tree, she returned to the old nest, and was soon back again with another youngster. She thus carried four little squirrels to the new nest. I was curious to learn, if possible, why she was thus changing her abiding place. I found the old nest was nearly destroyed, but in what manner or by what agency I do not know. The little fellows are now out of the nest and playing in the tree. The mother is much worried because of the presence of our angora cats, and spends much time scolding them.

I would like to see the 1917 meeting of the American Poultry Association held at Asheville, N. C. But it won't go there. The American Poultry Association, unlike all other live stock associations, considers it a duty to go any old place with its annual meeting where there is a probability of getting the largest number of new members.

Just now the fruit journals are giving much space to the discussion of soil moisture and annual bearing of apple trees. It is an important matter, and one well worth the attention and thoughtful consideration of all apple growers. An Eastern orchardist wrote to the *Rural New Yorker* that his Baldwins had a big crop in 1915 and was carrying a large crop this year. He was surprised because his Baldwin trees heretofore had yielded fruit only every other year. He asked if the cause of this year's crop could be the heavy rains of last season. To this Prof. J. F. Littooy, of Idaho, replied as follows:

On page 916 I was interested in what is said about the biennial bearing habits of Baldwins and your surprise at its bearing this year again, or two years in succession. Prof. James E. Rice thought that it was due to the ample moisture conditions of the previous summer. You ask if in the irrigated sections of the West the same results are obtained. Also you are inclined to the opinion that a wet season is likely to drive the trees into a wood growth.

Having had experience in both the irrigated and non-irrigated sections of the West and watching the habits of orchards under both conditions I would unhesitatingly say that the opinion of Prof. Rice is the correct one. Most of the commercial varieties in this irrigated section (Southern Idaho) bear annually. Considering the same variety some orchards bear annually and some do not, and when the conditions as to such fluctuations are investigated it is found that if the proper moisture conditions were lacking the previous season that fruit buds are also lacking.

In this arid section the available plant food has not been leached out by rains, as is the case in the humid sections; then with the heat and dry atmospheric conditions of the arid sections the tendency of plant life is greater fecundity. The heavy bearing of the fruit trees is abnormal, and the extreme thinning of fruit from the trees is essential to the best quality of fruit and vitality of the tree. A great vegetative growth and heavy bearing of fruit are not co-ordinate, as the conditions which encourage each are the extreme of each other. Hence when the tree is heavily laden with fruit its vitality is taxed and extreme vegetative growth will not follow as a result of ample irrigation. The prune tree, as an example, when mature, will make, practically, no growth the year it is in heavy bearing and regardless of the amount of moisture applied, and this is a tree that bears annually here.

The White Winter Pearmain growing here has the tendency to biennial bearing, unless the moisture conditions are watched very cautiously, and when it does bear it overdoes

itself and if at this time the soil does not receive ample moisture to develop the fruit crop properly the bud development also suffers.

Another thought. Your trees could not make an excessive wood growth in a sod-bound soil the same year it bears a full crop, and hence the ample rains favored fruit bud development and better fruit at the same time.

Note carefully the last sentence in Prof. Littooy's letter. It is the meat in the cocoanut.

* * *

In this section farmers are rushing the old hens to market. The price of all grains will be exceedingly high here this winter and the farmers are unloading more poultry than usual. Town people who have kept a few hens for years are giving up their poultry. Egg prices are bound to rule high.

* * *

In answer to S. T. Worth: I do not believe that King David apple trees are hardy enough to withstand the winters in Howard County, Iowa. If you will top-work the Duchess, on Hibernal or Tolman's Sweet, to King David, you can grow this fine apple on your grounds.

My experience with the Perfection Currant is that it will not endure our extremely hot summer and that it does not bear heavy enough to warrant its planting in a commercial way. I advise you to plant Red Cross and Diploma. They are entirely suited to your climate and will give you an abundance of extra large berries.

Care and Growth of Rose Comb White Leghorns

(Continued from Page 1123)

pan. They were provided, at all times, with fine grit and fresh water and after the first few days had constant access to a dry mash made as follows:

- 2 lbs. cornmeal,
- 2 lbs. bran,
- 2 lbs. shorts,
- 2 lbs. good clean sweet beef scrap,
- ½ lb. charcoal.

When one week old they were fed five times daily in addition to the above dry mash and when three weeks old were fed three times a day the following mixture:

- 2 lbs. corn chop,
- 2 lbs. cracked wheat,
- 2 lbs. cracked kafir.

This was fed in the litter. When the chicks were four weeks old they averaged six ounces each and were placed in a large coop with plenty of range. At eight weeks old, the cockerels weighed one and one-half pounds and the pullets one and one-fourth pounds. At three months, they weighed two and one-fourth to two and one-half pounds and from that time on they were given absolutely free range and were such good rustlers they did not require much grain, only at night feeding time.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

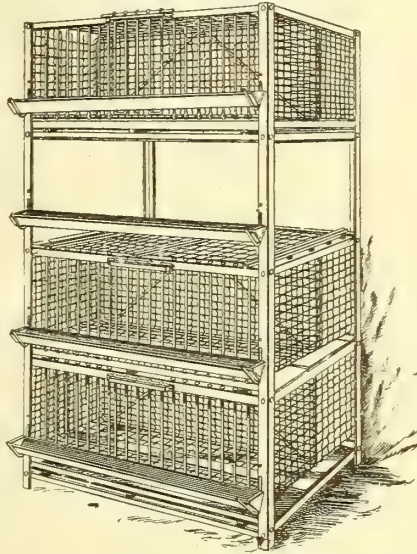

A POULTRY Water-Fountain arranged so the fowls cannot step in it or scatter litter in it has been devised by Edwin A. Collis, Viola, Delaware. The fountain is shaped like an inverted top suspended from a frame which is en-

Poultry Water Fountain, patented by Edwin A. Collis, Viola, Del. Patent No. 1,195,443.

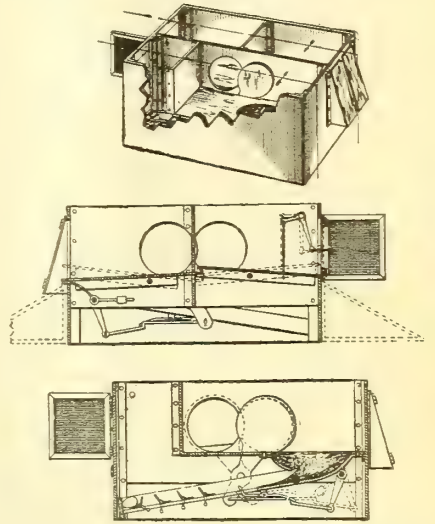

circled by a ring on which the poultry may roost to drink. The conical shape of the container prevents the poultry from roosting on the fountain itself. The fountain can be readily inverted to fill it, as it is pivotally suspended. Patent No. 1,195,443.

A Chicken-Feeding Coop invented by George Collis and patented to the Collis Company, of Clinton, Iowa, is of the sectional variety and designed especially for housing "milk-fed" chickens. A number of cage structures are provided, all alike, and each having an individual trough, roosting board, cross-pieces and bracing members. The device is made almost entirely of metal. The different cages are spaced apart, and the cages being of woven wire, permit free passage of air. Patent No. 1,192,867.

Chicken Feeding Coop, invented by George Collis and patented to the Collis Company, of Clinton, Iowa. Patent No. 1,192,867.

A Trap Nest that both traps the hen and traps the egg when laid, has been invented by Benjamin F. Sigler, Locke, New York. When the egg is laid it rolls down an incline opening out of the bottom of the nest, and trips a latch as

Trap Nest, patented by Benjamin F. Sigler, Locke, New York. Patent No. 1,194,432.

it rolls down. The latch being released allows a weighted lever to drop, and as the weighted lever is operatively connected with a pivoted gate theretofore closing the exit opening, the gate is tilted over so as to close the entrance opening instead and force the hen to leave by another route from that by which she

This Equipment Will Increase Your Profits

Right now, when you are putting your layers in winter quarters, you should equip your plant with these time-saving, money-making appliances. Continue the favorable conditions your birds enjoyed on free range. Keep them busy, well-fed and watered, contented. The

Norwich Automatic Exerciser and Feeder

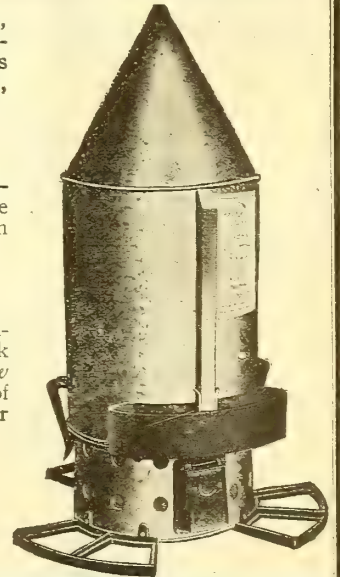

will supply the scratch grain in the right way—little and often—without attention on your part. It will give your birds the same exercise that was so beneficial on the summer range, keep them hunting and working. The

Norwich Automatic Air-Lock Fountain

will continuously supply fresh, clean water, free from contamination of any kind. Unaffected by cold weather. In practical work in the extreme North has proved frost-proof to 47 degrees below zero. You'll need it this winter. Guaranteed results from use of these appliances:—Greater egg-yield, healthier birds, and greater profits through the savings effected.

openings in the vertical wall of a cylindrical valve mounted in the center of the feeder, and which is operated by a bait suspended from a balanced lever, when the fowls pick at the bait. Patent No. 1,195,104.

Theo. Hewes Takes Over the Indiana Fanciers' Association

Mr. Theo. Hewes, the well known poultry show manager, has finally completed the chain of winter exhibitions, having taken over the Indiana Fanciers' Association of Indianapolis, and will put on the first show under his management, February 8th to 12th, 1917. This exhibit has been a combination show of poultry, pigeons and dogs, but the first show will be poultry and pigeons only, with the dog show under the same management coming the 13th to 16th of February, when a 3-point show will be benched.

Exhibitors and concession men should get in touch with Mr. Hewes at once and note the address is 25 W. Washington St., Indianapolis, Indiana.

MONTHLY PRIZE CONTEST DEPARTMENT

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

SCIENTIFIC POULTRY HOUSE CONSTRUCTION.

Many Ready Built Houses May be Improved in Construction by Making a Wire Screen Opening at One End and Putting the Roosts at the Other.

By W. C. DUMBLE, Toronto, Can.

THE air-lock, or caisson, and the internal combustion engine, strange to say, have their points of similarity with the new style open-front poultry house. A correct understanding of these two processes or principles have revolutionized all modern industrial activities and their general application is noticeable in the domain of our great billion dollar industry.

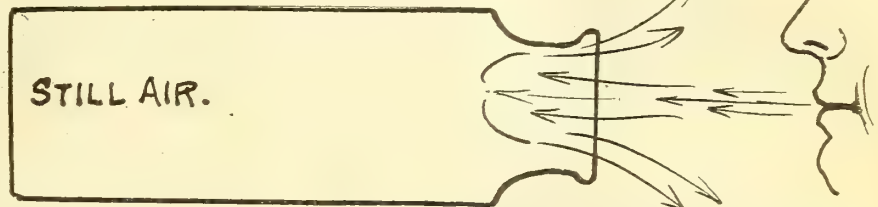

The air-lock caisson permits the laying of concrete foundations on the rock below the muddy bottom of great rivers or arms of the sea by forcing air into immense hollow steel structures, closed at the top and open below. A forced air pressure within the cavity prevents the entrance of water, permitting workmen to operate within and to excavate and lay concrete, thus making secure foundations for immense piers to carry a superstructure of bridge work or whatever. In this way the piers of many great bridges were laid supporting the great cables of such structures.

The last word in scientific poultry house construction embodies the principle of the air-lock. The correct fresh-air house is a caisson constructed, not up and down, but horizontally, closed on all sides and at the rear—but open at the front extremity. The enclosed air prevents the entrance of outside air. This is the essential secret of this style of house. Wind storms or rain cannot

penetrate far into this closed space. No matter how fiercely the storm beats outside, the rear end of the enclosure forms a quiet and secure resting place for the live stock within. As no inrush of water is to be feared in the caisson on the bottom of the sea, so no inrush of biting blasts can disturb the haven of rest at the rear end of the properly constructed open-front house.

The correctness of this principle may be tested by blowing forcibly into a long, open-mouth bottle. The air at the rear is not disturbed, your breath flies back into your face, it does not penetrate any

gasoline motor is the soul of the automobile, the submarine, the aeroplane, the zeppelin! Likewise, the combustion of corn in the internal economy, or anatomy of the flock on the roosting perch gives rise to an elevation of temperature, which heat, communicated to the surrounding air renders it lighter; whereupon, in obedience to a law of nature, it rises and is conducted by the sloping roof to the outlet in the front. This motion of air above the fowls is made continuous by a rising current of heated atmosphere, pushing the air in front ahead of it, thus ensuring a constant

Testing the principle of the air-lock. Air forcibly blown into an enclosed space does not penetrate. See article "Scientific Poultry House Construction," Monthly Contest Department.

distance into the space enclosed: the trapped air within prevents the entrance of outside air. (See illustration No. 1.)

But a trapped, stagnant atmosphere would be far from ideal for the health of living creatures! Just so, but fortunately another of the great scientific principles of the day comes to our rescue and solves the problem to perfection. It is the principle of the internal combustion engine! Internal combustion in a hen house? Yes, sir! And it works constantly, silently and effectively in our air-locked poultry house.

The internal combustion engine has revolutionized about everything! The

gentle strain forward to the exit. The vacuum thus created beneath the roosting perch ensures a gentle, continuous, but positive stream of outside air, fresh and laden with its full quota of oxygen. This stream of fresh air is quiet but positive, supplying a constant amount of life-giving atmosphere without draughts or sudden dropping of temperature. The outward current carries off with it the oxide of carbon. (See illustration No. 2.)

Thus protected from sudden gusts of cold air, and supplied with constantly changing streams of vitalized air, the fortunate dwellers in the open-front

P. J. FERRIS, Box A, CUYAHOGA FALLS, OHIO

house of this type enjoy a condition of good health not approached by any other contrivance devised to date.

Of course the essential principles of construction of this style of house must be observed. Many open-front houses are not the open-front fresh air house of the Woods' pattern. The length should be greater than the width for best conditions, with the front roof kept low, not above four feet at the eaves. The roosts are placed at the farthest distance from the open front which is closed with quarter-inch mesh wire screen. This suffices for all seasons. The open front faces the south or east. Complete details of construction may be found scattered thru the pages of

culture are: Robust heredity, a plentiful supply of sound grains, greens and gristle, pure water, and pure air twenty-four hours a day.

To bring about the adoption of these factors will require "line upon line" and to the poultry editors will fall the pleasing duty of preaching this gospel to the increasing multitude of those who are looking to poultry raising as a means of subsistence. Poultry craft is a science and these are the foundation stones upon which the enduring structure must be built. Any failures that may have been reported will be found upon investigation to have arisen from the absence of one or more of these before mentioned essential factors. Perhaps of

The internal combustion principle. The heat of the fowl's body causes air to become lighter. It travels upward and outward. Outside air comes in and sets up a gentle current, creating ample ventilation. See "Scientific Poultry House Construction," by W. C. Dumble, Monthly Contest Department.

AMERICAN POULTRY JOURNAL. The present article endeavors only to set forth the underlying principles on which the house is constructed. Reports from various quarters are piling up and all tend to prove the real value of the house as a protection for the flock, frosted combs being rarely found; the health of the stock remains first-class and the important item of the egg yield in winter is entirely satisfactory.

The fresh air idea is gaining for all classes of creatures, the human included. People who have learned to sleep in open porches and other out of door structures cannot be induced to sleep indoors.

In a few words we may condense volumes of poultry lore. The few essential facts that lie at the bottom of the entire structure of profitable poultry

these, faulty heredity and faulty housing have proved the most frequently lacking and the most fatal. The faulty housing is the one most in evidence, because it is visible to the naked eye. Everywhere we see the house that is defective in design.

The roosts are in the wrong place—too near the source of draughts. The roof is too high, and, thru the idea of keeping the fowls warm, all sources of fresh air are closed and the inmates breathe all night their own carbon-laden breath.

A great many ready built houses might be easily improved in construction by making a wire screen opening at one end and putting the roosts at the other. These two simple changes would go far to conform to the correct pattern.

My absolute guarantee given to all; write me today, please, for catalog and wants.

SUNLIGHT POULTRY FARM E. N. LEMON, Owner Lynchburg, Ohio

A MINISTER'S SUCCESS WITH POULTRY.

Second Prize Article in American Poultry Journal's Monthly Contest.

By REV. F. P. FRANKE, Harvard, Neb.

FORMERLY, whenever I considered poultry raising, I was reminded of filth, lice, noisy male birds and notional hens that would lay a few eggs when they felt like it and not when you wanted the eggs. Remarks of my friends favoring poultry keeping and glowing articles on the profitability and beauty of a well-kept flock always found me with both ears stopped up.

Being a minister of the Gospel, I could not see anything particularly esthetic in a lot of hens digging about the grounds of the parsonage and the church. Coming to a new field in Wisconsin, I found upon my arrival there a well-built henery with a large well-fenced yard and a dozen fowls within, donated by the members of the congregation. My first thought was that these birds would soon see the inside of the pot after being well dressed. They must have read my thoughts, for they started right in laying and I could not then decide to dispense with them. One of the hens stole a nest and one fine day came off with fifteen hustling, healthy chicks, which at once became the delight of the family.

Figuring up the profit and loss one night, I found that the hens came out ahead and daily thereafter felt more kindly disposed toward them and decided to raise more. The following winter found me with twenty-five laying hens and a thorobred Rhode Island Red cockerel. The hens were, as I told a friend, representative of all the different sects and denominations in the country. And I laid it to that fact that they forgot all about laying that winter, probably keeping themselves busy discussing creeds and dogmas. A friend to whom I advanced this theory told me I was totally mistaken—that the hens were all right, but I was all wrong. He advised me to study a little more henology and a little less theology if I wanted to get eggs. So I invested in three poultry papers and a dollar book, but found that poultry authors disagreed about as much as the fathers on dogmas. When I came to figuring the profit and loss the second time, it really seemed to be all loss and no profit when the prices paid for literature and utensils were considered and the death and funeral expenses of the thorobred cockerel and several of the low-brow hens were taken into account. I phoned at once to have some crates sent up, thinking to deliver myself and family from further annoyance from hens for all time to come.

Just about this time, a friend, who was much interested, sent me one hundred eggs from his choice Buff Leghorns. I was really not greatly enthused, but a neighbor loaning us an incubator, I put the eggs in. Not being familiar with incubators, I inquired all about the art of running one and got instructions from all quarters, wholesale and free. If I could have followed all the advice given on how to run that incubator, no chick could have hatched therein, whereas they and their offspring are now scattered all over the United States and Canada where I have since shipped stock and eggs. As all advisers agreed that the best place to run the machine was down cellar, down it went. Everything

CANDEE

You Can Set Up a CANDEE Yourself—Save Time and Money

*This is an
All-Built
600-Egg
Section*

Each 600-Egg Section Shipped All-Built Ready to Set Up on Its Legs

The Candee Incubator saves the salary of an expert from the factory—saves an expert's railroad fare and expenses—and saves time waiting for the expert to come because you can set up its all-built sections on the legs yourself and start hatching at once without delay.

Each section is shipped from the factory with its hot water pipes all in place inside the section.

Shipped with its wooden partition in place, dividing the 600-egg section into two 300-egg compartments.

Shipped with its wire partitions in place, giving four divisions for four 75-egg trays in each 300-egg compartment.

Shipped with its connections in place all ready for coupling with the two main hot water supply pipes under the machine.

When you install a sectional Candee Incubator you need not build the machine when you get it, as would be necessary if you bought a "knocked down" incubator.

More Sections Can Be Added At Any Time

Because the Candee is sectional in construction, you can add new sections as your business grows without tearing down your first machine and without the expense of having the factory expert make the addition.

Should you ever move from one farm to another, it will be a simple matter for you to disconnect the Candee sections, carry them out of your cellar and haul or ship to your new location. It will not be necessary for you to knock the whole machine apart to move it.

And the Candee section easily passes through any ordinary door opening.

Critical poultrymen prefer the Candee because it is sectional in both construction and operation, and because they know it is thoroughly reliable there being more Candees in use than all other mammoth incubators combined.

Write for the Big List of Candee Users Who Have Added Extra Sections to Their First Machines to Take Care of Increased Business.

Does a Candee

READ THE

Here are a few of the letters written by those who say it pays to operate a Candee Hatcher. The success of hatching chicks is so great that custom hatching

COULDN'T FILL DEMAND FOR CHICKS.

"Our 1,200-egg Candee incubator is giving perfect satisfaction, producing good hatches of sturdy chicks. As evidence of this will add that we have hatched as high as 89 per cent of fertile eggs and have not had a poor hatch. And out of 2,000 chicks hatched, there are more than 95 per cent living and growing today. I had no difficulty installing the machine—had help only to move sections and to place them upon the frames. We have all the orders we can fill this season and had to turn away many requests for both day chicks and eight-week-old-pullets."

C. D. Moore, Antwerp, N. Y.

BEGINNERS HATCHED 186 CHICKS FROM EGGS WITH CANDEE.

"Our Candee incubator has been running perfectly and we have had no trouble whatever with it. This was our first experience with a machine and hatched as high as 186 out of 225 eggs put in and this in a shed roof building, when the temperature of the house runs from 40 to 100 degrees."

J. T. Goodliff, Wellsville, N. Y.

NO LIMIT TO THE DEMAND FOR CHICKS AND CUSTOM HATCHING.

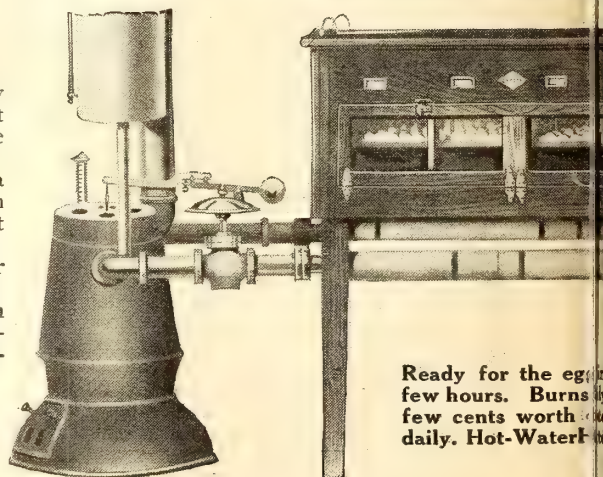

"I find that the commercial hatching is a profitable branch of the poultry business, and want to enlarge my plant for the next season, but have definitely made up my mind just to what capacity have now a 3,000 machine. The demand for day-old chicks and hatching business is steadily growing and there seems to be no limit; will just as far for the coming season as can extend my plant."

C. H. D. Summers, Gallipolis, Ohio

LETTERS

Owners of Candee Incubators, that tell why Note that the demand for Candee-hatched and baby chick orders must be refused:

COULD NOT FILL HIS ORDERS—MUST ENLARGE HIS CANDEE.

"Having just taken off my last hatch for the 1915 season, I am pleased to say that the Candee incubator I purchased from you has given me the utmost satisfaction in every respect, and I find the Candee is exactly what you represented it to be, and is so automatically regulated that the eggs simply cannot be overheated. I intend to add several more 600-egg sections for next season, as I could not fill my orders this season, though I hatched over 5,000 chicks."

W. R. Kaiser, Lansdowne, Ont., Can.

SOLD EVERY CHICK AS FAST AS THEY HATCHED.

"We are running our hatchery at full capacity this season and getting good hatches right along, and up to the present time have sold every chick hatched as fast as taken out of the machine."

Manti Mammoth Hatchery Co.

Erastus Jensen, Mgr., Manti, Utah.

POULTRY PROFITS EQUALED PROFITS FROM 35 COWS AND 160-ACRE FARM.

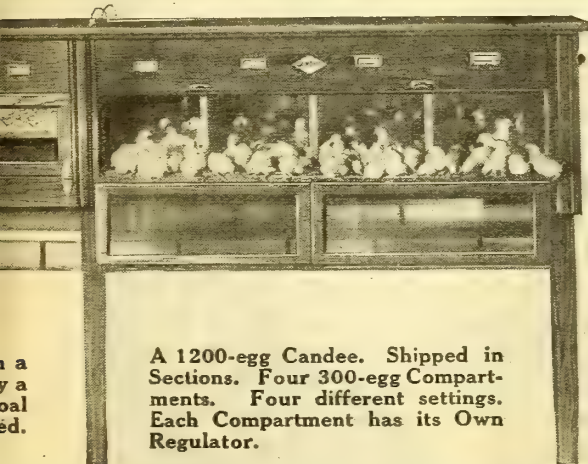

"I am still at this time tied to the dairy end of farm work as a helper, but run 500 hens every year and a 2,400-egg Candee incubator. I have run the 500 hens since the spring of 1911 and my wife and I next June have decided to make a break away from the dairy business and run poultry exclusively, as our profits from our poultry plant have equalled my father's profits from his 35 cows and the 160-acre farm every year. My 500 layers and pullets on range every year only require 3 or 4 acres at their liberty."

J. H. McClelland, Hobart, N. Y.

CHLEIT MFG. CO., Inc.

A 1200-egg Candee. Shipped in Sections. Four 300-egg Compartments. Four different settings. Each Compartment has its Own Regulator.

Automatic Regulator at each 300-Egg Compartment—and Regulator at Heater

With the Candee, there is no worrying and watching and getting up in the middle of the night to prevent baking of the eggs because

The regulator at each 300-egg compartment, shown above, automatically shuts off the hot water from the compartment when the temperature is right, and then that hot water flows around under the machine through the main supply pipes until it is needed in the compartment, when the regulator again automatically opens the valve.

The regulator at the heater automatically opens and closes the draft to the fire, according to the temperature of the water in the heating system, which with the compartment regulators gives double protection against any over-heating of the eggs in the Candee.

With the Candee, there is no raising and lowering of the trays by hand to give the eggs the correct heat, which must be done with incubators hand regulated.

And as the Candee trays remain stationary all the time, there is a large roomy nursery for the chicks in the bottom of each egg chamber.

With the Candee, you need operate only as many compartments as you have eggs to fill, because the flow of the hot water can be shut off from one or more compartments any time.

Our catalog contains many letters from pleased users of the Candee, who tell of their big hatches of strong, sturdy chicks resulting from the constant, correct temperature compelled by the double heat control and regulation.

The Candee principles of operation and construction, covered by broad patents, are unchanged after years of use on hundreds of poultry plants and by all the big colleges and Experiment Stations. The Candee Incubator is not an experiment and insures the best possible hatching results.

It is sold with the invitation: "Write your own Money-back Guarantee and attach it to your order," which proves our confidence in the efficiency of our equipment.

The Candee Colony Brooder

Coal-Burning—Self-Regulating

Broods up to 500 chicks in one flock in one building, with only one heater and one coal fire to attend. Write for special catalog describing and illustrating this Brooder.

The Candee Brooding System

Hot Water Heat—Adjustable Hovers

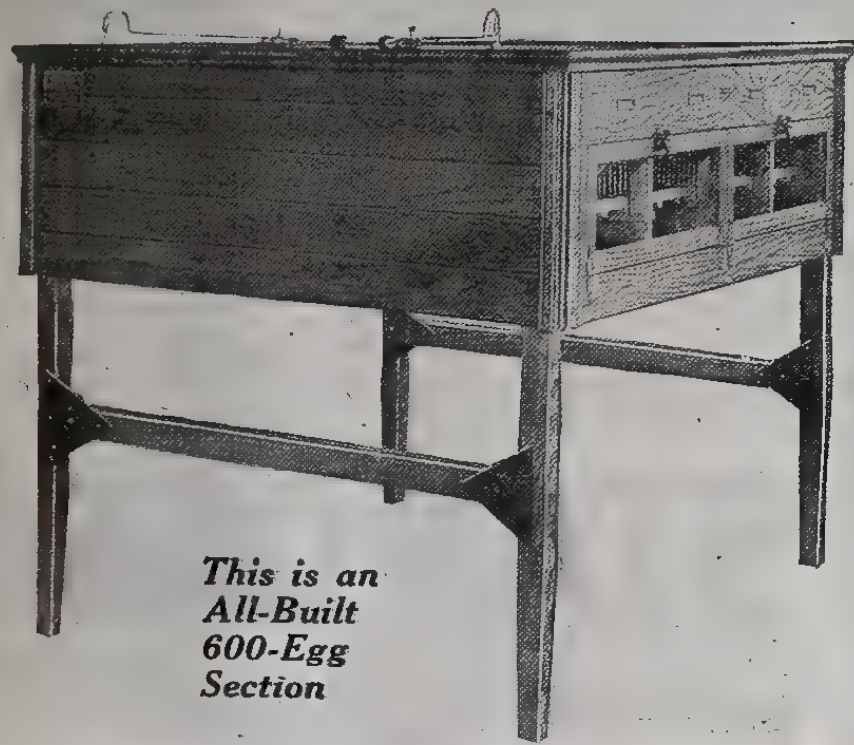

Broods all ages of chicks at one time in one building. The hot water heat is supplied by one coal-burning heater, with automatic regulator, to any number of adjustable hovers. Each hover has a capacity of from 50 to 65 chicks.

S. A. HUMMEL Box 52, Freeport, Ill.

went along smoothly but the thermostat, which had a way all its own quite beyond human control. The second week of the hatch the cellar flooded and I found the machine nearly afloat. It was rescued and placed on a dryer spot back of the big coal heater—and in spite, or on account of the flood, I have been unable to determine which, hatched out 67 chicks.

The fluffy little things soon began to grow and hunt for a living. I was attached to them from the start, notwithstanding my previous lack of respect for the poultry family. I determined to keep some of them for curiosity whether they ever laid or not. Being accustomed to seeing a flock of big clumsy low-brow fowls about the place, I thought the Leghorns were only half grown when they began to lay and continued to do so.

Shortly after this I was called to another field in Illinois, just an ideal location for my Leghorns. Cornfields in front of us, cornfields in back of us and the flock kept right on hunting up a good living and laying a good supply of eggs. I began to advertise stock and eggs, but got a lot of free advertising from the beauty and attraction of my flock display upon the lawn and from the man to whom I sold surplus market eggs. That little flock of Leghorns was an eye opener to me, showing up the possibilities in poultry keeping on a limited scale. I had to work with the crudest kind of equipment, as it would not have paid me to invest heavily while moving from one charge to another and yet my success was phenomenal and I realized almost as much from poultry keeping as salary paid me by the con-

gregation. In addition to this there is great enjoyment to be found in the work and I shall never cease to be glad of my initiation into the great and growing fraternity of poultry lovers.

Help Your Molting Hens They Will Pay You Back

Hens can't lay when molting; they are too busy making feathers. And at this critical time they are in danger of contracting disease because of weather changes, lack of plumage and weakened condition. Help them now. Quick action is needed. They will pay you back in dollars and cents.

For a positive, quick-acting Poultry Tonic and Conditioner use

Pratts Poultry Regulator

the poultryman's favorite for nearly 50 years. A scientific combination which supplies those needed tonics, appetizers, digestives and laxatives lacking in the usual poultry ration.

Costing but one cent a hen per month, it puts vim and vigor into weakened molting hens, carries them quickly and safely through this dangerous period, gets them to laying without loss of time.

Because of its beneficial action upon the organs of egg-production, it will speed up your pullets, too. One egg now is worth three next spring, so use Pratts Poultry Regulator and get eggs now.

Pratts Roup Remedy

will help a lot, too. Used in stormy, cold weather as a preventive, it will keep the flock free from troublesome colds, roup and similar disorders. If these troubles have already appeared, Pratts Roup Remedy will save the birds. Roup hens will not lay, and will give the disease to the rest of the flock.

Our dealer in your town has instructions to supply you with Pratts Preparations under our square-deal guarantee—"Your money back if YOU are not satisfied"—the guarantee that has stood for nearly 50 years.

Readers Experience Department

Selling Eggs by Weight.

YOU are aware I have found fault many times with Egg Laying Contests in the past, that they did not tell but half of the story. Practically all food products excepting eggs are now sold by the pound. There is a law in Massachusetts that eggs should be so sold, but they are not.

There is no justice in paying as much for eggs weighing eighteen to twenty-one ounces to the dozen as those weighing twenty-four to thirty-two ounces per dozen. But eggs differing as widely as that in weight are being sold side by side in the same market with little or no protest from the purchaser. When we can demand that a dozen eggs shall weigh twenty-four ounces and compel the law respected that eggs shall be sold by weight, then we may hope to see justice in prices in the different breeds.

When 150 Brahma eggs, 168 Plymouth Rock eggs, and 213 Leghorn or Wyandotte eggs all weigh the same, and each as a food supply the same value only, why should we reckon their productive value in the number of eggs laid by each? When five Brahma eggs and seven Leghorn eggs make the same amount of custard, why should the Brahmas be handicapped in money value thirty per cent, and why should the Plymouth Rocks be obliged to pay twenty-nine per cent handicap to the Leghorn in order to compete in the same market.

The hen "Rebecca" laid 315 eggs that

weighed 30 ounces to the dozen in 333 days. Whoever saw a small egg variety producing eggs weighing more than 24 ounces per dozen. In the case of "Rebecca" we find her laying 13 pounds more in a year than a small egg hen in the same length of time, using the maximum weight of 24 ounces per dozen. What sense in being satisfied with the same price for the two hen's eggs. The hen that lays the greater weight of eggs is the prize hen in the egg laying contests regardless of the way many contests have been and are being conducted.

Let the breeder come to the front and demand eggs sold by weight, then each will get a fair reward for the food furnished. This change once brought about and we will see twenty to thirty per cent increase in the demand for the Asiatic and American breeds. Our first-class hotels and restaurants now will pay fifty cents per dozen yearly rates for Brahma eggs, but these are sold by special contract, guaranteeing twenty-four ounces and over to the dozen.

Create a demand for the twenty-four

to thirty-two ounce per dozen eggs and more and better poultry will be the result.

Natick, Mass.

I. K. Felch.

White Orpingtons.

Since the subsiding of the Orpington "boom" with its greatly inflated prices, which held possession of this country and Canada for several years, the White Orpington has gradually come into its own and now enjoys a wide and deserved popularity, based on genuine merit.

As an exhibition fowl they rank among the first to merit a fancier's attention. Handsome, stylish, docile, they readily lend themselves to the handling and training that are so necessary to turn out prize winners in a large class against strong competition. In the production of exhibition specimens the fancier will find a fertile field for the exercise of his skill in mating.

At the shows thruout the country the number of entries in the White Orpington class are growing and new breeders

are constantly bobbing up to share in the honors. This is perhaps due to the fact that a good many of the older White Orpington breeders have been bending their efforts toward producing not only show quality but also to combine with this the faculty of high egg production. This aim has been difficult of attainment, but at the present time we find some of the best show specimens also holders of high laying records or fathers of hens with high laying records.

As a breed White Orpingtons are a fowl capable of standing extreme climatic conditions and possessed of the necessary vitality and stamina to undergo forced feeding for high laying records and conditioning for exhibition; with the ability under these conditions to go into the breeding pen and furnish a high percentage of fertile eggs, capable of producing good strong chicks that grow quickly and mature into laying pullets when five or six months old.

The White Orpington aisle at any show where the bulk of attendance is generally people who do not raise chickens but would like to if they lived in the suburbs or country, comes in for its full share of admiration. Necessarily, they must be pretty, stylish, something whose form, color and carriage pleases the eye or they would not receive all this attention from those who are not fanciers.

The beginner selects the breed he is going to raise from having seen the same at some show, from a study of the various 'poultry' magazines with their numerous ads, or upon the advice of neighbors who have had experience with this or that breed.

Should he be one of those who have stood in front of the first prize pen of White Orpingtons at some large show and gazed longingly at them, the chances are very good that he will either purchase White Orpington stock or hatchling eggs from some good breeder.

If he selects his breed from the ads of a poultry magazine, the chances of the White Orpington being the breed selected are equal with that of any other breed, more especially if he has at some time seen a good pen of them.

Should he act on the advice of neighbors who have bred White Orpingtons and should plenty of eggs during December, January and February be any inducement, White Orpingtons will be the breed he selects. However, it is well to remember that ordinarily a person will not make a success with any live stock, be it poultry, hogs or cattle, if their form and color do not harmonize with his ideal of beauty for a given kind of stock.

Gladstone, N. D. Rufus B. Lee.

Buff Rocks in Close Confinement.

One of the most interesting articles that I have read in the **AMERICAN POULTRY JOURNAL** since becoming a subscriber and reader of it, which I have been for some three or four years past, is that appearing in the January issue regarding the development of a 1915 flock of "White Rock Pullets."

In that article the results were taken from a pen of nine picked pullets up to the time that they had been laying for forty-five days, in which time they had laid 83 eggs.

Now we have a pen of "Buff Rock Pullets" of exactly the same number, nine, and as these birds have been kept confined, in the strictest sense of the word, it will be interesting to compare

NOVAK POULTRY FARM Route 1 Racine, Wisconsin

The Marvelous Newtown Giant Stands Supreme Among Incubators

A strong statement—but we have *ample reason* to believe it to be *absolutely true*. Our faith is justified by the *consistently satisfactory performance of the machine itself under all conditions and in all parts of the world*.

The Newtown Giant is the only incubator for you if you require the machine which will positively “hatch the most chicks, the best chicks with least labor and at lowest cost.” Below are a few reasons for acknowledged Newtown supremacy:—

Supreme in Efficiency

Actual performance in all climates, under all the varying conditions the world over, has demonstrated the Newtown to be the most efficient hatching machine.

Supreme in Construction

This applies to every part of the machine. The most exacting care and the very highest skill are used in manufacturing the Newtown.

Supreme in Durability

The Newtown is substantially built and will last a lifetime. Every part is carefully inspected and strongly put together. Each machine is completely assembled before shipment. This insures accurate fitting and perfect operation.

Supreme in Improvements

This has been the greatest factor in Newtown success. Only those features which stand the most severe tests are adopted. They include the Automatic Coal Feeder, Automatic Regulator at the Heater, Automatic Regulator of Heat, Ventilation and Moisture at each compartment, Automatic Eggs Turner, Automatic Temperature Indicator and Automatic Electric Alarm.

Supreme in Service

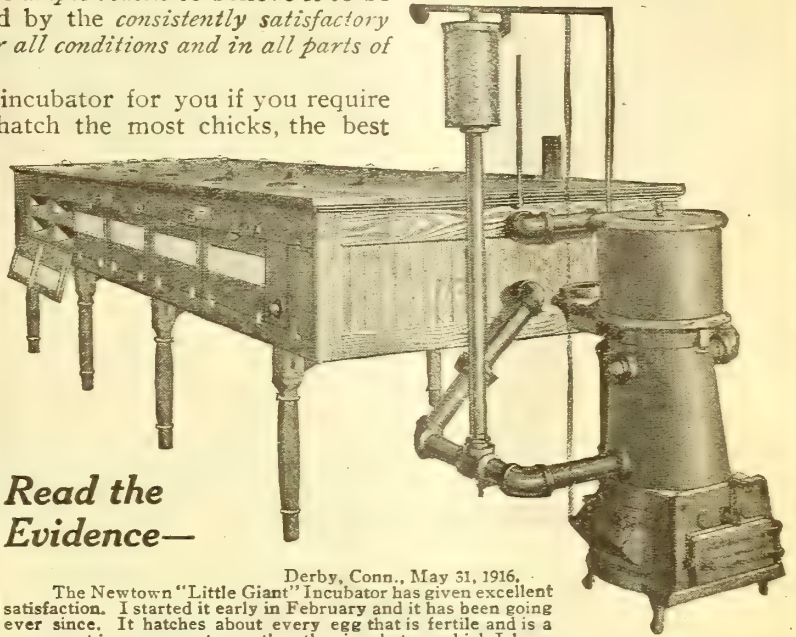

Nothing is left undone to insure that every Newtown user shall get the very best and greatest possible service from his machine. Everything is designed for convenience and service.

Supreme in Satisfaction

Every Newtown customer is a satisfied user. Ask the poultryman who owns one. A great many people who purchased Newtowns last year have already placed orders for increased capacity to be installed at once. This is the final test.

Supreme in Sales

Because they are supreme in Efficiency, Construction, Durability, Improvements, Service and Satisfaction, the sales of Newtown Giant Incubators are more than doubling each season.

Read the Evidence—

Derby, Conn., May 31, 1916.
The Newtown “Little Giant” Incubator has given excellent satisfaction. I started it early in February and it has been going ever since. It hatches about every egg that is fertile and is a very great improvement over the other incubators which I have had of smaller size and different makes, although they were considered to be among the best of the smaller machines. MAPLEDALE FARM, (Judge) W. S. Downes, Owner.

Waverly, Iowa, May 15, 1916.
We have thoroughly tried out our 3000-egg Newtown Giant Incubator and find it highly satisfactory in every way. It keeps the temperature perfect—same does not vary one-fourth of a degree in the various compartments. We were surprised at the small amount of fuel this machine takes, and have taken off two splendid hatches. We are perfectly pleased in every particular, and shall be glad, at all times, to recommend Newtown Giant equipment. RHODE ISLAND RED JOURNAL CO., A. G. Studier, Editor.

Somerset, Mass., June 12, 1916.
Am very much pleased with the way my machine has worked. I do not see how any machine could do better work. One of the things that impressed me most was the Egg Turner and decided me in your favor. After using the turner for one season I can say nothing but praise for it and feel that it has saved its price over and over in the time and labor. I have never had healthier or better chickens than I have had this year. Wishing you the success with your machine that you deserve. ERNEST L. PIERCE.

Reno, Nevada, April 6, 1916.
I am very well pleased with the 6000-egg size Incubator purchased of you this Spring. Your egg turning device is certainly a big improvement over last year's model. We are turning out the best chicks we ever hatched and more of them. Our 1200-size purchased last year, remodeled with this year's trays, hatches 20 per cent. better: 1056 eggs set; hatched 815 chicks, 1st hatch. 1056 eggs set; hatched 822 chicks, 2nd hatch.

A. F. SCANAVINO, Manager.

Pittsfield, N. H., May 24, 1916.
We have just closed our hatching season with our Newtown Giant Incubator. Got an average of 66 per cent. hatches of all eggs put in machines hatching over 13,000 chicks. Am much pleased with the turner. It is a great labor-saver. The chicks are well hatched, coming out large and strong. The Newtown products are O.K., and your dealings are on A. N. PEASLEE & SON.

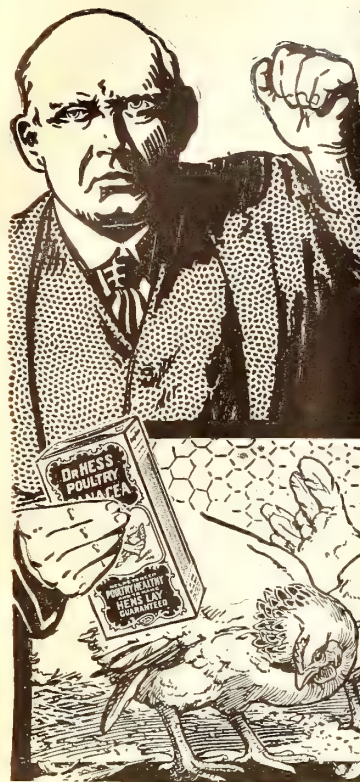

Gossville, N. H., May 27, 1916.
Am very much pleased with my 1800-egg Newtown Giant Incubator. My last hatch averaged 75 per cent. The ease and accuracy with which it runs far exceeds my expectations. K. F. RAND.

Box 92, Wyckoff, N. J., May 12, 1916.
The 1200-egg Giant Incubator purchased at Madison Square Garden is certainly a labor-saver for the busy poultryman. About fifteen minutes each day is all the time it requires and it brings out the finest chicks I ever saw. The Electric Alarm is a big feature but my machine has maintained such an even temperature that the Alarm has never been sounded. TEMPEL'S POULTRY FARM.

Huntington, L. I., N. Y., May 15, 1916.
The 1800-egg Newtown Giant Incubator has given perfect satisfaction. Our hatches have averaged about 80 per cent. all season and all were strong chicks. The machine is very easy to operate on account of the Automatic controls and the Automatic Eggs Turner is perfect. It saves time and turns the eggs thoroughly. The machine is all you claim it to be. BREEZY LAWN FARM, Henry Hung, Owner.

Our new booklet—“Proof of Efficiency”—and complete catalog are yours for the asking. Every earnest poultryman should have them. Better write for them NOW!

the results obtained with them, to those from the pen of "Whites" which were given the *advantages* of a grass run, practically from the day-old stage.

I am unable to give the weights of these birds back to the time when they were hatched, as they were secured rather accidentally July fourth.

As we were on our way to a well known local breeder's plant to look over some stock in which we were interested, we noticed this flock of young Buff Rock chicks as they were roaming around in a sort of hit or miss fashion, in a field bordering the roadside.

Having been a back-lotter for the past few years, and having devoted considerable time to the problem of confined poultry-keeping, I was comparing the haphazard sort of way in which these little chaps were being brought up, to the kind of care which they should be getting in order to get the best out of them, when the owner, appearing from behind a coop, inquired how we liked them. A few questions brought out the facts that they were thoroughbreds somewhere between eight and ten weeks old, and had been hen-hatched from some

good stock, which he had secured the year before.

As near as we could gather, they had been turned into the field with the mother hen a day or two after hatching and with the exception of a daily meal of some commercial chick food, had been practically left to shift for themselves. He figured they might weigh around one to one and one-quarter pounds and a subsequent weighing a few days later proved this a good estimate.

Now at this time we had a vacant coop on our lot, so we opened negotiations, finally securing nine pullets at a rate of 75 cents each, with an agreement, that should any of them turn out to be cockerels later on, he was to exchange them for pullets. This turned out to be the case, for two of them, developing into cockerels, were exchanged late in August for the largest pullets left in his flock. When these two were placed among their sisters of the same age they weighed a half pound less than the smallest of our confined flock.

On the seventh of July the pullets were installed in their new home, an open front coop 8 feet long by 4 feet wide. This coop is of the shed roof type 5 feet 6 inches front and 4 feet 6 inches in back, with a dropping board running the full length of the back and placed two feet from the floor of the coop, with the roost running full length of the dropping board and five inches above it. Placed in this way the birds have plenty of room to get under in the day to scratch, while at night it leaves enough

1,000-Egg and 2,000-Egg Queen Incubators

The large-size Queens have all the features of quality, material and construction, and tested modern improvements, that have made Queen Incubators of smaller sizes the most successful incubators of medium price. Double walls and bottoms of California Redwood insure complete insulation.

The 1,000 and 2,000-egg Queens were successfully operated last winter in rooms of a temperature of 30 degrees above zero. They maintained a uniform heat on normal lamp flame without special attention.

New heater is double-walled and lined with five layers of asbestos. Drain cap to outside of heater. Lamp sets on safety shelf, enclosed in hanger.

All Large Queens 10% Oversize

2,000-Egg Queen

Price \$180

Size, 120 inches by 88 inches. Only half of machine may be operated if desired, as 1,000-egg machine.

1,500-Egg Queen

Price \$135

Size, 120 inches by 66 inches.

1,000-Egg Queen

Price \$95

Size, 120 inches by 35 inches.

Larger Percentage of Strong Chicks In Competition with 8 Others

C. D. Adams, Manager Poultry Show, Milwaukee Co. Experiment Association, Wauwatosa, Wis., wrote: "For three years we have been using a Queen Incubator and Brooder in our work here in competition with eight other makes. The older students often put the newer ones 'wise' as to the incubator to use in their work, and it is not uncommon for students to ask for the Queen. I frequently put my special matings in it, and I believe it has given a larger percentage of strong chicks than any other machine we have, and some cost double what it did."

We Have Already Sold

a considerable number of 1,000-egg and 2,000-egg Queens for this season's hatches—36 in Ohio alone, besides almost 100 in other parts of the country.

For the Poultryman who wishes to install new hatching equipment, the large-size Queens offer the greatest certainty of results at the least expense. Full information on request.

Queen Incubator Company

1037 No. 14th Street

Lincoln, Nebraska

Smaller Size Queens

75-Egg to 750-Egg

Have been sold for many years; approximately 100,000 of them being already in use. They are not the cheapest machines on the market, but they are built to produce high average hatches of sturdy chicks, and from what poultrymen and retailers tell us, we believe there is no incubator in the country that has as large a percentage of customer-friends as the Queen.

above the roost for them to sleep in comfort.

Roof, back and sides of the coop are made up of good solid matched stuff, covered with a good quality of commercial roofing, making it absolutely tight and draft proof, while the front is entirely open, being protected only by the hinged muslin curtain as shown in Fig. 1.

This cover is exceedingly adaptable to varying weather conditions, being let down entirely on exceptionally cold nights, while, if partly lowered, it is efficient in protecting the inside of the coop from either rain, snow or excessively hot sunshine, without shutting out the air or light. This together with a second cloth cover, which is entirely removable and fits in the lower section of the front, as shown in Fig. 2, completes the front of a coop in which birds of both American and Mediterranean varieties have been kept for the past three winters with no severe cases of frostbite.

No litter is used, the earth floor being kept in a dry powdery condition thruout the year by reason of its being

Showing coop with hinged curtain partly lowered and bottom curtain in place in lower section. See "Reader's Experience Department."

well raked over each time the birds are fed scratch food. This method of giving them scratch food has been strictly adhered to ever since we have had them and consists principally of whole oats and cracked corn, raked in to a depth of six or eight inches. Fed in this way the birds are kept at work a greater part of the whole day and get fully as much exercise as they would if their feed were thrown out on an open run. Furthermore, they have the advantage of the open range flock at this time of the year, when they enjoy exactly the same conditions as regards fresh air, scratching and exercise that they do in the best of weather.

This scratch feed is raked into the coop bottom first thing each morning and again about an hour and a half before dark at night. Enough is fed at this time to ensure of some being left for them to scratch for in the morning before the attendant puts in an appearance. At noon they are given a wet mash made up of wheat, bran, cornmeal and ground oats, equal parts by measure, with one-half part of beef scraps. About once a week this is omitted and in its place is fed a supply of whole oats, which have been allowed to soak in water since morning.

The wheat bran is kept in open hoppers

at all times, as the birds will not overeat of this feed and by reason of its bulky nature it has a tendency to expand the crops of the young pullets at this time, giving them a greater eating capacity, a thing which is quite essential to them later on if they are to become egg producers.

During the summer and early fall, the green food element is supplied by an abundance of fresh lawn clippings each day, just enough being cut at one time to supply their immediate needs. When this supply is cut off during the winter, its place is taken by sprouted oats and cabbage. The cabbage being usually hung up on a level with the birds' heads for them to pick as they require it.

Oyster shell and grit are fed to the pullets simply by keeping plenty of it raked into the bottom of the coop along with the scratch feed, the hens picking up what they need of this in the same manner that they would if on range.

Along toward the late fall the scratch grain was varied somewhat by means of adding a greater supply of cracked corn in their afternoon feed, the amount of corn in proportion to oats being gradually increased as the nights grew longer. The wet mash was also changed about this time by the addition of alfalfa, to help the sprouted oats and cabbage take the place of the lawn clippings when that began to run short. Again when the pullets began to lay a supply of gluten meal was added, this high protein product becoming particularly valuable at this time.

Under this system we have had no indications of sickness of any kind, the birds coming along finely from the time we first got them.

At the time the first egg was laid, the heaviest pullet weighed six and three-quarter pounds, with the others varying all the way down to six pounds, the smallest reaching that weight.

The first egg was laid December 16th, at which time we had had the birds just over five months, which with the age they were when we bought them brought them to about the normal age of seven and one-half months to the time of commencing to lay.

We have now as accurately as possible compared the conditions under which these birds were raised, with the normal White Rocks, including housing, feeding and methods of feeding, weights and the age at which egg laying commenced, and with the exception of the Range vs. Confinement question, the methods followed were almost identical but for a few minor differences. Therefore we now come to the subject of results, and while we cannot say how it will stand at the year's end, the following egg

1-lb. can
25c
3-lb. can
60c
(except in
Canada).

Rid Your Hens of Biting, Blood-Sucking Lice!

Hens that are pestered with lice soon quit laying. Day and night the torment goes on. Get rid of all lice, before real winter comes on, by sprinkling

Dr. Hess Instant Louse Killer

on fowls, in nests and dust baths, on roosts and about houses and runways. If your horses, cattle or hogs are lousy, dust or sprinkle into the hair. Dr. Hess Instant Louse Killer kills lice on all animals.

It comes in cans with perforated top—easy to use. The powder means quick death to lice, but is harmless to fowls and animals. Sold only by dealers and guaranteed.

You can buy it at my dealer's in your own town.

DR. HESS & CLARK
Ashland, Ohio

Note—Dr. Hess Instant Louse Killer also kills bugs on cucumber, squash and melon vines, cabbage worms and slugs on rose bushes.

Egg-o-hatch

A new invention by Geo. H. Lee
Maker of Lee's Lice Killer, Germozone, Egg-o-latum, etc.

Applied to eggs during incubation, it strengthens the chick and weakens the shell, so that at hatching time you have a strong chick and a weak shell instead of a weak chick and a hard, tough shell that causes so many to die just at hatching time. Also eliminates moisture troubles.

Egg-o-hatch means better hatches and stronger chicks

It is easily proven. Apply to half the eggs and run the other half as usual, then note results. Fifty test hatches gave average of 96 per cent for Egg-o-hatch eggs and 81 per cent for eggs not treated, right in the same machine. Last five summer hatches average 95 per cent and 67 per cent. For 5 cents to cover mailing, we will send one sample with full directions free, sufficient for 50 eggs. A full size package will run 600 or 700 eggs one hatch, or three 200 to 250-egg hatches. .50 cents postpaid, or at dealers.

One installation, now being made, of

Blue Hen Mammoth Incubators

has a capacity three times as great as entire year's output of any other Mammoth factory.

You can start small

Greater capacity in less space

Automatic Egg Turner

"All-Year-Round" Hatcher

Catalog Free

While **Blue Hen Mammoths** are being installed in the *largest* hatcheries—on the other hand it is the great money-making machine for *smaller* producers. You can start as low as 800-egg capacity.

In a given space the **Blue Hen** gives you from one-sixth to *one and one-half times more capacity* than any other mammoth incubator.

Turns every egg throughout a **Blue Hen Mammoth** in *five seconds*—whether capacity is 800 or 20,000. The greatest time, labor and money-saving feature ever built into a mammoth incubator.

The **Blue Hen** does fine work in cold as well as mild weather. Splendid results, not just for one or two hatches but for the entire season.

Our fine new catalog explains in detail the sectional construction, positive automatic regulation of heat, air and moisture for each compartment and many other features that will interest you. Let us show you how easy it is to start, operate and increase with a **Blue Hen**.

DEALERS and farmer-agents can secure exceptional opportunity to represent us in unoccupied territory. Easy sales and good profits

assured on Blue Hen Mammoth Incubators, Blue Hen Lamp Incubators and the

On Blue Hen Colony Brooders alone, the sales by dealers and farmer-agents have been astounding.

Men without selling experience and dealers who never before sold brooders, have easily made many profitable sales by showing the Blue Hen Catalog to practical poultrymen.

Blue Hen Colony Brooder

Better than ever with the 1917 additions and improvements.

Yet sold at the same low price, possible only by increased demand and larger production.

ROSE AND SINGLE COMB RHODE ISLAND REDS

Are you going to show this season? Do you want to win? If so, buy your Reds from a breeder of experience. Never had better youngsters than this year. We will ship **anywhere on approval** upon the receipt of 40% of purchase money. Remember, I have no other breed. Write your wants.

RED TOP POULTRY FARM, John G. Spencer - Route 2 - SHARPSBURG, PA.

record for the first forty-five days of egg laying will show that the confined Buffs have a little something on their White friends to date.

I regret that the first dozen were not weighed as a dozen, simply because there was no thought at that time of comparing them with any other flock, but many of the eggs have been weighed individually on scales which are in daily use for chemical work and are necessarily very accurate, and they average from one and seven-eighths to two ounces each or twenty-two to twenty-four ounces per dozen. This is a conservative estimate, as many of the eggs go well over the two-ounce mark, but are only counted as two-ounce eggs.

The first dozen eggs were laid as follows:

Dec. 16—1 egg	Dec. 22—1 egg
Dec. 17—1 egg	Dec. 23—2 eggs
Dec. 18—None	Dec. 24—1 egg
Dec. 19—1 egg	Dec. 25—1 egg
Dec. 20—1 egg	Dec. 26—1 egg
Dec. 21—None	Dec. 27—2 eggs

Taking exactly the same number of days, twelve, as did the Whites.

The rest of the record is as follows:

Dec. 28—2 eggs	Jan. 14—3 eggs
Dec. 29—None	Jan. 15—4 eggs
Dec. 30—2 eggs	Jan. 16—5 eggs
Dec. 31—3 eggs	Jan. 17—3 eggs
Jan. 1—None	Jan. 18—5 eggs
Jan. 2—2 eggs	Jan. 19—4 eggs
Jan. 3—3 eggs	Jan. 20—4 eggs
Jan. 4—1 egg	Jan. 21—7 eggs
Jan. 5—3 eggs	Jan. 22—4 eggs
Jan. 6—1 egg	Jan. 23—5 eggs
Jan. 7—1 egg	Jan. 24—7 eggs
Jan. 8—4 eggs	Jan. 25—5 eggs
Jan. 9—3 eggs	Jan. 26—5 eggs
Jan. 10—3 eggs	Jan. 27—5 eggs
Jan. 11—3 eggs	Jan. 28—6 eggs
Jan. 12—3 eggs	Jan. 29—5 eggs
Jan. 13—5 eggs	

Making a total of one hundred and twenty-eight eggs for forty-five days, or an average of one egg per day better than the White pen.

Now the results of the pen comparing almost exactly with the experimental pen of Whites it appears that we may safely take the figures obtained from them as a guide for Rock development. The increased out-put of eggs credited to the Buffs, at this time of the year, resulting without doubt to the fact of their enjoying during the cold period, the same chance of natural scratching in earth, not litter, that they have in the laying season.

As the breeder of the Whites intends to keep a complete record of his pen for the entire season, it may be interesting to compare results further at the end of that time, and we shall indeed be pleased to do so.

Albert V. Geary.

New Bedford, Mass.

Abolish Your Trapnests

Read: You are wasting time, labor and expense with present trapnests. My system of individual recording renders them impractical, and I guarantee it to be 100 per cent efficient. You will soon be trapnesting; test my system, its efficiency has been verified at the Manitoba Agricultural College. It will cost you \$2.00, with no further expense.

WRITE FOR MOLTING SECRETS
PURINA MILLS - St. Louis, Mo.

NEW YORK STATE FAIR.

By P. K. WHITE.

To visit at New York State Fair reminds one of the Garden and Boston shows. Here you find most of the leading fanciers of the country, while it is true that a large number of them are not exhibitors, yet they find time to run down here and renew friendships for a day or two.

If memory serves me right, this seventy-sixth annual exhibition is not as large as in former years, yet I hear in every aisle that the quality is much better and in several classes stronger in numbers.

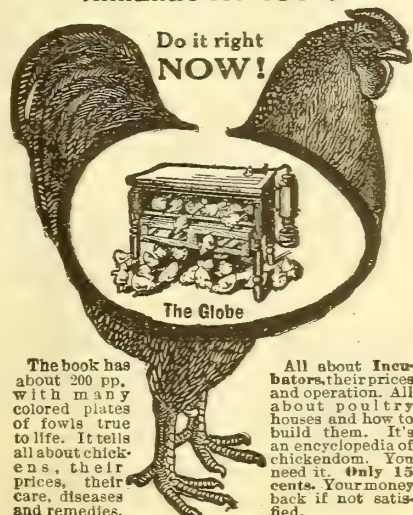

Advance notices gave the total entries at over 7,000, yet a very careful count shows that there were 2,709 single entries and 384 pens. This includes bantams, turkeys, ducks, geese, guineas and pheasants, making a total of 4,629. By adding the utility or "farm flocks" which are exhibited as a pen of nine females and one male, and the pigeons, of which there were 624, it gives a grand total of 5,703 birds entered.

Among the well known people who attended, yet did not exhibit, were Mr. and Mrs. D. W. Young, Mr. and Mrs. E. B. Thompson, Frank Platt, Chas. D. Cleveland, J. H. Drevensedt, "Jimmie" Glasgow, L. D. Howell, W. G. Minich, Geo. Weed, Irving Rice and a number of others whom I do not recall at this writing.

The honor for the largest number of birds entered goes to the S. C. Rhode Island Reds, of which there were a total of 149 birds; this includes the pens. Next is Buttercups, with 137. S. C. White Leghorns, 122; White Orpingtons, 119; R. C. Rhode Island Reds, 110; S. C. Anconas, 109; Silver Campines, 106; Buff Plymouth Rocks, 91; White Plymouth Rocks, 89, and White Wyandottes, 79. The fact of John S. Martin winning 1-2-3-4-5 cock bird in this last named class was the talk of the show, for the competition was very strong. The same is true with Fernbrook Farm, winning 1-2-3-4 pullet.

If one is to judge by what the old timers say, the "Silkies" had the best exhibit which has been seen in many days and in this connection it is only right that our readers be informed that W. B. Atherton, the well known Silkie breeder, of Randolph, Mass., had the

Shoemaker's Poultry Book and Almanac for 1916.

The book has about 200 pp. with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies.

All about Incubators, their prices and operation. All about poultry houses and how to build them. It's an encyclopedia of chickening. You need it. Only 15 cents. Your money back if not satisfied.

The price of the book is \$2.00 in cloth binding, or \$2.50 in leather binding, postpaid. Send your order to our book department.

We believe that the progressive development of every poultry interest could best be accomplished by making Standards for pure-bred poultry free and broadcasting the information to all who

are interested. Perhaps some day a majority of association members may see the light and view the matter in the same way, and then official information on pure breeds will be easier to get and a far greater number of people will become interested in more and better poultry.

Stocking a Market Poultry Plant.

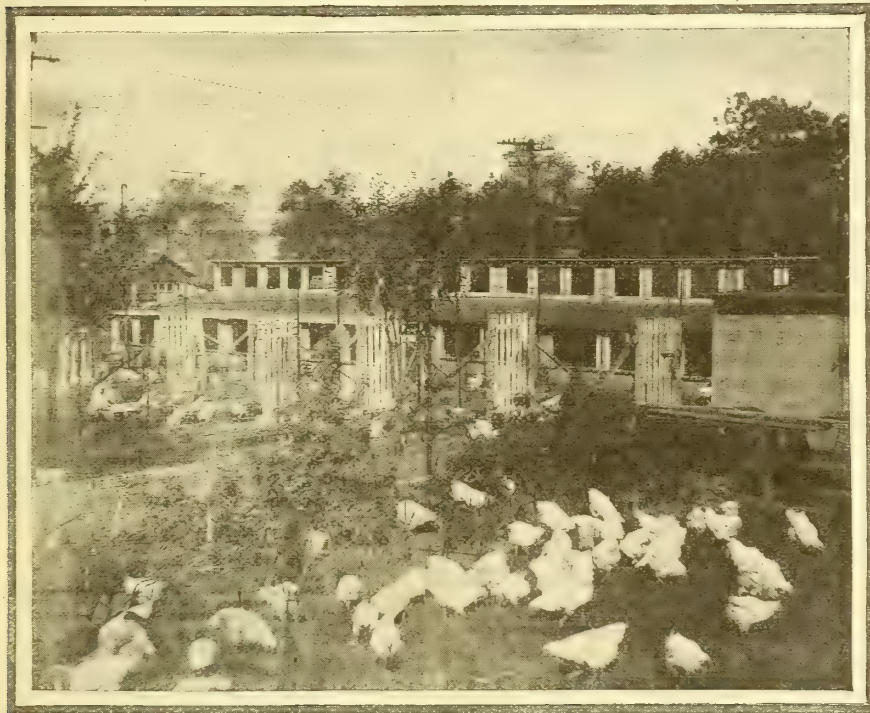

Q. I am going on a 20-acre fruit and chicken farm, north of Des Moines, and want to raise chickens for commercial purposes only. From reading poultry magazines I had about made up my mind to use White Leghorns, altho I have been raising Rhode Island Reds. I want a chicken that combines both good laying qualities and ability to round up into

shape rapidly for makert poultry. At present I do not care anything about the exhibition advantages of the fowls, altho I may later on.

Des Moines, Iowa.

T. L. H.

A. If you want just an egg farm—to produce white eggs—with broilers and fryers merely as a side line, you will probably find the Leghorns satisfactory. But if you intend to go in extensively for market poultry, the Leghorns will not suit you. The Reds make an excellent all round fowl, good producers of good sized, uniformly colored brown eggs and are easy to grow into good quality market chickens or fowls. Reds, however, do not as a rule take on fat or flesh as readily as some other breeds. In our experience with this very excel-

lent variety, we have found that the Red chicken appears to have a "single track" scheme of development, that is, it seems to put all its energies into developing one thing at a time; when it grows frame, it grows mostly frame, and when it is feathering, it goes at it in the same whole-souled way. It is a more difficult chicken to keep development at highest point in all particulars than some other breeds. Also, for a market plant an all white fowl possesses many advantages. We have found that the White Plymouth Rocks and White Wyandottes make first-class all round development all over at all ages, and are generally plump and marketable at any age if properly cared for. We believe that of these two the Rock puts on flesh more easily, altho the Wyandotte stands up remarkably well under heavy forced feeding and is less liable to leg weakness than the Rock. Both flesh with about equal rapidity, but the 'Dotte has a tendency to harden in flesh a little earlier than the Rock, which latter holds its soft meatedness almost as long as an Asiatic breed. So far as egg production goes, you cannot make a mistake in selecting any good strain of any of the leading popular breeds, we have found them all to be about equal as good producers of eggs. Even tho you are not at present interested in exhibition quality, you will find it advisable to make your start with good pure-bred stock. Uniformity counts large in the production of good quality market poultry.

Land for Colony Poultry Farm.

Q. How much land would we require to keep about 2,000 layers in open-front colony houses and to raise about 4,000 chickens every spring; also to raise green food for winter feeding?

Toronto, Canada.

J. J. P.

A. We should want a farm of at least 20 or 30 acres. It is a mistake to start on too small a farm. You want room enough to alternate crops and poultry and to keep two cows, a horse and some other live stock, if you intend to get your living off a farm. We think that a 30-acre place is plenty small enough.

For the colony houses and yards for laying stock, you will need not less than 5 acres and it will be better if you can use twice that area, alternating crops and poultry year after year to keep the land sweet. The same holds true of the range for growing chickens. If you can

divide up the farm into 5 acre fields and rotate crops and chickens you will get the best results all around.

Beginner's Questions.

Q. (1) What is natural color of White Plymouth Rock chicks when hatched?

A. (1) Generally smoky, but varies from a mixed slate color to canary yellow. The dark smoky chicks, if feet are yellow, usually make the whitest birds when grown.

Q. (2) I bought twelve Barred Rock chicks, two days old, all of which were black when received. They are quite big now and one of them is all white. What is the reason for this?

A. (2) It is not uncommon for white sports to result from light matings of Barred Rocks, your white chicken is a sport—a throwing back to white ancestor from which breed had origin. All baby Barred Rock chicks are black with light colored patches, which vary from slate to white and yellow.

Q. (3) I have a Rose Comb Rhode Island Red hen which was one year old this spring and her ear lobes are turning white. What is the cause of it?

A. (3) The ancestry of R. C. Reds is considerably mixed and it is not uncommon to have white appear in ear lobes of adult specimens.

Q. (4) Is slaked lime a good disinfectant to use on droppings boards?

A. (4) It is not. It sets free the ammonia in the droppings. Use either dry loam or ground gypsum (land plaster) as an absorbant on droppings boards.

Q. (5) How old should chickens be before they receive large sized grit?

A. (5) When they will weigh about 3 to 4 pounds each or heavier. Be guided by size and weight rather than age.

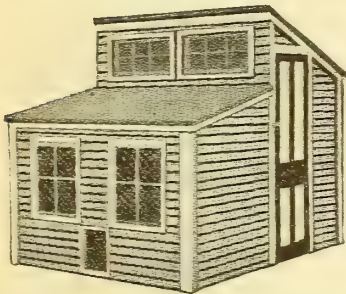

Q. (6) What is the Standard color of a Brown Leghorn's ear lobe?

A. (6) White or creamy white.

Q. (7) Could they be a different color?

A. (7) They frequently are, but off

color is a defect. More than one-third red to surface of ear lobe disqualifies in cockerels and pullets.

Q. (8) How many fowls would you advise a beginner to start with?

Lynn, Mass.

J. H. S.

A. (8) That depends on what you keep poultry for, the time you can give to them and the accommodations you have for them. For back yard flocks one or two dozen is plenty. Where you have the room, the time and the inclination, you may as well start with and learn to manage flocks of 100 or more as to start smaller. Successful handling of 100 or more in one flock is a very different matter from taking care of a dozen or fifteen birds in a back lot pen. In any case it all depends upon yourself and what you are keeping poultry for. Simply start with the size flock you intend to keep and learn to manage it for best results. Better select one breed only and stick to that. When you have learned to successfully manage the one flock of your original selection, it will be time enough to add more flocks of the same or similar size. If you intend to go into exhibition quality instead of just useful eggs and meat production, you will find it necessary to use small flock matings. For such a start a well mated pair or trio is frequently sufficient.

Information Wanted.

Q. I am thinking of going into the poultry raising business and as I have no experience in that line, I am looking for information. I desire to get in touch with some one or some firm that will give me instruction right from the start.

Martin, Tenn.

J. C.

A. All of the leading agricultural colleges now conduct short courses in poultry husbandry. If a correspondence course appeals to you, there are several correspondence schools in poultry husbandry that use our advertising columns. You will obtain a good deal of useful and practical information thru the poultry journals and various poultry books. But in the final accounting you will have to get out and do actual poultry work with the birds. Experience; practical, every day, working experience is necessary if you are to succeed.

Picking Up Layers.

Q. (1) I am now picking up a lot of pullets, White Leghorns, to use as layers. Is it possible, in a general way, to tell a good layer from a poor layer by any sort of physical examination? On either side of the vent is a sharp bone. As I understand it these are the pelvic bones and I have been told that where these are wide apart it denotes a heavy layer and where close together—a narrow opening—it indicates a poor layer. Is there anything in this? I don't want to carry any more "boarders" than I can help.

A. (1) No one "sign" alone is par-

ticularly trustworthy in picking the layers. The pelvic bone sign is of value chiefly as an aid in telling if the hen is actually laying, but does not indicate her ability as a layer. If the bones have flexibility and are well apart, the bird is usually in lay. It takes experience to select the layers, but it is difficult to tell just how it is done, altho some people become very skillful in making such selection. In general it may be said that the selection of a layer may be accomplished by sizing up all her good points as a group or collection of signs. She will be in good condition—good order—that is, healthy, fat, but not overfat; comb bright and clean; face, wattles and nose clean and in good color; eyes rather prominent, bright and clear and pupils equally dilated; plumage smooth and in good order; body plump and well filled out; abdomen firm and full but not too much bagged down; crop well filled and firm, not slack and watery,—in fact the usual indications of health, vigor and good condition. Medium comb and wattles for the variety preferred over coarseness of these points. Add to this elasticity and good separation of pelvic bones; activity of the bird and a disposition to be first off the roost in the morning and last on the roost at night and you will generally have a good layer—for almost any healthy, active, vigorous, normal hen will prove a good layer if properly fed and cared for.

Q. (2) I have some nice large pullets, hatched last February, and I would like to know if it would do to breed from these the coming season, say beginning in January? Or would it be wiser to procure yearling hens? I have no suitable breeding stock of my own except these pullets.

Strasburg, Va.

W. D. M.

A. (2) Select the best of them and breed them to good vigorous yearling males.

Feeding—Feeders—Weight of Chicks.

Q. (1) I have a small bare yard that has plenty of shade. I raise poultry as a hobby, but try to make them pay. My breed is White Wyandottes. I feed commercial scratch grain and a commercial mash with meat. Mash in hoppers all the time, but give a moist mash on cold days. They get all the charcoal, grit and shells that they will eat. Is this ration all right or should they get more meat and greens?

A. (1) Would supply all the greens they will clean up daily in summer and in winter would give sprouted oats and vegetables—one good feed a day. Do not know the proportion of meat in your mash, but with most commercial mashes it will do no harm to add 5 per cent more meat scrap.

Q. (2) Are automatic feeders all right for scratch grain?

A. (2) We like and use them.

Q. (3) I have 12 pullets about four

Keeler's Wh. Wyandottes

The Aristocrats of the White Wyandotte World

FIVE FIRSTS AT CHICAGO, 1916

YOU will be treating yourself right and serving your own best interests if, before buying White Wyandottes, you write me fully TELLING ME YOUR WANTS. I have by far the finest and largest lot that I ever reared, birds that will be THE WINNERS at America's best shows this Fall and Winter as their ancestors have been for the past twenty-one years.

The World's Greatest Strain. The strain that produces satisfactory results in filling the egg basket, laying as high as 265 eggs a year and the prize winning females are selected from among the layers. Their fine head points, wonderful size and shape, pure white stay-white plumage, broad backs and well spread tails combined with their wonderful laying ability, their power of reproduction and their habit of winning first prizes are the results of twenty-one years of careful, systematic, pedigreed line breeding. The result of my twenty-one years of experience I am offering you at remarkably low prices—quality of birds and breeding considered.

2000 BIRDS FOR SALE, 2000

Females \$5.00 to \$25.00. Males \$5.00 to \$35.00. A limited number, extra choice of the very best breeding, \$30.00 each. Breeding pens, \$20.00, \$25.00 and \$35.00. Show pens, \$50.00, \$75.00 and \$100. I have no cheap birds—nothing but the best, so please do not write me for any \$2.00 and \$3.00 birds.

If you wish to win I can help you. If you wish to breed winners I will mate the birds correctly to produce them. Buy your breeders early. Reserve your show birds NOW for the Fall and Winter shows. All stock shipped on 48 hours approval. New richly illustrated art catalog free for the asking. (5 red stamps appreciated.) SEND FOR IT NOW. It tells the story of my success and may help you to succeed. State wants definitely and address

Again prove their superiority. A sweeping victory at Ohio and Indiana State Fairs. Mediterranean special for best pullet in Ohio Show. Buy a \$10.00 cockerel now that would cost you \$20 to \$25 next December. Good breeders \$3 up, from a strain that does win and produce. JOHN L. BROWN, 1515 W. 14th St., Anderson, Ind.

White Wyandotte Farms

are selling large, stylish, broad backed and heavy boned cockerels at low prices.
OSCAR L. BOCK - - - Route No. 2 - - - COUNCIL BLUFFS, IOWA

months old and they average 2½ pounds each. Is that heavy enough?

A. (3) They should average from a pound to a pound and a half heavier at that age.

Q. (4) How many birds would a house 8x6 ft. hold?

A. (4) 12 to 15 fowls.

Q. (5) How many to a house 5x12 feet?

A. (5) 15 to 20 if an open-front house.

Q. (6) Do you approve of "O. K. poultry litter?"

A. (6) We have never used it. Those who use it report favorably.

Q. (7) Do you recommend trap-nests?

A. (7) Yes, see article in this issue.

Q. (8) I intend to use one male to eight females, is that all right?

A. (8) Yes.

Q. (9) How soon would you pen the twelve pullets?

A. (9) All pullets should be penned or housed this month.

Q. (10) At what age will White Wyandotte pullets lay?

Wilmington, Del. H. D. P.

A. (10) At seven months if conditions are favorable.

Fish Tail Combs—Mating Young.

Q. (1) I have two Buff Leghorn cockerels, both very good birds, except that the blades of combs are forked like a fish tail. The combs are otherwise good, large, well shaped and with good points. Would you breed them?

A. (1) Comb defects are difficult to eradicate. Would prefer to secure males without such defects. It is difficult enough to get good combs and is unwise to breed specimens having decidedly defective ones.

Q. (2) I also have some good pullets of April hatch. Would it be advisable to mate them with cockerels of same age? They are unrelated.

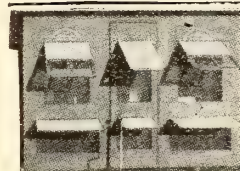

A. (2) We would prefer to secure a good yearling male of same strain as pullets, out of same sire if possible, and mate him to the pullets. If the pullets have a good sire and he is available, mate them back to him, providing the birds are all healthy and do not possess the same or similar defects.

Q. (3) Have a 4-year-old cock apparently in good condition. He is an exceptionally good one and I would like to use him the coming season. How many pullets would you mate with him? Okeene, Okla. C. H. H.

A. (3) From four to six of your best ones; pullets of his own line if you have them.

Broilers and Fryers.

Q. (1) This winter I am going to make a specialty of broilers and fryers. Can you tell me what kind to hatch and grow for best results? I want just one kind and prefer the white varieties of

"GOLDEN ROD" Buff Orpingtons

all ready for the early fairs. January cockerels weighing 6 lbs., pullets 5 lbs. With color and type to burn. R. M. Seward, R. 15, Lewistown, Ill.

Wyandottes, Orpingtons or Plymouth Rocks.

A. (1) Any one of the three named should give satisfaction.

Q. (2) Is it true that it is difficult to get Wyandottes to hatch well?

A. (2) It is true of some strains, but not of all. Think the fault is chiefly due to using breeding stock that is not well matured and in not paying sufficient attention to health and vigor.

Q. (3) In the same length of time will the Wyandottes weigh as heavy as the Orpingtons?

Doulestown, Ohio. S. C. H.

A. (3) For broilers, fryers and small roasters, yes, if properly fed and cared for. For large roasters, no.

Miscellaneous Questions.

Q. (1) At what age should young chicks be taught to roost?

A. (1) When they are ready, which is usually when well feathered, or between two and three months old.

Q. (2) At what age can I begin to feed young chicks the ration used for breeders?

A. (2) When from six weeks to two months old.

Q. (3) How long does it take to hatch Pheasant eggs?

A. (3) 24 days.

Q. (4) Are the English Ringneck Pheasants good sitters and mothers?

A. (4) Probably as good as any if permitted to select their own nest in a secluded covert. A Cochon Bantam hen usually makes the best mother for hatching and rearing Pheasants. Silkies are also very good for this purpose.

Q. (5) I am planning to have a Pheasant preserve and to fence in about five acres of woodland and let my birds run wild. In winter I expect to shelter them with small straw and brush houses. I intend to let them hatch and rear their own young. What breed of Pheasants would you advise?

A. (5) We don't know, but believe that the common English Ringneck would give you as good results as any under such conditions.

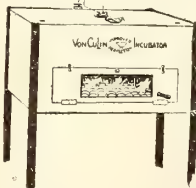

Q. (6) Can you give me description of a simple goose house to house about ten African geese?

Summit, N. J. J. G. W.

A. (6) All you require is an open-front house with enough overhang in front to keep out the worst of driving storms. It should be placed in a dry location so that floor can be kept dry. An inexpensive open-front building about 6x10 should be ample.

Hens for Egg Production.

Q. (1) What is the cheapest way in getting hens for egg production only, year by year.—(a) By buying pullets? (b) Buying year old hens? (c) Buying day-old chicks? (d) Buying hatching eggs? Of course, with eggs we have to

THE QUAKER OATS CO. CHICAGO, U.S.A.

figure a lot of things into cost of incubation or with chicks for brooders and brooding; while with purchase of pullets each year the only equipment needed is the laying quarters. What I want to know is the cheapest way to get the layers.

A. (1) That is a pretty tall order. A great deal depends upon your location and facilities for buying good stock. In some localities it is cheaper to buy well developed pullets in the fall than it is to raise them. In others, it is less expensive to "farm out" your hatching eggs and buy back the pullets in the fall. If you are particular about the variety you keep, you may find it difficult to get a supply of layers of desired sort and probably the most dependable method would be to buy and rear baby chicks, if you do not wish to go to the trouble and expense of doing your own hatching. We often find it desirable to have a hatchery incubate our early eggs for us.

Q. (2) I want a good laying strain from a reliable breeder and would like to know what it will cost to buy say 250 layers each year.

A. (2) If you want them of a certain breeder, the best way would be to get his prices and, when you agree on terms, to make a contract with him to supply your needs. Good pullets are worth not less than 25 cents a pound live weight in the fall and frequently bring higher prices. If you go to a specialty breeder for your layers you will probably have to pay about \$3 each for them.

Q. (3) Take White Leghorns and Rhode Island Reds, which is the best to keep for egg production, figuring also what they will bring when sold to market? Here the heavy breed will sell at from two to three cents more per pound than Leghorns.

Hayward, Cal.

G. P.

A. (3) That is a matter which depends somewhat on your location and climate. Under favorable conditions both breeds are equally good as layers. With a warm climate the Leghorns would probably average better in yield. You could run the Leghorns thru three laying seasons with profit, while two laying seasons would be about the limit with the Reds for best results. In marketing, there would be much less depreciation on the Reds than on the Leghorns,—at least we find it so. Leghorn pullets here cost about the same in the fall as Reds, usually from 25 to 30 cents per pound alive. Leghorns as pullets run from three to four pounds and average to cost about 90 cents each. The Reds will go about 5 pounds each and average to cost about \$1.25 each. When ready to be "scrapped,"—sold to make room for new layers,—the Leghorns bring about 50 cents each on an average, selling at from 14 to 16 cents a pound alive; while the Reds have always brought us from 20 to 25 cents a pound alive as fowl and bring us in from \$1.20 to \$1.50 each.

LAKEWOOD FARM, HOLLAND, MICHIGAN

OUT OF THE EAST

BY P. K. WHITE

Space in American Poultry Journal is based on the quality and quantity of circulation. The price may seem high as compared with other poultry publications, but those two words, **QUALITY** and **QUANTITY**, make it worth it. Our army of readers are buyers; they want advertised fowls, appliances, etc. They have been taught that the best things are advertised. If you appeal to them right, you will get their inquiries; if you give their inquiry prompt and careful attention you will get their business and when you do, give them full value for their money, or you will find the first order will be the last one. Advertising space properly used, as an investment that yields dividends. This has been proven.

D. J. White, of Wilkesburg, Pa., intends in the very near future to move to a larger place, as his business has outgrown his present home.

Just before going to Cleveland, Mr. Bell and I returned from a fishing trip and I only wish that Wisconsin laws were such that I could have sent all my friends a box of fish. We were at a lake about fifty miles from Duluth, where it was 98 in the shade, every day for two weeks. While there we had the pleasure of witnessing a band of forty Indians give some real Indian dances. They were Chippewas, headed by Chief Cloud, and their dances were in full raiment, paint, beads, feathers and all. It is a sight one seldom can see and very interesting. Had a long talk with the Chief and found that he is a breeder of Barred Rocks.

It pays to advertise. In July issue I mentioned the fact that J. W. Bowman, owner of Rock Ledge Farm, Southboro, Mass., was a bachelor. Just in receipt of a letter from his manager, Mr. Walker, informing me that congratulations are in order. Some writer once said that the sweetest thing in life was a couple who, after fifty years of wedded life, were still sweethearts. Well, J. W., those are my wishes to you and Mrs. Bowman — "May you always be sweethearts." Your turn next, Brother Fay.

Fools look at the present, wise men look ahead. Plan your winter advertising campaign now.

Back where I was raised there was a young Irish chap who had a good expression which he always used whenever everything went just right. This expression was, "some system." This expression, I feel sure, will

prevail after the coming election of the officers of the National S. C. White Leghorn Club, for the fact that numerous friends of that grand old chap, Mr. Chas. J. Fisk, have prevailed upon him to allow his name to be placed before the members as their future president. Mr. Fisk, as owner of Wilburtha Farm, is known wherever good birds are bred. As to Mr. Fisk himself, to know him is to like him, and there is no question but what his election will mean a big boost for S. C. White Leghorns. Bear in mind that he has the time to give it real attention, for he is first, last and all the time a breeder, while the other candidates have numerous interests to take up their time.

From what I have seen and heard, the honor for the most costly poultry houses rests with Mr. Urban, of Urban Farms, Buffalo, N. Y.

yard covering a space eight feet deep and thirty-nine feet wide, a large number of the R. C. White Leghorn winners of the country are raised. Mr. Back Lot Man get busy and do what A. F. Almendinger of Buffalo did.

For a simple home-made drinking fountain whereby the fowls are always assured of fresh water, my hat is off to Mr. Studd, manager of Long & Bisby Farm, Hamilton, Ont.

While in Hamilton, Ont., I had the pleasure of visiting the following farms: Herbert Hall, M. J. Duffy and Robt. Christie.

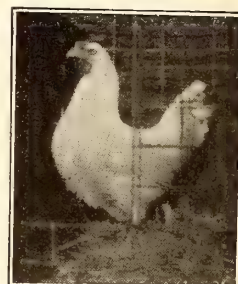

E. B. Peck, of Batavia, N. Y., has made a 300-chick brooder, heated by gas. It is made of the best cast and galvanized iron and costs complete about two dollars.

Buffalo Boy V, first cockerel at Greater Buffalo Show, 1914.

Betty IV, first hen at Greater Buffalo Show, 1914.

Betty V, first hen at Greater Buffalo Show, 1915.

Rose Comb White Leghorns as bred by A. F. Almendinger, 180 E. Delavan Ave., Buffalo, N. Y.

falo, N. Y. All of his houses are made with three thickness of lumber and sandwiched within is a strip of wire fencing. The doors are also three-ply, with sheet iron sandwiched in, and are locked on the same principle as a safe door. This, together with the fact that the windows are covered with iron bars, set in timbers 6x6, makes his houses as near thief proof as it is possible to build them.

Houck & Alt, of Buffalo, hatch the majority of their stock in the states and then put them on Mr. Houck's farm in Canada to mature. The only breeders we know of who have plants in two different countries.

If you doubt that one can be successful raising poultry on a city lot, here is where you change your mind. The gentleman in question has a beautiful home, in the heart of the best residence section. In the back

So far in my travels the record for large S. C. White Leghorns is held undisputed by F. A. House, manager of Eagle Bay Farm, Silver Creek, N. Y.

If you like baseball you should have witnessed the game between the ladies and gentlemen held the last day of the convention at Sheppards Ancona Farm.

No matter how good anything may be, it can always be improved on. Our capon friend at Toronto, Ont., S. K. Burdin, has recently acquired a number of patents on the improvements he has made in his caponizing instruments.

One of life's mysteries: "The Country Gentleman." I thought all country men were gentlemen.

Make the Greatest Win in History at the Iowa and Nebraska State Fairs

The Big Iowa State Fair of 1916 brought out 2,600 of the best fowls of Illinois, Indiana, Ohio, Missouri, Nebraska and Iowa. In the best of competition our birds won 39 first prizes, including five out of six firsts on White Orpingtons, 2 firsts and 2 seconds from four classes in Buff Orpingtons, and four first prizes on Reds. Our 1st White Orpington pullet was the silver trophy champion female of the whole English class.

At Nebraska State Fair, with 3,162 fowls actually on exhibit and in competition, our winning record was even better than at Iowa. We made practically a clean sweep on Buff and White Orpingtons, White Wyandottes and S. C. Rhode Island Reds. Our record on White Holland and Bronze turkeys at both fairs was never equalled. Our first and second prize hens in White Leghorns were the wonder of the show room. Free catalog and special fall price sent on request. Hundreds of birds for sale at reasonable prices. Every fowl guaranteed to please, or no sale.

THE 1733 RANCH, Russell F. Palmer, Manager

R. R. 6, Box 2, KEARNEY, NEBRASKA

Yes, It Took Over 26 Years of Careful Selection, Trapnesting and Pedigreeing to Produce

PARKS' STRAIN OF BRED-TO-LAY AND DO-LAY BARRED PLYMOUTH ROCKS

The records they have made at home, the reports from customers in nearly all parts of the world, together with the Official Laying Contest Records show that it was years of breeding well spent. They have sworn continuous laying records up to 148 eggs, 365 day records up to 290 eggs. Flock averages up to 243 eggs. In addition to having been among the winners in nearly all the American laying contests. They outlayed every other breed entered (the famous English strains included) and made the best winter month record in the last Missouri laying contest. They lead the entire 100 pens in the present Missouri contest by 31 eggs. And we know those 100 pens represent the cream of the best laying flocks of United States, Canada and England.

COCKERELS AND FOUNDATION STOCK

We have some choice pedigreed birds with the above breeding for foundation stock, and a nice selection of Cockerels, that stamp the lay on their offspring.

Mrs. Ida Kinyon, Deep River, Ia., writes: "I am getting the benefit of those roosters. I never got so many eggs in all my life. We simply trade eggs for everything, even to hog tight wire fencing."

Cockerels and Foundation Stock Circular Free. Large 40-page catalog a dime. J. W. PARKS, Box J, ALTOONA, PA.

It would be a pitiful waste

if you had a winner and your lack of self-confidence or your too great belief in the "big fellows" infallibility prevented you from exhibiting at

The Palace Show

You owe it to yourself not to take that risk. We emphasize the fact that we have made many a man in the trade and we urge you to see what we can do for you. If you win a prize—well, we don't have to tell you what that means, but we do wish to point out that in any case we can be the means of introducing you to new men and new methods.

New York City

gives precedence to a show that already has prestige over every other show in the country. You reap the benefit of this double advantage. From

DECEMBER 5-9

you can make every minute worth while, both from the business and the scientific point of view. The chance is too good to miss. Act quickly.

Entries Close November 20th

Come now, it will be a whole year before you have another opportunity.

EMPIRE POULTRY ASSOCIATION

Robert Seaman, Pres. MINEOLA, N. Y. L. D. Howell, Sec'y

Indianapolis Breeders of Poultry and Pet Stock Association

Will hold their second annual show December 4-9, 1916 at Indianapolis.
Competition open to the world; premium list ready November 1, 1916

G. C. OTT, Secretary 1106 Linden St., Indianapolis

PROGRESSIVE INCUBATOR CO., BOX 135 RACINE, WIS.

SURE MONEY For Dealers and Farmer Agents

With the New Improved

EUREKA COLONY BROODER

The Best Brooder Stove Proposition on the Market

This wonderful brooder raises the chicks instead of smothering them. It is absolutely gas proof, can be operated at a cost of only five cents per day, and being self-regulating needs attention only once every 24 or 48 hours (dependent on the weather.)

The price for 500 capacity, is but \$12.00; for 1000, \$15.00. This is the only colony brooder on the market selling at anything near the price. You can make real money selling this brooder—its quality, construction, automatic features and general efficiency impress on sight. Experience is not needed. Send at once and get the rights for your territory. We make the Eureka right and we treat our agents right.

Price is low—discount liberal.

JAMES R. WOTHERSPOON
240 N. Front St. Philadelphia, Pa.

2nd Prize Pullet Bred Cockerel, Palace Show, 1915

LATHAM'S BEAUTY AND UTILITY Barred Plymouth Rks.

Choice breeding females selected from my matings of this year at very low prices.

Let Me Supply You Winners
for the shows this fall and winter. I have them. Write me what you want.

C. H. Latham, Box 145, Lancaster, Mass.

Satisfaction Strain BUFF ORPINGTONS

My birds this year are simply magnificent. I have never produced so many birds of superb coloring, massive size and correct type. Cannot find words to express my confidence to please the most exacting buyers of Buff Orpingtons for exhibition, breeding and utility, this season. To back this up I offer to pay the express on any stock that is returned as unsatisfactory and will ship C. O. D. if you wish. And don't forget. Satisfaction Strain Buff Orpingtons have been on the firing line for 10 long years and not a dissatisfied customer yet. Catalog free. "The farm with no dissatisfied customers."

F. A. KAUP BUFF ORPINGTON FARM - Box 101 - GLEN ELLYN, ILLINOIS

World's Best S. C. Blk. Minorcas

Canadian National Exhibition, Toronto, and Western Fair, London, are Canada's two greatest fall shows. I won at Toronto September, 1916, 3rd Cock, 1-2-3-4 Hen, 1-2-3-4 Cockerel, 1-2-3-4 Pullet, 1st Pen. At London every 1st, 2nd and 3rd. My cock birds were in full moult. All my winners for sale at reasonable prices. Please send for sale list.

T. A. FAULDS - LONDON, ONTARIO, CANADA

The Morris White Orpingtons

They are repeating their remarkable winnings at the last Madison Square Garden Show, where they won 1st Cock, 1st and 4th Hen, 1st and 4th Pullet, 2nd Cockerel and 2nd Breeding Pen, by winning for us at the New York State Fair at Syracuse, September 12, 1st Cock, 1st Cockerel, 1st and 2nd Hen, 2nd Pullet and 2nd Breeding Pen. In every show where our White Orpingtons have competed, they have made for us this kind of a "clean-up" winning. We have on our farm 300 grand Cockerels and Pullets that are very classy. They have the real Orpington type, heavy bone and are white. Write us your wants. We can please you at reasonable prices.

THE MORRIS POULTRY FARM - LEBANON, OHIO

Rhode Island Reds, Both Combs

At the Industrial Exposition and Fair, September 2-9, 1916, Cleveland, Ohio, I won on Single Comb Reds, 4 first and 4 second prizes. At Lorain Co. Fair, Elyria, O., won every first and second prize on both varieties. This in connection with my winnings at the last two big Cleveland Winter Shows, surely will convince you my Reds are as good as the best. If you want quality, write me.

After a Year's Test

Under every day conditions this impartial authority wrote this letter. Read it. Your experience with Carbola will be the same. You can rid your poultry house of lice and mites—you know how important that is to the welfare of your flock—and at the same time, at no extra cost for labor or material, paint them a snow-white by using

CARBOLA

The Disinfecting White Paint

a mineral paint combined with a germicide 20 times stronger than carbolic acid, but neither caustic nor poisonous. Comes in powder form ready to use when-ever convenient. Just mix with cold water and put on either with brush or sprayer. Will not blister, flake or peel. Will not spoil by standing.

Use It Instead of Whitewash

in poultry house, cow-barn, hog-pen, creamery, cellar and out-building to prevent the germs of all infectious disease from getting a foot-hold in flock or herd. Get some today from your dealer and have it handy.
10 lbs. (10 gals.) \$1 and postage. 20 lbs. (20 gals.) \$2 delivered.
50 lbs. (50 gals.) \$4 delivered.

Trial package (covers 250 sq. ft.) and booklet for 25 cents postpaid. Write us to-day if your dealer won't supply you.

Break High Cost of Grain Feed

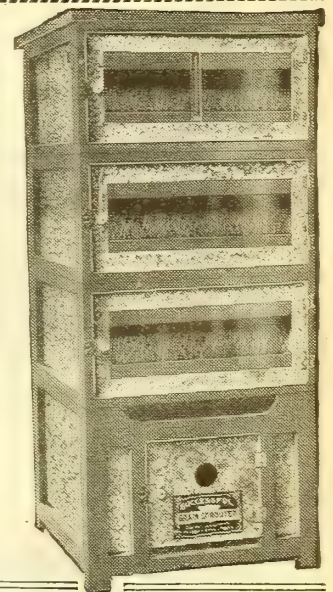

Feed Sprouted Oats

Easily—quickly—cleanly—econom-ically produced in "Successful" Sectional Metal Grain Sprouter. Get greater fertility in winter laid eggs—earlier chicks. Make three bushels of tempting egg-making feed from one bushel of oats, wheat or rye—increases the egg yield at least 50 per cent and at same time save one-third feeding cost. Write for catalog and 1917 offer we make on the

"SUCCESSFUL" SECTIONAL GRAIN SPROUTER

Made with double steel walls—metal trays—nothing in it to warp, shrink, swell or mold the food. Fireproof. Lasts a life-time. Large glass doors. Made in sections so you can add more sections as your needs grow. There's a size for your needs whether you keep 50 or 600 hens. Thousands of poultry raisers say they would not be without this wonderful food maker. The newest, most reliable construction ever made in a grain sprouter. Not only turns idle hens into industrious layers but supplies feed for growing chicks—protects health—prevents chick loss. Booklet free—"How to Raise 48 Out of 50 Chicks," 10 cents.

EGGS A SPECIALTY

8 Harrison Street

New York, N. Y.

We desire to receive shipments direct from actual poultry plants or farms that are in position to ship in single case lots or more of their own production.

Strictly Henhery White, Brown or Mixed colored eggs are considerably higher than usual and will go higher as the season advances. We predict 65 cents or better on Henhery White Eggs within the next three months and 50 cents or better on Henhery Brown or Mixed.

Write us, if interested, for shipping tags, market prices or any other information desired. We refer you to Irving National Bank, Fidelity Trust Co., Commercial Agencies and Prominent Poultry Plants by request.

Red Feather Farm

ALL EGGS (above utility) from our *Champion Sensation* and *Red Prince* strains of R. and S. C. REDS HALF PRICE after May 15th. See our ads in R. I. Red Journal, R. P. J., American Poultry World and Farm-Poultry.

F. W. C. ALMY Box 100 TIVERTON 4 CORNERS, R. I.

DIAMOND CORN GLUTEN MEAL

Insure Your Winter Egg Yield

AS Henry N. Prouty used to say: What you get out of a hen in the Winter depends on what you put in, in the Fall.

Protein is always necessary—and Diamond Corn Gluten Meal is the most economical and concentrated form of corn protein on the market.

The proportion of protein required varies—for a Fall feeding the following dry mash formula has been used by many successful poultrymen:—

100 lbs. Wheat Bran
100 lbs. Wheat Middlings
100 lbs. Diamond Corn Gluten Meal
50 lbs. Corn Meal
50 lbs. High Grade Beef Scraps
25 lbs. Linseed Meal

If you cannot get Diamond Corn Gluten Meal from your dealer, write us direct.

GREATER CHICAGO SHOW.

Prospects at present are that the Greater Chicago Show to be held at Chicago, January 10-16, 1917, will be bigger and better than ever. So far four national meets have been awarded to this show, viz., The National S. C. White Leghorn Club, The International Partridge Plymouth Rock Club, The National Partridge Wyandotte Club and the American Bronze Turkey Club. Judges Chapman and Johnston have been engaged to judge the White Leghorns. This places a well known Eastern and Western Leghorn judge on this class. Mr. H. B. Hark, the well known breeder of Partridge Wyandottes, will judge the Partridge Rocks. He has judged this class at some of the largest shows in the country and his work has always been satisfactory. Mr. A. C. Smith of St. Paul, Minn., will judge the Partridge Wyandotte classes. Mr. Smith is well known to the breeders of this variety and a large entry is expected. Mr. Lewis, of Ohio, who has judged the Bronze Turkey meet before with entire satisfaction, has been engaged at the request of the club. Other well known judges engaged are: Frank L. Platt, Dr. Clarke, W. E. Stanfield, W. Struble, Wm. Wise, Jos. Dagle, Chas. McClave, Newton Cosh and J. A. Leland. In order that you may get one of the first premium lists off the press send your name and address to D. E. Hale, Sec'y, Room 930 Monon Bldg., 440 South Dearborn St., Chicago, Ill.

BIG SHOW AT KANSAS CITY, MO.

The great Convention Hall in Kansas City, Missouri, will be a busy place during the second week in January. The Implement show, with free admission, will be held on the first floor. The Kansas City Poultry Show on the second floor, the light and ventilation being best on the second floor. In connection with the poultry show, the Kansas City Pigeon Club and the Mid-West Pet Stock Association will hold their annual shows. A fine collection of wild birds and animals from the Kansas City zoo will be on display. Exhibitors who want their birds seen by a large number of interested visitors should remember the Kansas City Show. Premium lists of the poultry shown can be secured by writing E. L. Noyes, 726 Main St., Kansas City, Mo.

Mrs. J. Wolf Box 40 Merrifield, N. D.

LITTLE ROCK BIG POULTRY SHOW.

Arkansas' largest poultry show of the year will be held at Little Rock, week of October 16 to 21 inclusive. The Little Rock Poultry Association has joined with the Pulaski County Fair and will hold their sixth annual poultry show at that time. Large cash premiums, all guaranteed by the Board of Commerce, will be paid on Friday, October 20th, and exhibitors not present will receive a check for their winnings. Hon. T. E. Quisenberry will place the awards by the comparison system. The management feels that no further guarantee as to the honesty of the awards is needed, as the name Quisenberry stands for a square deal to large and small exhibitors alike. Entry fee 25 cents for singles, \$1.00 for pens. The premium list is now out and if you have not received one send a postal card to James V. Johnson, 820 State Bank Bldg., Little Rock, Ark., and he will send you one by return mail.

THE DAYTON SHOW.

The fanciers of Dayton, Ohio, in charge of the poultry exhibition are figuring on giving cash specials second to no other show in the country. A magnificent new building will house the show this year and the ventilating and lighting problems of former years will be easily managed. Remember Dayton held the largest American Poultry Association meet ever held in Ohio last year. They have Empire cages and allow three standard holes to every pen and large apartments to Minorca males. Altho not pushing for silver cups, a long list has been offered to date. A marked catalog is printed during the show, thus advertising the exhibitor at no charge to him. Remember the great try-out show will be held November 28, 29, 30, December 1, 2, 3, and that all judges will remain over Thanksgiving Day to explain their decisions. Names are being filed now for the big premium list, which can be obtained for the asking by writing the secretary, C. D. Forney, Dayton, Ohio.

As a result of the recent election of the American Single Comb Brown Leghorn Club, the following officers will serve their club for a period of one year, beginning with September 1: H. V. Tormohlen, Portland, Ind., president; Edward E. Orr, Brantford, Ontario, Northern vice-president; Rev. D. T. Brown, Mansfield, La., Southern vice-president; E. H. Rosenkranz, Colfax, Wash., Western vice-president; Fred H. Cook, Beaver, Pa., Eastern vice-president; G. L. Hornbrook, Decatur, Ill., Central vice-president; Mrs. Alice Smith, Pequanock, N. J., election commissioner; Noel M. Hall, Harrisonville, Mo., secretary-treasurer.

MRS. HATTIE D. REED
Chestnut Terrace :: Marcellus, N. Y.

The fifth annual show of the Cleveland Poultry Breeders' Association will be held January 8-13, 1917, at Cleveland, Ohio. The show will be held in Central Armory, within three minutes walk of the Public Square. Judges will be Platt, Gault, Stream, Tormohlen and Johnson. For further information write the secretary, J. O. Somers, Bedford, Ohio.

The third annual exhibition of the Oil City Poultry Association will be held at Oil City, Pa., January 24-27, 1917. Chas. McClave, judge. This will be a score card show. For full particulars address the secretary, Chas. R. Baker, Oil City, Pa.

Proviso' Poultry Fanciers' Association of Maywood, Ill., has engaged the services of Judge Waterman to assist Judge Hale in placing the awards on poultry at their big show to be held December 21-26, 1916, at Forest Park, Ill. Don't fail to write the secretary, R. C. Jamieson, 1019 N. 5th Ave., Maywood, Ill., for full particulars.

The 1916 Year Book of The American Light Brahma Club is now ready for distribution. This book is full of valuable information and should be in the hands of every one interested in this grand old breed. The membership fee to this club is only \$1.00. Write the secretary, Harvey C. Wood, Bound Brook, N. J., for full particulars.

Closing Out Sale

Owing to circumstances over which we have no control, we are compelled to sell our entire stock of Single Comb White Leghorns; also our poultry plant, including our home, poultry houses, brood coops and all equipment. The dwelling house contains 12 rooms, bath, hot and cold water, hot-air furnace, gas and electricity.

The stock consists of about

700 S. C. White Leghorns

300 pullets, 400 hens, one and two years old, and about 50 cocks and cockerels. Prices ranging from \$1.00 to \$10.00, or will sell the entire flock to one purchaser for \$1.00 a piece. **Must sell quick. This is a real bargain.** Write today to

I want to show you how to make Money with Poultry
T. E. Quisenberry

What Others Say.

I can now save enough on feeds to pay for the entire course. **F. M. HILL,** LaGrange, Ill.

I would not take the price of the whole course for the lessons on breeding and mating. **F. L. NOBLE,** American Fork, Utah.

I could have saved about \$400 had I taken your course before I started. **FRANK SAWYER,** North Woburn, Mass.

The knowledge I have gained from the disease lesson is worth the price of the course. **GEORGE W. MORRIS,** Russellville, Ky.

I have been in the building business for 30 years but your instruction is the best I have ever saw. **E. M. WIGGIN,** Kansas City, Kan.

Your lesson on baby chicks is just what we have been looking for. Last year we lost 650 chicks out of 1600. This year we lost 65 out of 1600. This is the result of just one of your lessons. **GEO. M. JONES,** Escondido, Calif.

It is my earnest desire to put a real—useful—practical poultry education before every man and woman who is interested in poultry raising. I want to see more and better poultry raised—I want to see more people making money with chickens—I want to eliminate the losses and disappointments that so many poultrymen experience—I want to help you solve your poultry problems—and I can do it.

A Complete Poultry Education

I have made it possible for you to obtain right in your own home, during spare time, a complete—thorough—and practical a knowledge of poultry husbandry such as you could get nowhere else except at an agricultural college.

In a course of lessons taught by mail, I have completely covered the science of poultry husbandry and made it so plain and simple that anybody can understand it. I give you knowledge it has taken me a lifetime to acquire.

I show you how I make hens pay a big profit each year. I show you how I got 2,364 eggs from ten hens in a year. I show you how to feed for a big egg and meat production, how to select a site for your poultry plant and how to build your houses (right here I save you many times the price of the course)—how to get winter eggs and spring broilers—how to incubate and raise baby chicks—how to mate and breed—how to avoid and treat poultry diseases—how to show and win at poultry shows—how to dress and market poultry for the biggest profits. In other words there is no phase of poultry culture that you are not taught thoroughly. Hundreds of our students tell us that each lesson is worth the price of the whole course.

You cannot afford to be without these lessons. They pay for themselves many times each season in increased egg yield—in preventing losses from disease—in knowledge. The broadest guarantee it is possible to write covers this course. If you are not satisfied you do not pay.

Get Our Free Book Today

Our Free Book "Dollars and Sense in the Poultry Business," fully explains how we can help you to make more money and save money raising chickens. It explains in detail just what our lessons teach you and what they can do for you. Just fill in and mail the attached coupon or send your name and address on a post card, no letter necessary, and a copy will be sent you by return mail.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **six cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win at the Imperial Show
of all the World

Madison Square Garden
New York

January, 1916—Competition Open to the World

The following matchless record: All the Ribbons and Prizes offered on Cocks, Cockerels, Pullets and Exhibition Pens, viz:

Cocks	1st, 2nd, 3rd, 4th and 5th
Cockerels	1st, 2nd, 3rd, 4th and 5th
Pullets	1st, 2nd, 3rd, 4th and 5th
Exhibition Pens,	1st, 2nd, 3rd, 4th and 5th

Sweepstakes Champion Male and Female. Shape and Color Specials—Male and Female. All Silver Cups and cash Specials. More First, Regular and Special Prizes than any exhibitor of any breed. This is the Capstone to their unexampled record at New York for 28 years.

My exhibit of **100** birds of supreme quality is an achievement unknown in the entries of Poultry Shows—unequaled in the annals of Barred Rock history.

Grand Winning Show Birds

The finest that all America has ever produced—are now on my farm ready to win Blue Ribbons and Silver Cups for you in any competition in the World in Cocks, Cockerels, Hens, Pullets and Pens. They are elegant in size and shape, fine heads, rich, clear blue color, with that sharp, clean cut, straight, narrow "Ringlet" barring to the skin that wins under all Judges. The prices are reasonable.

Winners of every first prize offered at Madison Square Garden, New York, February, 1915—first cock, first cockerel, first pullet, first hen and first pen cockerel.

Prizes and Silver Cups have been won by my customers on Imperial "Ringlets" in more than a thousand show rooms throughout the civilized World—You can win the same laurels. I will sell you grand exhibition birds for any show, and breeders of this richest First Prize New York blood in elegant single birds, trios and pens, mated to produce prize winners.

If you want the best in Barred Rocks you must have my Imperial "Ringlets."
My customers are my first thought and nothing is too good for them.

Elegant Catalog Upon Request.

EGGS from the finest exhibition matings in the World,
\$10.00 per setting; four settings, \$35.00; one hundred eggs, \$60.00—One-half these prices until December 1st.

AMERICAN POULTRY JOURNAL

Ducks Thrive on Red Comb

"Eleven months' egg record from ten ducks fed only on Red Comb Feed shows 1952 eggs"

"MY record for ten Indian Runner Ducks, fed exclusively on Red Comb Meat Mash and having no run whatever and receiving no green feed except that contained in the Meat Mash, was 1952 eggs for eleven months. Counting up my record for this month (April) I find I have received 763 eggs from thirty-one ducks."—Homer Edner of Du Bois, Pa.

Mr. Edner's letter is a good endorsement of our strong assertion, "There is a Red Comb Feed for every poultry use."

Red Comb Feeds are used all over our country by successful poultry raisers for ducks, turkeys and chickens. Red Comb brings health, strength and vigor. It makes the flock just what you want it to be—a flock of steady, natural layers.

Red Comb Meat Mash

the great egg maker, is made of oat-meal, oil-meal, corn-meal, meat scrap, wheat bran, wheat middlings, alfalfa-meal, and *not over 5% shell and 1% charcoal*. These ingredients are the best earth can produce. And are balanced perfectly by experts.

The Feed You Give Determines Your Success

Feed rations decide the poultry success of every poultry raiser. The feed you give your flock either makes constitutional vigor, making the fowl a steady

layer, or its poor quality lessens the vitality of the bird and poultry profits for you. This point is easily seen as you know the value of proper feeding in every walk of life. Make your flock pay you a bigger profit. Start feeding Red Comb Feed today. See your feed-man—insist on Red Comb.

"Feeding Poultry for Profit"

Our famous poultry book gives the poultry experiences and advice of six great poultry experts. It's FREE. Write for a copy now while the thought is in your mind.

Hales & Edwards Co.

Don't Argue Why a Black Hen Lays a White Egg! **GET THE EGG!**

During the molting season and
in the Winter, when eggs are
scarcest, is the time to

Increase Your Egg Production 100%

George G. Newell is the author of a well written,
handsomely illustrated, finely printed Book entitled

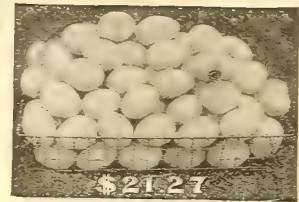

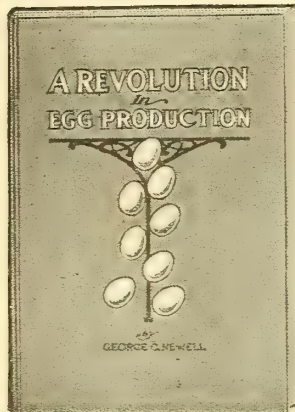

A Revolution in Egg Production

which explains how he doubled his egg production. Not theory,
but hard facts. This book is not a collection of rehearsed facts
which all practical poultrymen know and beginners can read
in any poultry book or journal, but presents and proves an
entirely new system which has never before been used, to our
knowledge.

Now is the time to get this book and prepare
to increase your egg production this winter

No man or woman has been in the poultry business so long,
or knows so much about it that they can afford to pass this
offer by. To the beginner it is invaluable. **LOTH. PRICE \$1.**

AMERICAN POULTRY JOURNAL PUB. CO., 542 So. Dearborn St., CHICAGO, ILL.

THIS! HOW *does this, look to you?*

Many \$3.50 Utility Anconas—Sheppard's strain—will produce eggs to the value of \$21.27 and over within a year. We have abundant evidence to that effect. That's why there is a quickening demand for Sheppard's Famous Anconas from every part of the world. Not only are they the World's greatest egg machines and winter layers—with the somewhat amazing egg record of 256 average for a flock—but they're wonderful prize winners as well.

Sheppard's Famous Anconas

Score Nearly All Firsts at
Madison Square Garden

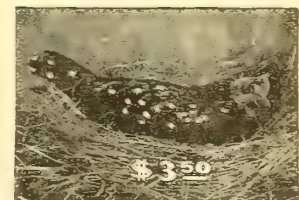

For nine consecutive years my birds have won three times as many first and second prizes at the nation's greatest shows—including recent exhibits—as all my competitors together. You see why they are "famous"—and best, don't you?

If you want winners—or egg producers—write for catalog. Don't buy eggs, baby chicks or stock until you read the story of Sheppard's Famous Anconas.

Byers' Orpingtons

BUFF
BLACK
WHITE

You have heard about the merits and popularity of Byers' Orpingtons. I have supplied many of the best specimens ever produced. At hundreds of shows from Coast to Coast and in Canada, Byers' Strain Orpingtons win. It is not so much a matter of determining who seems to have the best, but a question of getting the values ordered at a given figure. My policy is to invariably satisfy the latter feature in every transaction. So with my increased facilities and finer quality you get lower prices and superior service in fact. Beautifully furnished show birds in excellent condition and training now ready. Get my new price list and selling plan.

C. S. BYERS

Sucrene Poultry Feeds

For Winter Layers and Early Fryers

If your hens do not lay in winter it is because you do not house and feed them properly. Sucrene Poultry Feeds make them big, steady layers in winter when eggs are 60 cents a dozen.

Sucrene Poultry Mash and Sucrene Scratch Feed

are not mere temporary stimulants. They contain the necessary food values that nourish and maintain the body, and the special egg-making and developing ingredients—including a high percentage of meat scraps.

We use only the very best clean, sound grains—no musty salvage grain. Every ounce is eaten—there's no waste in feeding.

Sucrene Feeds Pay Many Times Their Cost

Test feeds made, show that hens fed on Sucrene increased their egg yield 31% in a few weeks. Young chicks gained 56% more in weight than others fed on the ordinary grain rations.

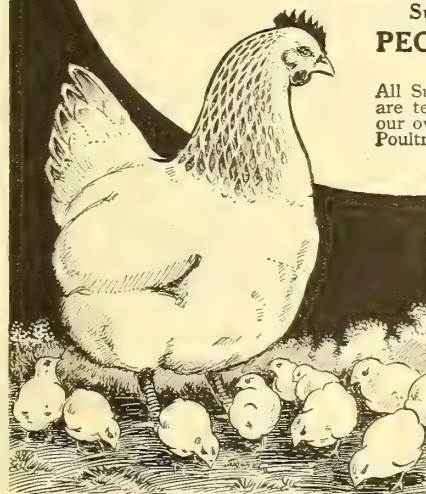

"C. E. Pemble, Proprietor of Willow Brook Poultry Yards, Peoria, Ill., writes: 'Am at present using two tons of your chick and scratch feeds per month, and consider them a perfectly balanced ration and very satisfactory indeed.'"

We guarantee every package of Sucrene Poultry Feeds to be of uniform high quality. Fill out and mail us the coupon or write us a postal for full information.

Western Poultry Journal

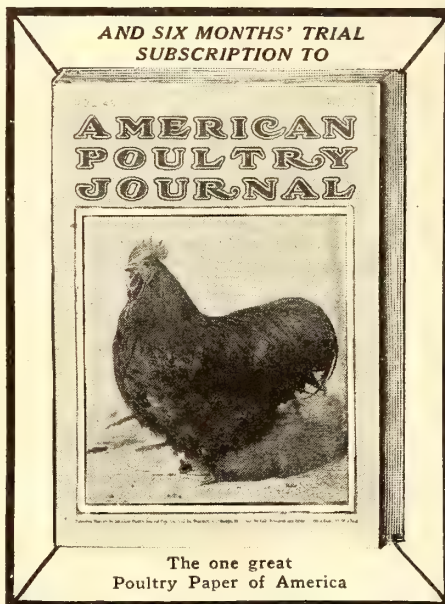

Cedar Rapids, Iowa.

Established 1889. Issued monthly. 5 cents per copy; 50 cents per year. Has long been recognized as one of the most up-to-date and progressive poultry papers of the West. Edited by E. E. Richards, the present President of the American Poultry Association. Clean, instructive common sense articles on the care of poultry and editorials of like nature make this one of the favorite poultry papers in the Western States.

American Poultry Advocate

Syracuse, N. Y.

Established 1892. Issued monthly. 5 cents per copy; 50 cents per year. Is one of the widely known and consistently advertised publications in the field. It is composed of interesting and instructive reading and is conceded to be one of the best, clean-cut poultry papers in the East.

American Poultry Journal

Chicago, Illinois.

Established 1874. Issued monthly. 10 cents per copy; 36 months \$1.00. "The One Great Poultry Paper of America" is conceded by all to be the leading poultry paper of the world. It contains from 64 to 252 pages in each issue, profusely illustrated; contains no free reading notices or puffs for advertisers, but sound common sense articles, the kind that are profitable to both amateur and professional poultrymen.

Everybodys Poultry Magazine

Hanover, Pa.

Issued monthly. 5 cents per copy; 50 cents per year. Another "breeders choice," is well edited, progressive and instructive, finding popular favor among poultrymen who enjoy good editorials, by H. P. Schwab. The helpful hints given in the many articles are advantageous to both amateur and professional.

Write Your Name and Address Plainly on the coupon and mail it to us with one dollar in cash, money order or stamps. Never will you receive more value for your money. The publications in this club are the leaders in their chosen field. They treat exclusively on poultry and appeal to every red-blooded poultryman—those who enjoy chickens for their beauty as well as for their market value. Look this offer over again.

You Can Make.*

Announcement

\$1.00 will now buy a three years' subscription to American Poultry Journal. No subscriptions will be entered for a period of less than three years (except six months trial), as the high quality of the periodical which we are selling, at the price asked for publications of inferior value, does not warrant entering subscriptions for a shorter period.

As you are interested in poultry, you want the best information which you can get for your money, and without a particle of doubt such information is found monthly in the American Poultry Journal, which at the rate of three years (36 issues) for \$1.00 is the best buy any poultryman can make.

Not Only How Big, But How Good

The above reproduction of a photograph illustrates three bound volumes of what readers of American Poultry Journal obtained during the past three years. A year's volume contains approximately 1,500 pages. Three volumes contain 4,500 or more pages, size 9x12.

Now just think for one moment, where can you get a 1,500 page book for \$1.00? Yet we offer you practically three 1,500 page books for this amount. You do not get obsolete literature when buying the American Poultry Journal, but you get the very latest up-to-date information on poultry.

Our Guarantee

In accepting your order, we guarantee to mail a copy of American Poultry Journal to your address about the first of each month for 36 months. We guarantee you against fraud on the part of our advertisers as per notice on editorial page. And we further guarantee to uphold the envious reputation of American Poultry Journal by filling the reading columns with the best, most useful and instructive articles obtainable.

Fill out the order blank and mail to us with One Dollar in currency, money order or stamps, and assure yourself 36 issues of THE ONE GREAT POULTRY PAPER OF AMERICA.

Three-year Subscriptions to Canada, \$1.75; to City of Chicago, \$1.50; to Foreign Countries, \$2.50. To any other point in the United States, its possessions, Cuba or Mexico, 3 years for \$1.00.

OWEN FARMS

*Buff Orpingtons White Orpingtons,
White Plymouth Rocks, White Wyandottes,
S. C. R. I. Reds and White Leghorns.*

Have won sweeping victories

for years at Madison Square Garden, New York, (where 393 Owen Farms birds have won the blue.) Palace Show, (New York,) Boston, Chicago, Pittsburgh, Syracuse, Allentown and the other leading shows both North and South.

OWEN FARMS EXHIBITS in the hands of our customers or of ourselves have WON the LEADING HONORS at HUNDREDS of SHOWS all over the country, and have raised the standard of these shows. Shows that do not include Owen Farms birds are not plentiful but, when found, are considered incomplete. You can help increase the prestige of your show by adding Owen Farms quality to your exhibit and swell your own winnings by calling to your aid the all powerful backing of Owen Farms.

NOVEMBER IS THE MONTH

TO BOOK YOUR ORDER. Whether you want an entire string for your show, a cock, hen, cockerel, pullet or pen, a pen of breeders rich in Owen Farms blood lines that have been superbly mated, or birds for utility purposes, NOW IS THE TIME TO PLACE YOUR ORDER while my large flocks are complete. Will hold the birds for you until you wish them. Will send show birds all fitted for showing if you desire and co-operate with you in every way in my power to make your success certain. An early order on your part will enable me to choose your birds from among a larger number than later on.

1916 YOUNGSTERS

are the evenest lot in quality I ever saw. The small percentage of culls were killed off long ago. The remaining flocks have been a matter of wonderment and pleasure to the numerous visiting breeders who have seen them the past summer and fall. Mr. Davey and I have selected and shipped scores of birds for the early fall fairs and for early breeding and never in the history of Owen Farms has the extreme delight of customers with shipments made them been so freely expressed.

You will find here exactly the bird or birds you are needing, whether you wish them to win your show, to breed you winners, or strong, husky utility birds to lay and pay and breed your birds with these characteristics inherent.

You will not be disappointed in any purchase you make of me. Write fully and frankly just what you wish the birds for, and if you will give me all particulars it will greatly help me in writing you. My fine catalog, giving all details regarding my birds, my farms and my generous business methods will help you decide to buy here.

A typical Owen Farms winning was made at the New York State Fair in September when my White Rocks, White Leghorns, Buff and White Orpingtons won 12 out of a possible 20 firsts, 8 seconds, 9 thirds and 9 fourth and fifth prizes. A total of 38 regular awards. The most important of all firsts, first prize pen, was won in each variety. 28 Owen Farms birds won the blue. 8 birds of all other exhibitors combined won the blue.

My S. C. Rhode Island Reds and White Wyandottes

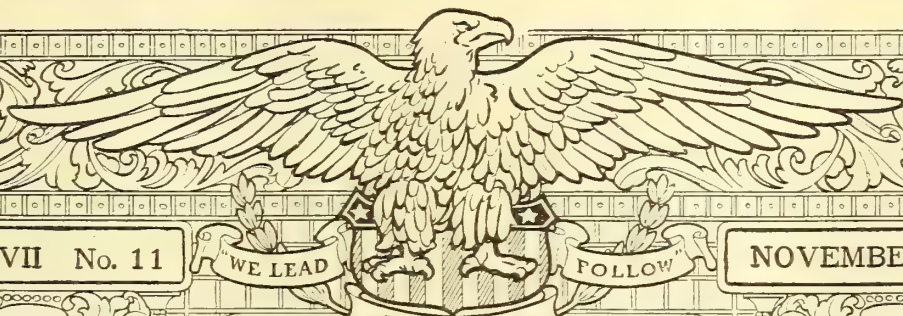

were not shown at Syracuse. Important sales in these varieties made me decide to give my customers the benefit of my best early birds. Later you will realize I am stronger than ever before.

My Birds Live, Grow, Lay and Pay. Owen Farms New Illustrated Catalog

will prove a real treat for you if you have not already seen it and is yours for the asking.

AMERICAN POULTRY JOURNAL

VOL. XLVII No. 11

NOVEMBER, 1916

U. R. FISHEL—PIONEER POULTRYMAN

U. R. FISHEL, of "Fishelton," Hope, Ind., is a White Plymouth Rock specialist on a large scale. "Fishelton" has 120 acres devoted to one variety and claims the title of "the largest specialty poultry farm in the world." He was born in Hope in 1866, and began breeding poultry when he was 13 years old. He made his start with a \$1 setting of fancy eggs.

"Fishelton" has laying house capacity for 3,000 hens. The open-front house is preferred. The incubator cellar on this plant has 14,000-egg capacity.

The farm sells about 15,000 White Rocks annually for breeding, exhibition and laying purposes. The farm and plant is valued at \$100,000. This was all developed from that boyhood initial investment of \$1, and Mr. Fishel says he has "made every dollar out of the poultry business."

He is one of the directors of the Citizens' National Bank, Hope, and of the Fuel Gas Co., member of the Advisory Board of the Indiana Experiment Station, and treasurer of the American Poultry Association. Mrs. Fishel takes an active interest in the work with poultry and is herself a fancier of ability.

Management of Pullets for Winter Eggs

There Are No Secrets Connected with Making Pullets Lay in Winter. A Bird to Lay Must Be Healthy, Well Matured, Well Fed and Cared For. Rations for Winter Eggs.

By Maurice H. Decker, La Porte, Indiana

GETTING winter eggs is the most important phase of the utility poultry business and the stumbling block that causes a large number of failures of those who lose out in making hens pay. The winter egg is the "Golden Egg" and a current quibble of a few years back ran to the effect that those who made money with poultry either got winter eggs or sold secrets and formulas for getting them to others. Extensive business has been done in the distribution of schemes for making hens lay in the winter months,

A well lighted, fresh air colony house that furnishes the conditions necessary for a profitable production of winter eggs. This house is 8x10 ft. in size and houses 20 White Leghorn pullets. See "Management of Pullets for winter eggs."

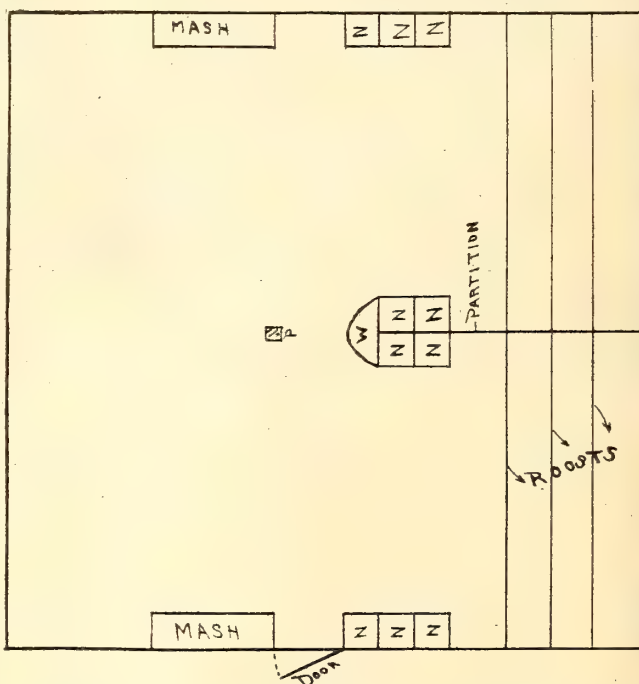

schemes that dealt with types of buildings, heaters for laying houses, patent foods, methods of sprouting oats, etc., schemes that amazingly dealt with every factor of winter egg production, but the most important one of all—the fowl itself.

There are no secrets or mysteries connected with making pullets lay in winter. Given good, healthy, well-bred pullets, housed and cared for in a proper and common sense manner, any careful poultryman will be able to succeed. The first step toward winter eggs lies in a wise and careful selection of the pullets to be housed and fed for the purpose. With high grain prices and moderate selling values of fresh eggs per dozen, it is decidedly a risky proposition to attempt to force for cold weather laying any but strictly first-class, full grown pullets of good breeding. To make profitable winter layers, heavy fowls of the Brahma type should be hatched preferably in the month of February, Rocks and Reds in March and the first week in April, and Leghorns and their kin in April and May. Range raised stock is to be preferred, but this is not imperative if the pullets are in good flesh, of healthy alert appearance, bright of eye and plumage and of active hustling habits. Before the flocks are settled in their winter quarters, all listless, thin necked, crooked boned, over-fat individuals should be carefully removed, for it requires but a small per cent of such fowls in a laying, paying flock to turn it into a source of loss. If the pullets have been bred with a view to heavy winter laying, then the chances for success are greatly enhanced. If not, it is too late this season to remedy the matter, but careful attention should be given next spring to the introduction of heavy laying blood if your present strain does not turn out satisfactory results.

The laying house must be clean, bright and roomy, so built that it will provide ample protection for its inmates from storms and drafts, and still supply an abundance of fresh air and sunlight. What it is made of, or how made, matters little

so long as these points are taken care of. The easy answer to such requirements is, of course, the fresh air, open-front house, which exists in sufficient sizes and types to meet the requirements of every poultryman. Old buildings should be carefully gone over and all cracks and openings in the back sides and roof closed wind tight. Even very old out-of-date laying houses can be made comfortable and cheerful by putting in screened openings in the front and extra sash in the sides near the front. The walls can be made tight with tar paper at little expense and a fresh air building evolved that will encourage fowls to do the best that is in them. A few other essentials are that the floor be of some material that is not dusty, the interior fixtures simple yet adequate and of a design that will encourage regular cleaning. To provide the necessary exercise for the fowls, the floor should be covered at all times with clean dry litter. Straw, either wheat, rye or oat, corn fodder or if nothing better is available shavings will do and must be removed and changed as soon as badly soiled or damp.

Feeding for winter eggs is a simple problem if sufficient quantity and variety of wholesome foods are placed before the fowls. Most flocks are given the right proportions of grains, but fail in a profitable egg production because the essential green and mineral elements are lacking. In the line of greens we prefer alfalfa to all the rest. I believe plenty of steamed alfalfa supplemented by a few vegetables, such as potatoes, turnips and cabbage will give better and more results in health and eggs than a straight ration of any other form of green food. The alfalfa is rich in lime in the easiest assimilated form which eliminates much loss from thin shelled and broken eggs and we seldom experience sickness in our

Convenient arrangement of laying house fixtures. This shows the floor space of a 20x20 ft. house divided in the center by a partition extending 9 ft. from the rear. Nests are marked N and are one, two, or three tiers, depending upon the size of flock and breed of fowls. W is a shelf two feet from floor secured to end of partition upon which is placed the water pan. Upon either side of the house are mash hoppers 4 ft. long. If in a long house, these could be placed in the partitions, half on either side. This plan presents an unusually clear floor space, one that encourages sanitary conditions. This plan is for roosts with no dropping boards. If boards are used the nests could be built in 6 to 10 ft. sections with 1/4-inch wire bottoms and hung under them along their front edge by wire hooks and eyes. See "Management of Pullets for Winter Eggs."

flocks of layers as long as they consume their daily ten quart pail of steamed alfalfa (this to 150 hens). Sprouted oats are excellent, but require considerable more work and do not, in my opinion, give results that warrant the extra labor.

Imperial "Ringlet" first prize pullet and champion female at Madison Square Garden, New York, February, 1915. Owned, bred and exhibited by E. B. Thompson, Amenia, N. Y. This pullet is the mother of the wonderful pullet exhibited by Mr. Thompson, winning first prize and championship at Madison Square Garden, January, 1916.

We have always held the opinion that heavy layers will not consume enough oyster shell or limestone grit to supply themselves with sufficient egg shell material and in addition to the extra calcium furnished by the alfalfa, regularly place a few pounds of shells ground up to the fineness of flour with every hundred weight of mash. All of our mash hoppers have three to four compartment and besides mash there is always beef scrap and cracked bone before the fowls.

Following I give a number of rations for winter eggs that are used and recommended by some of our Experimental Stations. In adopting any of these rations is is well to remember the following points. Scratch food fed in the morning should be given as soon as the hens leave the perches, the sooner the better, and in the evening a couple of hours before they retire to the roosts. Dry mash in hoppers is usually left accessible to light, active breeds the day thru, but for heavy fowls the hoppers are usually closed until noon. Fresh water, oyster shell grit and charcoal are always before the hens.

NEW JERSEY RATION:

Morning scratch food: Five pounds to 100 birds.	Dry mash:
100 lbs. Wheat	200 lbs. Bran
100 lbs. Oats	100 lbs. Corn meal
Afternoon scratch food: Ten pounds to 100 birds.	200 lbs. Middlings
100 lbs. Cracked corn	100 lbs. Gluten meal
100 lbs. Wheat	100 lbs. Ground oats
100 lbs. Buckwheat	100 lbs. Alfalfa
100 lbs. Oats	200 lbs. Meat scraps
	During molting season, oil meal instead of gluten. In spring alfalfa omitted and meat scrap reduced.

INDIANA RATION:

Scratch food morning and evening:	Dry mash:
100 lbs. Corn	100 lbs. Middlings
100 lbs. Wheat	100 lbs. Bran
50 lbs. Oats	60 lbs. Meat scraps.
	Milk fed regularly.

THE CORNELL RATION:

Scratch food morning and evening:	Dry mash:
60 lbs. Wheat	60 lbs. Corn meal
60 lbs. Corn	60 lbs. Middlings
30 lbs. Oats	30 lbs. Bran
30 lbs. Buckwheat	10 lbs. Alfalfa
	10 lbs. Oil meal
	50 lbs. Beef scrap
	1 lb. Salt

CONNECTICUT RATION:

Scratch food, given only in afternoon in warm weather:	Dry mash:
60 lbs. Cracked corn	200 lbs. Bran
60 lbs. Wheat	100 lbs. Ground oats
40 lbs. Heavy oats	100 lbs. Corn meal
20 lbs. Barley	100 lbs. Gluten meal
10 lbs. Kafir	75 lbs. Middlings
10 lbs. Buckwheat	30 lbs. Fish scrap
10 lbs. Beef scrap	30 lbs. Beef scrap
	25 lbs. Low grade flour

THE MAINE RATION:

Scratch feed:	Dry mash:
Early morning, cracked corn.	200 lbs. Bran
Ten to eleven o'clock, equal parts wheat and oats.	100 lbs. Gluten
About two quarts to fifty birds each feeding.	100 lbs. Corn meal
	100 lbs. Low grade hour
	100 lbs. Beef scrap
	50 lbs. Linseed meal

Green food for all rations is cabbage, beets, sprouted oats, alfalfa or clover—any or all of these as much as the hens will eat.

Regular care in the matter of feeding is of equal importance to the variety and quantity given. The hens should not be kept guessing just when their next meal is coming and they should not be left hungry to stand around idle until you arrive with the feed pail. If there is any question of your not having the time or opportunity to serve their meals regularly and on time, a few automatic feeders will prove a valuable aid in preserving a steady egg yield. Warm water is of as much importance as nourishing foods and should always be available to the laying flock during freezing weather.

Close watch must be kept upon sanitation and symptoms of disease. Lice and mites must be kept down to a negligible degree and close watch for colds and roup be maintained. We use an early fall spray with kerosene and carbolic acid for mites, a good dust bath of coal ashes and loam for lice and dip the heads of all fowls afflicted with colds in a weak solution of some creso dip promptly and regularly until cured. Wholesome sound food and dry clean litter with plenty of house ventilation in the right direction will do wonders in maintaining a laying flock in perfect health thru the winter.

SEX CONTROL in POULTRY BREEDING

CHAPTER VI—A Discussion of the Subject by Other Breeders, and Comment by the Author.

By Herb E. Sharp

(Copyright, 1916, by Prince T. Woods and Herb E. Sharp)

IT HAS indeed been gratifying to receive the commendation, and also the condemnation of persons so widely known as many of the breeders who have expressed an opinion of the work so far published, and while it is not deemed necessary to present the words of praise, it is advisable, for a complete comprehension of the subject to present the adverse opinions and suggestions that have come to hand.

When men of the standing in the live stock world that the Hon. W. D. Hoard, Ex-Governor of Wisconsin, enjoys, life time breeder of dairy cows, who has done more than any other living man to advance the interests of the man with a scrub herd, and whose integrity cannot be questioned, or his motives impugned; and David Munroe, whose life has been given to his chosen breed: see fit to criticise any author for his writing, it is well for that author to give careful attention to the opinions they present, and as for ourselves, if we are in error, in many matter which has been presented to the public, we shall appreciate having an opportunity to correct that error.

It is with the most sincere respect for the opinions of older men, and men of wide experience that we present these statements, and shall attempt to point out as briefly as may be the errors as we see them; however, should these great breeders be shown to be in the right, we shall be under great obligations to them, and if they are in the wrong, then we hope to be able to correct their errors and thank them for the interest they have shown in the matter.

Ex-Governor Hoard writes: "We may select the son of a cow that has given mostly heifer calves, but then his sire may have come from a cow that gave mostly bulls, so there you are. Again, if your calves are all heifers, where are you going to get sires to improve your herd with?"

FIRST AND SPECIAL PRIZE COLUMBIAN
WYANDOTTE COCKEREL NEW YORK STATE
FAIR, SEPTEMBER 1916 BRED & OWNED BY
WILBURTHA POULTRY FARM TRENTON Jct. N.J.

With equal propriety we might assert that the dam of any certain bull may have been a great milker, but his sire may have come from a beef animal, it is solely for the purpose of keeping family records correctly that breed clubs have been established, and the breeder who selects for use in his dairy herd an animal that traces to two or three types of breeds, or families in the breed, is using very poor judgment, for such an animal may transmit almost any character, but least of all the one that is most to be desired.

Again if we can establish a family that will regularly give us about 90% females, we will have ten bulls for every one hundred cows, which is about nine more than is required, and in poultry yards one male is ordinarily sufficient for ten females, and ten birds in the breeding pens will easily be able to maintain a flock of one hundred layers in the laying pens, so that a family of fowls producing even as high as 99% females would still be abundantly supplied with males.

But let us suppose a case, that is all but impossible to reach, if the flock, or herd, should reach a point where absolutely no males should be produced, we then would have inherited characters so strongly fixed, that the introduction of a foreign male could not work any great damage to the quality of the flock as a whole, and it would only be necessary to purchase one male, then breed back to our strong females, to re-establish the quality of inherited characters desired.

On the other hand, one is struck with the importance of the entire question when we consider that it is *absolutely impossible to increase or improve the flock, or herd, when the progeny are all males*. One is forced to ask these older breeders just what value could be given to the greatest sire in the world, if all his progeny were to be males, could he increase production of milk, butter, or eggs, and if so, how?

In the second chapter, reference was made to the hen whose chicks were all males, and how quickly she was disposed of, together with all her progeny. Another instance was recently published in the *Pacific Poultryman*, by an independent investigator finding just such a hen some years before we began the series of experiments which resulted in making this discovery.

The Claim Agent of a Western Railroad related an incident of the killing of an entire herd of six cows, in a snow bank, by a train on his road. Claim Agent went to the place to secure an adjustment: the cows were all the milk stock the farmer owned, they had been purchased seven years before to start a dairy herd, had always been bred to expensive sires, and had dropped something near 40 calves, but *every calf had been a bull*, those expensive sires had never increased the production, and had not even been able to reproduce the herd, and so the settlement was arranged easily, on the *beef value of those animals*. That farmer retired from the dairy field.

Two brothers purchased two registered Shorthorn heifers, one of them dropped all heifers, and her daughters did likewise, her owner has now been breeding Shorthorn cows for 30 years, while his brother's heifer never dropped a heifer calf, and he retired from the live stock world.

How long would any breeder remain in the poultry business if his chicks were all cockerels? Will Mr. David Munroe kindly reply?

Having declared that the calves from certain bulls were just now showing 90% females, tho their dams produced mostly bull calves, and being pressed for a forecast as to the work the daughters of those bulls would do, he said: "What we want is for you to take this cow, bred as she is, with her disposition to produce mostly males, and change her over so that in future, you make her produce heifer calves."

No doubt many farmers who are keeping mongrel stock, not only dairy stock, but in all other lines as well, would be pleased to have some mighty man come along the road and by a simple wave of his arm change over all his feed wasters

into profit makers, and if such a thing were asked of our redoubtable critic, his first suggestion would be to secure a Holstein bull for the dairy herd and a sire of equal quality in the other lines, and the advice would, doubtless, be very effective, if given time to do the work, but it would not "change over any individual bred as she is," it would simply create a new group of individuals. Even if the slight-of-hand methods were possible they would simply serve to destroy all pure-blood values.

Let us take this cow "bred as she is" a Holstein and with her black and white hide, no one wants her color changed, no one wants that hide taken off and a new one grown on, then why should any breeder want her ovaries removed and a new set grown in? Yet if we breed this cow to a Shorthorn bull he will take her hide off and grow a new hide on her daughter, and so if the other organs are not just as we desire them, we have only to choose carefully the kind of a sire we use, to secure the kind of organs we desire, whether the organs in question be the ovaries, the digestive system, or the circulatory system, or mammary organs.

In presenting the account of the "Bessie" family, the very best inducement has been given to those breeders who deny the inheritance of the sex producing trait, to present any evidence that may exist in denial of the theory proposed, for the simple reason that if this theory is correct then members of that family, whether of either sex, are positively valueless in the breeding yards, a "Bessie" bull might easily double the average milk and butter production of a herd of fairly good cows, but if he did, his daughters would drop few, if any female calves and so force the owner out of the business.

Further, owners of this stock cannot say that they chose to remain silent rather than to enter a public discussion, that might be detrimental to their interests, or that they are not financially and mentally equal to holding up their side of the question. "Bessies" have been sold for the highest prices, sold and purchased by men whose mental and financial ability have placed them at the very top of the list of able breeders, and further, by naming these men individually the matter has been placed where they cannot dodge the issue, if this theory is not correct they may save themselves yet by disproving it. The investigation has been carried on earnestly, honestly and fairly, if any evidence has been overlooked, surely these breeders, who are among the most prominent in America, will come forward with that evidence.

The founders of the Hereford breed of cattle had no great difficulty in changing the hide of the Shorthorn; founders of the Dutch Belted cattle succeeded in changing the hide of the Holstein; founders of all the dairy breeds have made great changes in the digestive and mammary systems of their stock, and these changes have all been regularly inherited for generations; yet it is true that these changes have become fixed and inherited, or transmitted because of certain changes that have occurred in the ovaries of the females, and these have influenced the sons, so that the same changes have appeared in their daughters, and again have been transmitted to the next generation. Now for any breeder of live stock to assert that the action of the ovaries is not subject to the laws of heredity, is for him to almost raise a question as to his own intelligence.

The Editor of the AMERICAN POULTRY JOURNAL has sent me the following letter, and while the author is probably a trifle less renowned than those we have just considered, yet his opinions are just as much to be respected, and his deductions are just as important, if correct, as tho he were the most famous of them all.

"Dear Sir: As you are giving considerable space to the articles on 'Sex Control in Poultry Breeding,' possibly you will

permit me to interpolate a few remarks and ask one or two pertinent questions.

As I understand it the idea is to select a hen whose offspring proves to be mostly females, and, by line-breeding, to intensify and fix this characteristic in the resultant family or strain.

If this characteristic is transmittable, as Mr. Sharp claims it to be, it is going down the road to oblivion for any flock bred along these lines, regardless of whether the strain in the past has been bred for feathers, eggs, or both.

Practically all breeders agree: 1st, That all improvements thru breeding must come thru selection; 2nd, The male is half the pen the first generation, and proportionally more the following generations if line-breeding is followed; 3rd, We must have quantity in order to do any real selecting for quality.

If a breeder limits the number of males produced, where is he going to get the quantity which is absolutely necessary if we are going to select quality? (Continued on Page 1228)

How to Secure Exhibition Quality

Fitting Barred Plymouth Rock Females for the Show, Including Care and Management from Shell to Show Room. *By C. H. Latham, Lancaster, Mass.*

THE question is asked many times: "When do you begin to fit your birds for the show room?" and it could very truthfully be answered, "One should begin several years before the show occurs," for a fine exhibition bird must be bred, and very carefully raised, they do not just happen like some freak of nature, but are the results of careful study and painstaking work of the breeder.

In fact, one should begin as long a time before the show as possible. We will take it for granted that the breeding stock has been carefully selected and mated, and is in the best of health and condition to give their very best to their offspring. Then the fitting goes right on from the day the egg is laid that is to produce a prize winning bird. The egg should be hatched under the best conditions to give a strong hearty chicken, and from the day the chick is hatched till fully matured it should have the best possible chance for growth and development, for very much depends on this; the best bird that ever was hatched could very easily be spoiled during this period. One thing the breeder should keep in mind, a high-bred bird will not grow and thrive under some conditions that a cross-bred or ordinary bird will thrive under. This old idea that a bird having free range where it can pick up many insects, bugs and grasshoppers, in fact work hard to get its own living, and make a fine bird, is rank nonsense. They won't do it, they will grow and make some sort of bird, but they won't make winning show birds.

Give the chicks a good roomy coop, *never crowd them at any time*, the fewer birds there are to a brood, or in a colony coop later, the better growth and development will follow. Feed liberally from the very first feed, giving them all they

will eat, and giving them a variety of food that will promote quick growth, use judgment in doing this, they should have this food fed in such a way that they can assimilate it quickly. The writer, a year ago, saw a flock of Barred Plymouth Rocks that had ideal surroundings and very best of care, but failed to make proper growth because of the method of feeding. They had, possibly, the right kinds of grains, but they were fed in a dry mash of ground grains, and it took all the time and strength of the birds in working down the dry feed and then going to the drinking vessel to drink. Not a bird was making its best development and all lacked development.

After the chicks are a month old they should be fed one or more feeds a day on a cooked mash that can be quickly assimilated and then at night fed on hard grain, after they are of size to take it readily. This night feeding should be of whole corn, or whole corn and wheat. Some suitable shade should be provided, and nothing is better than low bushes or shrubbery, weeds, or a good corn field. The shade is absolutely required for the hot weather. The feeding trough and water vessel should be placed very close to the shade, and better still, placed in the shade. In hot days a chicken cannot live long in the direct rays of hot sunshine, nor will they go into it to any extent for food or water. If the food and water is at a distance from the shade, the chicks will skip the noon meal rather than go into the hot sunshine to get it.

No one can properly feed birds by measure, some days they seem to require more food and will eat more than in other days, and as they grow the quantity of food must be steadily increased. At all times the growing chickens should be in a condition of flesh that if killed they would be in fine condition

for the table. Growing a large lanky frame first, all joints and angles, and then trying to put the flesh on to give proper shape is a very poor way to grow a good shaped show bird.

If a section of the poultry house is available for use during

FIRST PRIZE WHITE WYANDOTTE COCK

SOUTH BEND INTER-STATE FAIR, SEPT. 12-16, 1916
BRED & OWNED BY J. C. FISHEL & SON, HOPE, IND.

the late summer months, one having a good grass run connected to it, a selection of the most promising pullets should be taken in from the range and given these quarters.

Now the real finishing off work begins. The good, liberal feeding should go steadily on, the quarters should be clean and a litter of straw, or some other material, for feeding small grains provided so the birds can get needed exercise. The mash feeding and whole corn at night should be continued, keeping them steadily growing. Later when the grass is getting old, cabbages should be hung up in the quarters so they can pick at this much relished green food. It helps to fill them out by giving bulk to their food, and gives better width to backs and breasts. Be among the birds several times a day, and get them accustomed to having a human about, soon they will become very tame and eat out of the hand if desired to do so.

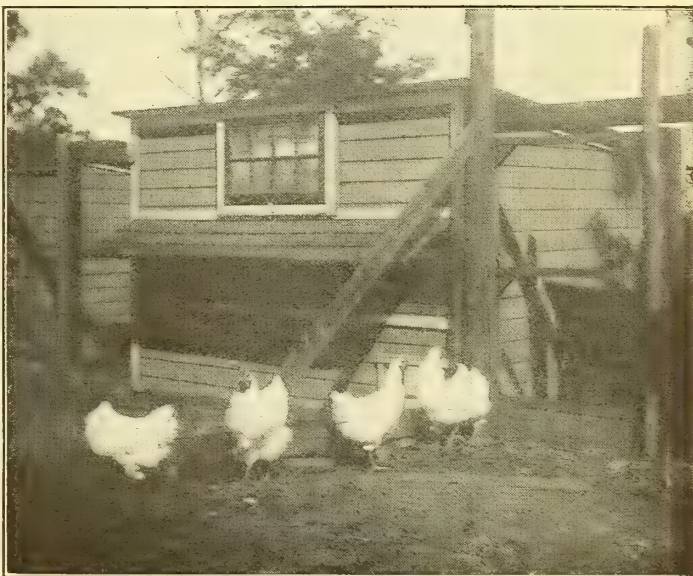

One object now is to get them in as perfect feather as possible. Some pullets show well with the smaller chick feathers, but most of them, if rightly cared for, will drop these feathers and put on what might be rightly called adult pullet feathers, which, tho are somewhat different in character to the real adult feathers that they acquire when they moult into yearling hens. In many specimens the feathers in the back and portions of the wing bows will not end in a dark tip, but usually these feathers come just right when they become hens. Do not, as a rule, pluck out the chick feathers, let them moult in naturally as possible. Sometimes they drop them very slowly, and, especially in tails and wings, grow them in unevenly. If this seems likely, when the chick feathers are ripe and pull easily, it is well to pluck them so they all come in even, especially is this desirable in the tails. A pullet shows best just before the feathers are fully ripe, when they still have a little growth to make, they lay smooth and more even on the bird

than they do at a later period. A pullet to show at her best must be rounded out and in pink of flesh and condition. She is usually at her best when about ready to drop her first egg. From that time on she will be steadily going off from best show condition, from what is termed getting over-ripe. A few days before the show, the pullets should be looked over very carefully; they will all have more or less off-colored feathers, such as irregular barring, either heavy tipped feathers or white or dull colored tipped feathers scattered about, that should be plucked; also they will have some black feathers, and partly solid black ones that should be plucked out. If one has scruples against this dressing up or plucking, they had better drop the whole business, for any Barred Rock that goes into the show room in proper show condition needs this work done. In thirty years experience in breeding exhibition Barred Plymouth Rocks the writer has never seen or handled an exhibition specimen that did not need this plucking. Some people set up a big hue and cry against such work, and call it faking. But one thing is very sure, a poor specimen cannot be made into a good show bird by plucking, for there would be nothing left to show. It takes a really fine specimen to be fitted for showing. We show birds to bring out the best that is in them, and, if these qualities are not there, any amount of plucking will not make them good show birds.

Fitting the hens is done in much the same way as with the pullets, except that when they are well into their moult, we must look carefully that they drop all their old feathers, and often we have to pluck a large number of old feathers. Some hens hold their wing feathers, and these should gradually be removed, all being done a month or six weeks before the show, so that they may have grown in new feathers in time.

Remove all old scales from the shanks and feet of the hens. They naturally shed these each year, tho I have noticed that many breeders do not seem to be aware of this.

Keep the birds at all times as clean as possible. Washing Barred Plymouth Rocks is not needed, it would mean a lot of careful work, which can all easily be avoided. It is the outside or surface color that will show dirt, if anywhere. A few hours before shipping the birds to the show, take them into an open shed or into the open air, and very carefully sponge off the surface of the plumage with a sponge moistened with benzine (do not use gasoline). This will remove, very quickly, all dirt that is in the surface color, and great care must be exercised that too much benzine is used so as to wet down to the skin of the bird. Keep them moving about for a few minutes, so they do not get into some corner and breathe too much of the fumes of the benzine. It will dry out very quickly, leaving the feathers bright and clean and in perfect show condition. As soon as the benzine is fully dried out, coop the birds in clean coops and ship to the show room.

White Wyandotte cockerels on the Rosemount Farm, Franklin, Pa.

Weight, Not Numbers, Egg Value Standard

Why All International Egg Laying Contests Should Award the Prizes to the Hens Laying the Most Pounds of Eggs Instead of the Largest Number of Eggs. This Article Was Awarded the Prize in the M. C. Wilson Contest. *By T. Harris Boughton*

THE most important reason why the number of pounds of eggs laid by a hen should be made the criterion in International Egg Laying Contests instead of the number of eggs laid is that the only real test of a hen's value as an egg machine is the *amount of food* actually produced, and not the number of little packages in which this food is contained. To consider anything but the actual *amount* is to distract attention from the most important phase of the utility breeding of hens, and to place too much importance on unimportant considerations. The system advocated would place a premium on the big egg, instead of the small egg as at present.

Of course it is true that eggs still sell by the dozen, and an egg that can just crawl under the wire at 24 ounces to the dozen may bring just as good a prize as a big generous egg. But this condition is wrong, and cannot continue indefinitely, because it is wrong. Because of the difficulty of dividing five eggs among six people, eggs will still continue to be sold by the dozen, and not by the pound, in most markets. But the

Helen T. Woods, associate editor of American Poultry Journal, with a lap full of newly hatched Black Langshan chicks. The Anchorage Farm, Silver Lake, Mass. June, 1916.

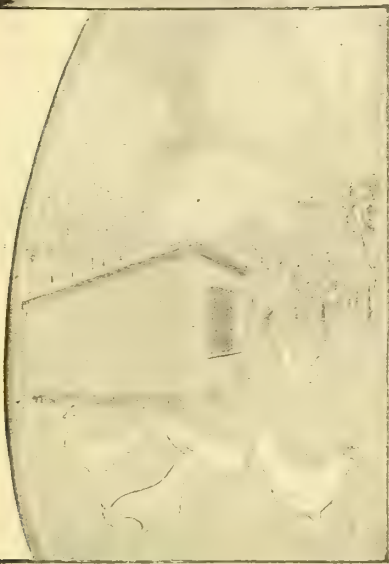

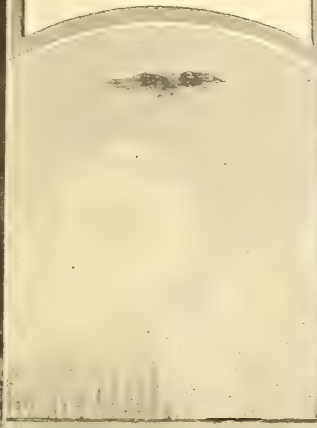

change that is coming, and that must come, is that eggs will be strictly standardized and graded according to size, and the price of a dozen eggs will be determined by the weight of the eggs. It is certainly fair and just that when eggs weighing 24 ounces to the dozen sell for 24 cents, eggs weighing 32 ounces to the dozen should bring 32 cents. In fact the larger eggs are worth slightly more, because the shells will make a slightly smaller percentage of the total weight.

Can you think of any other commodity besides eggs, that is sold by the dozen, in which the price of a dozen is not determined by the size? When you buy a dozen grape-fruit, or sweet-corn, or spring chickens, or cantaloupes, or fence-posts, or feather pillows, or fruit trees, the price depends absolutely upon size, quality being equal, and a dozen big ones cost considerably more than a dozen small ones. This is as it should be, and undoubtedly the same condition of affairs should, and sooner or later will exist in poultrydom. This condition would mean larger profits for the poultryman, and so attention should be attracted to and credit given for the hen that can produce the larger size as well as the larger number of eggs.

This change in methods of merchandising must of course

be brought about by the producer, and not by the consumer. Do you know why it is that the poultry business, altho it is one of the largest in this country, both in capital invested, and in business transacted, yet lags behind every other big industry in the matter of intelligent standardizing of its products? It is because it has never been a field of exploitation for "big business." There are no \$100,000,000 corporations for producing eggs, and there are good reasons why there never will be. Also there are no associations of poultrymen (as there are of fruit growers, for instance) who make a united and determined effort to enlarge the market for their produce, to seek out the best markets, sending a carload now here, and now there, as conditions warrant, and who conduct a definite and far-reaching campaign to educate the public to appreciate, and to be willing to pay for a superior article. Of course there are individual poultrymen who have realized their own opportunities to the full, and who have been able to get a superior price for a superior article, but they are the exception and not the rule, and there is a very good reason for that. You have only to visit a few poultry farms and talk with the owners, or even read the articles that practical poultrymen write about their methods and their aims, to see that the vast majority of poultrymen are in the business because they love it, and not primarily for the money there is in it. This attitude of mind is necessary, too, for unless a man loves his birds, and enjoys spending his time to make them more comfortable and contented, they will not do their best for him. If he regards them merely as so many machines for grinding out dollars, the hens seem to get news of it in some way, and they won't grind nearly so hard for him as they would for someone who took a more personal interest in them. The result of this condition is that most poultrymen are more interested in producing good birds and good egg records than they are in marketing their produce, and while the chickens are kept hustling every minute of the day, the cash register is allowed to strike its own gait, and to be as lazy as it likes.

You may wonder what all this has to do with the subject of figuring in pounds instead of in dozens in establishing egg records. It has just this to do with it: The only possible excuse for figuring a hen's performance in number of eggs, rather than in pounds, is that it is more convenient, and that the market calls for eggs by the dozen, and considers one fresh egg as good as another, regardless of size. But I have shown that this condition of affairs is unjust both to the producer and to the consumer, and should be remedied. Eggs should be graded according to size, just as nearly every other commodity is graded. The public must be educated up to the new standard, but before that can occur, the poultryman himself must be educated up to it, and there is no better way to do this than by using the weight standard in laying contests, thus drawing attention to the real value of the hen that lays big eggs, instead of giving the prize, as at present to the hen that lays small eggs, and a few more of them. One reason why big capital has never been attracted to the egg industry is that as the market now stands there is not sufficient profit in the business to draw capital away from other industries. The blame for the comparatively small profits rests upon the poultrymen themselves, who, because of their interest in the producing end of their business, have neglected the selling end. This can be corrected only when poultrymen make use of the methods that "big business" would use—that is, a definite, persistent, concerted publicity campaign to educate the public to the value of a superior product, and to collect a superior price therefor. Let us boost the big egg, and the hen that lays it.

S.C. WHITE LEGHORNS
BLUE RIBBON
WINNERS
AT THE
ILLINOIS STATE FAIR
SPRINGFIELD ILL. 1916
BRED AND OWNED BY
MEADOWLARK FARM
ELGIN ILL.

Meadow Lark Farm, J. W. Taft, Prop., Elgin, Ill., exhibited a fine string of S. C. White Leghorns at the Illinois State Fair this year. Their birds carried off five firsts, three seconds, two fourths and one fifth. There is no retouching on any of the photographs and no alteration in the shape of the bodies, with the exception of the sickle feathers on the two upper males, which were ragged.—L. A. S.

OUR EDITORIAL in September issue on
American Poultry Association Reor-
ganization" started quite a little com-
ment pro and con—some of the "con"
views are interesting.

It is evident that some readers did
not understand the suggestion made,
or did not read the editorial carefully.

As matters stand at present, any-
one can buy a life membership in the American
Poultry Association for \$10 and the American Poul-
try Association does not get all of the ten dollars;
part of it goes to the state or provincial branch and
part to the organizer who secures the member. The
association now advertises that it "Endorses all
persons whose names appear on its membership
roll as to their integrity and good intentions as
poultry breeders, dealers in poultry equipment and
as publishers."

Obviously, with the present method of securing
members, and with a \$10 life membership fee, that
cannot be done and that advertised endorsement
ought to be withdrawn.

It is pretty generally admitted that the \$10 life
membership brings a good deal of "dead wood" in-
to the association. For one reason or an-
other new members buy a life member-
ship in the association for \$10 and then
show no further activity or interest. That
is not good for any organization.

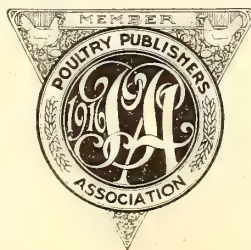

We suggested that it would be a good
plan to increase the life membership fee
to \$50, with an alternative of paying
annual dues of \$5.

One critic says that a \$50 life member-

ship fee would be absolutely prohibitive for poultry-
men, but that it might be for the good of the asso-
ciation to have an initiation fee of \$5 and annual
dues of \$5. Another editor, who, so far as we know,
keeps no poultry but does operate a city garage
and automobile repair shop, says we must think
that the American Poultry Association is a "mil-
lionaires' club." Probably he knows all about them,
but we have to confess that, being a poultryman
with just a modest income, we know nothing about
"millionaires' clubs" except what we read in the
current news of the day, and we are not interested
in the sort of "chickens" that such clubs are reputed
to encourage. From what we have read, certainly
no such club would consider a life membership fee
of \$50.

We cannot see that a life membership fee of \$50
would be prohibitive. Men with long experience
in organization work tell us that the lowest life
membership fee on which any international organ-
ization can hope to live, thrive and do business, is
a fee of \$50. We believe that they know what they
are talking about. Several organizations of poul-
trymen have come into existence recently and al-
ready have good membership lists, and these are
charging an initiation fee of \$5 and annual
dues of \$5. If the rate is increased and
one does not care to buy a life member-
ship at \$50 he can pay instead dues of
\$5 per year. Most of us who expect to
live ten years or more and take an active
interest in poultry affairs, would consider
it economy to buy the life membership.

Persons opposed to the increase, or
without sufficient loyalty to the organiza-

tion or interest in it to meet such increase, would probably have to be carried on their original payment, but we believe that such members would be few indeed. Certainly a big international live stock organization like the American Poultry Association should have membership fees that are sufficient to sustain it without recourse to other methods of raising money. By properly organizing county, state and provincial branches having much lower annual dues, it should be easy to provide the membership of such branches with representation in the international body, and such a plan could be made to meet all requirements of those poultrymen who for any reason could not directly join an international association having \$5 annual dues or a \$50 life membership fee. All poultry associations or societies could be provided for by representation in the parent or international body and the plan could be worked out to give a more active, influential and desirable international organization. It is worth careful consideration and, for the good of the industry, it is just as well not to condemn the plan hastily or to jump at unfavorable conclusions.

We are not urging the plan or endeavoring to promote any selfish interests. We are simply reporting the trend of a very strong sentiment for progressive reorganization as expressed by a good many prominent members of the American Poultry Association. Something ought to be done for the best interests of the American Poultry Association. If anyone has a better plan than the one suggested in our September editorial, let him come forward and present it. There is abundant material to make the American Poultry Association what it should be, one of the strongest, best, biggest and most influential live stock organizations of international scope. It needs closer and more practical organization. It needs to secure its revenue from sustaining membership fees paid by active and interested members. What is the best way to bring about real progressive reorganization? Think it over.

THE WIDELY ADVERTISED "high cost of living" is still with us. Keen observers of world conditions tell us that it is here to stay for some time. With the awful destruction and waste caused by the European war we are all of us concerned, because we will all have to help pay the bills, and so will our children, their children's

children and many generations yet to come. If the war were to stop tomorrow, the wanton waste it has caused could not be paid for within the coming century. The burden has been placed upon all humanity, there must be an accounting, the price has to be paid and we must all make the best of the unfortunate world conditions. We cannot settle the matter by playing politics, but we can benefit others and ourselves by remaining at peace. The "high cost of living" is a whole lot better than the high rate of dying," as one of our correspondents puts it.

From all over the country come reports that farmers and others are selling off their poultry and reducing their flocks. The causes are presumed to be excessive cost of grain and the better prices than usual that are obtainable for market chickens and fowls. We believe that it is a big mistake to reduce

flocks too much. It is wise to cull out the wasters and old birds while the demand is good and prices are high. One should not endeavor to carry larger flocks than can be well fed and properly cared for. It is wise to winter only such birds as are known good breeders or prove to be good producers. But it is a good time, right now, to KEEP GOOD POULTRY.

We believe that the close selling is, in a measure, offset by increased buying of laying and breeding stock by beginners who have become interested in poultry as a means of lessening the cost of the family food supply. In spite of the high cost of grain and milled foodstuffs, it is not difficult to produce eggs and poultry meat at home—wholesome food that you know is good—at a much lower price than one can go into the market and buy food of equal quality and food value. It is a good plan to keep poultry, that the fowls may help keep you.

D. Lincoln Orr, who, as a miller and grain dealer, as well as a poultry fancier, is in close touch with the situation, writes: "Grain is still soaring, corn \$1 per bushel in carload lots, 1000 bushels, pay before the car door is opened; best wheat as high as \$1.85 per bushel; middlings and bran crowding \$30 per ton; barley today quoted at \$1.23 for 48 pounds. (These are wholesale prices). I do not feel that these prices are justified, but we have to pay them. It is a hard question what to do—load up and they may drop; don't buy and they go up. However, I feel the safest game is to buy only what is needed for present use, as prices cannot go much higher it seems to me. I feel they have been boosted beyond what they should by speculators.

"It looks to me that many fowls will be marketed this fall and that will make eggs high, also fowls later on. I am eating broilers very frequently now, as meat is high and I have lots of broilers all paid for, so I am eating them."

Reports from Office of Markets of the U. S. Dept. of Agriculture show that there is a considerable shortage of eggs in cold storage as compared with same periods last year. The demand for new laid eggs is good and the prices are better than usual at this season, with every indication of climbing higher. Fowls and chickens are selling at good prices in spite of the reported heavy selling and when the close selling by poultry keepers is checked there will be better prices offered. We have not sold closer than usual this fall and intend to winter a good sized flock of the most promising breeders and layers.

We are buying supplies, as needed, about as usual. We are using more eggs and poultry on the home table than common and we generally use home-grown eggs and poultry pretty freely. We find that the fowls pay the grocery bills, supply us with plenty of good, wholesome, reasonable cost poultry meat and eggs—food that we know gives us the greatest value for our money—and help us to considerably lower living expenses by reducing the amount of expensive other meat required. We have plenty of broilers and roasters—as Mr. Orr says: "all paid for"—and we are eating them and growing others to supply the winter and spring table—also, we are selling some of the surplus at attractive prices to help out on the grain bills. We are not trying to unload our flocks on the market to save grain bills, but are making our own prices and selling to private trade only. If customers do not want the

chickens at our prices, we will keep and eat the birds ourselves; but we have yet to find any prospective customer who haggled over the price after he saw the birds.

Those who are interested in poultry, and who have room for even a small flock, will find it a good time to engage in poultry keeping. Aside from the satisfaction of having home-grown eggs "with the new-laid bloom on" for the family breakfast, the home flock will be found to be a very considerable aid in helping to cut down the cost of family food supplies. When living cost is high, it is a good time to keep good poultry.

Feed Liberally.

FEED liberally. Give your fowls an abundance and a variety of wholesome food. Feed liberally, but do not waste the food. Do not imagine that you can save money by cutting down the food supply or by feeding "cheap" foods.

Cold weather is here and there is colder winter coming. Your birds need an abundance of wholesome food in order to resist the cold, keep in good condition and be productive. You can legitimately and successfully lessen the cost of feeding by supplying good alfalfa, clover, and vegetable foods, to give bulk to the ration and the use of such food-stuffs will keep the birds in better order.

We once knew a man, who, when the fall moulting season came on and the fowls stopped laying, cut off the food supply, all but a scant feeding of whole oats once a day. Said he: "They don't lay, so I won't feed 'em until they do." Sickness overtook the flock and he buried most of them.

Another poultry keeper, when the egg flow ceased in the fall, gave his hens no food except what they could pick up around the farm, and apple pomace from the cider mill. He wondered why he "had such a time with colds" in that flock and "got no eggs." When he finally began feeding more freely, he did not get results but had colds and roup to contend with all winter.

A recent correspondent complained that his hens stopped moulting. He had been getting a good egg yield, but when the hens stopped laying and began to moult he shut down on the regular ration and gave oats and bran only. Naturally the moult stopped. It will be remarkable if that starvation diet at moulting time does not produce serious results and some expensive experience.

In order to produce exhibition quality, to grow chickens properly, to keep adult fowls in good condition, to get eggs, to have fowls moult properly, it is necessary to feed liberally on wholesome food in reasonable variety. A well-known fancier, who wins regularly at the big shows, writes us:

"What chickens I have are making splendid growth, and eating me into the poor house, but am feeding them just as the grain came free for the asking."

He knows the value of liberal feeding, even tho he does joke about the "poor house." Those chickens that were making "splendid growth" and being fed "just as the grain came free for the asking" will be strong in the ribbons and will sell at long prices. You can't get something for nothing. It takes liberal feeding to get satisfactory results with poultry.

Sex Control.

IN THIS issue we present the sixth chapter of Herb E. Sharp's series on "Sex Control in Poultry Breeding." This series has attracted a great deal of attention among breeders of poultry and live stock. Chapter I was published in AMERICAN POULTRY JOURNAL for April, 1916.

Mr. Sharp believes that he has succeeded in producing a strain of Black Langshans that can be depended upon to produce a very large percentage of pullets if properly bred. He has gone to considerable trouble and expense to endeavor to prove his case to our readers and to our personal satisfaction. It seems fitting at this time to present our report of results with Sharp's Lang-

shans in the 1916 breeding test at the Anchorage Farm.

It will be remembered that Sharp's hen No. 62 was awarded to J. F. Robinson, of South Weymouth, Mass., as first prize in a Black Langshan article contest published in January, 1916, AMERICAN POULTRY JOURNAL. This hen later won first prize in the utility class at the big Boston Show and her picture was published in March issue. Her record, as given by Mr. Sharp, was 22 chickens from 28 eggs, 18 of the chicks pullets and 4 cockerels. In April we traded with Mr. Robinson and secured hen No. 62 for our experimental yards, Mr. Robinson having decided that he did not want to bother with testing the pullet producing trait.

On February 26, 1916, we received from Mr. Sharp, three sex-bred Black Langshan females and a male. These had made a nine-day trip from Spokane and had been badly handled by transportation company, in fact nearly starved, so much so that they had developed egg eating. It took us some time before we cured the egg eating habit, and, for a while, we had some difficulty in getting fertile eggs. This last we attributed to the fact that the cockerel was rather immature for breeding purposes. We personally attended to the trap-nests used for these birds, marked the eggs, set each hen's eggs separately, did all hatching under hens, and marked the chicks when hatched. We lost two sittings during the second week of incubation thru a raid by skunks.

The second week in October we rounded up all of the Sharp chicks and made a count of the sexes. We found we had just 64 chicks from the sex-bred Langshans. Of these there were just 20 cockerels and 44 pullets.

From hen No. 61 we had 22 chicks; 7 of these were cockerels and 15 were pullets.

From hen No. 63 we had 17 chicks; 3 of these were cockerels and 14 were pullets.

From hen No. 64 we had 10 chicks; 4 of these were cockerels and 6 were pullets.

From hen No. 62 (the contest prize hen) we had 15 chicks; 6 of these were cockerels and 9 were pullets. This hen No. 62 presents some interesting evidence from which the reader may draw his own conclusions. We assumed that the eggs she produced during the first two weeks we had her, were most probably fertilized by a Robinson male. We kept and set these eggs separately. From these early eggs we had 6 chicks; 3 of which were cockerels and 3 were pullets. From her later eggs, fertilized by mating with the Sharp strain cockerel, we had 9 chicks; 3 of which were cockerels and 6 were pullets.

The facts are as presented and the reader may draw his own conclusions. Any way you take it, the showing is a remarkable one. Mr. Sharp may feel that he has proved his case and that we are according him faint praise when we

Platt's Wonderful RED SUSSEX

Some special values in large, vigorous, well-bred cockerels. Richly colored. If your females come penciled, or light in breast and back, or if your cockerels come white in undercolor, or black in breast, let me prescribe a cockerel that will straighten you out.

Reasonable Prices. - - F. L. PLATT, SWANTON, OHIO

AMERICAN WHITE ORPINGTONS

WILL WIN FIRST PRIZE
FOR YOU ANYWHERE

We can furnish you a Cock, Hen, Cockerel, Pullet or Pen from the "best line of males in the country." Every individual an American line-bred bird of eight years' standing. Pure white color, massive type and heavy laying ability are so intensely bred into these birds that they are acknowledged supreme by all. The most reliable reproducers of any strain. Ask any judge or breeder that knows, "Who has the best White Orpingtons?" "Woolery Farm, of course!" These birds are American line-bred and they win and lay. No breeder today can give you more in real value, nor will go further to give you the best satisfactory service.

We are the originators of the American bred White Orpington, and want all good breeders to know and appreciate their value. Get our winnings at the National Club shows, Chicago Coliseum, Madison Square, Hagerstown, Cincinnati, Indianapolis, and remember we bred every one of these winners, his sires and grand-sires. If you breed strictly Woolery Farm's American-bred strain you breed the best, and if you can advertise them you will find a ready market for all your surplus stock and eggs. Write us your requirements today; we can fill them promptly. New Catalog-Mating List ready January 1st. Register your name for one now.

say that we are still "from Missouri" and want to make another full season's test of these birds and the breeding of their progeny. In fact we may decide that we require more than one more breeding season in order to satisfy us that he has actually discovered the secret of sex control in poultry.

His presentation of the case in his series of articles has been able, reasonable, and convincing. The experimental flock, which he placed in our hands without reserve, have "delivered the goods" by yielding a remarkably high percentage of pullets. The stock is sound and vigorous and the chicks healthy and growing well. This makes a favorable showing for closely inbred stock.

Hen No. 63 certainly made a remarkable record. No. 61 was the hen we expected to give us the best results, and the record shows the singular fact that her early chicks came 4 cockerels and 12 pullets, while the last clutch of her eggs, set late in season, gave 3 pullets and 3 cockerels. These were the last eggs of her string and she hatched and raised the brood herself.

"Prince Ebony" strain Langshans gave us a little more than half cockerels. Eggs from Robinson Langshans gave us nearly 60 per cent cockerels. From our experience with Black Langshans this season, both with adult fowls as breeders and layers and with growing chicks, we are very much pleased with them. They make fine big chickens that grow quickly and make flesh comfortably, the eggs are large and hold a fine brown color; both old and young stock are uncommonly active for their size and prove excellent foragers. As layers the adult hens and 1915 pullets which we secured have made a wonderfully good showing. The "Lordly Blacks" have not disappointed us in any particular, but we note that, altho they are Asiatics, they possess a nervous disposition that is only equaled by the Mediterranean breeds.

The National Dairy Show.

DURING the past ten years the National Dairy Show has grown to be the one great agricultural event, not only in size but in importance and attractiveness, of our great national dairy industry and allied branches of agriculture.

Springfield, Mass., October 12 to 21, 1916, presented the first of these great National Dairy Shows to be held east of Chicago. Not only was the dairy in-

TO OUR READERS.

Our subscribers are our friends and we use every effort to protect them in every way. We believe that every advertisement in this issue is signed by trustworthy people, and to prove our faith we will make good to our subscribers any loss sustained by virtue of their having purchased fowls or goods from one of our display advertisers.

All we ask is, that in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad is inserted, and in case of loss notify us of the fraudulent misrepresentation of the advertiser, giving us full particulars as soon as it occurs. In all cases in writing to advertisers say, "I saw your ad in American Poultry Journal."

dustory represented, but from far and near came exhibits of all special branches of agriculture which are associated with the development of the dairy cow. There were big nursery exhibits, displays of dairy machinery and a wonderful variety of labor saving farm machinery and implements; specialty association exhibits, big herds of dairy cattle, representing the highest development in the various breeds. It was a big exhibition and a source of inspiration to all who attended it. The key note of the whole was closer operation of all concerned, better tools, better equipment and greater efficiency.

We made a special trip to the show for the purpose of seeing Harry M. Lamon and his assistant, Joseph W. Kingborn, of Poultry Investigations, U. S. Department of Agriculture, who were there in the interests of the Girls' and Boys' Clubs. One of the biggest, most important and most interesting features of this big Dairy Show was the department devoted to the Girls' and Boys' Clubs, representing the work of school girls and boys throughout the country, and particularly in New England. Corn Clubs, Potato Clubs, Pig Clubs, Fruit, Canning, Domestic Science and all branches of boy and girl endeavor on the farm were represented. And, of course, to us the exhibits of the Girls' and Boys' Poultry Clubs, occupying a special tent, proved decidedly interesting; in fact this was one of the centers of attraction of the great show. No one can attend such inspiring exhibitions without realizing the great importance and broad scope of the work undertaken by the United States Department of Agriculture on behalf of our girls and boys.

We believe that at Springfield has been started the nucleus of a big annual poultry show for the Girls' and Boys' Clubs. A work that is well worth while and deserving of hearty support and encouragement from all persons and asso-

and your careful attention means your success. This is your opportunity to procure a start from strains that have given entire satisfaction to over 4,500 customers in this and foreign countries.

Stock Sale

In all my breeds I have some exceptionally good breeders (hens and cocks) to offer for the first time. It is the stock that has produced the eggs and chicks for over 4,500 satisfied customers. My regular prices are very reasonable. This gives you the opportunity of buying real layers, a foundation for future success. I have some very good cockerels and pullets growing nicely. You may want some of them. Advise me of your wants. I will be pleased to quote you prices on same for early fall delivery. Do not overlook the advantage of booking your order now. It means a reserved selection and mutual benefits.

Write for my instructive illustrated catalog. It has helped others and will undoubtedly help you.

ciations interested in the big pure-bred poultry industry.

We understand that the showing at Springfield was so encouraging, showed such keen interest on the part of the girls and boys, that Massachusetts is likely to be one of the first of the Northeastern states to have a special representative of the U. S. Department of Agriculture for the purpose of developing the work of Girls' and Boys' Poultry Clubs. We urge all who are interested in poultry to get in touch with Harry M. Lamon and boost for the greater development of this progressive work for our girls and boys and for the betterment of all pure-bred poultry interests. In our December issue we hope to be able to present some photographic views of the Girls' and Boys' Club exhibition at the great National Dairy Show.

C. H. LEITNER R. F. D. 4, Box 8 ELGIN, ILL.

Confidence in yourself is a good thing, if you don't overdo it to the extent of hypertrophied self-importance and exaggerated ego. When your self-conceit reaches a point where you live and thrive on flattery and the fawning advances of other self-seekers; when you are beginning to believe that you are the only man for your job and that your services are indispensable to the rest of mankind; it is a pretty good plan to slow down before you start skidding.

No matter how good and clever you are, no matter how well you can manage your particular line of work, no matter how snug you sit on your job, there is always someone else who could take that job off your hands and do it just as well and probably a little better. Just remember that no matter how big a man gets, how indispensable he makes himself, how capable he may be, there is always some other man ready and waiting to take on the work and to endeavor to prove more efficient at it. Good men have passed out and have been sorely missed, yet plenty of other men have promptly turned up to take their places, to carry on the work and to improve on it.

A good opinion of yourself is a good thing when combined with plenty of willingness to keep learning and to keep driving onward. But it don't pay to get balky, to attempt to stand in the way of progress, to think that you know it all and that your way is the only way. Just consider “safety first” and don't let “big head” symptoms grow on you; for once you get bitten by the bug of exaggerated self-importance you are headed for the toboggan and the discard.

Winner in Article Contest.

IN the September issue, M. C. Wilson, of Oil City, Pa., offered a show pen of his “beauty and business” Rose Comb White Leghorns to the reader of AMERICAN POULTRY JOURNAL submitting to us the best article on “Why All International Egg Laying Contests Should Award the Prizes to the Hens Laying the Most Pounds of Eggs, Instead of the Largest Number of Eggs.”

The prize goes to T. Harris Boughton, Wilmette, Ill., and his article, “Weight, Not Numbers, Egg Value Standard” appears in this issue of A. P. J.

This was one of the best and most satisfactory article contests which AMERICAN POULTRY JOURNAL has conducted. Thirty articles were received, representing all parts of the country and every article presented a good argument. Not less than half of these articles are so good and so ably presented that we hope to publish them as time and space will permit. We enjoyed reading them and have no doubt that our readers will find them equally interesting. We believe, also, that they will help toward the eventual selling of eggs by weight, which is the standard by which food values are determined, not the number of small packages in which the food is contained.

The editorial staff had a difficult time of it picking the winner in this contest; when we got down to the nine best articles it began to look as if we might have to put the authors' names into a hat and hold a “drawing” to decide the issue. A final reading and ballot, however, fixed on Mr. Boughton as the winner and he has our congratulations.

“REGAL QUEEN”, FIRST BOSTON HEN, 1913

Four Judges in Four Years

Yet the

Regals Keep Winning

AT THE NEW YORK STATE FAIR

Under Judges Drevenstedt, Cleveland, Graham and Atherton, the result has been the same. This year my birds were again awarded the

Grand Prize

which was the Manning Cup for the best ten birds in the show (final possession.) My total win was:

Cocks, 1, 2, 3, 4, 5; Hens, 1, 2, 3, 5; Ckls., 1, 3, 4, 5; Pullets, 5; Pens, 1, 4, 5; Best Display for the 11th time.

Under four of the best Wyandotte Judges in America my birds have proved to be far in advance of my competitors. My customers do just as well—scores of reports have been coming in from all parts of the country. At the Canadian National Exhibition the bulk of the premiums in White Wyandottes were won on Regal stock bred by customers. The following winnings have been reported to date: Cock, 3; Hens, 2, 3, 4; Cockerels, 1, 2, 3; Pullets, 1, 2, 3, 4. If you want to make a success of your White Wyandottes, get Regal stock.

5000 — Cocks, Hens, Cockerels and Pullets for Sale — 5000

SPECIAL To make room for young stock, I am offering 30 special value pens at \$25, \$35 and \$50; also fifty early hatched cockerels at \$10 each. In writing, state whether you want birds of exhibition or Dorcas breeding.

PORT DOVER, CANADA

DR. WOODS' NOTES AND COMMENT

O what a glory doth this world put on
For him who, with a fervent heart, goes forth
Under the bright and glorious sky, and looks
On duties well performed, and days well spent!
For him the wind, ay, and the yellow leaves,
Shall have a voice, and give him eloquent
teachings.

—Longfellow.

* * *

Thus far it has been a glorious autumn and the promise is good for a wonderful Indian Summer. Nature is full of compensations and, to all who made the best of the cold, wet spring and dull, moist, early summer, she is paying full measure in a bright and beautiful fall season, to ease the rigors of the approaching winter's chill.

* * *

With uncommonly fine weather conditions for the season, the work of getting things snug for winter is progressing rapidly and favorably. The adult stock birds are in fine fettle and the youngsters are decidedly promising.

* * *

October was a marvelous month, a great month for tourists, and we have never before noted such a volume of automobile travel. Cars from nearly every state in the Union have passed our place "seeing America first" and particularly beautiful New England. The October foliage has been remarkably fine this year and weather conditions have been all that could be desired. Everybody, with his wife and family, seemed to be on wheels and worshipping at Nature's shrine this fall.

* * *

A great deal has been said, pro and con, about the Everbearing strawberries. While it is probably true that these fine strawberries may not prove profitable as a purely commercial proposition, we believe that no family garden is complete without an everbearing patch. Our experience has been very satisfactory. Unfortunately we do not know what variety of everbearing berries we have. Last spring, when we were very busy with other matters, a nursery agent pestered us until we invested \$3 in a hundred plants, chiefly to get rid of the agent. It has proved to be the best \$3 we ever invested in plants. In due time the berry plants came and were set out. Since early in July we have been furnishing the family table with delicious strawberries twice a week from that little everbearing patch. On Friday, the 13th of October, after frost had killed everything else in the garden, we had a fine big strawberry shortcake from that bed of everbearings and never did strawberries taste so good. It looks as if we would get one or two more pickings before the freezing weather puts an end to bearing. Whatever may be the facts about the everbearing strawberries from a commercial point of view, we believe that our friends will find them a good investment for supplying the family table with superior quality berries out of the regular season.

* * *

During October's second week we made a 45-mile trip to beautiful Old Silver Beach in Falmouth, cooked dinner on the beach and enjoyed a fine swim in the briny ocean. The day was mild, like mid-summer, and the water

warm, with just enough surf to make it good fun. There were picnic parties all along the shore and some of the fishermen made fine catches of big tautog, caught in the surf off the rocks. Wild geese and ducks have been plentiful since the season opened.

* * *

And that reminds us: If you kill or capture a wild duck bearing an aluminum band around one leg, having a number on one side, and on the other a statement requesting that the U. S. Dept. of Agriculture, or Biological Survey, be notified, you are requested to send this band at once to the Bureau of Biological Survey, U. S. Dept. of Agriculture, Washington, D. C. This band, if accompanied by a statement as to date, place, and circumstances under which the bird was taken, will be of service to the Survey in its efforts to determine the

longevity of individual ducks and the routes of migration of the species. The bands are being attached to considerable numbers of wild duck of several species which have been cured of the duck sickness prevalent around Great Salt Lake, Utah, and there released. The Department is particularly anxious to secure reports from these birds to determine their complete recovery from this malady which has killed hundreds of thousands of ducks in Utah.

* * *

High winds and lightning ripped down a few old apple trees this season and we had the wood sawed up into fireplace lengths. Old apple tree wood, full of punk, is the fireplace wood par excellence. Save it and store it away for the short days. No matter how punky and rotten apple tree wood may seem, it will yield both pleasure and warmth

*Never had so many good ones to sell as now
H. W. Halbach*

GET THE BEST

WHETHER you want a show bird that can win, or breeders that can be depended upon to improve your flock, a prepotent sire or a prolific female, it will pay you to make your purchase where quality has been the watchword from the beginning—from the strain that has produced the most sensational winners in the big shows for years, from the breeder who can and will give you the best values.

In White Plym. Rocks You Can't Beat Halbach's

The unparalleled win of my birds at the great Coliseum, Chicago Show, December 13-18, 1915, was the final link to the chain of victories that has given them the undisputed championship. 1-2-3 Cock; 1-2-3-5 Hen; 1-2-3-4-5 Pullet; 2-3-4 Cockerel; 1-3 Young Pen; 1-2 Old Pen. ALL CHAMPIONSHIPS.

In the opinion of experts from every section of the country there never has been shown to date a string of White Rocks that so nearly approached the highest ideals of the breed. And every individual was bred on my farm—is the product of years of careful breeding—represents bred-in quality; not accidental quality. It is in the blood. You who buy of me may possess it—and it will be reproduced. I have hundreds of birds of superlative merit, closely related or directly descended from my great champions. Any one of them will breed the quality you seek. Every one of them is vigorous, active, prepotent. Every one of them is worth many times the price I ask for them as individuals for their breeding value alone. My thousands of satisfied patrons the world over are proof that my birds make good—invariably—in show room or breeding yard. And when I say to you that never in all my years of experience have I had so many good ones to sell as now, it means that Halbach's guarantee of satisfaction signifies more to you this year than ever before.

Write Me for Show Birds or Breeders, I'll Please You

Without exception my personal attention is given to every order. Whether you buy the lowest priced bird on my place or an outstanding exhibition specimen, it is my honest endeavor to fill your order just as I should wish to have one of mine filled by you. And every time, if what I send is not satisfactory in full measure, my customer may return it and get his money back. Write me today for what you desire to obtain. Make up your mind to own White Rocks from the real Champion Strain and you can win. Large catalog, 20 cents.

WINNERS AGAIN

At Hagerstown, where there were about 9,000 entries and every class well filled, Monmouth Farms demonstrated again its right to the title of America's Premier Leghorn Farm. Against the stiffest competition, we won almost every first and second prize in Whites and went far ahead of any other exhibitor in Buffs.

Does It Mean Anything to You?

Wouldn't you like to be represented in a show by birds of this character? It's the surest way we know to come out with Blue Ribbons. Better write us today—right now. Tell us where you want to exhibit. We'll help you win.

HAGERSTOWN WINNINGS

Whites 1st and 2nd Cock
1st, 2nd and 4th Hen
1st and 2nd Cockerel
1st, 2nd, 4th and 5th Pullet
1st Old Pen

A Fancier's Pride in His Work

We're proud of our birds because of their quality. Proud of our 8 years spent in perfecting this quality. Year by year, as our business has grown, we have discovered new and better methods of breeding, mating, feeding and housing. The four factors that go towards making blue ribbon winners. We want you to know all about "Mirimichi Quality," about our wonderful winnings at the World's Fair, New York, Boston and other shows, so we have prepared a catalog that gives you an insight into our "Quality." S. C. Rhode Island Reds, White Rocks and White Wyandottes. This book is free, so write for it today.

Fishel's Wh. Wyandottes Are World's Champions

THE past five years Fishel & Son's strain have won more prizes than any other strain of White Wyandottes at from three to seven shows a season, including the Great World's Fair at San Francisco. No other breeder of this variety can show such a wonderful list of winnings. Our customers are winning over all competition and while this strain is bred to the highest degree of perfection as to exhibition points, they are bred equally as well for utility, (meat, eggs and quick growth.)

Thousands of farm range birds for sale, bred by our winners and brought to maturity on free range which insures health, vitality and vigor. Exhibition birds conditioned and guaranteed to please you. Get Fishel Service which cannot be equaled. Send for our catalog.

J. C. FISHEL & SON Box J HOPE, INDIANA

when used in the fireplace. Since the long evenings have been with us, the whole family have enjoyed sitting about the open fire, on the old fashioned hearth, learning the wonderful tales that none but the old apple wood can tell, when the frosty winds clamor outside the door.

* * *

At this time, before real severe freezing weather sets in, remember that cabbages make fine green food for breeding stock and layers. Where cabbage is freely fed in the fall we believe that the old birds clean up the moult in much better shape and begin laying earlier. Don't feed frozen cabbage. If cabbage has been frosted, thaw out in a tub of cold water before feeding.

* * *

Egg prices are climbing higher for first quality, new-laid eggs. Bear in mind that soiled, dirty, or washed eggs will not be accepted as first quality. Renew the nest material often, keep the nests clean, keep clean litter on the floor of house, gather eggs often. It takes a little care to get clean eggs, but it is well worth while.

* * *

Cooked yellow pumpkin and squash, fed plain or in a moist mash—as much as will be cleaned up quickly in the daily ration—will help to put that desired golden yellow color into egg yolks. Yellow corn and good, well-cured, cut clover are also helps in securing rich colored yolks.

* * *

If you find that turkeys are scarce and high in price, try a well-fattened, home-grown capon for the Thanksgiving dinner. If you fail to have capon for the family table, now and then, you are missing one of the finest table delicacies. Capons can be produced at home at far less cost than you will have to pay for other meats—not half so good—in the market. Get more poultry onto the family table, the combinations you can make with fowl, capons, roasters, fryers and broilers, are many, economical, nourishing and satisfying. The cook will tell you that there is nothing equal to home-grown chickens and eggs.

(Continued on Page 1245)

Aldrich White Orpingtons

The Combination Strain of Quality

During the last five years we have exhibited at MADISON SQUARE GARDEN, CHICAGO COLISEUM, ST. LOUIS, PITTSBURGH, BALTIMORE, ALLENTOWN, BUFFALO, ATLANTA and AUGUSTA, winning 280 regular prizes and many specials, in competition with the best in America, Canada and England. Last season at Chicago, Allentown, Buffalo, St. Louis and MADISON SQUARE GARDEN, our birds won 57 prizes; we won 18 firsts, or **twice as many firsts as all our competitors combined**—a record never before equaled by one breeder of White Orpingtons in America. At the great Hagerstown Fair, October 10th, 1916, we exhibited eighteen birds, winning first and second cocks, first and second hens, first and second cockerels, first and second pullets, first old pen and first young pen, also special for best Orpington female and special for best Orpington male.

No other breeder has ever equaled our record of winning First Cockerel at Madison Square Garden three years in succession, and we have also won **First Pen three years in succession** at both Chicago and Madison Square Garden. No other breeder has ever equaled our record of last season in winning First Cockerel at both Chicago and New York; nor has any other breeder succeeded in breeding birds good enough to win **first prize both as cock and cockerel** at both Chicago and Madison Square Garden. Last season we won First Cockerel in all shows exhibited at, and also First Cock in all shows competed for. This is ample proof that we have produced the

Best Line of Males in America

For many years in all of America's and Canada's best shows our customers have won the most coveted prizes. As we only sell one customer at a show, **your competitor cannot win** if you place your order with us early. We are the originators of the American-bred

Combination Strain of Quality

By trapnesting our flock for many years, selecting only breeders each season bred from our highest egg record females, selected also for exhibition type, quality and size, we have perfected our strain until we can supply our customers birds of **exhibition quality combined with high egg production**, and at prices no greater than are asked by any reliable breeder who breeds only for egg production, neglecting show qualities.

First Cock, Chicago Coliseum, 1915

WINNERS IN LAYING CONTESTS

At the National Laying Contest at Mountain Grove, Missouri, during 1914, 4 pullets selected at random from our pens laid 729 eggs, an average of 182 eggs each, valued at \$5.28 per pullet, as against the English Leghorns with an average of 229 eggs each, or \$4.38 per bird. This plainly shows the advantage of the great winter laying qualities of the White Orpingtons. In 1915, a pen of Aldrich Strain White Orpingtons, in the same contest, laid **492 eggs during the five winter months**, an average of 98 eggs each, as against an average of 40 eggs by the Barron Leghorns. One Aldrich Strain White Orpington pullet laid 200 eggs in nine months and twenty days, being the most laid by any bird in the entire contest, 79 pens all varieties competing.

We Have Made Our Reputation. Let Us Help You Make Yours

We have one thousand birds now ready to win for our customers in any competition, many of them sired by "American King," CHAMPION WHITE ORPINGTON MALE OF AMERICA, and MADISON KING, the only American-bred White Orpington male that has won twice at Madison Square Garden. By securing birds bred from the above winners, you will have the best blood lines in the world in White Orpingtons in your flock.

If you wish to make a profit raising chickens, secure your birds from the Strain that is best known in America today. Every one now recognizes that the Aldrich White Orpingtons are unsurpassed, and those advertising Aldrich Strain have a big demand for their stock and eggs. Our new catalog with color plates and prices is now ready, and it is free if you mention American Poultry Journal. To save time, tell us your wants in first letter.

Aldrich Poultry Farm, 5081 North High Street, Columbus, O.

FIRST PRIZE HEN, BOSTON, JAN., 1916.
HOMESTEAD CAMPINE FARM, WAYLAND, MASS.

Something Different

You never knew of a representative of a poultry journal to write an advertisement and sign his name to it. But this is the real truth. I do not hesitate.

READ ON. This advertisement is written by the Eastern representative of this journal and it tells the story of why, to my mind, the name of "Homestead" dominates in the world of

Silver Campines

Such authorities on breeding as D. W. Young, E. B. Thompson, etc., maintain that good housing and feeding play an important part in the birds' plumage, type and shape. If this is true (and who are we to pass judgment on these authorities) then Homestead Campine Farm should raise the greatest birds in the world.

ALL IN ALL I have visited hundreds of poultry plants, but I truly think that the "Homestead" has the cleanest plant in the United States or Canada. This, together with the feeding, is bound to give these birds character.

THE BIRDS you find there have those three much desired points, good clear neck hackle, good breast and good clear markings on upper part of body right to tip of tail.

DO NOT mistake my meaning, they are not all perfect, but I do not think there is a bad bird in the flock.

THE YARDS and range are perfect, you cannot find a blemish on them, in fact they remind you more of the front lawn of particular people than a poultry yard. Houses are of open-front type. Dropping boards are covered with "peat moss," which absorbs the moisture in the droppings, thereby assuring pure fresh air.

YOU ARE THE JUDGE. Do you wonder that under such ideal conditions the birds thrive so well and repay their owner by capturing so many prizes.

AS LAYERS of large white eggs, with a certain flavor all their own, these Campines cannot be excelled, and as a table fowl—well it reminds you of eating partridge.

THEIR RECORD as winners in the show room would cover pages. Suffice to say that always you will find them blue ribbon winners at Madison Square Garden, Central Palace, Boston, New York State Fair and the smaller shows.

YOU RUN NO RISK. The vigorous strain of Silver Campines will suit you and when you give them your order, rest assured you will receive real value for the amount you send them.

Write for prices and be sure to state if you want birds for breeding or exhibition.

P. S.—They issue a handsome catalog, full of real information. Send five 1c stamps for copy.

HOMESTEAD CAMPINE FARM
C. A. Phipps
Box A WAYLAND, MASS.

THIS month we will put the mulching on the strawberry beds if the ground freezes, as it usually does here in November. All bushes, such as currant, gooseberry, raspberry and blackberry bushes will receive a good lot of stable manure. Proper pruning and liberal feeding of these bushes is the secret of lots of big berries.

It is a pleasure to look over the garden and vineyard, orchard and berry fields and to note that all is in readiness for the long cold winter that is but a few days away. The bees are snugly housed in their winter cases and will not mind the cold. The poultry has been properly cared for, and will enjoy the winter in their comfortable quarters, the cellar is crowded with home-grown vegetables and the coal bin is full. So let the north winds howl and do their worst. "Who's afraid?"

I picked a few Senator Dunlap strawberries the other day. The late fall rains brought them out. Somehow they did not appeal to me. In fact, the ever-bearing varieties which give a few berries in the fall are not given room on our place.

As a reader of your interesting horticultural department, would like to ask a question. Is there any way to keep borers out of apple trees, other than getting them out by hand? Please answer in American Poultry Journal.
Texas. J. L. Hendrix.

There are a great many preparations on the market, each held to be a sure preventive of tree borers, but which in fact are only partially effective. I have had the best results by the use of sulfocide. I now paint all of my fruit trees—the trunks and up some distance in the forks with this preparation. Once in a while I have to resort to the use of the

knife and wire to remove worms from a tree, but very seldom.

I was reading one of your articles in American Poultry Journal where you recommended "Royal Purple" raspberries. Will you please inform me where I can get a few bushes? Would you advise planting that variety in this section?

Tennessee.

T. M. Potter.

Royal Purple raspberry was introduced by L. J. Farmer, Oswego, N. Y. It can be purchased from most of the Eastern nurseries. I think it would do well in Tennessee. Would advise you to try a few plants.

Your horticultural talks in the American are highly appreciated. You must have overlooked Henry Field's Norseman cabbage when you say Jersey Wakefield is the best. I agree with you that it is good and I always have some in my garden. I would like to try out some Royal Purple raspberries. Can you furnish me some, or where can I get them? Our honey crop was best in years. My thirty swarms kept me going this summer.

Nebraska.

F. B. Reeve.

I have given the Norseman cabbage a four-year trial. It has not been as satisfactory as the Early Jersey Wakefield. I have no plants, bushes, vines or trees for sale. Note reply to T. M. Potter as to where you can get Royal Purple raspberry plants.

Being a constant reader of your articles, would like to ask when is the proper time to graft apple trees and how soon after planting them can same be done? When is the best time for budding? After setting a bud, must same be wrapped or tied up? What is meant by long cane system of pruning grapes? Is it necessary to dig up tulips and hyacinths and such hardy bulbs after they are done blooming or can they be left in the ground undisturbed? Please answer in next issue of American Poultry Journal.

Iowa.

Henry North.

The proper time to place grafts in an apple tree is just before or at the time

INCUBATOR CELLAR AND NURSERY BROODER HOUSE AT NIAGARA
POULTRY FARM, RAMSOMVILLE, N. Y.

This structure was burned in May, 1916, but is being rebuilt. It is 48x170 feet in size, so the incubator cellar is one of the largest in the world. Curtiss Brothers, the energetic proprietors of this well known poultry farm, are planning to increase their tremendous business, and have purchased new incubator equipment from the Newtown Giant Incubator Corporation, Harrisonburg, Va. The first installation will consist of five Newtown Giants, each with a capacity of 20,400 eggs, or a total of 102,000 eggs.

the buds are swelling in the spring. In fact I have the best results by waiting until the buds are about ready to unfold. The scions must be dormant. As a rule it is best to top-work a young tree the second spring from planting. If the tree is older it makes no difference. Any unsatisfactory apple tree should be top-worked to some worthy variety, as the scions will bear fruit the second year after being placed if the tree is of bearing age.

The best time for budding apples and most fruit trees is in July and August in the Central West. Budding should be done when the bark will peel easily. Yes, the bud, or rather the wound made by inserting the bud, must be wrapped with wax cloth or raffia, in order to secure the "setting" or "taking" of the bud. At the end of the tenth to fourteenth day after putting in the bud, cut the wrapping away, so growth of body of limb will not be interfered with. Long cane system of pruning of grapes means that the fruiting canes are left about three to four feet long. Spur pruning means that the laterals are pruned to two buds each. For Iowa, the long cane pruning is the best system so far put forth.

Tulips do better when replanted about every three to four years. Hyacinths do not need this treatment. All these bulbs can be left in the ground permanently and do well.

* * *

I notice in the article in your department of the September issue of The American Poultry Journal that you mention the Royal Purple raspberry as being most satisfactory of all raspberries in your locality. As I have never seen this variety advertised, am writing to ask you to kindly furnish me with the address of the grower or nurseryman that sells them. Our best berry here seems to be The Cardinal, as it stands out extremes of wet and drouth better than the Cuthbert or any of the other standards. Is the St. Regis a good bearer in any locality that you have ever heard of? I have sent for a few of The Oneida Ever-bearing variety, that is sold by the Rhinelander Nursery Co., that makes the claim of great superiority over the St. Regis. What varieties of ever-bearing strawberries are equal in size to the Superb that you have seen growing yourself? Progressive seems to me to be entirely too small to bring good prices.

Kansas.

Otto Greef.

The St. Regis with me is a very poor yielder and altogether unsatisfactory. I have many like reports in this variety. Then again some growers find them all they desire.

The Progressive seems to be the most satisfactory ever-bearer in the Mid-west. On my ground the Superb is a very shy bearer.

* * *

I have just bought a place close to the city with a lot 100x300 ft., meaning to raise all my garden truck another year and keep two dozen hens. There are a couple of fruit trees on it now, but they are practically worthless, as they are old and rotten. Now, I want to set out about half a dozen fruit trees and would like to know what I ought to plant so as to have two apples, one pear, one peach, one quince, one cherry. Also will have a few grapes, strawberries and other berries. Understand that all I want is just enough for myself, as I work in the city as a draftsman. Have had quite a little experience with poultry, but know absolutely nothing of fruit. Can you tell me what varieties are best to plant? I want a red apple to keep for winter but do not know the

THE LORD FARMS'

White Leghorn COCKERELS

for Producing Layers

"Like begets like,"—to improve the laying qualities of your stock you must breed from dependable layers. The old way was to simply pick out the good looking birds for future breeders. You are just as apt to pick out males bred from very poor layers as any other kind under that system. Today you can buy pedigreed bred cockerels from the highest layers on our plant from us.

There is absolutely no guess work about our stock. "We know." Our cockerels this year are bred from ancestry with records of 200 to 288 eggs.

Our Strain of Leghorns is Pure American Bred

Scores of our cockerels are fit for the show room, and all have nice white plumage, good yellow legs, medium size combs, and are otherwise "Standard bred," but best of all they are bred from big producers of good sized white eggs.

Our records are honestly made, as we trap-nest every day in the year, and our farm and methods are always open for public inspection. We own the pen of Leghorns that won third at the Storrs Egg Laying Contest last year, with an average laying record of over 196 eggs. The majority of the birds in this pen beat 200 eggs, and they were mated to a cockerel with a dam's record of 248 eggs, and his granddam's record was 288 eggs.

Sons of our highest producers will cost you \$5.00 to \$15.00 each. A few dollars invested in this kind of stock will return you hundreds in the future. By breeding from our cockerels for a few seasons you will stamp their laying qualities right on your strain. One season's breeding will show you the benefit of this method, and now is the time to buy, as we have a grand selection.

THE LORD FARMS

Box 240-M Methuen, Massachusetts

varieties that are best or where I can be sure of getting from a reliable concern, as I mean to pay a good price for the trees and shall not be niggardly about that. But I do not want to find when they come into bearing that I was stung some five or six years ago.
Ed. E. Claussen.

Asking me to name the one best apple tree for planting in Pennsylvania or anywhere else is drawing it down pretty fine. I will advise my correspondent to plant one Stayman Winesap and one Delicious apple tree. Early Elberta would be my choice were I to plant but one peach tree. Would set the one cherry of Montmorency. I do not know what pear or quince to recommend for planting in this man's yard.

There are a number of thoroly reliable nurseries in easy reach of my correspondent's home.

See to it that the young fruit trees are protected on the southwest by a board or some other material, in order that they will not sun scald this winter.

* * *

I wish to ask your advice in connection with the planting of a fifteen to twenty-acre fruit and poultry acreage to be located north of Des Moines. I am going into the business not entirely for the pleasure but for the commercial gain. I want to plant apples, cherries, currants, gooseberries, grapes and perhaps blackberries and raspberries. I might plant other fruits, such as plums or pears, if you thought advisable. I would like to know what you think is best to plant and what percent of each to plant. I would like to have apples for the early market and right thru to the winter market. What distance apart is best to plant the trees, bushes and vines? When is the best time to plant? I had planned to go on this acreage in February or March. Is it best to make the holes for fruit trees with dynamite? What spraying should trees get the first year? What age trees are best to plant? Same with bushes. When should trees be first pruned and should the bud blossoms be nipped the first two years or let fruit. I spent about ten years on a fruit and truck farm in Michigan, but had nothing to do with the trees except at fruit picking time so I have no technical knowledge of the above things from actual experience except as picked up from observation. How about strawberries for home use?

Iowa. Thos. L. Hosmer.

I strongly advise Mr. Hosmer to make his planting of apple trees largely of winter varieties. While a small part of the orchard could be profitably planted to early kinds it would not be well, in my judgment, to give much room to these sorts. Above all I would not plant any of the summer kinds. I would confine the planting of the earlies to the early summer varieties, using Henry Clay and Yellow Transparent and Live-land raspberry. These come extremely early. Plant only enough to supply your local market.

For winter varieties I would advise Delicious, King David, Grimes Golden and Black Ben. Delicious is a one best apple and will always be in best demand at high prices. King David is a glori-fied Jonath. n, beautiful, fine quality and the tree wonderfully productive. Grimes Golden is a jewel, always in demand. Be sure to get the Grimes Golden double worked on Delicious. Grimes Golden on its own roots is badly affected with crown rot, but when double worked on Delicious is free from this disease. Black Ben is the "barrel filler." Bears annual crops of great big beautiful ap-

White Leghorn BABY CHICKS

FOR 1917

Now is the time to get your order placed for January, February, March or April chicks. Already we have thousands booked for early deliveries. No orders too large or small to receive our prompt and careful attention. We are the largest breeders of W. Leghorns in the Eastern States, and we believe we have more satisfied customers than any other breeder in America.

Don't forget that we are breeders of W. Leghorns.—we are not simply running a hatchery. Our business receives our own personal attention every day in the year. Last year we sold over 160,000 baby chicks, and this year we have made plans to hatch over 200,000.

The coming season we expect to put out the finest Leghorn chicks we ever hatched. The majority of our pens this season will be headed by males bred from dams with records of over 200 eggs, yet our prices are going to remain practically the same as last season.

25 to 49 chicks.....	17c
50 to 99 chicks.....	16c
100 to 499 chicks.....	15c
500 to 999 chicks.....	14½c
1000 or more chicks.....	14c

Our stock has always been free from White Diarrhoea, so our chicks have always been easy to raise. We have hundreds and hundreds of customers who do not lose more than 5, 6 or 7% of the chicks we ship them.

Write Today for Our 104-Page Catalog

It contains a lot of valuable information about W. Leghorns and how to be successful in handling the same. It has been the means of making hundreds of successful poultry men and women. We give you this book free, but ask you to send us 4c in stamps to pay for mailing the same.

C. A. S. FORGE WORKS, SARANAC, MICHIGAN

ples. These are not the equal in quality to the others named above, but sell readily at a good price.

Plant early apple trees twenty-five feet apart; winter varieties thirty feet apart. I would plant very lightly of plums. There is, as a rule, no money in this fruit. Mammoth Gold, Omaha and America can be safely planted near Des Moines. Would advise that you plant only enough pear trees to supply your home demand, that is, the demands of your own family. Pear growing in Iowa, owing to the blight, is a dangerous business. I have the Lincoln pear on my place and it seldom blights.

I think you will find it profitable to plant largely of Early Richmond and Montmorency cherry. The soil around Des Moines is especially adapted to the raising of cherries and this fruit is always in demand at good prices. Yes, plant largely of Red Cross and Diploma currants and Oregon Champion gooseberries. There is big money in these fruits. When one does get a crop of raspberries they bring a big price, but it is an uncertain crop in this state on the whole.

It is not necessary to make the holes for the trees by using dynamite, unless your soil is underlaid with hardpan.

Plant only well grown two-year-old trees. Be sure to do this. The trees should be pruned when set by equalizing the top and root. Then leave them alone except to head the growth properly by rubbing off all buds which would make undesirable branches or limbs. Do this each year and there will be little need of severe pruning. When the tree gets ready to fruit, let it do so.

For home use plant Dunlap, Haviland and Sample strawberries.

* * *

Your very interesting department on Horticulture in the American Poultry Journal prompts me to write you about two plots of land 60x100 ft., facing southwest, which I wish to put in fruit. One plot directly on seventh street has nothing growing on it and the other is used for young chickens.

The peach is the principal fruit tree grown here. Very few fancy apples so far as I know are grown in this vicinity. I would like as early maturing varieties as possible. What about Grimes' Golden, Delicious and McIntosh apples? Stark's Early Elberta, J. H. Hale, June, and Elberta peach, Mammoth Gold plum, Lincoln of Illinois and Bartlett dwarf pears and Montmorency cherries.

I would like to raise some garden vegetables in connection with the fruit trees on the seventh street end. Present garden is 30x100. In the rear of house are two plots about 30x80 growing red and black raspberries, blackberries and six Downing gooseberries, ten each Diploma and Red Cross currants, five Elberta, one Niagara, one Crawford early, one Crawford late and one Champion peach purchased of C. A. Green's nursery at Rochester.

There is a thrifty pear tree that has never so far as I can learn borne any fruit and one natural apple tree, fruit of which is pucky and worthless. Can they be budded or grafted and if so where can buds or grafts from good fruits be secured?

Have never raised any kind of fruit until I came here two years ago and know absolutely nothing about trimming or spraying, but do know they must be cultivated. Have two hundred one year old strawberries, but owing (I suppose) to the cold spring had but about three quarts of fruit on them. Am broadcasting droppings from 130 chickens and forty hens on the front lot.

PATENTED

Read What Bill User Says

Dear Jim:—

Sure I'll be glad to tell you what I can about brooders. You are dead right—if you expect to stay in the chicken business you've got to *raise* your chicks after you hatch them—and to do that you need the best brooder that money can buy. That is the Standard Colony Brooder, made by the Buckeye people, and sold on 30 days' approval.

When it comes to brooders, I have seen them all, but this "Standard" is the leader of the bunch. It will take care of from 100 to 1000 chicks for less than six cents a day, and do it better and with less work and trouble than any I have ever seen. It is a self-feeding, self-regulating coal burner, and all you have to do is put coal in it once every 24 hours. And you ought to see the little chicks thrive and grow—better than they could under any old hen that ever lived.

It's so all-fired good they tell you to write your own guarantee—and that's going some.

Take it from me, Jim, this brooder proposition is just like the incubator. Get the best one there is—it is the cheapest in the long run—and the best of them all is the "Standard."

Yours for more profit,

BILL USER

A Guarantee Without an "IF"

Just as "Bill" says, when you buy a "Standard" brooder, you can write your own money-back guarantee.

Beware of Imitations! So far we have caught five competitors trying to imitate the "Standard." Make sure by looking for our name.

AGENTS WANTED! Some desirable Territory is still open. Write at once for our offer.

The Buckeye Incubator Co.

114 Euclid Avenue

Springfield, Ohio

Eggs are bringing for one day old, strictly fresh, 55 cents per doz. Will be 70 or 80 cents by December first. Wheat is 2.65 and corn 2.20 per hundred.

Appreciating any help you can give me might help me to give my family and myself one of God's greatest gifts to mankind, as well as, I hope, some financial gain.

New Jersey.

J. W. Knox Clark.

I like that letter. It has the human interest spirit ringing true, and love of wife and children, the home-making desire of a father.

Mr. Clark certainly has named the very best varieties of peaches and apples for his section and he should, in my judgment, confine his plantings to those varieties exclusively. The apple and pear trees which do not bear fruit can easily be top-worked to desirable fruit. Mr. Clark will find it not only profitable but a lot of fun to learn how to put in scions and buds. He can no doubt secure scions from some grower near his place. If not, he should send to some reliable nursery firm for them. The scions should be put in, in the spring just as the buds on the old trees are starting to unfold. I venture the prediction that in due time Mr. Clark will have one of the best intensive fruit "farms" in all New Jersey.

* * *

would like to take advantage of your department and ask a few questions and will thank you for your interest. I have a young peach orchard, about 275 trees. This is their fourth summer. They were purchased from a reliable nursery thru an honest agent (honest is right). I had them planted by experienced fruit growers. The first year everything was new to me and they did not get cultivation, but the following years they were cultivated and pruned. This spring they were pruned carefully and plowed both ways and then harrowed frequently up until August first. The borers were dug out and the trunks painted with asphaltum, and in passing, this asphaltum treatment for borers looks good to me.

The trees made a splendid growth, but recently have begun to turn yellow, say about a month ago, a few of them earlier. It is not the "yellows," at least as generally understood. Last Sunday I had an experienced fruitman come down and go over the trees. We dug down to the roots and found as follows:

Where the tree had shown sickness all thru the foliage, the bark on the trunk was dead, all around between the bud and the roots. Where the foliage showed sickness on half of the tree the bark was partly dead between the bud and the roots.

We dug up a couple of trees and found that the bark above the bud was green and apparently healthy, that the roots were apparently in healthy condition but that the bark on the trunk between the bud and the roots was dead.

About half the orchard, perhaps more, is affected to varying degrees in this manner. The man I had come to look at them thought he would try cultivation rather than pull them out, but in my opinion an evident disease like this is not curable or at least not worth while.

What I would like to know is what is the matter with these trees and what might be the probable cause and the prevention in future, if any.

We had suspicions that the fruit was budded on inferior, or diseased stock, or perhaps not on stock suitable to this locality.

This locality is one of the highest points of Allegheny Co., Pa. The soil is good, perhaps might be called rich and the air drainage good; a very favorable spot for a peach orchard. The varieties planted were mostly Elberta, with some Champions, Early and Late Crawford. The stock came to me from an Ohio nursery. Whether the stock was their own budded stock or bought in from some outside nursery I do not know. Will appreciate your advice on the matter, particularly as to yanking them out and planting new trees.

Pennsylvania.

Albert Hartrick.

I am confident on the evidence that your peach trees were originally budded on stock which is unfit for planting in your locality. The fact that the trees are affected as they are shows that the parent stock was of no value as far as hardiness and vigor is concerned. In 1882-3, thousands of peach trees, budded in a southern nursery, were scattered

thruout the peach growing district of the north, and all were affected as are your trees.* I strongly advise you to dig out every one of these trees which are ailing. I think you will make a big mistake if you do not do so. Don't stop to find out the cause of the ailment, but yank 'em out at once!

Being such an unusual case, I sent a copy of Mr. Hartrick's letter to P. C. Stark, of Stark Bros. N. & O. Co., Louisiana, Mo., and asked his advice. Mr. Stark replied as follows:

We have carefully read the copy of letter from Mr. Hartrick. I do not remember of ever seeing a similar condition on peach trees to that which he describes. However, I have seen young trees, especially during wet seasons, blister on the body and form a dead portion or sometimes a ring entirely around the tree. I do not know that science has ever discovered the exact cause of this trouble. However, it only shows up on a portion of the tree, and I do not think there would be any cause for alarm of its inoculating the ground and attacking the trees that were planted to replace the dead ones. My suggestion would be that you have him cut out all trees that are dead or that he is sure are going to die. The others could have the affected portion trimmed back to good live wood and probably the new bark would grow over. I do not think your correspondent need worry about any danger of infection on trees that are replanted in this location. Hope this gives you some suggestions regarding answering this letter.

* * *

In answer to P. P. Scott, Missouri: Water core in apples is caused by the accumulation of excess sap in the tissues surrounding the fibro-vascular bundles, or the main sap channels. In some varieties of apples, where the water core is not excessive, the sap is finally distributed to the surrounding tissues. The cause of the apple being water cored in this way is not yet well understood. A few years ago I was the guest of one of the largest apple exporters in New York City. He showed me several thousand barrels of Western Jonathan apples which were affected with water core so badly that he could not ship them to Europe.

* * *

I have four letters from men who will plant apple orchards next spring asking if it pays to use dynamite in the planting. In answer I quote a letter from B. C. Anton to the *Fruit Grower*:

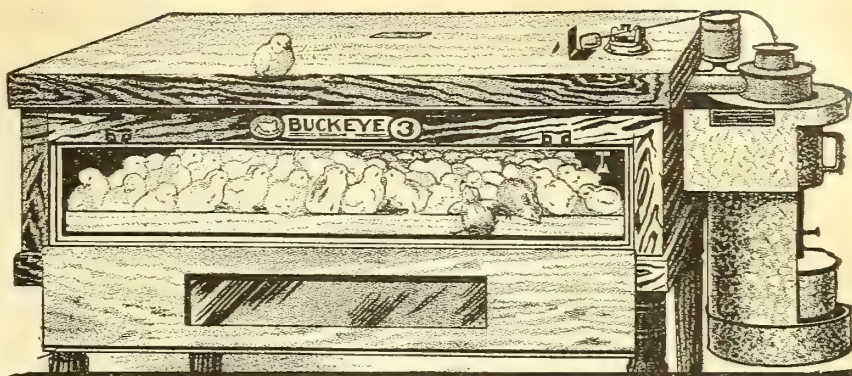

So much has been said and written on the use of dynamite, in tree planting and cultivation that many appear to be confused in their ideas, and some are liable to injure their soil if they follow advice blindly. One of our Missouri readers, Mr. B. C. Auten, gives the following advice which will be safe to follow:

The best way to decide the matter is by actual test. Put in a trial shot and note the result. After the charge has been exploded take a spade and dig a narrow trench clear across the soil affected, in a straight line across the center of the hole made by the shot. Dig out on both sides until you come to the ground which has not been disturbed. Make the trench deep enough to ascertain the condition of the soil as far down as the influence of the explosion can be seen.

If the effect of the blast tends to improve the condition of the soil, it can be easily seen, but if it only packs it and makes a tight, jug-like hole in the ground it is harmful. In some cases the soil will be so compressed that it is almost impossible to dig into it with a spade. In fact I have tried some places where the soil appeared almost like rubber after a shot for some distance on all sides and the center was in the form of a jug and fully as water-tight. If a tree should be set in such a place the result would be bad.

In answer to F. W. Ainsworth, Georgia: I cannot tell you what would be the best cover crop for your orchard. Consult the horticultural authorities at your state college.

BUCKEYE

The Best Incubator Made

*"Built up to a standard
--not down to a price"*

You'll find it in the plants of the biggest breeders in the country---and you'll find it in the piano box coops of beginners just started.

Anybody can hatch chickens with the Buckeye. It operates automatically and can't go wrong. You get a chick from every hatchable egg.

That's why poultrymen *think* "Buckeye" when they *say* "incubator." That is why all the Agricultural Colleges and Experiment Stations endorse and recommend the Buckeye.

Here's What We Guarantee

The Buckeye incubator is *guaranteed* to hatch more chicks and better chicks than any other incubator regardless of price, or we take it back.

The fame of this guarantee has traveled from sea to sea. Over half a million "Buckeyes" are in use by big and little breeders and over 2000 leading dealers sell it.

Questions and Answers

Conducted by
Prince F. Woods, M. D.

Off-Color in Black Minorcas.

Q. Five years ago I bought a pair of S. C. Black Minorcas (a cockerel and pullet) from a reliable breeder. The birds were good color then. When the pullet got to be three years old she moulted and grew a set of white primaries in each wing and the following year they came in white again.

I have been breeding from this pair in this way: The first year bred the original pair; second year bred father to his pullets and mother to her son and the third and fourth and fifth year proceeded the same.

Now, I find this year that some of my young stock have gray in the wings and some have a feather or two in the back with gray tips and a few have two or three tail feathers tipped with white.

I would like to know if this defect can be bred out all right, or if I will have to start all over again. I raised 100 chicks this year and about one-third of them show some off color.

Quincy, Ill.

G. D.

A. By careful selection you can breed out the defect. It is not necessary to make a new start. You probably did not give sufficient attention to strength of color in mating up your birds and undoubtedly did not cull closely. We would not have broken up the original pair mating the second or third season if it was giving good results, but would have given the cock, in addition to his first mate, some of his best and strongest colored pullets. In Black varieties it is not uncommon to have adult fowls moult in white feathers and it is a common thing to get white in the chick feathers of the young stock. There will always be a percentage of defective specimens and these should be culled out and not bred. If you will select your

breeding birds with care, and pay sufficient attention to health and vigor and to strength in color, you can improve the color of your strain considerably and reduce the percentage of off-colored chicks. If you are satisfied with the performance of your flock and with results in other respects, we would stick to the original stock and breed for greater strength in color by careful selection and mating. When one side of mating is weak in any point, try to offset it by strength in that section in the mate. Be sure to use only strong, healthy breeding birds. If you feel that you need "new blood" in your flock, write to the breeder from whom you made the first purchase and explain conditions to him. He may be able to furnish you with a good male or female that has the strength in color and other points that you need and closely enough related to your stock to give you good results.

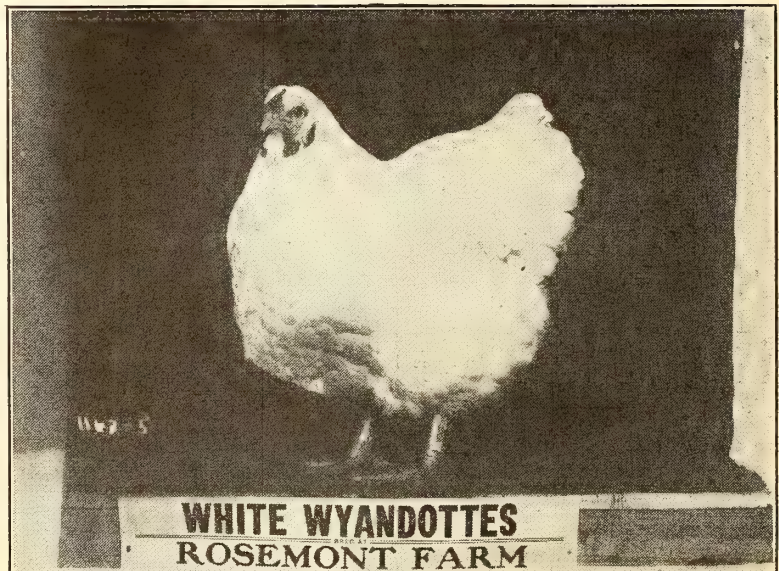

Dust Bath—Cold Water—Feed.

Q. (1) Where birds are housed at all times, should there be a dust box? Is the sand on the floor with litter on top all that is need.d?

A. (1) While the fowls will get along very well dusting in the sand on floor, it is well to supply a dust bath containing loam. Don't let it get too dry and dusty. A slightly moist earth "bath" is best.

Q. (2) Must the water in winter be given cold and changed often, or can it be warmed without any serious effects?

A. (2) A good many poultry keepers use warm water or some water-warming device. We prefer our own drinking water cold or cool and assume that our fowls feel the same way about it. We give the drinking water cold both sum-

A New Book— and a 1917 Model Old Trusty

YES, reader, we are ready with our new book for 1917 and we want you to send in your name at once for a copy free. It's a new book all the way through—in a new style—new shape—new cover—and filled with new Johnson suggestions on making money with poultry. Send in your name today. We now have close to three-quarters of a million customers. To our old customers who may read this ad we extend greeting. We will be glad to hear from you. Some have written us who have been using Old Trusty Incubators for ten to twelve years or more and are still getting big hatches every year. This is to be expected. Old Trusty is built for long-life work and good work year in and year out.

New Conveniences for 1917

Note the illustration of Old Trusty on the cover of our catalog. The lamp now sets on a big oil drawer. This drawer runs in under the case and holds enough oil for the entire hatch. Saves filling the lamp from time to time. Also note the handy thermometer holder on the door. The thermometer comes into view every time you open the door. These features are

work savers. They don't make the hatches any bigger but they do make them easier. Bigger hatches with Old Trusty would be impossible, for it already holds the world's record for biggest averages right now.

Old Trusty is always shipped safe arrival guaranteed and **freight paid by us**. Quick shipment from factory at Clay Center or warehouses at St. Joseph, Mo. and Seattle, Wash.

mer and winter and change when necessary—always supply fresh water once a day and sometimes twice. When there is much freezing weather and there is clean snow on the ground, we supply snow in place of drinking water and the fowls seem to like it better than the water.

Q. (3) I feed Park and Pollard's feeds. Can these be used with safety, or is it better to mix one's own feed?

Govans, Md.

T. E. G.

A. (3) The commercial feeds you name have a good reputation and we sometimes use them. Most of the ready-mixed feeds are good if you obtain a fresh supply and do not buy old, stale stock that some dealer has carried in storage for too long a time. For the man with small flocks the ready-mixed feeds are usually very satisfactory. For large flocks we believe it is more economical to mix one's own feeds.

Fall and Early Winter Colds.

Q. What do you do for colds? I was putting 100 Leghorn pullets from colony house into laying house; out of 52 there were 22 with colds and 30 with clean noses. I shall separate them and keep the clean nosed ones by themselves. Whether they crowd or not they get colds. There is a lot in print, but I want to know what you do for colds.

Neighbor says: "Don't talk. I have been having a time with colds." Another neighbor has 300 fowl and they are chock full of colds and roup.

Maryland.

A. We very seldom have trouble with colds in young or old stock. We attribute this to the fact that we house all stock in open-front quarters and never breed from a bird that has been afflicted with colds. Also we do not encourage visitors to enter our houses or yards or to handle our birds. In a neighborhood where several flocks are "chock full of colds and roup" it would be a very easy matter to carry the infection from one plant to another.

To avoid fall colds, breed only from healthy, vigorous stock that has never been sick. House in open-front quarters. Do not leave young stock too late in colony coops in the fall. When housed, do not shut in too closely. See that the change from range conditions to winter housing is not too great a change. Supply an abundance of greens. Do not go from infected poultry quarters to the healthy fowls without exercising reasonable precautions to prevent carrying infection. Don't let visitors coming from infected plants handle your birds or enter your poultry yards and buildings. Don't forget that rats, mice, and wild birds may carry infection from one place to another. Don't crowd the flocks. Do not shut in closely at night. Do not permit close bunching on floors of coops on frosty nights.

When colds appear, isolate all sick birds. Clean up and disinfect. Dip heads of birds having colds or cleanse their mouths and nostrils with a solution of one teaspoonful of creolin, or

YOU Need Leg Bands

For Your Birds

just as much as you need to feed or house them. It is impossible to trap-nest without them, and if you raise one or a thousand birds you should have them banded, if for no other reason than to tell their age at a glance. For trap-nesting and exhibiting, the bands are made with large numbers easily read from a distance. Double numbers on a band from 1 to 100, single numbers on a band from 101 to 300, may be had on white, red, blue, pink, cerise, yellow and green celluloid. A 150 single numbers from 301 to 800 on white only. In order to tell the age of the bird, we can supply bands with the number "1915" and "1916" on the same seven colors of celluloid. Sizes to suit all breeds, also pigeons. Guaranteed to stand water and weather. Send for free sample and circular. Easy to use and worth using.

REDS Single Comb

You must look elsewhere for show birds. All we have is real pedigreed layers, with trap-nested records of 171 to 222. To get you acquainted will ship four hens and cockerel for \$17. Hens have record of 158, 160, 158, 140—last named is for 8 months. Or pen 4, for \$32, which includes cockerel and seven hens with following records: 193, 180, 178, 178, 174, 174, 171. In lots of 4, hens of trap-nested strain but not trap-nested, \$2.25 each. If we don't satisfy you, we don't want your money.

zenoleum, or similar saponified cresol preparation, in a quart of warm soft water. Follow this treatment up with the application of camphorated petrolatum to face, mouth and nostrils. Keep the birds in open-front quarters and see that they go on the roosts at night.

Costs and Profits.

Q. (1) What profit could be expected from cockerels of American or English varieties hatched in April or May and sold as market poultry in the fall? Would want to charge cost of eggs plus cost of incubation, together with feed, against these market birds. Have in mind Chicago markets for both feed and poultry.

A. (1) The answer to above question depends upon conditions affecting your chicken crop, your skill as a manager both as a grower and in selling your stock. The best way to answer the question is to try it and find out, keeping an accurate account. Paper figured costs and profits are alluring but are seldom satisfactory. If the cockerels are

caponized and properly grown and marketed you might realize a gross profit of 15 cents per pound above costs you suggest charging. From this you would have to deduct labor and overhead charges in order to figure actual net profit. Frequently, unless special attention and skillful management is applied to both the growing and marketing, the birds may not show any appreciable profit when all production costs are considered. Generally speaking, if you can show a net profit of from 25 cents to 50 cents per bird on cockerels at six months old you are doing pretty well.

Q. (2) Can the sexes of White Rocks, White Wyandottes and Rhode Island Reds be distinguished while the chicks are broiler size, say 8 to 10 weeks old? Would like to sell cockerels as broilers and keep the pullets.

A. (2) In the majority of cases, yes. Now and then there will be a few specimens that will fool an experienced grower.

Q. (3) Can Leghorn sexes be distinguished at this age?

A. (3) Yes.

Q. (4) Which should be the most profitable, 2-pound broilers at 10 weeks old or roasters as described in question 1?

A. (4) That depends largely on your local market and the demand. Most of the losses of chicks come before the broiler age. If the market for roasters is good, the cost of making roaster flesh after broiler age is proportionately less per pound than the cost of making broilers. Guesses and paper figures are unsatisfactory. The only way to satisfy yourself is to try it and find out.

Q. (5) About what would it cost to feed a chick during its first month? What would be the cost for 10 weeks?

A. (5) Approximately—first month, 8 cents; first ten weeks, 18 cents.

Q. (6) What would it cost to feed a cow a year? About what profit could one expect from one cow per year?

Houghton, Mich. A. M. W.

A. (6) Again the answer depends largely upon yourself, local conditions and the cow selected. We never have

World's Largest Incubator Order

Curtiss Brothers—"Niagara Poultry Farm"

Buy 102,000 Egg Capacity NEWTOWN GIANTS

These machines—five Double-Deck Newtown Giants with a capacity of 20,400 eggs each—will soon be installed at Niagara Poultry Farm, Ransomville, N. Y. We believe this to be the largest single order for incubators ever placed by an established, successful poultry farm.

Curtiss Brothers have had wide experience; *have been making poultry pay on a large scale for thirty years.* They have made such a success of their business that the conservative FARM JOURNAL published a special book describing their poultry farm and methods. In this book—"100,000 A Year From Poultry"—Niagara Poultry Farm is called "*the largest general poultry enterprise in the world,*" having been "*brought up to such a point of productiveness that its sales exceed \$100,000 a year.*"

When experienced, successful, business poultrymen like Curtiss Brothers select the

Newtown Giant Incubator

for their personal use after fully investigating the merits of all makes of incubators of the mammoth type, and place an initial order for 102,000 egg capacity, they clearly demonstrate their conviction that *the Newtown Giant "hatches the most chicks, the best chicks, with least labor and at lowest cost."* You will do well to be guided by the judgment of *men who know* when selecting your incubator.

For dependability, efficiency, convenience and economy, the marvelous Newtown Giant stands supreme among incubators. This broad statement is supported by the testimony of a vast number of prominent poultrymen in all parts of the world.

Learn about the Newtown Giant—how it is constructed—the wide range of sizes in which it is built—its exclusive time and labor-saving, results-insuring features—the astounding hatches regularly secured by Newtown users. You owe it to yourself to learn the facts and avoid expensive mistakes. Our catalog and booklets tell all these facts, plainly and truthfully. These helpful books are FREE for the asking. Write for them today.

THE NEWTOWN COLONY BROODER

Coal-burning, self-feeding, self-regulating.
Made in four sizes at \$15, \$20, \$25 and \$32.50 to accommodate any number up to 1200 chicks.

VICTORY

4th Cock, Boston, 1916

Do You Need Breeding or Show Ckrls. this Season?

Hundreds of youngsters now ready for delivery; also a few breeding females of exceptional worth that I must sell to make room for pullets.

YOU ARE JUDGE

I challenge any and all breeders to give you better values than you receive from me for I breed Leghorns as a hobby and for the personal satisfaction that I get from handling the best. I sell all but a very few of my season's production and sell with a view to my customer's satisfaction and future trade.

DO NOT place your entire order with me this season, but place a part and a part with any other breeder you may choose to select. Compare the **RESULTS** you obtain. Be your own judge as to where you will come in the future.

Willow Tree Values are backed against the world with utter confidence of your satisfaction and future orders.

BROCKTON FAIR

FIRST COCKEREL

In a hot class of 21 cockerels I won First—admittedly the coveted prize in any class. This bird surely deserved the honor. My pullet was Fourth in a class of 25 and pen Fourth in a class of eight pens.

SURELY

this win proves that my young stock is of the highest quality and that they are on a par if not a little better than my competitors.

REMEMBER!

birds you buy here are backed against all breeders. Once you purchase, you become a steady patron, because the value you receive compels you to return.

All birds shipped subject to your inspection for 48 hours. If not satisfactory ship them back and your money will be refunded without "red tape."

H. P.
McKean, Jr.

H. P.
McKean, Jr.

kept cows for profit and don't know what is a reasonable return to expect. We are keeping cows to supply the home table with milk and cream and some butter—with skim-milk for cooking and for the poultry. Probably the milk costs us more than it would if we could buy it, but it is not possible for us to buy the milk we want when we want it and can't buy the quality we produce. The standard ration per day for 1,200 pound cow is 25 pounds of dry matter; which ordinarily consists of about 19 pounds of dry matter obtained from hay, fodder and silage and 6 pounds from grain. You can use local cost of such feeds in your location and figure cost of her food from that. We have pasture six months of the year for our two cows. We grow some hay and some corn fodder, tho not nearly as much as we need. The grain we buy. The grain for one cow averages to cost us about 15 cents a day. Six months of the year we have to feed hay and fodder and the cost per cow for such feed is about 20 cents a day. Pasturage in this section can be had at \$10 per cow for the season. The grade Guernsey we now have is reputed to "milk right around" and from appearances can be estimated to yield an average of 10 quarts of milk a day for 48 weeks. So in round numbers you can say that it costs us about \$100 a year to feed a cow and that she yields us about \$168 worth of milk, figuring it at five cents a quart. Labor costs us 23 cents an hour and it takes about an hour and a half each day for the man to take care of two cows. The manure we need for the land and in this section it is not easy to buy good manure. We can buy milk at 8 cents a quart, but the supply is irregular and the quality poor. We estimate that our home raised milk costs us about 7 cents a quart when all expenses are figured, and the quality is unequaled and the supply entirely satisfactory. Any cow man looking over these figures may smile, but we live in a section where hay and grain are high—now higher than ever before—and as we stated, we are not keeping cows for profit, but for the satisfaction of having milk made at home.

Whitewash for Spraying.

Q. Please give a good formula for whitewash to be put on with a spray pump.

Rochester, Mass. W. E.

A. Slake quick-lime with just sufficient water to make a thick paste. Add a pint of melted lard—or other grease—and a cupful of common table salt to each half bushel of lime while slaking. This lime paste can be stored in tubs or barrels until wanted and will keep well as long as it is kept moist and covered. Before using, add to this lime paste sufficient water to make it the consistency of thin cream. Strain thru burlap or a fine sieve before using in sprayer.

"Sulphur Flour."

Q. There is a "sulphur flour" much used as a stock tonic and for spraying.

One Filling

Is this the same 'as the "flowers of sulphur" you have recommended in the Questions and Answers Dept. as a preventive of chicken pox?

Lakewood, N. J. E. T. S.

A. Flowers of sulphur is sublimed sulphur and can be obtained of any druggist. We do not know just what "sulphur flour" is. The labels we have noted call it "dusting sulphur" and "pure, refined, sulphur flour" which may be used for any of the purposes for which commercially pure sulphur is used." Whether it contains anything other than pure sulphur we do not know, but the inference is that it is not the same as flowers of sulphur and if we were buying a remedy for internal use with poultry we would obtain same thru a drug house and not use a commercial grade originally put up as an insecticide.

Nutritive Ratio.

Q. (1) What do the authorities consider the proper ratio of protein, fats and carbohydrates for a balanced ration for laying hens?

A. (1) So-called balanced rations show a nutritive ratio for entire ration of from 1:4 to 1:6. Digestibility, palatability and succulence are, in practical, every-day poultry work, of greater importance than mere chemical balance. You might have a mash that would figure a well-balanced ratio but that would lack digestibility or palatability and so would not be good. Most of the books on poultry feeding clearly explain how to figure nutritive ratio. A good mash is made of concentrated foods to narrow the ration, since the nutritive ratio of whole grains has to stand "as is." Most good mashes will approximate a ratio of 1:3.

Q. (2) How should a laying mash be proportioned out of the following ingredients: Wheat bran, wheat middlings, white corn meal, corn gluten meal, bone meal (27% protein, 6% fat), beef meal (guaranteed 85% protein and 7% fat), our mashes contain a teaspoonful of mustard to each 10 hens?

Strasburg, Va.

W. D. M.

A. (2) In common practice that mash would be mixed about as follows: 100 pounds each of bran, middlings, corn meal and gluten; 25 pounds bone meal; 50 pounds beef meal. It would figure approximately a nutritive ratio of 1:2.5.

Figures may vary somewhat according to analysis of the ingredients. In figuring the nutritive ratio the problem is expressed thus:

Protein: Carbohydrates plus (fat x 2.25). The fat has a value 2.25 times that of the carbohydrates.

Ducks in Back Yard.

Q. I am about to add a few ducks to my back yard poultry. I have selected Indian Runners because I have no water

Make Hens Lay Now And All Winter Through

Fall and winter eggs bring big money. This season they are selling at higher prices than ever before. This is your big opportunity to make your flock pay handsome dividends. Get the eggs!

Start your early-hatched pullets to laying now. Keep them at it all winter. Hurry along the late ones. Build up the strength of the hens which have become weakened as a result of the strength-reducing molting process. Enable every layer to fully digest every bit of feed she eats and convert it into eggs, thus cutting expense and increasing the income.

You can accomplish all this at a cost of but one cent a hen per month by using

Pratts Poultry Regulator

It makes hens lay by supplying the tonics they need at this season and quickly putting them in laying condition. It induces them to eat better—hastens digestion and assimilation—prevents disorders of liver and bowels—stimulates the egg-producing organs into activity. Your hens need these materials now when confined and kept under unnatural conditions.

Pratts Poultry Regulator is America's original poultry conditioner. For nearly fifty years it has given the most satisfactory results to untold thousands of successful poultrymen. Give it a fair test under our liberal money-back guarantee and learn how well your hens can lay.

Pratts Roup Remedy

is a winter necessity on the poultry plant. Use it to prevent colds, roup and similar troubles or overcome them if they have already appeared in your flock.

Our dealer in your town has instructions to supply you with Pratts Preparations under our square-deal guarantee—"Your money back if YOU are not satisfied"—the guarantee that has stood for nearly fifty years.

**This is the
Solution of
Your Brood-
ing Troubles**

Nature's way of
brooding chicks
is outdone by

Simplex Perfection Feather Brooders and Hovers

They are real artificial hens—"giant biddies" is what they have been correctly nicknamed. They are made of natural feathers to suit the requirements of the largest as well as the smallest breeders. They have been successfully used on some of the largest poultry plants in America. In 1911 the Midlothian Poultry Farms, of Tinley Park, Ill., installed our feather hovers in all their brooder houses and have had them in continuous use since that time.

Simplex Perfection Feather Brooders are manufactured exclusively by us—both heated and fireless construction. Prices to suit every purse.

Simplex Perfection Feather Hovers for brooder houses are manufactured in 3 sizes. Prices from \$3.00 to \$5.00. They are light and sanitary.

Send for our complete catalog and let us tell you more about these wonderful Chick Raisers.

SIMPLEX SUPPLY HOUSE, Pontiax Bldg., CHICAGO, ILL.

March and April Pullets

Something nice in early hatched pullets, ready for delivery. We have 500 S. C. White Leghorn and several hundred Barred Rock and White Wyandotte pullets, fully matured and ready to lay. They are splendid in type and shape, healthy and vigorous and have been developed on free range. Grand in size and color. Prices—Leghorns, \$1.25 each, \$1.10 each in 100 lots; Rocks and Wyandottes, \$1.50 each, \$1.30 each in 100 lots; 100 White Wyandotte yearling hens at \$1.25 each in any quantity. These are large and massive in size, have snow-white plumage, beautiful type and are wonderful in value. Some prime breeding cockerels at reasonable prices. Prices on application. All stock as represented and we guarantee absolute satisfaction. All stock shipped on approval. Address

run for other varieties. Please give me a general idea for house and yard, also how I should feed. Our spring and summer will run from 30—50 to 90 above, while our winters will go as low as 20 below; not much 20 below zero weather and seldom more than 12 below zero.

Willimantic, Conn.

S. B.

A. See book "Open Air Poultry Houses for All Climates," obtainable from Chicago Office of AMERICAN POULTRY JOURNAL at 75 cents per copy postpaid. A simple open-front house of the Woods' type will give you good results. One 8x14 ft. or 10x16 ft. would be most practical size for a back yard flock. Give them all the yard room you can spare and if possible have a double yard so that you can keep greens growing in one while the other is in use. Drinking water should be supplied in vessels big enough to permit ducks to get whole head under water. Renew water supply often and always water at feeding time. Keep house and runs clean and the floor of house dry, otherwise your back yard flock of ducks is liable to be a nuisance to neighbors. Following is a good ration, quoted from "Poultryman's Formulary":

Wheat Bran.....	1 bushel
Corn Meal.....	1 bushel
Beef Scrap.....	10 lbs. av.
Low Grade Flour.....	1½ pecks
Boiled Vegetables, turnips, beets or potatoes.....	1 peck
Scalded Cut Clover or Clover Rowen, Green Rye or Cabbage.....	1½ pecks
Grit or Sand.....	3 pounds av.

Above mash should be mixed with cold water and fed night and morning. At noon give light feeding of cracked corn and whole oats. Keep fine grit, fine ground oyster shell and pure water always before the birds.

Roosts.

Q. I have a poultry house 7x18 ft., 5½ ft. high on low side and 7 ft. high on high side, with top two feet screened. Now for roosts, what shape should they be, round or flat? What size? How far apart? How high up from the floor? I have White Leghorns. How many inches of roost space shall I allow for each hen? Am short or room and keep layers only.

Naco, Ariz.

N. Y. B.

A. For roosts use 2x3 in. stock, 2-inch side up and sharp edges rounded a little. Have drop boards 2½ feet above floor and roosts about 10 inches above the boards. See that there is head room on rear roost so that tallest male bird can stretch himself and crow without danger of bumping his head. Have rear roost far enough from wall so that tail feathers of males will not touch wall. Have other roosts 14 inches apart center to center. Allow not less than 6 inches roost space per bird.

Poultry Judges License.

Q. Can you give me information concerning a license for judging poultry and the conditions?

Reading, Mass.

P. R. B.

A. For full particulars apply to Sec-

Muller Sectional Brooder Coops

and Runways
Most convenient, durable and attractive. All sections secured by galvanized steel rods passing through screw eyes, providing a rigid joint and a perfect hinge. Can be assembled or taken down in two minutes, and no tools are required. Write for our free Booklet.
Franklyn R. Muller, 2 Madison Avenue, Waukegan Ill.

Do You Have "Good Luck" With Your Chicks?

How often you hear some person say: "I have no luck with chicks." "Luck" with chicks starts with the incubator. If it's a good incubator — properly heated, **properly regulated** (which is **very important**) and properly ventilated — your chicks will start off with vitality. They won't come out of the shell half dead and totally unfit to start on their way through life. So many people trust their eggs and their hopes to a cheap machine, forgetting that it is not how many you hatch that counts, but how many **live and prosper**.

The Queen is accurately regulated—it will take care of a temperature variation of 70 degrees without danger. It is built of genuine California Redwood—very scarce in these days of imitation and cheap substitution. Redwood **does not absorb the odor** from the hatching eggs.

John Bowen

of the Colorado Poultry Fanciers' Association, wrote: "Last season the writer installed a Queen as an experiment, and found that it hatched 18 per cent better than Eastern made machines and 11 per cent better than any machine built in the West. All of the machines were run under exactly the same conditions."

Stop Losing Chicks

With cheap incubators. A Queen costs but little more, and the extra chicks that **live and grow** soon pay the difference.

Start Your Chicks With a Queen Constitution

Many people write us that they have never known a machine that hatched such **strong, healthy chicks** as the Queen. The Queen is not a cheap incubator, compared with many of the cheaply constructed machines on the market, but it is cheap in the long run. It will be turning out high percentage hatches years after the cheap machines have been junked. It will be a pleasure to send you our new Catalog. It will be mailed to you free on request.

QUEEN INCUBATOR COMPANY, 1037 N. 14th Street, LINCOLN, NEBRASKA

Richard Wayne, Gary, Ind., writes: "I have been in the poultry business and used both hot water and hot air machines. I have made a very thorough comparison of 12 different machines and the Queen is the best constructed of all."

Alfred Cramer, Morrison, Mo., says: "I have operated about ten other incubators and the Queen is vastly superior to any of them."

S. L. Todd, Green Forest, Ark., says: "I have tried six other machines, high and low priced, and the Queen is the best incubator I ever saw."

"Not a Single Complaint"

Queen Incubator Co.
Lincoln, Neb.

Gentlemen:

Chicago, Ill.

During the many years you have been advertising Queen Incubators in the columns of American Poultry Journal, we have not, to the best of our recollection, received a single complaint from one of your customers.

Yours truly,
American Poultry Journal

Mrs. C. C. Blake

of Pocatello, Ida., just starting in the poultry business writes: "An old poultryman told me I had made a wise choice when I selected the Queen. He has 14 different makes at his large poultry plant, both hot water and hot air. He finds hot water machines far superior to the hot air, and the **best hot water machine is the Queen.**"

Self-Supporting
Egg Tray and
Deep Nursery—
Can't Fall Out

It's so easy to take care of a Queen. Nothing to do but fill the lamp and turn the eggs.

*The Famous
NONPAREIL*

Single Comb R. I. REDS

Change Ownership

WE have bought all of the *Exhibition Stock*, together with the name and the good will of the justly famous S. G. McLean "Nonpareil Strain" of Single Comb Rhode Island Reds.

These birds, together with our own strain of breeding stock, places our plant among the Red leaders. In the past we have had the type together with the egg laying qualities, and with the hundreds of "Nonpareil" birds we feel justified in calling our flocks the "four-in-one," namely: Color, type, vigor, and eggs.

You, no doubt, recall the wonderful winnings made by these "Nonpareil" birds, but to freshen your memory just go over the records of Madison Square Garden, also Boston, not to mention the smaller shows, and fairs held thruout Massachusetts and Connecticut. As layers they have in past years stood well at the top in the Storr's Contests.

You Are Looking for the Best for the Least

and we think we can satisfy you. Just give us a trial order, you to retain the bird 24 hours and if not satisfactory, return same and your money will be returned promptly, without any "red tape." Be sure to state which you desire, *Exhibition* or *Breeding* Birds.

Mating Young from Same Sitting.

Q. I have some S. C. White Leghorns which were raised from a \$5 sitting of eggs. Would you advise mating the pullets to one of their brothers or should I get an unrelated cockerel?

Mountindale, N. Y.

H. B.

A. Select the two best cockerels, if you have two good enough, and carefully mate the pullets to them. Try to balance up the matings by offsetting any weak points or defects on one side by strength in same points in the mate.

Winter Management of Breeders.

Q. Please tell me what is the proper way to handle a few White Wyandotte pullets, which I expect to begin laying soon, in order to obtain best eggs from them as breeders next spring. I suppose I should keep them from laying, but how? I have no facilities for changing them from one house to another.

Kewanee, Ill.

C. C. C.

A. We prefer to have pullets well established in laying, so that eggs come good sized, before using their eggs for hatching. In holding them for use as breeders do not force egg production by feeding rich mash. Give mash sparingly or not at all. Feed plenty of greens. Make the birds work for their daily grain in litter and feed just enough to keep them in good condition with keen appetites. Ration should be mostly whole grain and very largely composed of heavy oats. Feed meat foods in limited quantity only and just enough to add variety to the ration. Don't make the mistake of starving the birds or stalling them with too much sameness in the ration. The difference in feeding to keep stock birds healthy and in good order and feeding for eggs is largely a difference of degree. If you force the feeding you promote egg production; if you are careless in feeding you may have your birds lay themselves out of condition on too scant a ration; if you overdo forced feeding for egg production you may get the birds out of condition thru digestive troubles; if you change abruptly from a scant wide ration to a liberal rich one, you may start the flock moulting. Good management in feeding requires knowledge of the flock in hand and intelligent observation of conditions.

Leg Weakness—Capon.

Q. (1) I have two S. C. Black Minorca chickens that seem to have some kind of leg or back weakness. They are well grown, have good appetites, are very thin, but otherwise appear healthy. How can I treat them? They are well fed.

A. (1) Feed a good mash daily containing about 15% cut clover (steamed) and 10% best quality beef scrap (scalded). If the scrap does not contain a noticeable percentage of bone, you can also add a little granulated bone to

the mash; most beef scrap, however, has plenty of bone in it. Feed mash once a day and a mixture of cracked corn and oats twice a day. Give all they will clean up promptly at a feeding. Do not leave food before them all the time.

Q. (2) What should capons be fed and how cared for after the operation? Have succeeded with the operation, but they all die after about 3 or 4 days. Should the wound be sewed up?

La Fayette, Ala. H. B.

A. (2) This reminds us of that oft-repeated statement, "the operation was successful, but the patient died." There was something wrong with your operation or you would not have lost all the chicks. When operation of caponizing is properly performed no sewing is necessary. It is well to keep caponized birds confined in comfortable, clean quarters for about a week after the operation. Special feeding is not always resorted to, the birds have a keen appetite—having fasted before the operation—and they proceed to fill their crops and forget their troubles. A good feed for first food after operation is a moist mash of cornmeal and bran moistened with sweet milk. usually it is well to keep the birds on the regular ration to which they have been accustomed. Some growers recommend scant feeding for a few days, while others—equally successful—advise giving all the food the birds will eat. If wind-puff occurs, following the operation, relieve the bird by pricking the puff with a pen-knife. The capon house should be clean, dry and comfortable. A skillful operator will caponize birds almost as fast as the assistant can pass them to him. Prolonged operations result in losses. Practice on dead birds until you have sufficient skill to operate speedily; it will be time enough then to work on living specimens.

Changed Ration, Stopped Moulting.

Q. After 8 months of continuous and profitable laying my S. C. White Leghorn hens stopped laying and began to moult quite freely. I changed the feed, putting them on a ration of oats and bran only, with the result that they stopped moulting. I wish to prepare them for winter laying and ask that you advise me of the best cheap method of feeding fowl in that shape.

Milan, Mich.

J. B. Y.

A. You made a big mistake to cut down the ration when the fowls began to moult freely after 8 months of continuous and profitable laying. They had earned their rest from continuous egg production. It is evident that they were coming along in good normal condition and that their ration was about right at the time they began to moult freely. At the time when they most needed generous feeding on fairly rich and stimulating food, you cut the ration down to an almost starvation diet. Had you kept on with the regular ration—and perhaps added about 5% old process oil meal to the mash and fed succulent food, like cabbage, freely—it is probable that the moult would have cleaned up promptly and that your birds would now be laying well. It will take some time now to get them into good condition again. Economy in feeding is not found in "cheap" feeding. The least expensive method of feeding is the method that brings desired results. Would recommend that you return to your original ration, adding a little oil meal to mash and that you feed greens freely. You will prob-

"Dandy" Bone Cutter

Feeding green bone is one of the first steps to gain a big egg yield. But the bone must be cut right. The "Dandy" Green Bone Cutter cuts across the grain of the bone, enabling the hen to digest the nutritive elements better and convert same into eggs, blood and feathers.

I want to show you how to make Money with Poultry
T. E. Qulsenberry

What Others Say.

I can now save enough on feeds to pay for the entire course. **F. M. HILL,** LaGrange, Ill.

I would not take the price of the whole course for the lessons on breeding and mating. **F. L. MOYSE,** American Fork, Utah.

I could have saved about \$400 had I taken your course before I started. **FRANK WYER,** North Woburn, Mass.

The knowledge I have gained from the disease lesson is worth the price of the course. **GEORGE W. MORRIS,** Russellville, Ky.

I have been in the building business for 30 years but your lesson on Poultry House construction is the best I have ever seen. **E. M. WIGGIN,** Kansas City, Kas.

Your lesson on baby chicks is just what we have been looking for. Last year we lost 650 chicks out of 1600. This year we lost 65 out of 1600. This is the result of just one of your lessons. **GEO. M. JONES,** Escondido, Calif.

It is my earnest desire to put a real—useful—practical poultry education before every man and woman who is interested in poultry raising. I want to see more and better poultry raised—I want to see more people making money with chickens—I want to eliminate the losses and disappointments that so many poultrymen experience—I want to help you solve your poultry problems—and I can do it.

A Complete Poultry Education

I have made it possible for you to obtain right in your own home, during spare time, a complete—thorough—and practical a knowledge of poultry husbandry such as you could get nowhere else except at an agricultural college.

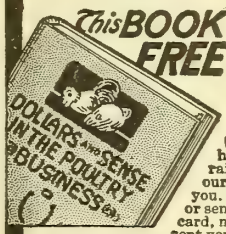

In a course of lessons taught by mail, I have completely covered the science of poultry husbandry and made it so plain and simple that anybody can understand it. I give you knowledge it has taken me a lifetime to acquire.

I show you how I make hens pay a big profit each year. I show you how I got 2,354 eggs from ten hens in a year. I show you how to feed for a big egg and meat production, how to select a site for your poultry plant and how to build your houses (right here I save you many times the price of the course)—how to get winter eggs and spring broilers—how to incubate and raise baby chicks—how to mate and breed—how to avoid and treat poultry diseases—how to show and win at poultry shows—how to dress and market poultry for the biggest profits. In other words there is no phase of poultry culture that you are not taught thoroughly. Hundreds of our students tell us that each lesson is worth the price of the whole course.

You cannot afford to be without these lessons. They pay for themselves many times each season in increased egg yield—in preventing losses from disease—in knowledge. The broadest guarantee is possible to write covers this course. If you are not satisfied you do not pay.

Get Our Free Book Today

Our Free Book "Dollars and Sense in the Poultry Business," fully explains how we can help you to make more money and save money raising chickens. It explains in detail just what our lessons teach you and what they can do for you. Just fill in and mail the attached coupon or send your name and address on a post card, no letter necessary, and a copy will be sent you by return mail.

FIRST SILVER CAMPINE PEN, BOSTON, 1915.

The above picture represents the first prize pen of Silver Campines at Boston, 1915. Owned and exhibited by Homestead Campine Farm, Box A, Wayland, Mass.

A typical White Wyandotte female, and a winner at many shows. Owned by Fernbrook Farm, Menand's Road, Albany, N. Y.

The above White Orpington was first hen at Chicago Coliseum Show 1915. Owned by Woolery Farm, Box Y, Bloomington, Ind.

ably have more or less trouble in cleaning up the moult and getting the flock back to egg production. You will have to pay for your experience in lost time, loss of yield and in special attention given to getting the birds into condition to meet cold weather in good order. You will be lucky, if by good care and liberal feeding, you get them into laying condition within the next six weeks.

Tumor on Back.

Q. On the side of one of my White Wyandottes, (on right side facing the bird) between the wing and the spine, there is a growth about the size of a small hen egg. This lump is hard and has no feathers on same, the skin is not broken, and there are no bruise marks. The bird seems healthy enough and the flesh looks very good. First noticed the growth two weeks ago. If bird is killed and bled would it be fit to eat? What is it and what can I do for same?

London, Canada. B. C. V.

A. Careful examination of the bird would be necessary to determine the precise character of the tumor. We would not want to eat a bird showing a growth of that nature. Surgical operation to carefully remove all of the growth is the only remedy. You might try this and report results.

Beginner's Questions.

Q. (1) I am a beginner. Would like to know what you mean by housing the pullets. How much room should they have? I am a back-lotter. Have a rye patch 50x75 ft. and one more lot 100x50 ft. in Bermuda and Japan clover. That is about all the room I have for green stuff. I use the rye in winter and the clover from May to October. I'll have about 85 pullets this winter.

A. (1) Housing the pullets simply refers to getting them into the quarters that they will occupy this winter. Give them such house and yard room as you can spare and do not crowd them. Do not make too great a change from the conditions under which they were grown. Feed greens freely. They will require about 4 sq. ft. house room (floor space) per bird and about 75 sq. ft. yard room per bird.

Q. (2) Do you think I will need to feed sprouted oats with this amount of rye and grass?

A. (2) If the rye and clover holds out well, you will probably not need sprouted oats. If supply of other greens runs short would sprout oats. Give one full feeding of some green stuff daily.

Q. (3) I am not able to buy expensive stock. Which would be the cheapest, to buy a pen of chickens this fall, or get eggs and chicks in spring?

A. (3) Eggs and chicks in spring.

Q. (4) Where can I get good beef scrap?

A. (4) Thru your feed dealer, or consult our advertising columns.

Q. (5) Is it cheaper and best to feed with automatic feeders? Where can same be obtained?

Martin, Tenn.

Here Are Some Big Bargains

This is the *Faultless Automatic Feeder*

All you have to do is to fill the can of this feeder with wheat, corn, oats or any other kind of feed, either mixed or separate. When the chickens are hungry they peck at the cross bar; this causes some feed to drop to the ground where the chickens can pick it up. No feed spoils or is eaten by rats or sparrows. **You can save enough feed in one month to pay for these feeders.** Besides the saving of feed, you save work.

Here Are Our Low Prices

 This feeder holds $\frac{1}{2}$ bushel of feed. It is made of heavy rust-proof material. It sells regularly at \$1.50—we sell it **for \$1.00** at factory in Chicago, Illinois. It weighs six pounds packed for shipping. Order by **No. 153.**

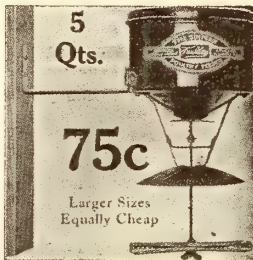

And What is More, we will sell you two 8-quart feeders, same style as above, both for \$1.50 and ship promptly from warehouse in Chicago, Illinois. These two feeders weigh nine pounds and will not be sold singly. Order by **No. 152.**

8-quart
two for
\$1.50

16-quart
each
\$1.00

Here is the Feeder for Your Low Coop Or for Your Baby Chicks

It holds five quarts, will feed any kind of feed, either mixed or separate. It is built on the principle of the large **Faultless Feeder** and is furnished complete with bracket, which can be attached to the wall or side of a coop at proper height. This feeder is beautifully enameled (dark brown) and with ordinary care it will last forever. It is guaranteed to feed your stock perfectly from the time the chicks are able to eat until ready for the axe. We sell this feeder for 75c, f. o. b. factory in Chicago. It weighs $3\frac{1}{2}$ pounds when packed. Get one today and feed your chickens right. Order by **No. 151.**

We carry a full line of poultry appliances and remedies. We also manufacture the well known Simplex Genuine Feather Brooders and Hovers—both heated and fireless. Send for our CATALOG; it will interest you.

We've proven our claims. Bred for Eggs but Fit to Show. Egg Bred Cockerels and Exhibition Stock now.

DR. L. E. HEASLEY

Box A

HOLLAND, MICH.

A. (5) Being a beginner you will probably get the most satisfaction out of your flocks by hand feeding them; it helps to keep you in closer touch with your birds. Automatic feeders are excellent as labor savers. The cost of feeding will be practically the same whether you hand feed or use automatic feeders. We like to use feeders because they save time and labor and we have to depend on help to do the feeding. The feeders insure more regular feeding and are practically fool proof; as long as feeders are kept filled and working the hens are well fed. You will find advertisements of good feeders in this issue.

Beginner's Chicks.

Q. (1) Will you please explain a safe method for a beginner to use in raising baby chicks? Not the feeding in particular, but the brooder's and necessary equipment.

A. (1) Get a copy of "How to Raise Chicks," which our Chicago Office will supply at 75 cents per copy postpaid.

Q. (2) Expect to start with 1000 in April and never operated any brooder. Should I get a coal burning brooder stove or would it be best to buy several small brooders. Which would cost the most?

A. (2) You can use small outdoor brooders in April. The best ones cost about \$15 or \$16 each. You would need one brooder for each 50 chicks. A good coal burning brooder stove would cost you from \$20 to \$30 and for 1000 chicks you would need at least two of them. You would have to house the stoves. A 10x10-ft. portable house, suitable for use with a coal burning brooder stove will cost you about \$35 delivered. In operation of either stoves or brooders, be guided by manufacturer's directions. In AMERICAN POULTRY JOURNAL for February, 1916, you will find a good article on "Using Coal Burning Colony Brooders"; also an article on "Rearing Chickens with Hen or Brooder." Look them up.

Q. (3) In using an indoor brooder are the chicks fed in the brooder?

A. (3) We feed them just out of hover at first. Later, when they have learned to use brooder, we feed in the exercise run.

Q. (4) Should the room in which brooder is operated be heated?

A. (4) Not necessary in April as a rule. We like to have it at a temperature of about 60.

Q. (5) Will baby chicks of White Rocks and White Leghorns be all right together for a short time?

West Austintown, O. W. S. F.

A. (5) It is best to brood them separately.

Mating—Pullets' Weight—Animal Food.

Q. (1) I have a cock "A" and a hen "B". From them I have a cockerel "C" and pullets "D". To establish my line from the hen "B", what method would be best; use "B" and "D" with "A" or mate with "C"?

A. (1) If the "A" plus "B" mating has given you good results would continue it and give "A" a few of his best daughters "D" also. Perfection Portable Poultry Houses

Have Solved the Housing Problem

Thousands of Poultry Raisers have become successful thru the use of these houses.

Write for our illustrated catalog. It will tell you all about Perfection Houses and why we can sell you a high grade house at a price considerably less than you can afford to build one.

Owing to the tremendous increase in our business, it was necessary for us to build a larger factory; same has just been completed and we are now in our new quarters, 4028 North California Avenue and in a position to handle orders quickly and ship promptly.

Enclose postage for catalog.

A few choice cockerels and pullets. They will please you.

BEAR BROOK FARM WAKEFIELD, MASS.

break it up. Trap nest your breeders and keep a record of the chicks so that you will know where your best ones come from.

Q. (2) What is the trouble, or do I expect too much, when my pullets of either heavy or egg breeds fall short of standard weight by one or two pounds at 6 or 7 months old, even tho healthy and laying?

A. (2) Would hardly expect them to make Standard weight until 8 to 10 months old. Probably size of parent stock and your method of feeding has much to do with lack in weight. Barred Rocks are apt to run a little under the Standard weights.

Q. (3) I have an Ancona pullet, age 6½ months, comb large and red, shape fine, appearance of laying body, well spread pelvic bones. She has been just like this for two months, singing every day but has not laid an egg. Will she be any good at all or is she a freak?

A. (3) Possibly she is laying in run or on range where eggs may be hidden or eaten. Would watch her for a few weeks longer before passing judgment on her.

Q. (4) I have no milk to use and want to know if calf meal, or milk mash, would help to grow chicks quickly to good size? Also, how fed? I find many questions answered in your columns every month and wish to thank you for the many times you have helped me.

Gardena, Cal. J. S. B.

A. (4) Either calf meal or milk mash should give good results. Feed according to manufacturer's instructions, which they will furnish on application. Personally, we prefer to use a good beef scrap and good fish scrap for growing chicks or adult fowls.

Don't Eat Mash.

Q. (1) I am feeding the Cornell formulas to my laying hens and young stock. I have several of the 8 qt. Norwich automatic feeders and Boston mash hoppers. I have been unable to get good results from my hens. They do not eat their dry mash well, but seem to depend almost wholly upon the scratch grain in the automatic feeders for their living. This, of course, does not give them any animal food and in fact the dry mash might just as well have been taken away and the hoppers used for beef scrap alone. I know you use feeders and hoppers and perhaps you have some system which is quite satisfactory. These feeders are very dependable and save a great deal of time and if I can get satisfactory results I will use them.

A. (1) Believe that the fault is chiefly with the mash. It probably is not sufficiently palatable. Try a mash made of best cut clover, 50 pounds; bran, middlings, corn meal, ground oats, gluten feed and best fine beef scrap, each 100 pounds. For a few weeks regulate the

Poultry Fence

27c.
A ROD

Made of Open Hearth heavily galvanized steel wire. Strong, durable, closely woven. Requires fewer posts no base board or top rail. Not a flimsy netting but a Poultry Fence. Sold direct to user. Write for free Catalog showing many styles of Poultry, Farm, Lawn Fence and Metal fence posts.

feeders at night so that they will feed very slowly and do not open them to feed freely until about 11 o'clock in the morning. Keep mash hoppers open and for a week or two remove the gratings in mash hoppers. Hens will not use the Boston hopper freely if they have to reach too far thru the grating for the mash. Regulate your mash hoppers so that the mash is easily accessible.

Q. (2) Would a plant using Barred Rocks for winter laying and disposing of old stock during the spring when prices are high, prove up well, handling from 500 to 1000 Rock pullets from September to May?

A. (2) It should.

Q. (3) Do you get a good yield from American class varieties in those months?

A. (3) Yes.

Q. (4) I have always found American breeds easier to rear while quite young than the Leghorns and the meat produced from them is a much greater amount than with the Leghorns. What breeds do you prefer for a plant for eggs and market poultry combined?

Leroy, Ohio. F. W. D.

A. (4) On our farm we are giving preference to White Rocks and Langshans, but carry a house full of White Leghorns also. We were carrying nine varieties, chiefly for experimental purposes and thought we would try to get down to one variety only. We can't make up our mind to discard the White Rocks and we are very much pleased with the Black Langshans. The Leghorns are easily grown, lay well, and their eggs sell well, altho this is a brown egg market, but we cannot in this market get as satisfactory returns for Leghorn stock when thru with them in the laying pens. As pullets and yearlings the several varieties prove about equal as egg producers. In the third laying season the Leghorns have a little the best of it in egg production. There is little difference in cost of feeding, not nearly as much in practical experience as is shown in egg contest records. Were we about to stock a farm for eggs and market poultry, we should consider Rocks, Reds, Black Langshans and a good laying strain of Light Brahmas. The Blacks go a little slow at first as market poultry, on account of prejudice against black legs and white skin, but once customers try them they come back for more of the same kind. Personally, we prefer a heavy fowl that will stand forced feeding for rapid growth and forcing for eggs, and, with us the greatest demand is for big brown eggs. The four breeds named have never failed to "deliver the goods" for us. The ease in handling and yarding heavy fowl is also a big point scored in their favor. To a large extent you will need to be guided by local conditions and local demand in choice of a breed. In our own experience with many varieties we have really found but little difference in the productiveness of different breeds, provided you get the right sort at the start and handle them properly. We get good big eggs and plenty of them from our Leghorns and as broilers they are excellent, but for roasters and fowl for home table and local markets they are not in it with the heavier breeds.

White and Partridge Rocks

Eggs for hatching from World's Fair and Chicago winners. Prices reasonable. Write at once.

Five good reasons for investigating

Blue Hen Mammoth Incubators

FIRST

They Require So Little Time to Operate

You need take only **3 to 5 minutes** a day to operate a medium size Blue Hen Mammoth as against **1 to 3 hours** a day for operating other mammoth incubators of the same capacity.

SECOND

The Blue Hen Automatic Egg Turner

Turns every egg thruout a Blue Hen Mammoth up to 10,000-egg capacity in **5 seconds**; slightly longer for larger sizes. Greatest time, labor and money-saving feature ever put on a mammoth incubator.

THIRD

Large Capacity in Little Space

Into same space required for 3,000 capacity Single Deck of other makes, you can install either a 4,000 Blue Hen Single Deck or an 8,000 Blue Hen Double Deck, using but one heater.

FOURTH

You Don't Have to "Sit up Nights"

The heat, warm fresh air, and moisture—at exactly the proper temperature for each compartment—are furnished **automatically**—without attention on your part—in every Blue Hen Mammoth.

FIFTH

Easy to Start and Easy to Increase

You can start "small" with a Blue Hen, and then put on additional sections later on, when you wish to increase your capacity. Any handy man can quickly set up a Blue Hen.

Send for 1917 Catalog, Now Ready.

DEALERS and farmer-agents can secure exceptional opportunity to represent us in unoccupied territory. Easy sales and good profits

assured on Blue Hen Mammoth Incubators, Blue Hen Lamp Incubators and the **Blue Hen Colony Brooder**

On Blue Hen Colony Brooders alone, the sales by dealers and farmer-agents have been astounding.

Men without selling experience and dealers who never

before sold brooders, have easily made many profitable sales by showing the Blue Hen Catalog to practical poultrymen.

You Can Make Money Three Ways With a CANDEE Incubator

*Hatch and Sell Day-old Chicks
Hatch Your Neighbors' Eggs
Hatch Your Own Eggs*

The same as H. L. Holsinger, Manager of the Summitt Poultry Farm, Ridgely, Maryland, who started with a 3,000-egg Candee and enlarged his machine each year as his business grew until he now has 25,000-egg capacity. Read his letter:

"Gentlemen:

"In the spring of 1912 we installed our first Candee Incubator with capacity of 3,000 eggs. It proved entirely satisfactory and in an actual test in our own cellar, we proved that eggs could be hatched in it at one-fifth of the cost of hatching them in lamp machines.

"With the first installation we started custom hatching and the baby chick business; and catering to the baby chick trade, we found it necessary to increase our capacity each succeeding year, until now we have a capacity of 25,000 eggs each setting.

Refused Orders for 10,000 Eggs Custom Hatching

"Never has there been a year but that we would be forced to refuse orders for custom hatching. During one week of last year a record was kept for one week of the eggs refused, and they amounted to nearly 10,000. This

year we hatched eggs for 100 different customers, and could have hatched many more had our capacity been sufficiently large.

"We also have observed that the demand for Candee-hatched chicks is a growing demand. This year all our chicks were sold far in advance of the dates of their hatching, and our only regret has been that our capacity was not many times larger.

One Order for 65,000 Baby Chicks

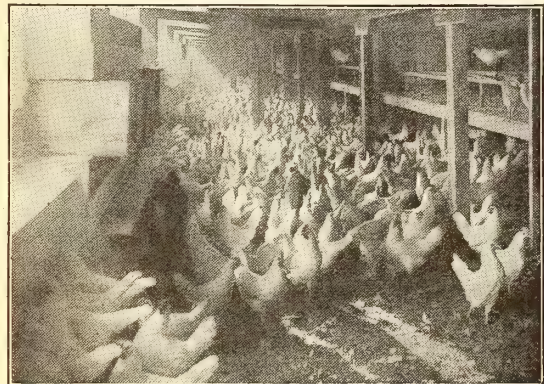

"We refused to enter into agreement to furnish all the chicks we could hatch up to the amount of 200,000, but at the same time partially agreed to supply one individual with 65,000 the coming season.

"When it is considered that these large orders were secured from the customers who have tested the chicks for appearance and vitality, the Candee Incubator cannot be praised too highly, for without it, notwithstanding the vitality in our matured stock, we would have been unable to produce chicks in quantities and chicks to give our customers good satisfaction."

**H. L. Holsinger, Mgr.,
Summitt Poultry Farm,
Ridgely, Md.**

Many other operators of Candee Incubators have built up big businesses, are prosperous and report that they cannot meet the demand for Candee-hatched chicks.

This proves that the hatching business is uncrowded and that there is a money-making opportunity in this business for you.

Picture of some of the vigorous White Leghorns of the Summitt Poultry Farm

Unchanged After Not An Experiment

You will be taking absolutely no chance in hatching with a Candee Incubator, because it is being unchanged in principles of operation of small and large poultry plants, and Experiment Stations in every part of the country. The Candee was right at the start. Incubator Investment.

Automatic Regulator at Each Section
The automatic regulator at each Candee section compels a constant, correct heat, because it automatically shuts off the hot water when the temperature cannot overheat in the Candee and big hatchery.

Automatic Regulator at the Hatchery
There is also an automatic regulator at the hatchery which regulates the temperature of the water in the hatchery.

No Raising or Lowering of Temperature
As it is unnecessary to raise and lower the temperature, all this labor is saved with the automatic stationary trays of the Candee give a roomy compartment.

Start Hatches at Different Times
The automatic regulator at each Candee section starts hatches at different times, as the operation of one section does not interfere with the operation of any other compartment.

Save Expense of Factory Moving
When you install the Candee you will not have to move the machine from the factory to put the machine together in a "knocked down" incubator or one that has been put in a factory. The Candee is shipped in all-built 600-egg sections with partitions installed at the factory. It is an easy matter to set up the Candee section in your own hatchery and save money and delay.

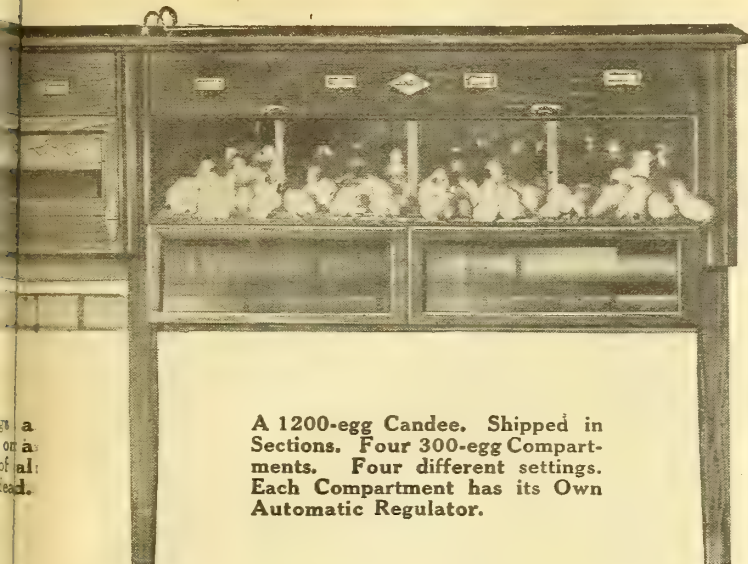

Add More Sections at Any Time
With the Candee you will be able to increase your capacity by simply adding more 600-egg sections when you install a Candee.

Write Your Own Money-Back Guarantee

Inc., Dept. 2, Eastwood, N. Y.

Incubator & Brooder Co.

MISSOURI EXPERIMENT STATION MOUNTAIN GROVE, MO.

"We have had splendid success with our Candee Incubator and Candee System of Brooding. We average about 85 per cent hatches of the fertile eggs, and that is all that could be expected of any machine. The brooding system develops strong, vigorous chicks."

Prof. T. E. Quisenberry,
Formerly Director of Missouri Experiment Station, Mountain Grove, Mo.

NEW JERSEY AGRICULTURE EXPERIMENT STATION, NEW BRUNSWICK, NEW JERSEY.

"The special feature which appeals to us is the dual temperature control of the Candee. The regulation of the water in the system is so accurately controlled that it rarely varies from 3 to 4 degrees in twenty-four hours. In addition we find that the thermostatic control in each section acts as a double insurance against the possibility of a variable temperature. This dual system of regulation also maintains a very uniform and constant temperature in all sections. The ventilation system seems to work admirably, and we have no trouble in getting the machine to sweat during the hatch."

Prof. H. R. Lewis, Poultry Husbandman.

THE OHIO STATE UNIVERSITY, COLUMBUS, OHIO.

"During the past three years we have used a 1200-egg Candee Incubator and also a Candee Brooding System with gratifying results."

Prof. F. S. Jacoby.

The students at these Colleges carry on all kinds of experiments with the Candee and yet it gives them fine hatches.

The Candee is the Incubator for the beginner, because it is so simple in construction and operation, and because the regulator at each 300-egg compartment automatically stops the flow of the hot water into the compartment when the temperature is right, so that the eggs cannot overheat.

UNIVERSITY OF MAINE, COLLEGE OF AGRICULTURE, ORONO, ME.

"This institution installed last year a Candee 2400-egg Mammoth Incubator and used the same this year to incubate all our eggs. The machine gave satisfaction in every way, and throughout the hatching period, which was from March 15th to May 1st, the temperature did not vary to any extent, although the outside weather conditions were very variable, as during that period we had some severe cold weather and one or two wind storms that made the temperature of the Incubator room much lower than normal. The two Candee coal brooders that we purchased gave satisfaction, and with them we brooded upward of 750 chicks. We had no difficulty in keeping the fires going under all conditions. We are very well satisfied with the Candee equipment."

Prof. E. N. Boland, Poultry Husbandman.

THE UNIVERSITY OF WISCONSIN, MADISON, WIS.

"I am very glad indeed to assure you that we are especially pleased with the 1800-egg Candee that we secured from you last spring. We have had good hatches in it; have not had a single poor hatch. We have hatched hens' eggs, duck eggs and goose eggs, all with good results. The machine is easy and economical to operate and certainly saves a good deal of time and trouble. Our hatches have been good and the chicks have lived and grown splendidly."

Prof. J. G. Halpin, Poultry Husbandman.

Bird's-eye view of Poultry Department of New Jersey Agricultural Experiment Station, New Brunswick, N. J.

SEX CONTROL IN POULTRY BREEDING

(Continued from Page 1191)

What is going to happen to his flock, if he is limited in his choice to a few males, while his neighbor, and competitor has large numbers to discard in his weeding out process of selecting his breeders?

Yours truly,
GLEN MCWILLIAMS,
Des Moines, Iowa."

Upon receipt of this letter, I wrote Mr. McWilliams, asking him what he would do with a flock whose progeny were all males, and he wrote:

"Nature's way is to produce about equal numbers of males and females. The breeder who limits the sex to either males or females heads his strain toward oblivion (as regards any improvement in the strain) to just the extent that he limits the sex."

In the first place, no one has yet attempted to alter Nature's way, but a very strenuous effort has been made to find out just what that way is, and apparently it is for one female to go thru life producing mostly males, while another goes thru life producing mostly females, and still others from a more or less indifferent, or careless line of breeding be-

hind them produce sometimes one sex, sometimes another sex, and then some of the more persistent ones will also transmit to their progeny the traits they themselves have carried thru life.

If it is going to oblivion for any strains bred along these lines, it is somewhat strange that we have not all arrived at that point before now, for positively all forms of live stock have been bred along these same lines since men began to domesticate wild animals.

Finding the method by which sex producing traits have been inherited in the past, simply enables the breeder to make an intelligent choice in selecting his specimens, we can choose between the female or the son of the female, that produces mostly males, on one hand, or the female that produces mostly females, on the other, and it is obvious that a large number of careless breeders will prefer to choose the female that they know nothing about, as she will be for sale for the least money.

The breeder who knows just what a particular line of blood, has been doing will probably be inclined to ask more for the female that will produce mostly females, and also more for her few sons, than for the female he knows is giving him mostly males, and many breeders will sell the all-male producer, with a statement that they know nothing about

her performance, and in this matter the purchaser of dairy stock will have a great protection in his registered pedigrees, that will reveal the all-male producing female unerringly.

Now all improvement does *not* come thru selection, corn breeders have frequently asserted that greater improvement was secured by *isolation* of a few plants from the same ear, than from all the selection that could be brought to bear, thus the seed of a medium ear will produce a better crop of corn than the selected best seeds or seed from the selected best ears from a large field, and in this segregation they are merely forcing the corn to "In-breed"; and the same results have often been noted by live stock breeders, and is readily acknowledged by all breeders who attempt to improve their strains by "Line-breeding," which is segregating.

2nd—"The male is half the pen the first generation." Yes, but he becomes proportionally less, and less, if we mate the son to the dam.

3rd—"We must have quantity in order to do any real selecting for Quality." It is claimed that the Hereford breed of cattle sprang from a single line-bred, white faced bull, that was repeatedly bred to his own mother, then to his own closest female relatives as long as he lived.

Nature's Own Grit

Kenty Grit is hard, sharp and cubical, insuring perfect digestion. It is the hardest limestone grit and contains the mineral food that produces egg shells and rich eggs. Write for prices and

MAKES THEM LAY, WEIGH & PAY THE PERFECT GRIT

A Scranton Single Comb Red Will Do It!

Win that show for you—improve the color, improve the type of your flock—put the size and vigor there—breed prize winners for you—make your flock a money maker.

Ours is Ben Scranton's own flock—perfected by him thru 12 years of careful breeding. The birds we offer are the very cream of all he has bred and raised. No flock is so strong but that this Scranton blood will help it. We can sell you a cock, hen, cockerel, pullet or pen, rich in every good quality, ready to win or breed winners and priced right. Write us today, before the opportunity passes for this season. Make up your mind to get the best now.

RAU & FRY, Grand Hotel

Hawthorne Poultry Farm,

INDIANAPOLIS, INDIANA

Certainly the Jersey and the Guernsey breeds have not had the advantage of any great numbers from which to make selections, for they are living examples of what has been accomplished, by taking good care of a few individuals and mating close relatives for long periods of time.

As quantity is not necessary to improvement we can limit the number of males very handily, and breed to the few good ones we raise with greater care, because we are not crowded with a lot of poor ones.

And last, having to discard a large number of males one is very likely to discard the best son of his best female, so that the breeder with only a few to bother with will probably run off and leave his too well supplied neighbor so far that the neighbor will never know he was in the competition.

Now let us go together into a flock of 1000 cockerels, all of one strain, and all good ones, line-bred, and generations of good blood behind them, let us carefully go over and handle every likely bird in the flock, till we both agree that we have found the very best and strongest breeding bird in the flock.

You are willing to buy him to place in your flock, he is practically a perfect bird, so let us just glimpse the record

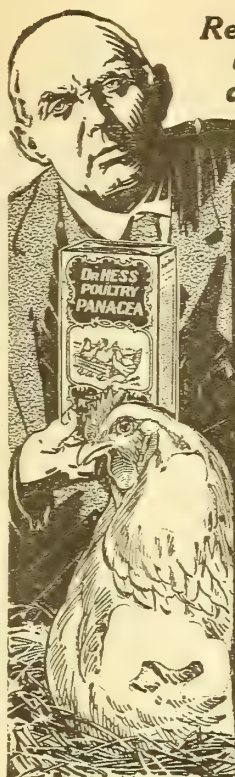

First prize Buff Orpington cock at Illinois State Fair, 1916. Owned by Richard M. Seward, Lewistown, Ill.

that goes with him; his dam produced 50 cockerels, never a pullet, the bird you have selected is $\frac{3}{4}$ the blood of his own sire, and his dam never produced a pullet, in a good bunch of cockerels; now look at this record, know that it stands as a guarantee that if this bird goes into your flock his daughters will never produce a pullet in any flock of 50 chicks.

Will you buy that bird? Without the record he is your choice, but with the record, no one wants him.

The hen that produces 50 cockerels, no pullets, stands just a two to one chance of producing the best looking, best breeding cockerel in any flock, beside the hen that produces 25 chicks of each sex, and just 50 to one with the hen that gives 50 chicks, all pullets but one. So in simply selecting the best looking bird in a flock of even one thousand birds, we stand a reasonably good chance of securing the son of a hen that is producing all males, then if we breed this fellow to his own daughters, his finest son will very likely be the son of a daughter whose inherited characters are very closely similar to those of the male she is bred to, and this gives exactly the outline we have presented above.

The Farm Journal

169 Washington Square, Philadelphia

Quite recently my attention was attracted to a magnificent pair of Percheron mares, one of them presented a rather odd appearance, with a very large masculine neck, which required a stallion collar, her hips were very well rounded, and at a first glance she might easily have been mistaken for a stallion, four of her five colts were stallions and all of them fine looking attractive fellows; the other mare wore a collar of normal size for an animal of her weight, she had a very effeminate appearance, tho inclined to show a trifle of flatness over the hips, tho when an arm was thrown across her back her great size became apparent, four of her five colts were mares, but the fifth one was a rather effeminate looking stallion, and this effeminate appearance in males has always been condemned as showing low prepotency, so males of this character are seldom preferred in the breeding yards, and one can hardly avoid the impression that probably many a great sire has been denied a fair opportunity to show his worth, because he was the son of a very powerful breeding dam.

Now if all our live stock has been bred along these lines, what are we going to do? Will we accept the female that is known to produce mostly females, or will we look for the female that is known to produce mostly males, or will we prefer to go forward in the dark with our eyes shut to the truth?

Will intelligent breeders develop a strain of female producers, or will they prefer male producers? Or will they prefer to go on blindly crossing in one line of blood on another indefinitely, without knowing just when they are to meet with an entire herd of bulls, or flock of cockerels?

In the Fifth Chapter of the series was presented a reference to the Guernsey bull, "McDonald's Prince," and his pedigree will furnish a wonderful lesson to those breeders who do not believe in "Line-breeding."

Most breeders care little what is shown back of the fourth generation, and few indeed that are line-breeding ever go further back than that if no close relatives are shown; this bull was never sold as a "Line-bred" bull and it is doubtful if his breeder so considered him; his sire was "Langwater Princeling" and his dam was "Norwood's Makefield," a cow that was not suspicioned to be a relative of "Princeling," and if we take the fourth generation back we find no animal appearing twice, so we would be justified in making this mating, if we were opposed to "Line-breeding," but the bull at the top, "Claremont Westward Ho," was a son of "Loyal of the Hunguets," while the third bull in this list was "May Rose King," sired by "Itchen Jewel," another son of "Loyal of the Hunguets," and the third dam was "Itchen Daisy III.," sired by "May Day," another son of "Loyal of the Hunguets." So much for the ancestry of "Langwater Princeling."

On the side of the dam we find in the fourth generation back, the first dam

Why hens never lay half an egg!

Feeding mostly grain makes yolks but not enough whites to complete the eggs. As the hen can't lay half-made eggs, she absorbs them back into her system.

Missouri Experiment tests show that 100 lbs. of wheat, corn, oats, barley, and kafir corn, makes an average of 224 yolks to 154 whites. Based on similar data

	Yolks	Whites
Purina Scratch Feed makes	247.49	142.11
Purina Chicken Chowder makes	182.05	282.55
Total	429.54	424.66

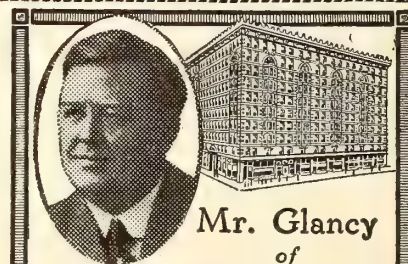

These Purina feeds together make the maximum number of complete eggs; eggs the hen will lay. That's why we can guarantee

More eggs or money back

on Purina Chicken Chowder if fed with Purina Scratch Feed as directed. Write for details and for

was "Clatford Gentle," a daughter of "Loyal of the Hunguets," the second sire was "Itchen Jewel," son of "Loyal of the Hunguets," while the second dam was "Itchen Lady," a daughter of "Loyal of the Hunguets," and so the sire and dam of "McDonald's Prince" were very closely similar in their breeding, and yet he would easily present a four generation pedigree and then pass as a cross-bred animal. Now to those who are opposed to the theory of sex control this question can well be put, if "Loyal of the Hunguets" came from a family of female producers, and "McDonald's Prince" has so much of his blood, more than any other animal, will he not be very apt to show it in his daughters?

Such matings as this have been made thousands of times, by men who would never have dared to do it, if they had looked at the generations back of the fourth, and in just this way we are continually bringing to the front the traits and characters of some long forgotten ancestor, and if those traits are undesirable, for any reason, we get them just the same, and if we do not breed in lines that we know are performing in a satisfactory manner, we may bring up one of these ancestors any time, so it really amounts to this: Will breeders follow along lines that are known to produce a majority of the desired sex, or will they risk an unintelligent cross, that may be simply breeding an undesirable line?

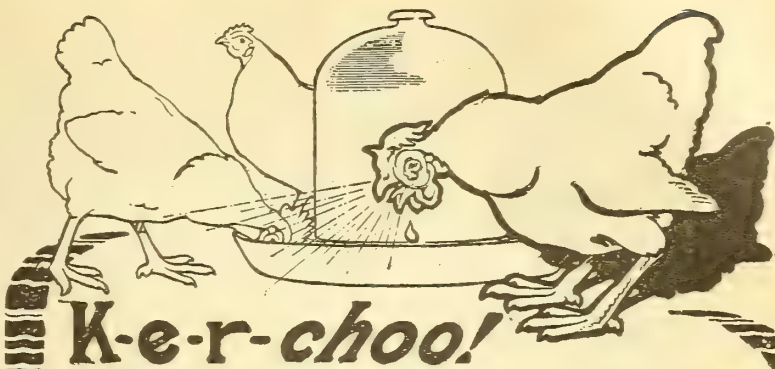

If these conclusions are right, then it was right for me to seek the widest possible publicity for my work; if they are wrong, it should be an easy matter to show the error.

At Detroit, in June, was held what breeders claim was the greatest auction of Holstein cattle the world has ever seen, a certain cow brought \$4,600, the highest price paid for a female at that great sale. When the articles on Sex Control were written, no one knew when any portion would be published, and yet the very next month the AMERICAN POULTRY JOURNAL named that cow, and if her purchaser had read the articles before the sale, the chances are he would not have bid on her, had he kept his money and paid \$4,000 for the opportunity to read that article, he would have still been several hundred dollars better off.

When any breeder can reap a profit of \$4,000 from reading a magazine article the magazine is justified in publishing the article, even tho it requires "considerable space." In the same stable where that cow was raised stood another cow, and if she could have been correctly bred, she would have been worth more than the "Champion" and her two sisters, and all twelve of their bull calves with the one lone heifer they produced thrown in for good measure. The AMERICAN POULTRY JOURNAL is to be honored for presenting this subject to as large a number of breeders as possible at the same time, and the live stock world is to be congratulated on possessing one publication with such men at the head as Mr. Bell and Dr. Woods, and if it lays in their power to make this work of practical value to the live stock world I am certain it will be done.

Keeler's Wh. Wyandottes

The Aristocrats of the White Wyandotte World

FIVE FIRSTS AT CHICAGO, 1916

YOU will be treating yourself right and serving your own best interests if, before buying White Wyandottes, you write me fully TELLING ME YOUR WANTS. I have by far the finest and largest lot that I ever reared, birds that will be THE WINNERS at America's best shows this Fall and Winter as their ancestors have been for the past twenty-one years.

The World's Greatest Strain. The strain that produces satisfactory results in filling the egg basket, laying as high as 265 eggs a year and the prize winning females are selected from among the layers. Their fine head points, wonderful size and shape, pure white stay-white plumage, broad backs and well spread tails combined with their wonderful laying ability, their power of reproduction and their habit of winning first prizes are the results of twenty-one years of careful, systematic, pedigreed line breeding. The result of my twenty-one years of experience I am offering you at remarkably low prices—quality of birds and breeding considered.

2000 BIRDS FOR SALE, 2000

Females \$5.00 to \$25.00. Males \$5.00 to \$35.00. A limited number, extra choice, of the very best breeding, \$50.00 each. Breeding pens, \$20.00, \$25.00 and \$35.00. Show pens, \$50.00, \$75.00 and \$100. I have no cheap birds—nothing but the best, so please do not write me for any \$2.00 and \$3.00 birds.

If you wish to win I can help you. If you wish to breed winners I will mate the birds correctly to produce them. Buy your breeders early. Reserve your show birds NOW for the Fall and Winter shows. All stock shipped on 48 hours approval. New richly illustrated art catalog free for the asking. (5 red stamps appreciated.) SEND FOR IT NOW. It tells the story of my success and may help you to succeed. State wants definitely and address

Monthly Prize Contest Department

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

RAISE MORE GUINEAS.

There Should Be More Guineas Raised On Farms.—They are Profitable, Easily Raised, Good Layers and a Most Delicious Food.—First Prize Article American Poultry Journal Monthly Contest.

By BERTHA M. TYSON, Rising Sun, Md.

GUINEA fowl are becoming more and more in demand in the best markets. They are healthy; prolific layers and breeders, easy to raise, great foragers, bring a good price in the market and everywhere acknowledged to be a delicious healthful food. Why are there not more guineas raised on farms?

Each season we produce great flocks of guineas at slight expense, being ideally situated for this purpose on a grain farm. We have kept all varieties, but now only the Pearl and White African. As we allow them absolutely free range, the White African variety is kept on a neighboring farm to prevent the breeds from mixing.

As layers, Guineas are hard to beat. In the wonderful records given of great layers in the egg laying contests, probably none can eclipse the never-miss-a-day record of a guinea hen during her laying season. The eggs are slightly smaller than a hen's egg and beautifully marked with dark brown spots. The flavor is unexcelled. The laying season lasts from April until September. If, however, the eggs are not gathered, the hens become broody after laying a goodly number of eggs. I have known

guinea hens to lay eighty or ninety eggs in one nest and becoming broody attempt to cover that number. The hen usually hollows out a grassy spot on the ground where there is shrubbery, weeds or tall grass to hide it from view. Sometimes, if undiscovered, the laying will continue day after day until the nest is filled, and all about it, with attractively spotted eggs.

When I first began to raise guineas I never attempted to set the hens, but allowed the hen to become broody by not collecting the eggs from her nest, at least only a part of them, but experience no difficulty in setting the guinea mothers now. Each day the egg is removed from her nest until she shows signs of broodiness by remaining on the nest. I then gently remove her and place the eggs in the nest and the hen over them. They sit well and seldom fail to bring out a fine brood. Early in the season I use chicken hens for hatching and brooding guineas so as to keep the guineas laying. After the hay and grain are cut the guinea hens are allowed to hatch and raise their broods and thus late in the season they are not handicapped by tall grass and grain when foraging about.

Naturally Guineas are of a wild nature and many people object to their peculiar call which may be heard at all hours of the day and evening and often during the night, especially if there is any disturbance about the premises. If reared with other poultry, they soon become tame and consequently make much better breeders. They are also more apt to stay about the farm buildings and there is usually not the same difficulty in

at the Illinois State Fair, where they won in strong competition: 1st old pen, 1st cock, 1st and 2nd pullet, 1st young pen, 1st, 2nd, 4th hen, 2nd, 4th, 5th cockerel. Write me today. I guarantee satisfaction.

MEADOW LARK FARM

J. W. Taft, Prop. Box 83, Elgin, Ill.

LAYERS

PAYERS

locating nests, as in the case of guineas reared away from other poultry by guinea mothers.

In hatching, the fertility of guinea eggs is a surprise to those who have hatched other kinds of poultry. Practically every egg hatches and when the time comes for the guinea chick to escape from the shell, it fairly jumps out and is ready for business from that time on. They require very little food and should be fed but a little at a time. Small seeds are relished by them, millet seed and finely cracked wheat making a fine food. They should have a constant supply of fresh water. They are very bright and intelligent from the start and soon know their attendant, calling for water if the fountain is empty or food is neglected. They never eat heavily, or scratch out plants, vegetables or grain as do chickens. As soon as freed from their yards after the dew is dried off, if the grass is high, they search for a large share of their living and consume large quantities of bugs, insects and destructive worms. They become valuable aids to the farmer by protecting his crops. They grow rapidly and when half grown closely resemble the Bob White or Quail and are equally as good eating.

The brood coop for young guineas should be placed on a plot of grass that has been cut very short and a little outside run constructed for them. At first they are so small as to be easily lost in the grass, but after a week or ten days old may be allowed on range with their mother.

The sexes are easily determined by the call, that of the female being a two syllable call, interpreted by some as "good luck" and by others as "buck-wheat," while the males use but one syllable, sounding something like "click."

There is always a good demand for guinea broilers, weighing from one and a quarter pounds to two pounds each. The flesh of the White African and Pearl varieties is light golden yellow and very delicious, the only dark meat being the legs and slightly dark under the wings. I consider the meat of these varieties superior to that of any other fowl. It has a fine flavor and is never dry, is equally as good roasted as broiled. They are in constant demand by all first-class hotels and in all reliable markets. They cost less to rear than any other variety of poultry. I have heard objections made to them on account of "their incessant racket," but I have learned to love their cheerful, busy note and would miss it as I would that of the birds' notes, frogs or crickets in the country where we are free from the jarring noise and distraction of the city.

Very little, if any shelter is required for Guineas. If housed at all, the building should be entirely open-front. In mating, I use four hens with one male and find the eggs always fertile. The male is always most attentive to his mates, escorts them to the nest when laying, and keeps close at hand at hatching time. He also assumes his share of responsibility in rearing the young, sometimes fathering four broods at one time and giving the mothers and young Guineas each their share of attention. The little Guineas are most constant in their love for the Guinea mother or foster mother and will continue to follow her about as long as she is about the farm. I have known a mother to bring

YESTERLAID

TRADE MARK REG. U.S. PAT. OFF.

Dusty Town

REG. U.S. PAT. OFF.
Sire has sired over
50 pullets that laid
200 eggs yearly.
Dam 475 egg in 2
consecutive years.

Heavy laying is a character inherited thru the sire. All Yesterlaid sires carry blood lines of hens that have laid 400 to 475 eggs in two years—as high as 261 eggs in one year.

Free range makes a vigorous sire. Yesterlaid cockerels are all range-raised. That is why they pass on to their daughters the character of their mothers—early maturity, heavy laying and long life.

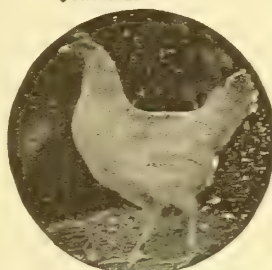

Pullets sired by Yesterlaid cockerels mature early; lay at 4 to 4½ months; and average 200 eggs each, yearly, in flocks of 50 to 100, with reasonable care. And they have the constitutional vigor to withstand long, continuous laying—two, three, four, even five years.

Yesterlaid are made in America; developed in Missouri, U. S. A., by more than a decade of purposeful, intelligent line breeding. They breed true—the blood does not "run out".

We have hundreds of Yesterlaid Breeding Cockerels descended from the same blood line as Lady Laymany, at \$5.00 up. Yesterlaid Egg Farms Co., Dept. 5, Pacific, Mo.

Fall Houstonia Sale of Red and Light Sussex

"The Colder the Day the Better they Lay."
America's foremost winners at Madison Square Garden, Chicago Coliseum, Pittsburgh and Buffalo.

Won at New York State Fair, September 11-16, 1916

Red Sussex—1st, 3d cock; 1st, 2d, hen; 1st and 2d cockerel; 1st, 2d and 3d pullet; best display.

Light Sussex—1st cock; 1st and 2d hen; 1st, 2d and 3d ckrl.; 1st, 2d and 3d pullet; best display.

February, March and April hatched birds are up to size; bred from Madison Square Garden and Chicago Coliseum winners and without doubt the finest ever produced.

Bargains in Trios at \$10.00 and Pens at \$15.00 while they last.

Exhibition stock that can win anywhere, at reduced prices. Must make room for May and June hatched chicks. Let us quote you on your needs. Get the best at the best price.

HOUSTONIA POULTRY FARM
Dept. A South Charleston, Ohio

out three separate broods during the season and have all of them about with her. When the mother starts to lay after brooding a flock of young Guineas, the little Guineas follow her to the nest and linger about until she has deposited her egg and is ready to go with them.

In season there is always ready sale for stock and eggs of any of the varieties of Guineas. Any poultry lover with sufficient land and who is within access of the large city markets will find Guinea rearing profitable.

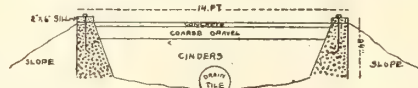

SUCCESS IN HANDLING LAYING HENS.

Record of a Flock of Barred Plymouth Rocks.—Second Prize Article American Poultry Journal Monthly Contest.

By JULIUS L. SCHMIDT, St. Cloud, Minn.

IN THE fall of 1914, I had on hand about 240 Barred Rock layers. After dusting them thoroly for lice and carefully white washing and cleaning the poultry houses they were put into winter quarters.

These pullets had before them at all times a laying mash of my own composition, consisting of two parts wheat bran, one part ground corn, and one

End elevation of poultry house floor.

part each of meal alfalfa and a good grade of beef scrap. There was also a constant supply of crushed oyster shells, ground charcoal and water before them. Floor of coop had a litter of straw about twelve inches deep in which wheat was fed about seven-thirty each morning. At noon they were given table scraps, potato and apple parings, mixed with ground green bone, which I grind myself. This mixture was fed on boards made expressly for the purpose. At

Cross section of floor in laying house.

this time I also gather the eggs and give a light feed of oats in the litter, and after scraping the boards of any left over food, replace them on the wall where they belong. Late in the afternoon I give them a mixture of wheat and barley, again change the water, and gather the remainder of the eggs. Before six o'clock the water is removed from pails and the coops locked for the night. The locking is probably unnecessary, as the windows are muslin and any one wanting chicken could have entered without difficulty. I was not bothered, however.

In January these birds were laying first rate, averaging about ten dozen eggs a day—about a fifty per cent yield. This may not have been anything to talk about, but I seemed to be about the only one in town that was getting eggs, judging from the way customers came flocking to my door. I sold the eggs during this time for forty-five cents per dozen, which was a little in advance of

the retail price. I marked all eggs, "sterile eggs—guaranteed less than forty-eight hours old." A local hotel has a standing order with me for a case of thirty dozen a week and the rest I dispose of to private families and occasionally a few to soda fountains.

For the month of January, I got over three thousand eggs—3,682 to be exact. My receipts for what I sold over and above those used at home amounted to \$128.00 for the month of January alone. I cannot say positively just how much the grain fed cost, as I had considerable on hand from the fall before, but as near as I can calculate and placing the rate over high, they did not consume fifty dollars worth of grain, which, if they did, would leave me a net profit of about two dollars and a half per day for my labor, besides a liberal amount of fresh eggs for the family table. February I did as well, and March much better, owing to the fact that I had advertised eggs for hatching from a pen, the sire of which had won wherever shown. From this source I realized more than I had dared to expect. The coming year I hope to run a larger ad.

I have made it a practice to powder thoroly for lice the entire flock, every two weeks, and to remove the old straw from the pens. In two weeks' time I find the straw placed in as litter becomes short and heavy and I am glad to be able to replace it with clean fresh straw before it gets in a filthy condition. I am very fortunate in being able to get the straw for nothing at a farmer's stack next to my place. I also am very careful to change the nesting material once in two weeks or oftener if it becomes soiled. This I consider of great importance in producing first quality table eggs. Of course a dirty egg may be washed, but it never has the same appearance as a clean egg from a clean nest and no other kind should hope to be served upon a clean table. A washed egg not only loses its bloom of freshness, but it renders the shell porous and ready to absorb all odors with which it comes in contact.

My laying house is 14x60, built with double boards over 2x4 in. studding, with tarred felt between. It is 7 ft. 6 in. front by 6 ft. 6 in. back, built with the steep pitch of roof to the south and the long pitch to the north. It sets upon a concrete foundation and has a concrete floor which is absolutely sweat proof.

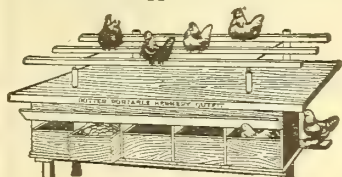

In building this house after the foundation was laid, I excavated to a depth of 2 ft. and laid a line of drain tile thru the center and then filled with cinders, which I procured at the local R. R. yards. On top of this I put a layer of coarse gravel, followed by a coarser layer of concrete. After it was set, I gave the whole thing a coat of tar and let it dry and then put on a finish of more cement. The floor is easy to keep clean, contrary to general opinion. The floor really seemed warm in the winter and did not wear off the birds' toes and I kept plenty of straw on it at all times.

In conclusion let me say I have only a few lots in the suburb of a city of 15,000 inhabitants and only have a little money invested, but am getting fine returns from the money and effort put into it.

Personally I prefer the Barred Plymouth Rock, but every man to his own liking in the matter of breeds. I feel that any one can succeed with poultry if sufficiently interested to put forth the right effort.

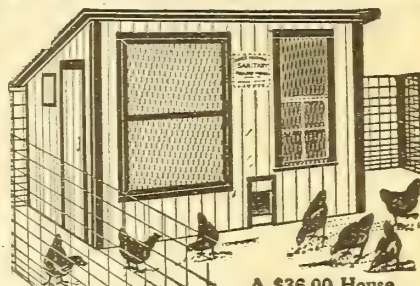

Don't Build—It's Cheaper to Buy Potter "Redybilt" Poultry Houses

Don't build—you can buy better, cheaper (ready built) hen houses, roosting and nesting fixtures, coops, hoppers, etc. We buy No. 1 high grade cypress lumber in carloads, cut and fit all parts perfectly in our big factory and deliver the complete house, coop or fixtures in convenient sections, all ready to be set up better and cheaper than you can build them yourself. Potter Poultry Houses, Roosts, Dropboards, Nests, etc. have been sold for over 10 years. Used by thousands of poultrymen. You start right when you buy them and save money, too. A clean, sanitary hen house means healthy hens and lots of eggs.

BABY CHICKS; 10 Varieties

400,000 for 1916

CLEVELAND HATCHERY
7916-18 W. Madison Ave. Cleveland, Ohio

WINFIELD S. THOMPSON, of Lewes, Delaware, has devised a novel trap-nest constructed to cause the hen to signal the poultryman after an egg has been laid, by partially opening the exit door. The nest has opposite hinged doors connected by a cord, one of the doors having a cut-out portion. In consequence the opposite door overbalances the other. A pivoted trigger mounted on one side of the nest is arranged to hold the trap door in an open position until the hen enters the nest,

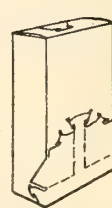

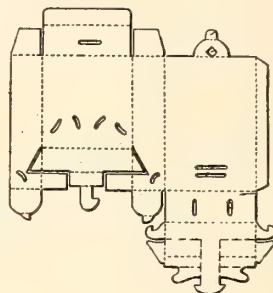

Trap Nest, patented by Winfield S. Thompson, Lewes, Del. Patent No. 1,187,793.

when the door is sprung shut. At the same time it closes the opposite door, to which it is connected by the cord. The hen, as poultrymen know, always seeks after laying to escape from the end of the nest where the light enters. In consequence she pushes against the door having the cut-out portion, causing it to partially open to the extent that the slack in the cord permits. The poultryman can ascertain, at a glance, where a number of these nests are in use, in just which ones the hen is ready for release. The device saves him much time in examining the nests and makes the keeping of an accurate egg record a simple matter. Patent No. 1,187,793.

A Combination-Feed Hopper and Poultry-Food Carton has been devised

by **Walter A. Becker**, North Chattanooga, Tenn. The carton is stamped from a single blank and folded to form a poultry-food carton. By tearing away two flaps along perforated lines, the car-

Combination Feed Hopper and Poultry Food Carton, patented by Walter A. Becker, North Chattanooga, Tenn. Patent No. 1,189,779.

ton is readily converted by the user into a poultry feed hopper. A half interest in the patent is owned by **S. Russell Dow**, Chattanooga, Tenn. Patent No. 1,189,779.

An Incubator-Brooder Combined System has been invented by **Harry Charlesworth** of Mt. Kisco, N. Y. There is a series of brooder compartments, the heat for each of which is supplied from a single heater at one end of the structure. Each unit has independently operating valves and an independent thermo-

winners

BETTER BARRED PLYMOUTH ROCKS THAN MINE DON'T GROW

THEY have won first prizes at Chicago at the greatest Barred Rock show ever staged. At San Francisco, where the cream of the country was on exhibition, in competition with the world's best, my birds won first and second on cockerel mated pens. In England, Canada, South America, and Cuba, they are winning regularly in the hands of my customers. There's a reason. Years of consistent line breeding for quality of color, type, size and egg production and scientific mating of the breeding pens has made my flock a prize-winning strain that we believe is second to none in reproducing the desired standard qualities.

SHOW BIRDS AT MOST REASONABLE PRICES

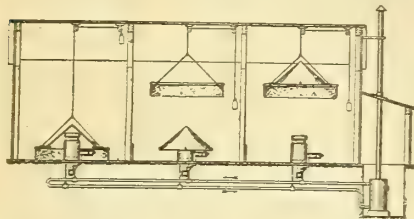

Right now I have over 1,000 youngsters that are positively the best I have ever had. They simply cannot be excelled in type and color for the price I ask for them. I can furnish winners for any show and give quality that cannot be duplicated for the money. A trial order will convince you that I have the goods. Satisfaction guaranteed.

LUTHER J. HALL

Box 7

KENNEY, ILL.

stat for regulating the operation of the valves. Heat may be applied to one compartment and turned off from another, as desired. Each brooder has a hover curtain suspended by a cord that is mounted on pulleys which are fastened to the roof of the brooder chamber.

An Incubator-brooder Combined System, patented by Harry Charlesworth, Mt. Kisco, N. Y. Patent No. 1,197,343.

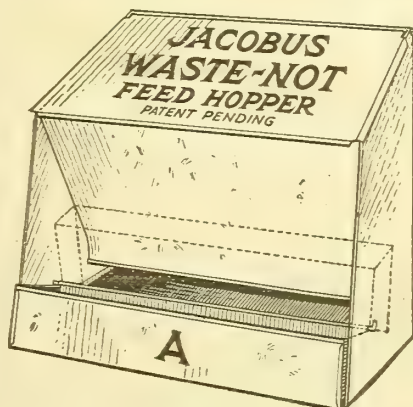

ber. This hover curtain may be raised or lowered at will. The curtain shades the brooder completely when lowered, so that the chicks will remain distributed around the heater instead of crowding into a corner or shady side, as they naturally do when such a curtain is not employed. The device may be transformed into an incubator. The eggs are placed on a pan which is placed in the brooder compartment, the only change in the structure being the addition of an auxiliary curtain, to prevent draughts, and of a pan of moistened sand to supply the moisture necessary in all incubators. Patent No. 1,197,343.

A Combination Egg Testing machine invented by John F. Pfeifle, Youngstown, Ohio, has a funnel-shaped reflector surrounding an incandescent lamp. Above this lamp is arranged an endless belt on which trays of eggs may be placed and passed thru the cabinet within which the lamp is contained. In the upper portion of this cabinet an elliptical eye-piece and lenses are provided thru which the operator may look down upon the eggs as they are moved over the reflected light. By this means it is possible to handle a quantity of eggs rapidly. Patent No. 1,198,477.

Edward J. and Emery T. Boehm, of Neenah, Wis., have jointly invented an egg tester, the novel feature of which is an amber colored sheet of glass arranged between the observer and the eggs as they are passed over the incandescent lamp within the candling cabinet. Inventors claim that altho other colors of glass were tried none gave such distinct views of the contents of the shells as did the amber colored. Patent No. 1,197,335.

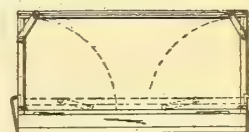

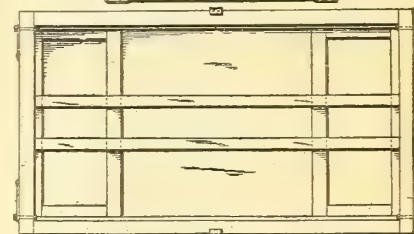

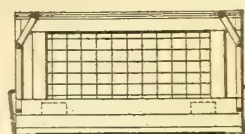

An Egg Packing and Testing Device combined has been devised by Alex L. Anderson and Wm. V. Purdy of Beatrice, Nebraska. It consists of an egg carton having slotted portions above each separate egg compartment. For candling purposes the carton is inverted so that all the eggs in it may be candled simultaneously, then packed away in the crate, without any labor being expended in re-packing because of the candling. Patent No. 1,197,996.

A parkway structure for brooder coops jointly invented by Charlie S. Wiggins and James J. Lanque of Kankakee, Ill., has been patented to the James H. Watson Co. of Bradley, Ill. It is a portable,

The new "Waste-Not" feed hopper invented by M. R. Jacobus, Ridgefield, N. J.

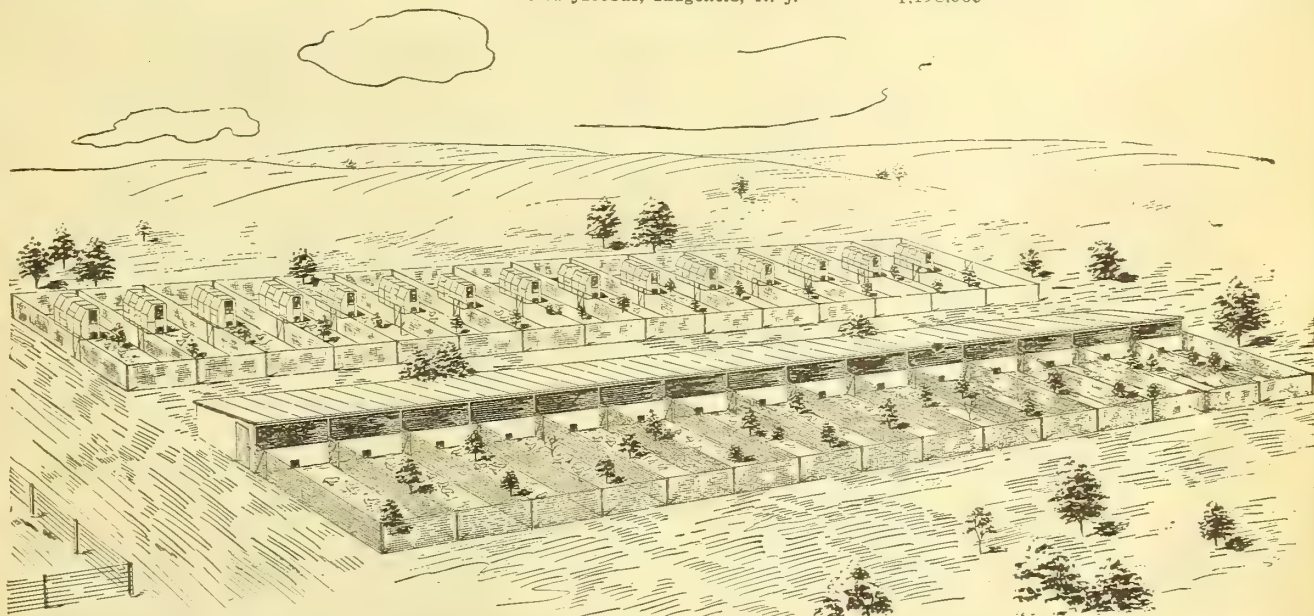

knock-down structure. A novel feature of its construction are ears projecting from the top of the frame and constituting hinge members, within which co-

Collapsible Chicken Crate, patented by Geo. L. Yingling, Winston-Salem, No. Carolina. Patent No. 1,198,305.

operating hinge members attached to the coop engage. This makes it possible to swing the parkway structure from its normal position on the ground to an elevated position resting on top of the coop during the day when it is not desired to confine the chicks to the limited area of the parkway. Patent No. 1,196,483.

A collapsible chicken crate has been patented to Geo. L. Yingling, Winston-Salem, No. Carolina. The side panels of the crate may be folded inward on the floor when the crate is to be collapsed for shipment back to the wholesale dealer after the chickens have been removed from the coop. Patent No. 1,198,305.

The above cut represents the 30 breeding pens of F. S. Smith, Hamilton, Ohio, the world's largest breeder of S. C. Buff Leghorns. Note the fifteen piano box houses in the rear, that he mates one male and one female in each year. From December 1st, 1915, to May 31st, 1916, the 15 hens' average for the six months was 134 2/3 eggs.

Weight of Leghorn Eggs.
VETERAN I. K. FELCH in the October number of the AMERICAN POULTRY JOURNAL states that eggs should be sold by the pound. This, we believe, would be fair to all. But why fire a broadside at the Leghorn breeders? I'm quite sure it is no fault of theirs that eggs are not being sold by the pound.

When Mr. Felch says that "150 Brahma eggs, 168 Plymouth Rock eggs and 213 Leghorn or Wyandotte eggs all weigh the same," it is time for the Leghorn and Wyandotte breeders to get out their pencils and figure a bit, and, furthermore, to use their scales and see if Mr. Felch is correct in his statements. Here is another one: "Whoever saw a small egged variety producing eggs weighing more than twenty-four ounces to the dozen?"

We have seen on all sides and in our own yards, a so-called small egg variety producing eggs that weigh from twenty-four to thirty-two ounces per dozen. We weighed eggs today, October 5, from a small variety that weighed twenty-eight ounces per dozen, and we figure that this same small variety produced these eggs on fifteen per cent less grain and

much less floor space than the larger breeds would have done.
Better look up an October number, Sunday issue of the Philadelphia North American, and I believe it will appear that the Leghorns as a whole lead in egg production all other varieties.
Cheer up, Brother Felch, price of grain is high, as is also price of eggs. The war is still on across the water, and we want none of it.
Punxsutawney, Pa. F. M. Hoover.

Speaks for the White Orpington.
That the White Orpington is one of the most beautiful birds bred today few dispute. Their great size, stateliness of bearing, beauty in type, and pureness of color, captivate all who see them. They are as much at home in the show room as a duck is in water. It is not an uncommon thing for a White Orpington specimen to carry off the championship honors at our best shows. At St. Louis Coliseum Show, 1913, the champion bird of the entire show was a White Orpington cockerel. At the same show in 1915 the championship went to a White Orpington pullet. They also have been among the leading winners at Madison Square Garden, Chicago and Boston.

Silver Campines
I won the Sweepstake Championship at Chicago last December, against the leading Campine breeders of the world. My Green Sheen Strain of Silver Campines unsurpassed as layers. Fowls from trap-nested matings a specialty.

Coliseum Champion

Exhibition stock furnished for any show in the country. Write me to-day.
Frank E. Hering Desk B South Bend, Indiana

Coliseum Champion

A few years ago the best specimens were very scarce, only the very large breeders who bred them in great numbers could boast of many superior specimens, but not so today. White Orpingtons now are as white as any breed of fowls. They very often carry off the color specials at our leading shows. At all of our smaller shows, specimens may be found that a few years ago would have won easily at Chicago, Madison Square and Boston.

The popularity of the White Orpington grows every day. There is scarcely a poultry show today but that you will find them among the largest entries. The old Barred Rocks that are so common have to get a hustle on them to keep up with them. At the great Panama-Pacific Poultry Exhibition there were in the S. C. Red class 297, White Plymouth Rocks 253, White Leghorns 251, Barred Rocks 228, White Orpingtons 220. The catalog of the Chicago Coliseum Show, 1915, gives the following classes: Barred Rocks 292, R. C. Reds 219, S. C. Reds 211, White Orpingtons 173, which gives an idea of their great popularity as an exhibition fowl.

The one thing that will always determine the lasting popularity of any breed of fowls is its usefulness. Just as long as they will lay lots of eggs, just so long that breed will be popular in the show room and no longer. Nothing else will keep them at the top. We Americans love beauty, but we are also intensely utilitarian.

At the Missouri Experiment Station egg laying contests they have carried off their part of the prizes. They won over all breeds in the month of February,

1913. The Missouri Experiment Station is now conducting its fifth annual contest, and the Orpingtons as a breed have won every cup for February, except February, 1916. A pen of White Orpingtons consisting of ten hens in the 1914

Dam's record 261 eggs first year, 214 eggs second year. Sire's dam 229 eggs first year, 214 eggs second year. An example of what Yesterlaid Egg Farms is doing in their trap-nest line breeding pens.

contest during the month of April laid as follows: 18, 19, 22, 24, 26, 25, 19, 23, 24, 20, which is an average of 22 eggs for each hen. For the year 1914 in this contest, three hens in the same pen laid 195, 196, 199 eggs each.

In the National Egg Laying Contest at Mountain Grove, Mo., a White Orpington pullet laid 200 eggs in nine

months and 20 days, leading every hen in the entire contest. This pullet died at the end of the nine months and 20 days, or I am sure she would have made a record of which her owner would have been exceedingly proud.

All these records prove conclusively that the White Orpingtons are there with the eggs, and especially the winter eggs. Speaking of winter eggs, reminds me of a little incident which happened during the winter of 1914. The writer had a nice flock of White Orpingtons which were doing some extraordinary good laying. A bushel basket was piled high with the fresh hen fruit, a bed was also covered with them. My little two-year-old boy entered the room and in his babyish language said, "I love de hens that laid dem eggs," and so do we all. We love their beauty, but utility satisfies.

Mountain Grove, Mo. O. S. Tallent.

Experience—"Writ Sarcastic."

EDITOR AMERICAN POULTRY JOURNAL:

Knowing that at this season of the year you, as well as others, are short of eggs, I take the liberty to send you by parcel post a mess of eggs for your breakfast.

You see, last fall, I, for experimental purposes, made a purchase of three pullets of Tom Barron's world record layers; consequently I have plenty of eggs now, and would have had more, but unfortunately owing to strange climatic conditions prevailing in this district, one of the pullets turned into a rooster, which was a great loss to me, as these eggs are readily selling for \$10 per 15.

"sefton" your produce

If you consider Sefton Corrugated Fibre Shipping Boxes with the idea of what you *get* from them, you'll never use anything else; greater efficiency and neatness in your packing and shipping; the reputation you'll get for high class service; and the important saving in lower costs, breakage and loss.

The main fact about Sefton boxes from your point of view is that they're as good as knowledge and skill can produce; knowledge of *your* needs, and skill in the mechanical operations,—the result of long years experience in making the best boxes.

Ask your paper jobber; and look for the Anchor Brand trade mark

The Sefton Mfg. Co.

1329 W. 35th Street

Chicago, Ill.

The eggs in above picture were sent us by M. C. Wilson. The two small eggs in center are from a prolific laying Barron Wyandotte and the six large eggs are from Rose Comb White Leghorns. See "Experience—Writ Sarcastic" in Readers' Experience Department.

The eggs in above picture were selected from a lot sent us by M. C. Wilson. The large eggs are from R. C. White Leghorns and are clear white; the small eggs are reported as from heavy laying Barron strain Wyandotte pullets and these small eggs vary from cream to a light brown tint. See "Experience—Writ Sarcastic" in Readers' Experience

(Yes, I said for you to eat them, Oil people are noted for their liberality.) But I really could not afford to give you a full mess of these high priced eggs, so I put in a few of my common R. C. White Leghorn eggs to fill in. Please note the great superiority in the flavor of the imported eggs. We have imported many things from England that have been subject to universal public comment and, we believe, that after they have become well known these imported Wyandottes will be fully as well thought of as the English sparrows that were imported some years ago. We should give the originator all the credit due him, for you know that some of our exports have been of the morganic type and of doubtful utility, some having to be returned to us shorn of their fine

feathers. We also should offer due thanks to Professors Quisenberry, Stoneburn and Turner for the share they, by their unswerving neutrality, have had in the introduction of these heavy laying birds that surely shows in all its points that most painstaking pains have been put forth by the originator to produce a strain of birds capable of laying 300 eggs without straining their constitution and by-laws.

Oil City, Penn.

M. C. Wilson.

NOTE—Accompanying the above epistle was a box of 15 eggs, one broken in transit; eight whole, small, tinted eggs which were marked T. Barron Wyandotte; six large, white eggs from R. C. White Leghorns. We took two photographs of selected eggs from this collection, which appear herewith. We also measured and weighed the eggs. Mr. Wilson's letter is "writ sarcastic" and recites his experiences with two special pullets only. We do

not infer that he criticises all heavy laying specimens, whether American or English, but that he desires to present his personal experience to our readers, they to draw their own conclusions. Here are the egg measurements:

Circumference in Inches. Weight in Long Way. Middle. Ounces.

T. B. Wyandotte....	5 1/2	3 1/2	1 1/2
T. B. Wyandotte....	5 3/8	4 1/2	1 1/4
T. B. Wyandotte....	5 1/2	4 3/4	1 1/2
T. B. Wyandotte....	5 3/8	4 1/2	1 1/4
T. B. Wyandotte....	5 1/4	4 3/8	1 1/4
T. B. Wyandotte....	5 1/4	4 1/4	1
T. B. Wyandotte....	5 3/8	4 1/4	1 1/4
T. B. Wyandotte....	5 1/4	4 1/4	1
R. C. W. Leghorn..	6 1/4	5	2
R. C. W. Leghorn..	6 1/2	5 1/4	2 1/4
R. C. W. Leghorn..	6 1/2	5 1/2	2 1/2
R. C. W. Leghorn..	6 3/4	5 1/4	2 1/4
R. C. W. Leghorn..	6 1/2	5 3/8	2 1/4
R. C. W. Leghorn..	6 1/2	5 3/8	2 1/4

The figures and photos we can vouch for, since we personally took weights and measurements and also arranged groups and photographed them.—Editor A. P. J.

CAUTION: Any Bone Cutter claiming to be MANN'S without F. W. MANN CO. cast on its surface, is an imitation. The genuine MANN'S is made only in Milford.

Make Hens Lay

WE publish a book which gives the secret that all fowl raisers are most interested in—the secret of making hens lay when eggs are high as well as when they're cheap. The quick and easy way. Goes into the why of the subject. Makes you master of the poultry and egg business. Opens up a new line of thought on the best feed for poultry—the ideal egg-producing food, viz., ground raw bones with the meat and gristle that adheres to them.

MANN'S LATEST MODEL BONE CUTTER

prepares raw, green bone and gristle into a fine mash, four times richer in protein (the egg-making, body-building element) than corn. It supplies the animal food that chickens must have. Easily digested. Saves grain feed. Fowls relish it. Makes them grow, keeps them well, makes hens lay.

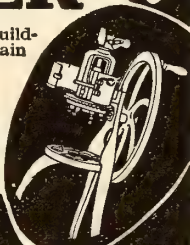

We Sell This Machine On Ten Days' Trial

No money down. Try it and note the improvement in the egg yield. If you like it, then buy it. If not, send it back at our expense. Send today for the book and read it. It is free. It will make you want the machine and the machine will add greatly to your profits.

A Ride With the Hunters' Moon.

A CLEAR, cool night in October, a comfortable motor car, fur-coats and robes, the hunters' moon casting its glamour over the landscape, and one hundred and fifty miles before us!

At five-thirty in the evening, we touch the button and are off, first gliding smoothly over familiar country roads and on thru the clear frosty air to towns and villages beyond. The sun sinks in a maze of glory behind the western horizon, leaving innumerable pink streaks against a grey sky. Over the hills to a rambling farm house come the last straggling farm hands from their work in outlying corn fields. Belated teamsters urge homeward, tired overworked horses. Half grown boys in jumper and overalls, creep "like snail" unwillingly toward saw and axe in the wood shed. Uniform-sized cans, filled with early-milked, quickly-cooled milk stand in single cans, and up to a dozen and several lots, on platforms, awaiting the trolley express to be carried in town. Half in the valley, a thick volume of black smoke curls upward against the hills from a factory chimney, and, coming nearer, a volume of weary humanity emerges from one entrance, the day shift going off duty, while just beyond at another gateway, the surging mass of a night shift goes forth eagerly to their all night toil. Here and there, herds of cattle are driven in from pastures, a market team is loaded with great precision in readiness for an early morning start; groups of happy children in the reckless abandon of the day's last play, laugh and shout in shrill voices, while they race madly, apparently without purpose, in all directions. Down the road comes a returning farm wagon, setting up a deafening rumble as the horses quicken their steps nearing home. Here and there, lights shine out from distant farm house windows, while in nearby

roadside cottages families are sitting down to the evening meal or gathering about the reading table with newspapers and magazines to learn of the day's doings in the world at large.

One by one the stars shine out, clear cut and brilliant against the unmatched background of the heavens, studding it with marvelous beauty. The moon, great, round and full, cool as the frosty air, looks on in placid glory. From a village church issues a pleasing chorus of the congregational singing of psalm tunes with the deep notes of an organ accompaniment. "Oh, give thanks unto the Lord, for He is good, and His mercy endureth forever!" In the half shadow of banked shrubbery leading to the church entrance, lovers linger a moment hand in hand, as they have since the world began and will continue to do thruout time.

As the night wears on, lights gradually go out from windows, houses sit silent and moon-glamoured, devoid of life—as tho painted on a canvas. On and on the motor whirs thru towns and villages, wood lined roadways and wide open stretches of country. Broad, flat stone fences outline the curving roads and pastures, picturesque in their natural relation to the boulder cropped meadows and hillsides, majestic in their century or more of service. A hound howls dismally across the hills and others take up the cry. What a night for a fox hunt as participated in by hunters of other days!

A town clock tolls the hour of midnight, and soon the cocks in various farm yards burst forth in competing voices, running the entire scale in a long series of exciting and vain-glorious "cock-a-doo-dle-do's". A semi-circle of Lombardy poplars lining a hillside driveway stand out in bold relief against the skyline. A midnight flyer, connecting distant metropolis with seaport city roars by, leaving a trail of black smoke and the

U. R. FISHEL

Box A

HOPE, INDIANA

reverberation of shrill whistles between the hills.

A strange deep silence falls over all as the night wears on. Every building, tree, bush, rock, stream of water, church spire and hilltop clearly defined and wonderful to look upon, each fulfilling its destiny, marvelous for what it is—and God only knows what and why it is—spread out in a stupendous panoramic display for man to behold, to enjoy and to make use of. On and on we travel thru the great silent night. Here, at least, man sleeps and nature awaits his awakening. Roadways and village streets are deserted—no sound save the soft whirr of the motor breaks the solemn wonder and stillness of the night.

Coming into the city at one in the morning, we find a different world. Groups of gaily chatting men and women loitering along the streets as tho it were mid-day. Street cars, well filled, jarringly rattle around curves and up main thoroughfares. Motor cars rush in and out of garages. Men sit in groups in hotel windows idly chatting and puffing at cigars. Shop windows display in alluring fashion all the wealth of modern merchandise.

The hotels are full. We take a front parlor on the second floor and cot beds are hurriedly carried in. Scrub women are noiselessly cleaning corridors and stairways.

We prepare for bed in a dreamy sort of way, half intoxicated with the wonders of the night and of this period of the world's history. The great heretofore unsolved problem of closer communication with our fellows which is marking a period of unprecedented progress, now solved by modern methods of transportation—chiefly by means of the motor car. Once considered merely a pleasure vehicle and owned by the wealthy few, now a necessity among practically all classes of people and in all lines of trade. The time draws near when no one can afford to be without one and this innovation must bring about no end of changes in the line of progress in the business world and the home life of the people.

A great broad fertile country stretching from ocean to ocean, a country of homes, a people of hope, of imagination unlimited, possessed of the courage of their convictions—who can fail to see their unmatched opportunity and great future in the encouragement, the succor, the brotherly kindness meted out by them unstintingly to the battle-ridden, war-impooverished nations across the sea? We have sometimes been down in the fog-dimmed valleys, blinded by egotism, nationalism and self interests, but we are reaching the heights, where the ozone is clear and pure, where the vision is world wide and where the hope is for

Use Less Feed, Less Labor, And Get More Eggs

Don't worry about high feed bills. Use Norwich Automatic Appliances. These machines prevent all waste, supply feed when the birds need it, increase the efficiency of the ration, provide exercise, increase the egg yield, and practically eliminate the labor of feeding. Official laying competitions have proven that *Norwich-fed layers regularly average 20 eggs more than hand-fed stock.* To make and save money, secure greater results with less effort, adopt the Norwich plan of feeding.

Make the test on one pen and compare results. Buy one or more Apaco Poultry Feeders from your dealer—or order direct from us if necessary—and let your birds prove that the Norwich way is right. Now is just the time.

The Apaco Feeder is sold under our guarantee of complete satisfaction. It holds 12 quarts and costs but \$1 delivered east of the Mississippi River—\$1.30 beyond. Order today. We will ship immediately.

The Poultry Fountain That Never Freezes

provides a constant supply of fresh, clean water regardless of temperature. Operated last winter in the extreme north at 32, 47 and 60 degrees below zero. Recent official investigations have shown water to be as essential to winter egg production as feed. The Norwich Automatic Air-Lock Fountain supplies water at just the right temperature, and eliminates the worry, annoyance and labor of frozen water.

BAKED PEARS.

By J. R.

Select good sound pears, pare and core and place in a covered baking dish. Add one-half cup molasses to two quarts of pears and a little spice if desired. Serve hot or cold.

APRICOT SOUFFLE.

By J. R.

Beat the yolks of five eggs for three minutes or until lemon color and add five teaspoonsful of sugar. Put one cup of stewed apricots thru a potato ricer and add to the first mixture. Beat the whites of the eggs stiffly and fold in. Pour into a baking dish and place the dish in a pan of hot water in a quick oven. Brown and serve immediately with whipped cream.

* * *

GREEN CORN GRIDDLES.

By J. R.

Cut from the cob sufficient green corn to make two cups and put thru a meat grinder. Add two eggs, two cups flour, three teaspoons baking powder, 1 tea-

spoon salt, 1 tablespoon melted butter and sufficient rich milk to make a griddle cake batter. Bake on a hot griddle and serve immediately.

* * *

BAKED STUFFED TOMATOES.

By J. R.

Mix one-half cup dry bread crumbs with a teaspoonful of butter, a half teaspoonful salt, a little sugar and a bit of grated cheese and a sprinkle of pepper. Select smooth ripe tomatoes, wash and cut a slice from the stem end, scoop out the insides, taking care to keep the shell firm. Mix the pulp with the other ingredients and fill the shells. Add a few bits of butter, replace the tops and bake in a buttered dish with a little water about forty minutes in a medium oven.

MONROE, N. Y.

DR. WOODS' NOTES AND COMMENT

(Continued from Page 1202)

If you have a corn crib, put by a selected stock of well-seasoned ear corn to be kept for making chick food next spring. There is no food that will quite equal good corn, well-cribbed and ripened on the cob. Dent corn is good, but the flint varieties are, we believe, best for poultry feeding.

* * *

On cold afternoons a full feed of whole corn and buckwheat, in time to fill up before going to roost, will be relished by the birds and will help toward better results.

* * *

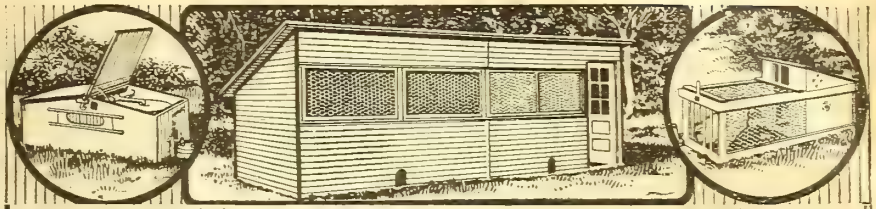

If you have neglected to store your winter supply, there is still time to put plenty of sand, gravel, loam and dried peat under cover for poultry use during the coming winter. The sand will be useful for floors of brooders, coops and poultry houses; the gravel will save more expensive grit; the loam and dried peat are needed as absorbents under roosts and on floors, and also in the dust bath.

* * *

We have read some editorial matter lately that makes us think of the one time popular song: "I don't want to play in your yard. I don't love you any more." When adult males take to childish pouting it is apt to give observers that "tired feeling."

* * *

If the American Poultry Association continues to work along the lines established at Cleveland Convention for harmonious co-operation, progressive development of the whole poultry industry, and better team work among all real poultrymen for the benefit of all poultry interests, it should receive the hearty support of every man and woman interested in poultry, able to see beyond the inside of their own pockets. An international organization, divorced from the selfish personal interests of a few and devoted to promoting the greatest amount of good for the whole poultry industry and all persons interested in

Brooder for 50 to 100 chicks

No. 3 Poultry House for 60 hens—2 units

Setting Coop

HODGSON PORTABLE HOUSES

The various models of these houses are arranged after the most scientific methods of raising poultry. Years of experience have proved this. The brooder can be operated outdoors in zero weather. The poultry house is made in sections than can be quickly bolted together by anyone. The setting coop keeps a hen by herself while setting. All neatly painted. Send for illustrated catalog.

Mention the AMERICAN POULTRY JOURNAL when writing to advertisers.

the many branches of poultry keeping, can grow wonderfully, and rapidly, and accomplish much that is really worth while.

* * *

We understand that the International Baby Chick Assn. is to hold a big meeting at the Palace Show, New York City, next month and that the educational program is to be a feature. Every one interested in the baby chick industry, and in allied branches of the poultry business, should secure membership in this organization. Information can be obtained of Secretary H. D. White, Saugatuck, Michigan.

* * *

When you find time to sit by the fire and look over the new seed catalogs that will soon be with us, just bear in mind that it pays to buy good seed, even though the price does seem a bit high. In this part of New England, owing to a cold, wet, and generally unsatisfactory growing season, it was a poor potato year. On a dry southerly slope we put in a barrel of seed, costing us \$5.50, and got 37 bushels of fine quality marketable size Early Rose potatoes. We are wintering about 14 bushels and sold the rest at prices ranging from \$1.25 to \$2 per bushel. Two bushels of native seed, White Mountain potatoes, gave us only four bushels of marketable crop. Five pounds of Plymouth County Farmer potatoes, supplied our boy by the County Agricultural Agent, gave sixty pounds of good potatoes.

* * *

A few months ago we mentioned a poultryman who uses a phonograph to help him to forget his troubles and to help establish a frame of mind that would enable him to attack his poultry problems with a clearer vision and greater determination. He finds that "canned music" supplies him with just the mental relaxation and rest that he needs. We got to thinking about that poultryman and his success and Edison's saying that he hoped to "see a phonograph in every home," and it occurred to us that maybe it might be well to take a little of the same medicine. We live pretty much in the back woods and thirty miles from a good theatre, so that amusements are expensive and take time. Result was that a modern phonograph and supply of records arrived at our home on the Better-half's birthday. It is one of those purchases that you continue to feel good about. All summer long it has furnished entertainment and enjoyment for family and friends on most evenings at home. As the days shorten, it affords still greater pleasure and by making careful selection in purchase of records and buying on the library plan of trial at home before purchasing outright, the machine is yielding worth while educational value for every member of the household.

* * *

If you are not using trap-nests and keeping a record of your best matings, better plan to do so the coming season.

Mention the AMERICAN POULTRY JOURNAL when writing to advertisers.

At least select one best pen, carefully mated, and take time to trap-nest them. Keep a record of the eggs and the chicks—use a chicken punch to mark web in chick's foot and record the marks—so that you know just what you are getting from your best breeders. With carefully kept breeding records you will be able to breed more intelligently and to get ahead much faster than on the old hit or miss, "hope the mating nicks" plan. It takes a little more time to use trap-nests and to keep records, but it pays big returns on the time expended.

* * *

Be sure to attend the poultry shows this season and urge your friends to do likewise. You can get more first hand knowledge of the different varieties of poultry by attending a good show and comparing the birds, than you can by reading printed descriptions. Take along a Standard and compare the specimens exhibited with the requirements in the different sections. Talk with the breeders about their favorites. If you are interested in poultry and wish to become a successful breeder you will find the up-to-date poultry show a good practical school. Exhibit at your local shows if you have good birds and can show them. Don't feel hard hit even if you don't win. It does make one feel good to make a win, but it takes a real man or real woman to be a good loser. The good loser takes his losses quietly, without fuss, whine, or excuses, and makes up his mind to do better and to win next time. Don't be a poor loser, and don't be a "quitter."

* * *

At this season the daily press begins its crusade of "Do your Christmas shop-

ping early." If you take the advice and attempt to follow it, you will find the experience is interesting but not productive. At most of the small and big stores, you will learn that "the Christmas stock has not yet arrived" or that "we haven't begun to open and display our Christmas goods yet." About all you will find is left overs. There ought to be a little co-operation on the part of the dealers in this "do your Christmas shopping early" campaign. There are firms, however, that are nearly always stocked with fresh goods and where you can "shop early" and as often as you please, get new goods and obtain good values. These are the big concerns that do a large and reliable mail-order business. You can generally do your Christmas shopping early by mail and get really satisfactory results.

* * *

Speaking of Christmas and presents, why not give a few lasting and interesting Christmas gifts to some of your boy and girl friends? One dollar will pay for a subscription to AMERICAN POULTRY JOURNAL (36 issues) for three years, outside of Chicago: in Chicago the price is \$1.50; in Canada, it is \$1.75; and in foreign lands it is \$2.50. The expenditure of a few dollars in AMERICAN POULTRY JOURNAL subscriptions would furnish worth-while and lasting Christmas gifts for several boys and girls and provide them with an incentive to become interested in poultry keeping and with a large fund of helpful instruction. It pays to help the youngsters, and there are a lot of oldsters who would enjoy and benefit by the same sort of Christmas gifts. If you can afford to dig deeper into your purse for a gift for the

boy and girl, why not give them a pair, trio, or pen of pure-bred fowls and so start them in worth-while productive work?

* * *

While we are on the subject, we wish to call your attention to the advertisements which appear in this issue of AMERICAN POULTRY JOURNAL and to those which will appear in our December number. You will find therein presented a great variety of offerings from which useful and desirable Christmas gifts may be selected. You can "shop early" with our advertisers, get prompt service and satisfaction, and you can do your Christmas shopping by mail. Be sure to mention the fact that you saw the ad in AMERICAN POULTRY JOURNAL, it secures special attention for you and it helps us.

OUT OF THE EAST

BY P. K. WHITE

Yesterday has passed—forget it, there is no tomorrow—so don't worry, today is here—use it.

At this writing, I have covered the first lap of my "round the East" trip and have visited so far about three hundred plants. These include some of the largest and smallest, not to mention some of the best and poorest.

You are well aware that there are some mighty big poultry plants in this country and while I have not visited all of them, I have been to a good many and it is my personal belief that Pittsfield Farm is the largest. It is a wonderful place in number of buildings and incubator capacity. In naming this as what I think is the largest plant, it is but fair that I mention that so far I have not visited Owen Farms, who are also noted for the large plant they have.

As to what I consider the cleanest plant, both in houses and yards, I shall name Homestead Campine Farm, Wayland, Mass. If you doubt this statement, ask any one who has ever been there and I am sure they will tell you the same. There are a large number of breeders who pride themselves on how clean they keep their poultry houses, but the "Homestead" is in the lead.

In my travels I make it a point to call at every poultry plant; none are too small, for after all it is the small man who grows. His views of the other fellow is a great education, and as William Barry Owen once said, it is the field man whom they unload all of their troubles on. In conducting this column I say what I really think; it may not agree with the views of some of the other advertisers, not to mention ye "editor and managing editor," yet they are honest views as I see them.

Thru error I omitted from Syracuse write-up the wonderful win made in Buttercup class by Mrs. Hattie D. Reed of Marcellus, N. Y. Here it is: Special for best display, special for most points on pen, 1-2-3 pen, 3-4 cock, 5 pullet.

All hatching at the Read Poultry Farm, Watervliet, N. Y., is done by electricity and the birds after coming from incubator are placed in electric brooders, then taken from there on a range of asparagus, which makes ideal shade for growing chicks.

Some people do not agree with Dr. Woods on his open-front house, yet in traveling around I have found hundreds of them and the owners were praising them to the skies.

Rumor has it that Schenley Heights Farm have sold all of their S. C. Reds to Harlo J. Fiske of Pabst Farms.

Have long had a desire to see the plant of E. B. Thompson, Amenia, N. Y. Well, it is a real plant in every way, birds, acreage and buildings. If the other breeders would use his system in regards to the office end of it, they would have more sales.

You know this is the home of the Barred Rocks and while I have not been to all of the plants, let me add that in the "Hall of Fame" as regards good plants in every way the following have a place: Bradley Bros., Lee, Mass.; C. H. Latham, Lancaster, Mass., and Grove Hill Poultry Yards, Waltham, Mass.

The farm of Gilbert Bros., Haverhill, Mass., adjoins the birthplace of Whittier, the poet. No, I know of no reason why this makes their Columbian Wyandottes any better.

Hickory Farms, R. C. Blake, Mgr., have purchased all of the stock, together with name, etc., of the well known McLean strain of Nonpareil Reds. McLean made a good record thruout New York, Connecticut and Massachusetts as regards winners, so we will, no doubt, hear more about the Hickory Farms. They are located just a few miles from the New Hampshire line at Townsend Harbor, Mass., and have a mighty fine plant.

To my mind Massachusetts has the best and poorest poultry plant in the entire country. But taken as a whole, there are some mighty fine plants.

W. F. FRASE
Route 21 East Akron, Ohio

Mention AMERICAN POULTRY JOURNAL when writing to advertisers.

Always thought that these leg band people had their goods manufactured, but find I am wrong. Called on all three of the following and find that they buy their aluminum in rolls, but the real making of the bands is done in their own plants. Here they are: Bourne Mfg. Co., Melrose, Mass.; M. M. Bruorton, Wakefield, Mass., and A. P. Spiller, Beverly, Mass.

The honor for greatest number of new buildings being erected goes to the Lord Farms, formerly known as "Everlay," Methuen, Mass. By the way, Mr. Lord informs me that right now he has more than fifty per cent more orders than at this time last year, so it shows what I have preached for some time. We are going to have the best year since 1910.

If some of the breeders would let their wives handle the office end of the business, there would be more sales at less expense. In nine out of ten cases they can write a better letter and more to the point.

Small advertisers do not mean small plants, as proven in the case of Mr. Roach, the Barred Rock pullet breeder, known as Bear Brook Farm, Wakefield, Mass.

Had the pleasure of meeting Mr. Bailey, the White Rock man of Wakefield, Mass. He has one of the coming plants of the state.

Called at Cornell Farm, Great Barrington, Mass. They were not at home, so did not get opportunity to see the place.

Regret that I did not get a chance to see "Uncle" I. K. Felch and Arthur Duston, two of the old guard.

Foxhurst Farm, Lime Rock, Conn., have a big surprise for our readers. It will no doubt appear in our February issue, so look it up, as it is real news for the poultry world.

Spent a pleasant Sunday with Chas. Hubbard of Lime Rock, Conn., and he showed me three (sport) Black Silkies. Asked friends Atherton and Drevenstedt about same, and they inform me that they are very rare.

At Buffalo, N. Y., visited the feed people, Globe Elevator Co., Chas. Cyphers, the incubator man, Dold Packing Company, meat scraps and feed, also Model Incubator Co.

Had the pleasure of going thru the big factory of the Hall Mammoth Incubator Co. at Little Falls, N. Y.

Have not fully covered Connecticut as yet, but so far the largest Red Farm is that of Payne Bros., Portland, Conn. This is another plant that is hollering prosperity.

Besides three small houses, the Rock Ledge Farm, Red breeders, of Southboro, Mass., are building a brooder house of one hundred and twenty-eight feet length.

Two real bred-to-lay farms that I have visited on this trip are: Miss L. C. Galbraith, Southboro, Mass., and Pinecrest Orchards, Groton, Mass., both of whom really trap-nest.

There is a movement on foot to elect W. H. Saart of Mirimichi Farms, Foxboro, Mass., president of White Rock Club, with Wm. Halbach of Waterford, Wis., secretary.

Here in New England we claim that the real fanciers of the country are our neighbors. There are some others around the country, but most of them reside here. There are so many that it is impossible to give all of their names, but I really think that these two are deserving of especial mention, for you find them exhibiting at every show. They are: Willow Tree Poultry Farm, H. P. McKean, Jr., Beverly Farms, Mass., and White Wyandotte Poultry Yards, H. J. W. Fay, Westboro, Mass.

The following people have been kind enough to extend me a very urgent invitation to visit their plant and I trust that by next issue I shall have a chance to do so, so that I may give my views: W. B. Atherton, Randolph, Mass., Rev. W. Berberich, Groton, N. Y., Bird Bros., Meyersdale, Pa., Sprecher Bros., Rohrerstown, Pa., Mrs. Hattie D. Reed, Marcellus, N. Y., Rosemount Farms, Franklin, Pa., J. W. Parks, Altoona, Pa., Sunny-side Poultry Farm, Bristol, Vermont.

If your yards are short on shade, take two pieces of wire netting seven feet long and five feet high, nail same on wooden frame, set up in form of house and cover with several thicknesses of corn stalks. You will find it proof against sun and rain. The idea was originated by Harold Tompkins, the Red breeder of Concord, Mass.

Lack of space will not permit me to go into details with all plants, but of the many I have visited, the following are really worth mentioning: C. F. Webster and E. A. Lichtenwalter, of Girard, Penn.; J. F. Van Alstyne, Castleton, N. Y.; B. G. Mac Candie, Canastota, N. Y.; also A. Fisher of the same place; H. Dufrane, Cohoes, N. Y.; Geo. W. Tracy, Kinderhook, N. Y.; W. J. Wallace, Westfield, Mass.; A. F. Tilton, Rockland, Mass.; J. Van Holten, Pittsfield, Mass.; Morey Bros., Milford, Mass.; Plymouth Rock Squab Co., Melrose, Mass.; Spring Farm Poultry Co., Littleton, Mass.; J. H. Jackson, Hudson, Mass.; Lester Tompkins, Concord, Mass.

Are you prospering? Are your efforts bringing results? If not, perhaps American Poultry Journal can help you in the way of preparing your advertising copy and sales letters.

SEEN AND HEARD IN THE MID-WEST

BY SHEPARD STRONG

We have recently visited a number of the more prominent fairs of the Middle West and are pleased to note that they were a decided success. It is especially gratifying to note that American Poultry Journal advertisers report the demand for their stock to be ex-

of the show. However, it must be said that there was a falling off in some of the less popular varieties, due largely to an arrangement of the premium list, which was admittedly ill-advised. This unfortunate circumstance, we are given absolute assurance, will be corrected next year and our information comes from the highest authority that this show, which has adopted for its slogan, "It's great, let's go," will add still greater laurels to its already high reputation. Chas. McClave, New London, Ohio, who has set the rather remarkable record of having exhibited for thirty-eight years in succession at Ohio State Fair, had the honor of winning on his first prize Dark Brahma cock the special offered for the best male in the show, any variety. He was not satisfied with this, however, as he won also the largest number of regular prizes of any exhibitor of the show, among which may be mentioned 1st hen and 2nd old pen in an exceedingly strong

FIRST AND SECOND PRIZE WHITE ROCK HENS, NEW YORK STATE FAIR SEPT. 1916
BRED AND OWNED BY WILBURTHA POULTRY FARMS TRENTON JUNCT. N. J.

Do you give your manager credit for what he does? History teaches us of the great soldier, who, using his "trustworthy sword," heaved down the foes and made way for his armies' victory. His courage, strength and purpose was indeed heroic. But do we hear anything of the poor "blacksmith" who made that trusty sword, so keen and strong that it would not dent or break? Your manager is the big cog in your success, don't forget to give him credit for what he does.

Once more we say, answer you inquiries on a typewriter.

ceedingly heavy and that request for increased space for the ensuing year is practically universal.

The 66th annual Ohio State Fair was held August 28th to September 1st. The weather was most auspicious; this, coupled with the most excellent publicity campaign conducted under the direction of Manager W. H. Kinnan, resulted in the largest attendance in many years. The quality in the more prominent poultry class was of a high order and competition was keen. The fine condition of feather of the old birds and the finish of the young in a number of varieties was the talk

class of Barred Rocks, 1st R. C. Rhode Island Red hen, five firsts on Light Brahmas and four firsts on S. C. Brown Leghorns.

The White Rock class furnished one of the sensations of the show, being strong in numbers, with quality simply great. U. R. Fishel, of Hope, Indiana, in competition with a number of well known breeders, won all firsts and seconds in the single bird classes and first on old and young pens, his first prize cockerel and pullet being awarded the specials for the best cockerel and pullet respectively in the American class. Important winners of balance of White Rock awards were: A. G. Spahr and Pierce and Cushion;

Water Fowl

Make the Greatest Win in History at the Iowa and Nebraska State Fairs

The Big Iowa State Fair of 1916 brought out 2,600 of the best fowls of Illinois, Indiana, Ohio, Missouri, Nebraska and Iowa. In the best of competition our birds won 39 first prizes, including five out of six firsts on White Orpingtons, 2 firsts and 2 seconds from four classes in Buff Orpingtons, and four first prizes on Reds. Our 1st White Orpington pullet was the silver trophy champion female of the whole English class.

At Nebraska State Fair, with 3,162 fowls actually on exhibit and in competition, our winning record was even better than at Iowa. We made practically a clean sweep on Buff and White Orpingtons, White Wyandottes and S. C. Rhode Island Reds. Our record on White Holland and Bronze turkeys at both fairs was never equalled. Our first and second prize hens in White Leghorns were the wonder of the show room. Free catalog and special fall price sent on request. Hundreds of birds for sale at reasonable prices. Every fowl guaranteed to please, or no sale.

THE 1733 RANCH, Russell F. Palmer, Manager

R. R. 6, Box 2, KEARNEY, NEBRASKA

a number of exhibitors failing to get a place because of the keenness of the competition. Buff Wyandottes were another quality class. B. M. Owens winning five firsts, one second and two thirds, and Dan C. Meek receiving four seconds. Partridge Wyandottes came out strong, Mrs. Donna Hanley being a heavy winner. The balance of American class was strong especially in Barred Rocks, Rhode Island Reds and White Wyandottes.

S. C. White Leghorns were extra fine. J. W. Friesner & Son, Bremen, Ohio, won 1st cock, 1st cockerel, 1st pullet and 1st and 2nd young pens, the first prize cockerel being awarded special for best cockerel in Mediterranean class. Louis H. Perry, of Clay, N. Y., sent in a great string of R. C. White Leghorns, which won all firsts, excepting pullet, which went to Chas. McClave. S. C. Black Minorcas were grand in quality. John L. Brown, of Anderson, Indiana, being the heaviest winner. His first pullet won the special for best pullet in the Mediterranean class. R. C. Black Minorcas were unusually fine, Dan C. Meek, of Coshocton, Ohio, winning three of the five first prizes.

Golden Campines were few in number but of fine quality, winnings principally going to C. M. Battles. Orpingtons were extra fine, the first prize Black Orpington hen owned by Carl E. Schmidt, of Oscoda, Michigan, was awarded the special for best female any variety, in the show. Turkeys and water fowl, as is usually the case at this show, were extra good.

The Newtown Giant Incubator Company had an attractive display of incubators in charge of P. S. Martin, the manager of their service department.

Special mention should be made of the extensive and instructive Ohio State exhibit consisting of models and drawings of the most useful types of all kinds of poultry houses and equipment for same, which was in charge of Prof. Jacoby.

The writer spent Labor Day visiting the poultry department of the Cleveland Exposition held at Edgewater Park. We found a really good quality show of about 500 birds. H. C. and C. W. Sixt, of West Park, Ohio, showed a strong team of White Wyandottes and S. C. White Leghorns and made a strong winning. Their birds are evidently bred to lay as well as to win, as their first prize pen of White Leghorns laid three eggs the day we were at the show. E. M. Billings, of Elvira, Ohio, ran into strong competition in S. C. and R. C. Reds, but cleaned up nicely by winning 6 firsts and 4 seconds. J. O. Somers, Bedford, Ohio, was a consistent winner in Anconas. Chas. McClave lined up a strong team of land and water fowls and was awarded 75 first and 26 second prizes.

The poultry show at the Indiana State Fair, Indianapolis, Ind., was one of the largest and finest of the season. The poultry building was filled to overflowing and was one of the main centers of attraction on the fair ground. The Plymouth Rock classes were large and quality very fine for the season of the year, notably the White Rocks, in which the grand team of U. R. Fishel was distinguished by its brilliant winning. White Wyandottes constituted one of the grandest classes ever seen at any show. L. J. Demberger, Stewartsville, Indiana, and J. C. Fishel & Son, Hope, Indiana, making heavy winnings. Balance of American class very good.

There was a strong class of Light Brahmas. Black Langshans were numerous and of high quality, notably the fine team shown by Mrs. Bernice Barrett, of Fortville, Ind.

Brown, White and Buff Leghorns were large classes of good quality. A superb string of S. C. Black Minorcas was shown by John L. Brown, Anderson, Indiana.

Buff Orpingtons, numerous and of good quality. The Woolery Farm, Bloomington, Indiana, made a great win in a strong class of White Orpingtons. Black Orpingtons not so numerous but winners of fine quality.

Indiana seems to be quite a hot-bed for Sussex and there were good classes of Red and Speckled. There was a big showing of both Game and Ornamental Bantams. We regret that lack of space prevents us from publishing full awards in this issue.

At the Kentucky State Fair, Louisville, Ky., the well-staged poultry show attracted much attention and we found here a high grade quality show. The judging was done by Henry Dipple and H. A. Pickett, who handled their classes in a highly creditable manner.

The Barred Rock class was one of the best we have seen this season. Pope & Pope, Louisville, Kentucky, set up a grand string of birds and won 5 firsts, 4 seconds, 5 thirds, 1 fourth, 1 fifth and special for best display of this variety. White Rocks, a wonderful class, and it was an honor to receive even a place, so keen was the competition. Among the more prominent winners was L. P. Doerhoefer, Anchorage, Ky. Buff and Partridge Rocks were nice classes. S. C. Rhode Island Reds were of high class quality. Chiles and Company, of Mt. Sterling, Ky., exhibited a small string only, but won 1st cock, 2nd hen, 1st cockerel and 4th pullet. Balance of

American classes and also Asiatics were good. White Leghorns were out in great numbers and quality. Special mention should be made of the wonderfully fine 1st cockerel and 1st pullet shown by Glory Anna Poultry Yards, Louisville, Ky.

We attended quite a few other fairs, but owing to lack of space allotted us, can make no comment in this issue. At one of these which, for obvious reasons we will not mention, we found there was a clause in premium list limiting each exhibitor to competition in eight varieties. This was done, so I was informed, in order to keep out big string exhibitors and so improve (?) the quality of the show. The result of this policy was that three exhibitors with miscellaneous birds, mostly of third class quality, saw their opening, as they judged rightly, that stringing with birds of good quality would stay away and that, as the entries didn't close until the first day of the fair, they would take the chance of showing and persuading the officials to remove the eight variety rule or else to show their whole string by entering eight varieties in each of their sisters' and cousins' and aunts' names. Well, the rule was rescinded and another show, that might otherwise have been good, was spoiled simply for the reason that the competition was not free and open to all. If it had been, the exhibitors whose birds constituted a good part of the show would never have taken the chance of showing.

At another fair, there was a rule stating that no entries would be received from hucksters or anyone else not a regular breeder. We asked the superintendent as to who was responsible for the writing of the poultry premium list and he claimed full authorship of it. This same gentleman happens to be the owner of the local poultry and bird store and he seemed quite proud of the fact that he had sold for \$2.50 the male that won special for best male bird in the show. Doubtless he even made a profit by the transaction even at this price or I over-

estimate the ability of the man as a dealer. Now, I do not want to cast any discredit on this gentleman, as he really handled the show in fine style and showed every courtesy to the exhibitors and visitors, but the point is, what is the definition of a "huckster" or "huckstering" as applied to poultrydom?

The Ohio Leghorn Club has recently been organized and already has a membership of over twenty of the most prominent breeders of the state. It has for its object the fostering of the best interests of Leghorns, all varieties, and besides its regular officers, is to have a vice-president for each variety. The officers are: C. W. Sixt, President; D. D. Whittaker, Cuyahoga Falls, Ohio, Secretary-Treasurer; and Vice-Presidents, Dr. R. H. Lindhorst (Black Leghorns), C. G. Moore (White Leghorns), J. E. Gault (Brown Leghorns), and G. J. Gable (Buff Leghorns).

Here Is the Secret of Winter Egg Profits!

"Get the pullets started to laying before cold weather. When they go into the winter houses, make them eat all they possibly can; have dry mash and high grade meat feed always before them; the more they eat, the better, just so long as the meat feed in the ration is high in protein and is clean and digestible." The most perfect and economical form of meat feed is

DARLING'S MEAT CRISPS

This feed is made from selected meat trimmings collected daily in the Chicago markets. It is cooked the same day at 350° Fahr., thoroughly removing all grease and foreign matter. After drying it is ground into uniform particles. It is a sweet, clean, odorless concentrate of fresh meat. We guarantee it to contain 75% digestible protein. Packed in moisture proof cartons and wooden pails.

Poultry Book FREE

This book, entitled "Feeding Secrets of Famous Poultrymen", will give you more information about **Winter Egg Production**; Pushing Late Pullets; Making Eggs that Hatch; Feeding for Exhibition, etc. It tells the cause and cure of common poultry diseases, and in addition contains a lot of other valuable information. It describes Darling & Company's other poultry feeds. Write for your free copy today.

HAPPENINGS of INTEREST

in the POULTRY WORLD

Five double-deck Newtown Giant incubators, having an aggregate capacity of 102,000 eggs, will be installed on The Niagara Poultry Farm at Ransomville, N. Y., by the Newtown Giant Incubator Corporation of Harrisonburg. The order, which is the largest single contract ever placed with any manufacturer for hatching equipment, was closed recently with the W. R. Curtiss Company, proprietors of the farm, by G. R. Spitzer, sales manager for the incubator corporation. The price of the equipment is \$11,020.

The cellar on the farm, now in course of construction to house this gigantic hatching equipment, will be forty-eight feet wide and 170 feet long. Only half of this space will now be required, but it is the intention of the purchasers to increase the hatchery as their business demands.

Each machine when erected will be seventy-five feet long and consist of an upper and lower deck. The hot water heating system, with which each of these large incubators is equipped, will be of sufficient capacity to comfortably heat a large dwelling in the coldest weather. Each machine is operated by a coal-burning, self-regulating heater.

SILVER WYANDOTTE ANNOUNCEMENT.

Silver Wyandotte breeders have been more than active during the fall shows, exhibiting at the Fairs many a bird that would have been a prize winner at the larger winter shows, and this season will see some wonderful birds on exhibit. The Silver Wyandotte Club of America is pushing the Club and State shows and the list of premiums offered at the Chicago Show, December 13-18, will undoubtedly equal that ever put up, running probably to fifth and sixth places, and including many cash premiums. For the state shows the club is offering beautiful silk ribbons and handsome lapel buttons in three colors, to be competed for, of course, by club members, who should send their application or renewal, with \$1 membership fee, to the secretary, Clara E. Hoffman, Allegan, Michigan.

The annual National meeting of The American Single Comb Brown Leghorn Club will be held in connection with the St. Louis Show, Thanksgiving week, November, 1916. The president of the club, Mr. Tormohlen, will again judge at the National meet. The Western members of the club have promised to show true Western hospitality to all breeders whether members or not and it is predicted freely that this will be a record breaking event.

The fourth annual show of the Gloucester County Poultry Association will be held on December 8th and 9th, 1916, in the Town Hall, Woodbury, N. J. All of our shows so far have been better than the preceding one and all present indications point to a larger and better one this year. Entries close Wednesday, November 29th, 1916. Address all communications to L. Cheesman, Show Sec'y, P. O. Box 22, Sewell, N. J.

CURTISS UT CLOVER

Free from long caky stems so prevalent in all other green foods; 75 per cent heads and leaves; sifted thoroughly to take out waste. ACTUALLY CHEAPER THAN EVER BEFORE. Feed it; increase your egg yield, reduce your feed bill and MAKE MONEY.

FREMONT, OHIO

DIAMOND CORN GLUTEN MEAL

Insure Your Winter Egg Yield

AS Henry N. Prouty used to say: What you get out of a hen in the Winter depends on what you put in, in the Fall.

Protein is always necessary—and Diamond Corn Gluten Meal is the most economical and concentrated form of corn protein on the market.

The proportion of protein required varies—for a Fall feeding the following dry mash formula has been used by many successful poultrymen:—

100 lbs. Wheat Bran
100 lbs. Wheat Middlings
100 lbs. Diamond Corn Gluten Meal
50 lbs. Corn Meal
50 lbs. High Grade Beef Scraps
25 lbs. Linseed Meal

If you cannot get Diamond Corn Gluten Meal from your dealer, write us direct.

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

JUDGES' SECTION OF THE AMERICAN POULTRY ASSOCIATION.

The forty-first annual convention of the American Poultry Association, held at Cleveland, Ohio, August 7-11, will go down as one of the best meetings in its history. A new feature was the department meetings, where permanent organizations were launched, and great good is sure to be the outcome. Over fifty poultry judges were present, when ways and means were devised to form a Judges' Association, and never has there been so much real enthusiasm at any previous meeting where a judges' club or association has been talked of. A permanent organization, known as the Judges' Section of the American Poultry Association, was organized on Wednesday, August 9, with a charter membership of thirty. The officers are as follows: President, Charles McClave, New London, Ohio; vice-president, J. H. Drevenstedt, Buffalo, N. Y.; secretary and treasurer, W. C. Ellison, Elma Center, N. Y.; board of directors, Edith L. Masten, Pleasant Valley, N. Y.; Mrs. Florence Forbes, New Decatur, Ala.; D. T. Heimlich, Jacksonville, Ill.; O. L. McCord, Peoria, Ill.; J. E. Gault, Chippewa Lake, Ohio. With such an efficient set of officers, backed by the association to a member, there will be no such word as fail. The objects of this club are many. Primarily, to secure a more uniform system of judging; to help the inexperienced judge to become proficient and able to secure his license; to get together once a year; have heart to heart talks and in this way work for the good in general,—handle as a body any matter pertaining to judges or judging—that is, in a form of complaint or adjustment, and many other things will be featured; but, above all, the object of the association is to weld the friendship of all the judges and promulgate fraternalism and closer alliance. Poultry shows, fairs and expositions will be supplied with the association list, and also other information given that is desired. Great good will be the ultimate outcome and we predict wonderful benefits for our brother fanciers and poultrymen thru our closer co-operation and fellowship. There are over three hundred licensed American Poultry Association judges, composed of men and women that have devoted the better part of their lives to this work, and who, we feel confident, will all be ready and willing to join, so as to help boost this good cause. All judges who have not joined should get in touch with the secretary at once.—W. C. Ellison, secretary, Elma Center, N. Y.

ILLINOIS STATE FAIR POULTRY SHOW.

The Illinois State Fair Poultry Show, which was held September 15th to 23rd, maintained its usual high standard both in quality and in the number of birds exhibited. The Illinois Poultry Exhibit has been for years the acknowledged leader among the Western fairs and under the able management of Judge Jerome Leland of Springfield will undoubtedly continue secure in its hold on first place. The entries were even larger than ever this year and it was necessary to house several hundred of the fowls in tents adjacent to the poultry building.

Rumor has it that the State Fair management has appropriated \$25,000 for an additional poultry building or the enlargement of the present structure. It is to be hoped that this has been done, for there has been a crying need of it for many years. We understood that it was necessary to refuse

many additional entries this year owing to lack of space. Next year with more exhibition room there is no reason why the Illinois State Fair Poultry Show should not rightly claim the title of the "Hagerstown of the West."

A large number of prominent fanciers exhibit from year to year at the Illinois Fair and it is always a show where competition, particularly among the popular breeds, is unusually keen and quality exceptional for the time of year. In this connection we can give concrete examples by naming the S. C. White Leghorns, Barred Rocks, White Wyandottes, Columbian Wyandottes, Rhode Island Reds and Orpingtons at this year's fair. Many among the above named varieties were in mid-season form.

To delay increasing the poultry show accommodations at the State Fair will, to a certain degree, retard the advancement of poultry culture in the State of Illinois, for it is at the State Fair you reach the farmer in person and thru the excellence of the poultry exhibit impress him with the advantages of the pure bred fowl over the mongrel.

CARD OF APPRECIATION.

The Allentown Fair Poultry Show, thru its superintendent, W. Theo. Wittman, wishes to express its hearty appreciation of the uniform courtesy and fancier-like spirit of its exhibitors and patrons as shown at its show September 19-22, 1916. The volume of entries was remarkable and this mark of confidence in Allentown was especially appreciated. Never in its history have the birds arrived so early or so promptly or been in as good physical condition as this year or the quality been better. There was absolutely no kicking on the judging, emphasizing the good sense and courtesy of the exhibitors. And lastly, the dozens of letters received from exhibitors expressing satisfaction with the prompt way the birds arrived home, correctly and in fine condition, was duly and fully appreciated after we had again succeeded in starting all birds home Friday and without the misshipment or loss of a single specimen.—(Signed) Great Allentown Fair Poultry Show, W. Theo. Wittman, Supt.

Every exhibitor within reach of Fort Wayne who plans to make a showing of his stock this season will do well to send his name and address at an early date to J. C. Howenstein, the secretary-treasurer of the Great Triangle Poultry Show, which will be held from the 17th to the 21st of January, 1917. Last season's Triangle Show at Fort Wayne was one of the best in the country, and exhibitors who placed their birds on exhibition are loud in their praise of the treatment they received from the men who are giving Fort Wayne a good name thruout the poultry world. This season's show promises to eclipse last year's event, which means that the men in charge will have to work mighty hard. The judges are H. A. Pickett, George H. Northrup and C. E. George, J. C. Howenstein, the secretary-treasurer, states that the premium list will be ready for mailing December 10.

In connection with the New Orleans National Farm and Live Stock Show, there will be held, November 16-19, a poultry exhibition of high quality. They are offering \$1,400 in cash premiums and nice line of cash specials and silver cups. For full particulars write R. E. Bruce, Supt. of Poultry, New Orleans, La.

SHOW BIRDS GALORE!

More than 2500 Aristocrat Barred Rocks are now growing up into superb, magnificent show birds. The Aristocrats are those wonderful birds which made such a truly

SENSATIONAL SWEEP OF VICTORIES

thruout all America last season—from Brooklyn, N. Y., to San Francisco, and from the great shows of Canada down to the Gulf—capturing **FIRST PRIZE** at such shows as Chicago, the World's Fair, Philadelphia, Norfolk, and scores and scores of other shows. This is one of the most **Victorious Campaigns** ever made by any strain in a single season. This great record gives force and power to the thought that

The Aristocrats Are Sure and Guaranteed Winners

Now—I ask you: Do you want to win this Fall or Winter? If so, sit down and write me, and we will make a deal that will safe-guard you absolutely.

W. D. HOLTERMAN, Fancier Box A **FORT WAYNE, IND.**
P. S.: This season the Aristocrats are even better than last year.

A BIG SHOW IN A BIG TENT.

The chicken fever is raging in the Tri-Cities and in order to accommodate the patients so afflicted, the Mississippi Valley Fanciers Association is going to pull off the biggest show at Rock Island, Ill., November 27th to December 3rd, ever held in this part of the country. This show will be held in a large tent, beautifully illuminated and well heated, located on Market Square, which is in the heart of the city, where thousands of people will pass daily. This idea is attracting attention of many breeders, as is shown by the number of inquiries already received. The attendance is bound to be large, which will assure many good sales. Fanciers will do well to get in on this big show, adequate help will be at your disposal at all times. The services of James A. Tucker and D. E. Hale have been secured to do the judging. Prepare your birds for this big show in the liveliest town in the Middle West, and write for premium list, which is now ready. Address M. O. McDannell, Sec'y, 1430 24th Ave., Moline, Ill.

THE BIG BOSTON SHOW.

Seldom has such strong interest in the Boston Show been shown so early in the season, and it indicates another big show for the Hub. The Cornish Club is coming strong and the American Barred Plymouth Rock Club is out for a topnotch entry that will make people sit up and take notice that this old favorite is still on the band wagon. The Hamburg Club is out to break their record of last year and the New England Bantam Club say that more room will be needed for the little birds. The American Light Brahma Club has selected Boston for their annual meet and plans are being made to make it the greatest event in the club's history. As usual, an attractive list of prizes will be offered, and the utility, egg, and dressed poultry division will receive the same generous support accorded it in the past years. Plan to be at Boston January 9-13, 1917.—W. E. Atherton, sec'y.

OF INTEREST TO BUFF WYANDOTTE BREEDERS.

The Illinois State branch of the American Buff Wyandotte Club will hold their meeting in connection with the Colliseum Show, Chicago, December 13th to 18th. There is a fine list of each and special prizes offered. Mr. Charles V. Kessler, Winamac, Indiana, will award the prizes in this class. There will be two classes of breeding pens, old and young. Fanciers who are interested will please send in their name for premium list at once. This list is now ready for mailing. Entries close November 25th.—Theo. Hewes, Secretary, 25 West Washington St., Indianapolis, Indiana.

The Quincy Poultry Association's next exhibition will be held November 28 to December 3. They have three of the best judges in the country and it is well known that more birds are sold at Quincy each year than any show in the state. They will again distribute both marked and official catalogs free, and will entertain every visiting exhibitor at a banquet and dance at Hotel Quincy. Catalog will be ready October 20. Write to A. D. Smith, Quincy, Ill., for copy.

The 11th annual show of the Unadilla Valley Poultry and Pet Stock Association will be held in Sidney, N. Y., December 4-8, 1916, and promises to be the best in the history of the association and they have had ten good ones. The entry fee is 50 cents, and the prizes \$1.25 and 75 cents, besides a long list of valuable cash and merchandise specials. For premium list ready in November, write the secretary, Archie E. Vandervort, Sidney Centre, N. Y.

The Chicago Pet Stock Club held a reorganization meeting with 32 members on Saturday, September 30th. The following officers were elected: President, J. E. Young; 1st Vice-President, L. F. Grafius; 2nd Vice-President, E. G. Condon; Secretary, George Eckert, 3224 N. Central Park Ave., Chicago. Watch us grow. Those interested should send one dollar to the secretary and become a member.

The Lanark Poultry Association are making plans for the largest show ever held in Northwestern Illinois. Judge F. H. Shellabarger will place the awards. Send your name for a premium list at once. Remember the date, December 4-9, 1916.—Mrs. J. A. Shaner, sec'y-treas., Lanark, Illinois.

The ninth annual show of the Fond du Lac Poultry and Pet Stock Association will be held January 4-7, 1917. D. E. Hale, judge. For premium list and full particulars address E. A. Sommerfeld, sec., Fond du Lac, Wis.

Rich Mahogany Chickens

with all-purpose qualities—standard bred.

Elton C. Mahon, Norwood, Tenn.

Dirt Breeds Disease

You can scrub your poultry houses with soap and water till they shine like a new pin, but the germs that cause disease in your flock—the lice and mites that sap its vitality—will still be there. You can kill these germs and parasites and at the same time, without extra cost or labor, paint your building a snow white by using

CARBOLA
The Disinfecting White Paint

a snow-white mineral paint combined with a germicide 20 times stronger than pure carbolic acid, but neither caustic nor poisonous. Comes in powder form; ready, when mixed with water, to put on with brush or sprayer. Will not blister, flake or peel off.

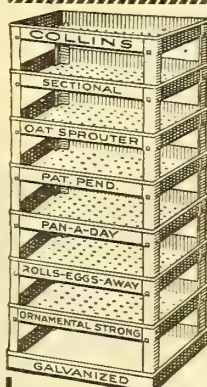

Use It Instead of Whitewash

in poultry houses, dairies, barns, cellars, pig pens, etc. Used and recommended by experiment stations, agricultural colleges and many of the largest poultry, dairy and breeding farms. Will not spoil by standing. Satisfaction guaranteed.

10 lbs. (10 gals.) for \$1 plus postage. 20 lbs. (20 gals.) for \$2 delivered free.
50 lbs. (50 gals.) for \$4 delivered free.

Your dealer will supply you. If not, send us his name and your order. Trial package, enough to cover 250 sq. ft. and booklet "The Disinfectant That Paints" for 25 cents.

PRODUCE WINTER EGGS
AT HALF THE USUAL COST

A Collins Oat Sprouter Sells for only **\$3**

but saves its price almost every day on the average feed bill. The only way that you can afford to keep hens this Winter is by buying a COLLINS SPROUTER and feeding sprouted grain. You provide at less than half usual cost, Fresh, Sweet, Green Feed, full of protein, the egg forming element. For lots of eggs feed the Collins way, and

MAKE YOUR HENS HEAVY WINTER LAYERS

I am the inventor of the most satisfactory, low-priced, quick-sprouting grain sprouter on the market. Hundreds now in use everywhere. Made of all galvanized steel. Knock-Down, Fireless. Three sizes; the Popular Size, 8 pans, 11x15 in., at \$3; small Back Yard Flock Size, 5 pans, 11x15 in., \$2; the big Breeders Size, 8 pans, 11x32 in., \$8. Delivered free East of the Mississippi River. West of River add 50 cents. West of Rockies \$1.

My sprouter must give complete satisfaction or I refund money after 10 days fair trial. J. A. Goodfellow, Flint, Mich., writes: "Your Oat Sprouter is certainly fine. I sprouted oats in 4 or 5 days. Last winter we had from 35 to 45 eggs per day from 54 pullets." **DEALERS SPECIAL PROPOSITION**—I'll send any responsible dealer, all charges prepaid a sample sprouter, with show card and printed matter. Display it. Make Sales, Order More. If unsold at the end of 60 days return to me. Customers supplied through their dealers or direct. Write for circulars and prices in quantities.

W. H. COLLINS 20-D Harrison Street NEW YORK, N. Y.

PALMER'S BARRED ROCKS

By their thirty-four years experience and being line bred since 1882, by their record of almost as many first, regular and special prizes as any three competitors combined at Chicago, together with the fact that we have sold either winning show birds or breeding birds to almost all fanciers of note in America, outside of the extreme East, by our record at the last Illinois State Fair, where we won FIVE FIRSTS and best display, besides selling winners for many other state fairs and early fall shows, and the fact that this season we have hundreds of show birds of EVEN better quality than EVER before gives us the right to the claim of not only one of AMERICA'S OLDEST but one of AMERICA'S BEST STRAINS OF BARRED ROCKS. Do you want to win or get breeding birds at bargain prices that can produce winners? Then write us at once, stating fully what you want and we can furnish it. We know we can, for we have done it hundreds of times. We guarantee you satisfaction and know we can please you with birds to win in almost any show in any numbers. Catalog free. Write today stating fully what you want, and price you care to invest to D. F. PALMER & SON, Box 35 Yorkville, Illinois

SUSSEX CLUB MEETING CHANGED.

During the Cleveland meeting of the American Poultry Association, the officers of the Sussex Club and prominent Sussex breeders got together and discussed the coming Club Show and Meeting. It had been decided to hold the annual Sussex meeting at Buffalo, Thanksgiving week. However, Buffalo has had to change the dates of its show to the second week of December. That means that Buffalo will conflict with the Coliseum Show

ing and every breeder is urged to enter at least one bird at the club show. In doing this, we can be almost certain to have a larger entry of Sussex than any other variety in the show.—F. L. Platt, Sec'y Sussex Club of America, Swanton, Ohio.

The 7th annual show of the Michigan Poultry Breeders Association will be held January 7-14, 1917, at Detroit, Michigan. The National White Wyandotte Club meet,

overlook this great show to be held January 10-16, 1917. It is going to be the largest and best show ever held in Chicago. Four National Club meets, viz., The S. C. White Leghorn Club, Partridge Wyandotte Club, Partridge Plymouth Rock Club, American Bronze Turkey Club and several state club meets. The best of judges in the best lighted hall in America. Send your name for premium list right now to D. E. Hale, Sec'y, 930 Monon Bldg., 440 So. Dearborn St., Chicago, Ill.

The main brooder house at Pittsfield Farms, 190 Main St., Holliston, Mass.

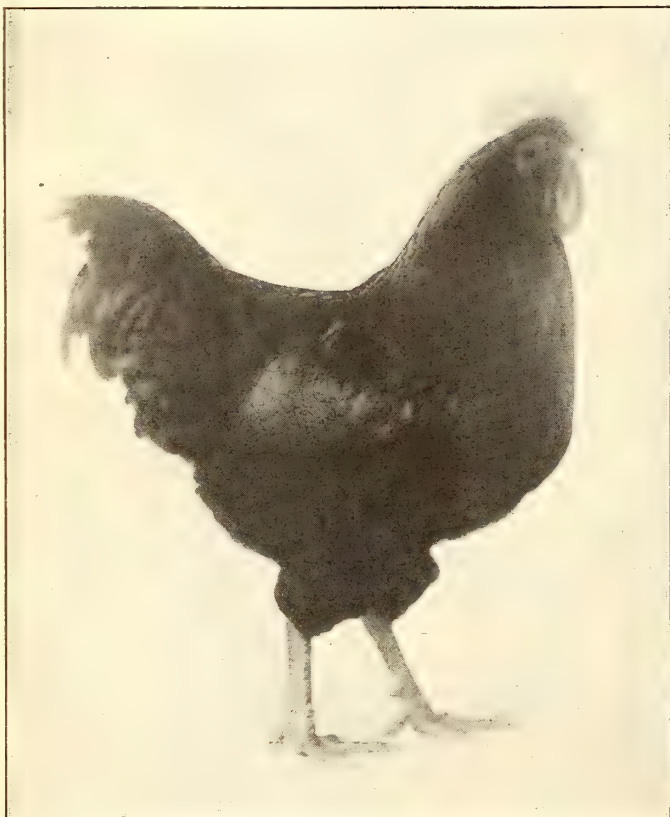

in Chicago. Several of the largest exhibitors of Sussex have entered at Chicago each year, and with Buffalo conflicting with Chicago, it looked like a difficult matter to get out a big class at the Club Show. Nothing is more important than a big enthusiastic Club gathering, and it has therefore been decided to hold the Club Show in connection with the Madison Square Garden Show, New York City. If possible, some specials will be offered at Buffalo, so that the small breeders who counted on showing there will not be disappointed. Three years ago the Sussex Club had a meeting at Buffalo, then went to New York and last year to Chicago, and in selecting New York again this year, the officers of the club have done what they believe to be the very best thing to do under the circumstances imposed upon us by the change in the Buffalo dates. Every breeder of Sussex is invited to attend the club meet-

which will be held during this show, promises to bring out a very large class. The Michigan Poultry Breeders Association offers \$170.00 and the National White Wyandotte Club offers \$100.00, making a total of \$270.00 in cash to be placed on White Wyandottes. This Association has also secured the State meet of the B. P. Rock Club and will, no doubt, have a large entry of B. P. Rocks. For full information write the secretary, F. M. Crowe, 923 N. Washington St., Owosso, Mich.

The premium list of the Greater Chicago Show will be ready November 15th. Don't

THE BIG WESTERN SHOW.

Prospects at present point to one or the largest exhibits ever cooped in the West. A cup for every variety and plenty of prize money has made success assured. The state meet of the American Poultry Association and Rhode Island Red Club, with F. H. Shellabarger hanging the ribbons, would make any show a success. Score card system of judging and the show held in two localities the same week appeals to the breeder that is looking for more business. Premium list now ready. Write the Secretary, Jno. L. Reid, Portales, N. M.

"Balboa," first, best and champion Partridge Rock cock at Panama-Pacific Exposition. Owned by Rockwood Farm, Box 1110, Norwalk, O.

Dan Palmer, Yorkville, Ill., has bred Barred Rocks for over thirty years. The unretouched photo above of one of his birds is a fair sample of the produce of his 1916 matings. This bird won at the Illinois State Fair this year.—L. A. S.

MADISON SQUARE GARDEN.

Our 28th annual exhibition gives promise of being one of the very best that the historic old Garden has housed. It certainly is gratifying to find that the fanciers of the country have enough confidence in my management to desire to continue their exhibits with us in even larger numbers than heretofore. The prestige of the Garden seems to be gaining year by year and one evidence of this is the desire of specialty clubs to meet there. This year the following clubs have already voted to hold their annual club meets in connection with our forthcoming exhibition: The Water Fowl Club of America with about 1,000 birds; the National Bantam Association, which will hold its 25th anniversary at the place of its birth, with about 1,000 Bantams; the Blue Orpington Club and the Sussex Club of America, and other clubs are now voting (like the National White Wyandotte Club), many of whose members desire to again meet at the Garden after an absence of twelve years, together with the International S. C. Black Minorca Club and the Paverolle Club. It is expected that the following Pigeon Clubs will also meet with us: The American Jacobin Club, American Fantail Club, the Swallow Club of America, International Magpie Club, the Turbit Club and the Owl Club. The Oriental Frill Club has already voted to come. In addition to this feeling of confidence that the fanciers show for the Garden I wish to say that never since I have been secretary have there been so many advanced requests for premium lists. In this connection I want to warn Specialty Club Secretaries that their offers cannot be printed in the premium list unless they are received by October 1 next. Our policy of paying all premiums and specials during the course of the show applies to Specialty Club awards and we do not intend to promise anything that we cannot deliver during the show. The Pigeon department will be in charge of that veteran and experienced fancier A. E. Robst. of Closter, N. J., who is co-operating with me in every way to make the Pigeon department all that the fanciers could desire. I have one or two innovations that I want to announce later if I may have the courtesy of using your paper as the means to make known my ideas for the continued prosperity of "America's Leading Show."

Yours very truly,
Chas. D. Cleveland,
Secretary and Superintendent.

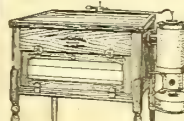

THE CENTENNIAL SHOW.

This is Centennial Year in Indiana and the big Centennial Poultry and Pet Stock Show will be held at Terre Haute, Indiana, December 6th to 10th, 1916. The Terre Haute Show this year will excel all shows that have been held there in the past, both in quality and in number of entries. One of the best judges in the country last year said that for quality no show in the state could beat it, and that winners for the largest shows in the country could be picked from the Terre Haute winners. This year the show will be cooped with uniform sanitary cooping and the same excellent care that has been given stock in the past will be given this year. They have secured J. C. Johnston for one of the judges on poultry. The Pet Stock judges have not yet been decided on, but several high class men are being considered. The Terre Haute Pet Stock Association has combined with the Terre Haute Poultry Association, which means that a fine collection of poultry and pet stock will be seen at the Terre Haute show this year. The Terre Haute show has grown by leaps and bounds and now it is recognized as the best sales town in Indiana. Last year the show room was crowded to capacity with buyers of blooded poultry and the breeders who were lucky enough to show there had a very successful week. They have decided to make most of the premiums in cash, so the exhibitors will have good cold cash to show for their successful breeding and showing. They are offering a number of other valuable premiums, which are set forth in the premium list, which is now ready, and every poultryman is urged to send for one and see for himself the opportunity that is offered to him at the "Quality Show of Indiana." Write to Harry Forbes, Secretary, Terre Haute Poultry Association, Terre Haute, Ind.

Show secretaries should write Harvey C. Wood, Bound Brook, N. J., secretary the American Light Brahma Club, for particulars in regard to specials the club is offering this season at the shows that comply with the rules of the club.

SUCCESS
Hinges on
the Start

Start your chicks strong—and protect them during first three critical weeks—then you can safely count up your profits.

**MODEL Incubators and Hovers****Sanitary Hover**
Price Only \$8.50 Net

NATIONAL WHITE LEGHORN CLUB.

The next annual meet of the National Single Comb White Leghorn Club will be held in connection with the Greater Chicago Show, January 10-16, 1917. This is one of the big shows of the country. White Leghorn breeders and fanciers should plan to attend this show and send their birds to this National Meet. Two judges of national reputation will be put on the White Leghorn class—one from the east and one from the west. J. C. Johnston, of Illinois, will judge the cockerels, pullets and old pens, and M. L. Chapman, of Wilburtha Farms, Trenton Junction, New Jersey, will judge the cocks, hens and young pens, and it is expected that the White Leghorn class at this meet will be the largest ever shown. Twenty-five per cent of the total entry fees on Single Comb White Leghorns will be offered as cash specials to members of the club; this in addition to the regular cash prizes, Club specials, silver cups, etc. Eight places on cocks, hens, cockerels, pullets, and both young and old pens, will be awarded, and White Leghorn breeders should plan to enter their birds at this show. If you are not now a member of the National Single Comb White Leghorn Club, write the club's president, Eugene Smith, Aurora, Illinois, or the club's secretary, F. O. Groesbeck, Hartford, Connecticut, for further information and application blank. Send your request for premium list of the Greater Chicago Show to D. E. Hale, secretary, 930 Monon Building, Chicago, Ill.

AMERICAN BUCKEYE CLUB MEET.

The annual national meeting of the American Buckeye Club will be held in connection with the New York Palace Show, December 5-9. Mr. W. H. Card will place awards. The club's ribbons and silver cups are sought after and all breeders of this variety are eligible to win them by sending the secretary, H. W. Deem, of Eaton, Ohio, \$1.00, the initiation and first annual dues.

SHOW SECRETARIES TAKE NOTICE.

The American White Plymouth Rock Club, H. W. Halbach, president, will offer five handsome ribbons at all forthcoming shows that will give notice of the offer in their premium list. For further particulars, address M. L. Chapman, sec.-treas., Trenton Junction, N. J.

The 23rd annual exhibition of the Illinois State Show will be held in the Arsenal at Springfield, Ill., on December 28th, 1916, to January 3rd, 1917, and the entire exhibition will be caged in Empire coops. Judges Russell, Hale, Johnston, McCord, Heyl, Klein, Leland and Heimlich will place the awards. This show is your show and we want you to make it a show for every exhibitor in the state and we guarantee you a square deal, whether you show one bird or a hundred. No favorites, everybody can rest assured of that. We will pay higher cash prizes than any show in the West, and will also have cash specials for best shape male and female and best colored male and female in every variety shown, also \$10.00 in gold to winners of best displays. Catalog will be ready November 1. Write A. D. Smith, Quincy, Ill., for copy.

For information about the Blue Andalusian Club of America, write the secretary, W. J. Coates, East Calais, Vt.

F. M. CROWE, Secretary

OWOSSO, MICH.

WINNINGS of A. P. J. ADVERTISERS

Under this heading will be given each month, during the show season, the winnings made by our advertisers, at the various shows, as reported by them.

W. W. Carpenter, East Providence, R. I., reports the following winnings on his Barred Plymouth Rocks at Three States Fair, Crescent Park, R. I., October 10-13, 1916: 1 cock, 1-2 hen, 1 cockerel, 2-4 pullet, 1 exhibition pen and 1 cockerel breeding pen.

Homestead Campine Farm, Wayland, Mass., report the following winnings on their Silver Campines at the New York State Fair, Syracuse, N. Y., September, 1916: 1-2 cock, 2-5 hen, 1-2 cockerel, 2-3-4 pullet, 1-2 pen and 1 display. At Hanover, Pa., on four entries, 1 cock, 1 hen, 3 cockerel, 3 pullet.

Dr. L. E. Heasley, Holland, Mich., reports that he won all 1st and 2nd prizes on his Buff Leghorns at the Holland Fair. Owing to a delay by express company his birds arrived too late for competition at the Grand Rapids Fair.

The Quincy Poultry Farms, Quincy, Ill., report the following winnings at the late Illinois State Fair, Springfield, Ill.: 1 pen and 4 cockerel on R. C. Rhode Island Reds, 1 and 2 cockerel on S. C. Rhode Island Reds.

3 cockerel on White Leghorns and 1 cock and 1 hen on Brown Leghorns.

Louis H. Perry, Clay, N. Y., reports the following winnings at the Ohio State Fair, 1916, on R. C. White Leghorns: 1 cock, 1 hen, 1 cockerel, 2 pullet, 1 pen. On Fawn Runner Ducks, 2 old drake, 1 old duck, 3 young drake. At New York State Fair, 1916, on R. C. White Leghorns: 1-3 cock, 3 hen, 4 cockerel, 4-5 pen. On Fawn Runner Ducks: 2-5 old drake, 1-2 old duck, 2-3 young drake, 2 young duck, 2-4 pen, \$10.00 Harriman special best display. Colored Muscovy Ducks: 1 old duck, 1-3 young drake, 1-2 young duck, 3-4 pen, \$10.00 Belmont special best display.

Aldrich Poultry Farm, Columbus, Ohio, report the following winnings at the Great Hagerstown Fair, 1916, on S. C. White Orpingtons: 1st cock, cockerel, hen, pullet and old and young pen, also 2nd cock, cockerel, hen and pullet.

Leo A. Lee, 4840 Belle Plaine Ave., Chicago, Ill., reports the following winnings on his Columbian Wyandottes at the Illinois State Fair, Springfield, 1916: 1-3 cock, 3 hen, 2 pullet, 4-5 cockerel.

John L. Brown, 1515 W. 17th St., Anderson, Ind., reports the following winnings on his S. C. Black Minorcas at the Ohio State Fair, 1916: 1-2 cock, 2-3 hen, 1-2 cockerel, 1-2-3 pullet, 2 old pen, 2 young pen and special for best pullet in the Mediterranean class. The same week at the Madison County Poultry Association Show, Anderson, Ind., he won 1-3 hen, 1-2 cockerel, 1-3 pullet, 1 pen. At the Indiana State Fair, 1916, he won, 2 cock, 1-3 hen, 1-2 cockerel, 1-2-3 pullet, 1 pen.

Richard M. Seward, Lewistown, Ill., reports the following winnings on his Buff Orpingtons at the Illinois State Fair, 1916: 1-2 cock, 1-3 pen, 1 hen, 2 pullet, 4 cockerel. At Wyoming, Ill., 1 cock, 2 hen, 1-2 pullet, 1 cockerel, 1 pen. At Atlanta, Ill., 1 cock, 1 pen, 2 pullet, 2 cockerel. At Delavan, Ill., 1-2 cock, 1-2 hen, 1-2 pullet, 1 cockerel, 1 pen.

J. W. Garvey, Thayer, Ill., reports the following winnings on his Columbian Wyandottes at the Illinois State Fair, 1916: 1-2-3 cockerel, 3 pullet, 1 old pen, 2 young pen.

John W. Ward, Jr., Pennington, N. J., reports the following winnings on his Dark Cornish at Allentown, Pa., 1916: 2 cock, 1-2-3 hen, 2-3-4 cockerel, 1-2-3 pullet and special for best display, all varieties of Cornish competing.

Thru error, the wonderful win made at New York State Fair by John S. Martin, the White Wyandotte breeder of Port Dover, Ont., Canada, was omitted from our October issue and we take this means of giving credit where credit is due. 1-2-3-4-5 cock, 1-2-3-5 hen, 1-3-4-5 cockerel, 1-4-5 pen, 5 pullet. Also best display and championship cup for best ten birds in show, all varieties competing. This makes the eleventh big win made by Mr. Martin at Syracuse.

The time is not far distant when the premium lists of the Madison Square Garden and Boston Shows will be issued. The Hamburg breeders of the United States and Canada are earnestly requested to co-operate with me so that the two largest exhibits of Hamburgs ever seen in this country will be shown to the public. While I am particularly interested in "The Fancier's Fowl," the Golden Penciled Hamburg, nevertheless we wish to see a large exhibit of all the varieties. We have already had the promise of several specials, but we want a large list of them. I will promise to exhibit at each of these shows five cocks, five hens, five cockerels, five pullets, two pens and possibly a display cage of Golden Penciled Hamburgs, and will donate either a couple of silver cups or cash prizes. Now let me hear from you promptly what you will offer in the way of specials before the premium lists close and try to advise me how many Golden Penciled Hamburgs you will exhibit.—John A. Gamewell, Secretary-Treasurer, The Golden Penciled Hamburg Club.

The eighth annual exhibition of the Terre Haute Poultry Association will be held at Terre Haute, Ind., December 6-10, 1916. J. C. Johnson, judge. The quality show, as this show is known, will be larger and better than ever. One of the features will be a large, well lighted show room, where breeders can display their surplus stock which they have for sale, at a very small fee. Big cash prizes will be the slogan this year. For full information write Harry Forbes, sec'y, 2601 N. 11th St., Terre Haute, Ind.

The American White Plymouth Rock Club is publishing an attractive catalog, which contains many valuable and interesting articles from prominent White Rock breeders, pictures of famous prize winning birds, and a complete list of members. It will be sent to all admirers of White Plymouth Rocks on receipt of a two-cent stamp to cover postage for mailing.

Rudy's Perfection Wh. Wyandottes

My strain is noted for its egg production and exhibition qualities. My customers all over the country laud my square deal business methods. I guarantee to give you extra good value for every dollar you pay me and if you are in the market for line bred birds I will be glad to tell you just what I have for sale. If you contemplate showing this season I can furnish you the quality that will win.

EGG-O-HATCH

How and Why it Betters the Hatch And Brings Stronger Chicks

Egg-O-Hatch is a dry powder. Mixed with water it makes a solution rich in loosely available oxygen and with a strong affinity for carbon dioxide. That is, when applied to eggs during incubation, it soaks into the shell and supplies oxygen for the growing chick; absorbs the carbonic acid gas given off; further, by its action on the animal matter of the shell, it renders the shell more porous and brittle.

Up to the hatching point, a chick breathes through innumerable blood vessels located in the inner membrane just within the shell. Close the pores of the shell and the chick quickly dies. Partially close them and the chick is weakened just the same as if partially strangled. If, at the same time, the shell is drying out and becoming harder, tougher and non-porous, a point is reached where the chick is too weak to break out of the tough shell.

The margin between strength of chick and strength of shell is small at the best and good hatches can result only when this margin is kept as large as possible

Egg-O-Hatch is easily and quickly applied to eggs by spraying or dipping. It is used only three times during the 21 days: Our later experimental hatches have invariably shown from 10 to 40 per cent better hatches where Egg-O-Hatch was used, and all were better, stronger chicks. Fifty test hatches showed an average of 96 per cent for eggs treated with Egg-O-Hatch, and 81 per cent for eggs not treated, **RIGHT IN THE SAME MACHINE.** Egg-O-Hatch is easily proven. Use it on half the eggs in an incubator.

ONE SIZE ONLY. 50 cents postpaid, or at dealers. Sufficient for 600 to 700 eggs. Sample 10 cents. Enough for 50 to 100 eggs. Our No. 19 Atomizer, all glass and rubber, is handiest and best way to apply Egg-O-Hatch. **PRICE 75 CENTS.**

To rid chickens and their roosting places of lice and mites, paint or spray **Lee's Lice Killer** on the roosts. Kills lice on bodies of poultry roosting over it; also insects causing "scaly leg." No handling, dusting, dipping or greasing. \$1.25 gallon, express prepaid; \$1 at dealers.

Germozone, given in drinking water, purifies the water and vessels, prevents spread of disease, counteracts musty or spoiled food, prevents and relieves bowel troubles. Is effective remedy for roup, colds, swelled head, canker and skin disease. Liquid form, 12 oz., 50c; tablet form, 50c postpaid.

Egg-o-latum, for preserving eggs, 50-dozen size, 50 cents postpaid. **Lee's Egg Maker**, five sizes, 25c, 50c, \$1.25, \$2.50 and \$8. **Lee's Louse Powder**, two sizes, 25c, 50c—1¼ and 3-lb. sizes. **Mandy Lee Incubators**, 60 to 300-egg. Brooders, 5 kinds. Send for catalog, poultry books and delivery terms.

WHITE HOUDANS

Write me for prices on choice exhibition and breeding stock. Mention American Poultry Journal.

M. L. STARKS Dept. A STARKS, WIS.

The two White Wyandotte cockerels pictured above were bred by John S. Martin, Port Dover, Canada. They were bred from a female with a high egg record and show wonderful size and vigor, while retaining the true Wyandotte type. The sire of these cockerels gave splendid fertility of better than 90% per cent thruout the whole season.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

OF AMERICAN POULTRY JOURNAL PUB. CO., published monthly, at Chicago, Illinois, for October, 1916.

State of Illinois, County of Cook, ss.

Before me, a Notary Public, in and for the State and county aforesaid, personally appeared James W. Bell, who, having been duly sworn according to law, deposes and says that he is the Editor of the AMERICAN POULTRY JOURNAL, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher—AMERICAN POULTRY JOURNAL PUB. CO., 542 So. Dearborn St., Chicago, Ill.

Editor—James W. Bell, 542 So. Dearborn St., Chicago, Ill.

Managing Editor—Prince T. Woods, Silver Lake, Mass.

Business Manager—James W. Bell, 542 So. Dearborn St., Chicago, Ill.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

James W. Bell, 542 So. Dearborn St., Chicago, Ill.

Henry G. Eisert, 542 So. Dearborn St., Chicago, Ill.

H. M. Bell, Congress Park, Ill.

B. M. Eisert, 1455 Balmoral Ave., Chicago, Ill.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)—None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is — (This information is required from daily publications only.)

JAS. W. BELL,

Business Manager.

Sworn to and subscribed before me this Eighteenth day of September, 1916.

(SEAL) ALICE A. SHEHAN,

Notary Public.

(My commission expires June 20, 1920.)

Yes, It Took Over 26 Years of Careful Selection, Trapnesting and Pedigreeing to Produce

PARKS' STRAIN OFF-BRED-TO-AND-DO-LAY BARRED PLYMOUTH ROCKS

The records they have made at home, the reports from customers in nearly all parts of the world, together with the Official Laying Contest Records show that it was years of breeding well spent. They have sworn continuous laying records up to 148 eggs, 365 day records up to 290 eggs. Flock averages up to 243 eggs. In addition to having been among the winners in nearly all the American laying contests. They outlayed every other breed entered (the famous English strains included) and made the best winter month record in the last Missouri laying contest. They lead the entire 100 pens in the present Missouri contest by 31 eggs. And we know those 100 pens represent the cream of the best laying flocks of United States, Canada and England.

COCKERELS AND FOUNDATION STOCK

We have some choice pedigreed birds with the above breeding for foundation stock, and a nice selection of Cockerels, that stamp the lay on their offspring.

Mrs. Ida Kinyon, Deep River, Ia., writes: "I am getting the benefit of those roosters. I never got so many eggs in all my life. We simply trade eggs for everything, even to hog tight wire fencing."

Cockerels and Foundation Stock Circular Free. Large 40-page catalog a dime. J. W. PARKS, Box J, ALTOONA, PA.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **six cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using **Classified Ads** get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted. On writing any of these advertisers mention **AMERICAN POULTRY JOURNAL.** All copy for **Classified Ads** must reach us by the 17th of month preceding date of issue.

Wilburtha Birds Prepared to Win

During the next 90 days the show history of 1916 will be recorded. Are you prepared to make the showing that will stamp you as a leader in your locality?

Birds that can win the coveted blue

are much sought after. As proof that we have them here at Wilburtha in great numbers, we point

to our remarkable winnings at the world's largest shows.

This year we bred for our customers to win

and will not make a general show campaign, showing only at one or two mid-winter exhibitions.

A good winning will bring you prestige and profit. Let us furnish you with the birds you need. Birds to do their best should be conditioned for a definite time, so your arrangements with us should be made early.

Tell us in your first letter when and where you want to show, about what you are in the market for, and we will get busy on some birds for you.

FRANKLIN, PENNSYLVANIA

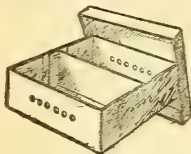

Pekins, Runners, Muscovies. Mating List Free. See Classified Advertisements. Exhibition Birds, Foundation Flocks

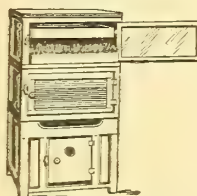

Non-Busto Elastic Egg Box
The suspension-bridge egg carrier—an air cushion for each egg.

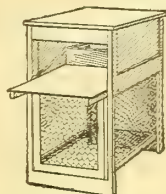

Koop de Luxe
For show birds. No crumpled feathers—no damaged combs.

Baby Chick Carrier
No gluing, no tying—all one piece. Shipped knocked down.

Oat Sprouter
Outer walls of wood lined with asbestos and galvanized tin.

Never Fail Trap Nest
After laying, hen drops down in yard till released.

Colony Chick House
The simplest, most efficient and economical on the market.

Larger Outdoor Brooder
Perfectly ventilated—never too cold or too warm.

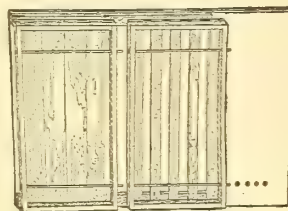

Efficiency Koop
No hammer—no nails.

To All Poultrymen—

There Isn't a Poultryman in America That Can't Improve His Business With This Apparatus

Andrews' Efficiency Koop

Compact—shipped knocked down

No hammer. No nails

I'VE used every piece of it on my own farm. I've saved four or five times the cost of each in less than a year. You can do the same. "Ask the Judges."

Take koops, for instance. A heavy, wooden crate costs a bunch of time and money to build. It is heavy and express charges are big. It can be used but once or twice. Then all your time, labor and money are thrown away.

While with my Efficiency Koops and Koop de Luxe you can be ready to ship instantly. They come knocked down. Can be put together without nails. They're light—save money in express charges. They can be used over and over again and are just as good as new.

How about that for saving? And here's another big point: Efficiency Koops cost less than wooden crates. If you didn't use them but once, they'd pay big.

Koop de Luxe				Efficiency Koop

Shipped only in half-dozen lots.

My **Medicine Cabinet** contains every remedy needed to keep poultry in perfect condition. There's **Obaco**, the "Miracle Medicine" that cures Roup, Gapes, Canker, Sorehead and White Diarrhea by inoculation. **Deathmite**, the wonderful cure for lice and mites; and other sure remedies that every poultryman needs.

Official Mating Line

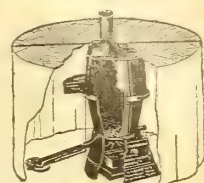

I manufacture a complete line of galvanized iron ware—the ware that wears. Also Oat Sprouters and Poultry Houses and almost every known article needed by poultrymen. The O. B. Andrews Company are sole distributors of the Dandy Coal-Burning Colony Brooder—absolutely the most efficient brooder made. "Ask the Judges."

Look at the interesting apparatus around the border. Every bit of it and lots more are described in the "Poultryman's Text Book"—a regular mint of knowledge that you can turn into ready coin. Send for it—absolutely free.

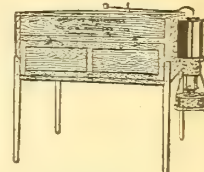

THE O. B. ANDREWS COMPANY
Dept. A Chattanooga, Tenn.

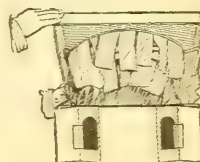

"The World's Largest Poultry Specialty Manufacturers." All of our articles are for sale by dealers throughout the country.

Dandy Coal-Burning Colony Brooder
Perfectly ventilated—all excess heat removed.

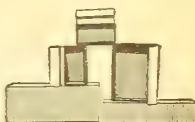

Andrews' Masterpiece Incubator
Just like nature—moisture perfect.

Fireless Corrugated Brooder
Fresh air, but no drafts.

Drinking Fountain
Clean, fresh water always.

Parcel Post Butter Boxes
Strong but light. All sizes, lowest prices.

Egg Trays
Can be stacked as shown.

Semi-Outdoor Brooder
Next to nature. Handles 50 to 100 chicks.

Wooden Shipping Koop
For export shipping.

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win at the Imperial Show
of all the World

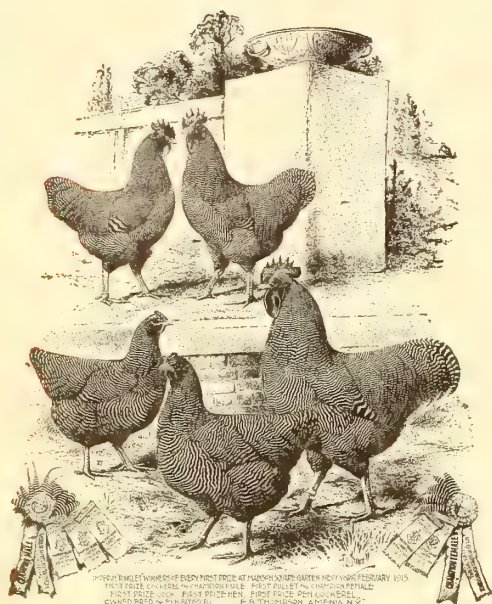

Madison Square Garden
New York

January, 1916 --Competition Open to the World

The following matchless record: All the Ribbons and Prizes offered on Cocks, Cockerels, Pullets and Exhibition Pens, viz:

Cocks	1st, 2nd, 3rd, 4th and 5th
Cockerels	1st, 2nd, 3rd, 4th and 5th
Pullets	1st, 2nd, 3rd, 4th and 5th
Exhibition Pens,	1st, 2nd, 3rd, 4th and 5th

Sweepstakes Champion Male and Female. Shape and Color Specials—Male and Female. All Silver Cups and cash Specials. More First, Regular and Special Prizes than any exhibitor of any breed. This is the Capstone to their unexampled record at New York for 28 years.

My exhibit of 100 birds of supreme quality is an achievement unknown in the entries of Poultry Shows—unequaled in the annals of Barred Rock history.

Grand Winning Show Birds

The finest that all America has ever produced—are now on my farm ready to win Blue Ribbons and Silver Cups for you in any competition in the World in Cocks, Cockerels, Hens, Pullets and Pens. They are elegant in size and shape, fine heads, rich, clear blue color, with that sharp, clean cut, straight, narrow "Ringlet" Barring to the skin that wins under all Judges. The prices are reasonable.

Winners of every first prize offered at Madison Square Garden, New York, February, 1915—first cock, first cockerel, first pullet, first hen and first pen cockerel.

Prizes and Silver Cups have been won by my customers on Imperial "Ringlets" in more than a thousand show rooms throughout the civilized World—You can win the same laurels. I will sell you grand exhibition birds for any show, and breeders of this richest First Prize New York blood in elegant single birds, trios and pens, mated to produce prize winners.

If you want the best in Barred Rocks you must have my Imperial "Ringlets."
My customers are my first thought and nothing is too good for them.

Elegant Catalog Upon Request.

EGGS from the finest exhibition matings in the World, \$10.00 per setting; four settings, \$35.00; one hundred eggs, \$60.00—One-half these prices until December 1st.

Make Your Flock Natural Layers

THE biggest-paying, best-producing hens are always natural layers. Forcing fowls to lay by feeding heavy, rich foods may tell on the health of the birds and it often injures their breeding quality. Forced eggs as a rule are not fertile.

Red Comb Poultry Feeds Do Not Force the Eggs

Red Comb Meat Mash, the great egg producer, is made of oat-meal, oil-meal, corn-meal, meat scrap, wheat bran, wheat middlings, alfalfa-meal, and *not over 5% shell and 1% charcoal*. These ingredients, the best earth can produce, are mixed scientifically by experts. They form a correctly balanced ration that will give growing health to your flock. Red Comb Meat Mash produces natural layers; it helps the hen by giving it in correct proportions egg-making food.

Unbalanced Rations Produce Fat

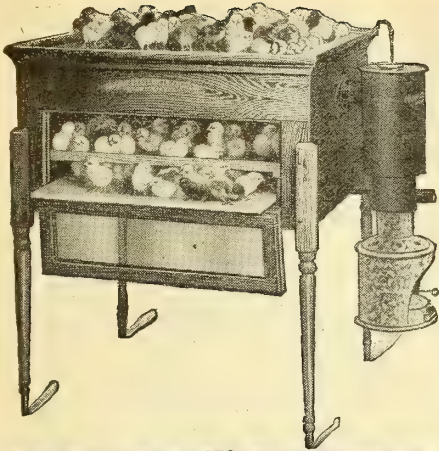

In building good egg-laying strains in your flock, poultry experts will tell you the value of the *correctly balanced poultry feed*. *Unbal-*

anced rations produce fat. Fat birds are not good producers.

See your Feed Dealer today. Ask him to show you the Red Comb line of poultry feeds. Red Comb, the big, universal brand, is used and recommended by successful poultry raisers and authorities the country over. Start feeding Red Comb today for profits. It makes heavy layers in nature's own way, because it contains egg-making ingredients, balanced correctly, that mean health to the flock and fertile eggs. Ask your dealer today. Write for valuable Poultry Book, written by six of America's leading poultry experts. *Free* to poultry raisers.

HALES & EDWARDS CO., Dept. B, 327 So. La Salle St., Chicago, Illinois
(Formerly Edwards & Loomis Co.)

“Means Health”
Red Comb

Hatch Your Chicks "Nature's Way"

The hen sitting on her nest hatching eggs in "Nature's way" supplies a certain amount of humidity with her warm body and distributes a uniformity of heat over the nest with her feathers.

These two things, humidity and even heat distribution, are two of the most important essentials to the production of strong, vigorous, "Chicks that Live." Almost any machine will hatch eggs, but what percentage of chicks live? That's the rub—the chicks that live tell the value of the incubator.

The successful incubator must be built so as to scientifically follow "Nature's way" and properly supply these two important essentials in artificial incubation.

PRAIRIE STATE SAND TRAY INCUBATORS

solved this problem years ago with the moistened sand trays and eddy current system of heat distribution.

That's why Prairie State machines are recognized as the most successful and dependable hatchers in the world. They are used in the majority of State Universities and Experiment Stations and are the choice of experts and successful poultrymen everywhere.

Let us send you our New 1917 catalog, giving complete information about the many superior features of the Prairie State Incubators and Poultry Equipment. Sizes 60 to 390 egg capacity. Prices \$12 to \$40. A postal brings book by return mail.

Natural Hen Incubator \$3

No freight to pay. Actual hen controls everything. No lamp, no costly mistakes. Best hatcher in the world. Over 750,000 in use.

J. M. Peyle, Jr., writes: "It is the best thing I ever saw for hatching chicks."

Another: "I got 507 chicks from 540 untested eggs." "Thousands of other testimonials. Agents Wanted. To reach the million mark in 1916 we will send you a Special Introductory Offer with our Free Catalog."

Natural Hen Incubator Co., Sta. H, Dept. 4, Los Angeles, Cal.

"Mr. Sheppard, 'that speaks for itself'—does it not?"

When a customer wants birds that are sure to win, my superintendent, and myself, pick out the birds. Once in a while we stop and admire their perfections. Yes, they do *speak for themselves*. If all of you could spend a few hours with me here, I never would need to spend another dollar to tell you of their good points!

All Anconas are judged by the standard of *Sheppard's Famous strain*.

For nine straight years I have been far and away the biggest individual winner at the World's Greatest Shows, including Madison Square Garden.

The World's Best Winners

At the last Madison Sq. Garden Show, we won eight First prizes; seven Seconds; six Thirds; six Fourths; five Fifths. Now is the time to send your order for some good hatching eggs, or breeders and get ready to win next year. Prices reasonable.

The World's Champion Layers

Great winter layers. Start laying when mere "kids." Keep it up! Have record of 256 average for flock.

Stock, Chicks and Eggs for sale. Write for catalog—send me your order. I will give it personal attention.

Byers' Orpingtons

BUFF
BLACK
WHITE

You have heard about the merits and popularity of Byers' Orpingtons. I have supplied many of the best specimens ever produced. At hundreds of shows from Coast to Coast and in Canada, Byers' Strain Orpingtons win. It is not so much a matter of determining who seems to have the best, but a question of getting the values ordered at a given figure. My policy is to invariably satisfy the latter feature in every transaction. So with my increased facilities and finer quality you get lower prices and superior service in fact. Beautifully furnished show birds in excellent condition and training now ready. Get my new price list and selling plan.

Sucrene Poultry Feeds

For Winter Layers and Early Fryers

If your hens do not lay in winter it is because you do not house and feed them properly. Sucrene Poultry Feeds make them big, steady layers in winter when eggs are 60 cents a dozen.

Sucrene Poultry Mash and Sucrene Scratch Feed

are not mere temporary stimulants. They contain the necessary food values that nourish and maintain the body, and the special egg-making and developing ingredients—including a high percentage of meat scraps.

We use only the very best clean, sound grains—no musty salvage grain. Every ounce is eaten—there's no waste in feeding.

Sucrene Feeds Pay Many Times Their Cost

Test feeds made, show that hens fed on Sucrene increased their egg yield 31% in a few weeks. Young chicks gained 56% more in weight than others fed on the ordinary grain rations.

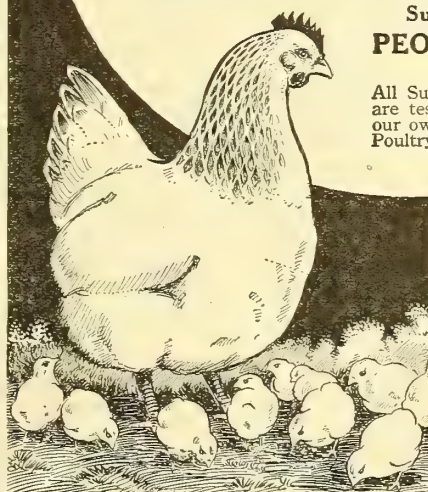

C. E. Pemble, Proprietor of Willow Brook Poultry Yards, Peoria, Ill., writes: "Am at present using two tons of your chick and scratch feeds per month, and consider them a perfectly balanced ration and very satisfactory indeed."

We guarantee every package of Sucrene Poultry Feeds to be of uniform high quality. Fill out and mail us the coupon or write us a postal for full information.

AMERICAN MILLING COMPANY

Sucrene Station 15
PEORIA, ILLINOIS

All Sucrene Poultry Feeds are tested and proven in our own Experimental Poultry Yard.

Please send me free literature on Sucrene Poultry Feeds checked below. (15)

Eastern Poultry Paper

ALL **\$1⁰⁰** NOW

Western Poultry Journal

Cedar Rapids, Iowa.

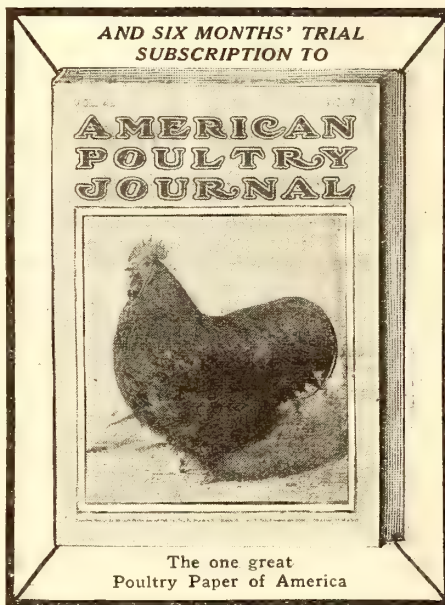

Established 1889. Issued monthly. 5 cents per copy; 50 cents per year. Has long been recognized as one of the most up-to-date and progressive poultry papers of the West. Edited by E. E. Richards, the present President of the American Poultry Association. Clean, instructive common sense articles on the care of poultry and editorials of like nature make this one of the favorite poultry papers in the Western States.

American Poultry Advocate

Syracuse, N. Y.

Established 1892. Issued monthly. 5 cents per copy; 50 cents per year. Is one of the widely known and consistently advertised publications in the field. It is composed of interesting and instructive reading and is conceded to be one of the best, clean-cut poultry papers in the East.

AND SIX MONTHS' TRIAL
SUBSCRIPTION TO

The one great
Poultry Paper of America

American Poultry Journal

Chicago, Illinois.

Established 1874. Issued monthly. 10 cents per copy; 36 months \$1.00. "The One Great Poultry Paper of America" is conceded by all to be the leading poultry paper of the world. It contains from 64 to 252 pages in each issue, profusely illustrated; contains no free reading notices or puffs for advertisers, but sound common sense articles, the kind that are profitable to both amateur and professional poultrymen.

Everybodys Poultry Magazine

Hanover, Pa.

Issued monthly. 5 cents per copy; 50 cents per year. Another "breeders choice," is well edited, progressive and instructive, finding popular favor among poultrymen who enjoy good editorials, by H. P. Schwab. The helpful hints given in the many articles are advantageous to both amateur and professional.

Write Your Name and Address Plainly on the coupon and mail it to us with one dollar in cash, money order or stamps. Never will you receive more value for your money. The publications in this club are the leaders in their chosen field. They treat exclusively on poultry and appeal to every red-blooded poultryman—those who enjoy chickens for their beauty as well as for their market value. Look this offer over again.

Aldrich White Orpingtons

MAKE GREAT WIN AT HAGERSTOWN

At the Great Hagerstown Fair, where over 6000 birds were on exhibition, we entered 18 birds and won

1st White Orpington Cock	1st White Orpington Cockerel
2nd White Orpington Cock	2nd White Orpington Cockerel
1st White Orpington Hen	1st White Orpington Pullet
2nd White Orpington Hen	2nd White Orpington Pullet
1st White Orpington Old Pen	1st White Orpington Young Pen
Special for best Orpington male, Special for best Orpington female.	

This win, together with our winnings of over 280 prizes at all America's best shows for the last six years, including Chicago and Madison Square Garden, and their records in the National Laying contests, is ample proof of superiority of the Aldrich White Orpingtons over all others.

Our Customers Are Winning

In practically all of the best shows in America where we do not show, and in hundreds of smaller shows in every part of the country, the most coveted prizes in White Orpingtons are being won by our customers. This season our customers have won during September and October over 200 prizes in such shows as New York State Fair, Tennessee State Fair, Illinois State Fair, Allentown, Memphis, Brockton, Dallas, Waco, and the State Fairs of Mississippi, Oklahoma, Montana, Arkansas and North Dakota. In many cases these birds defeated birds purchased from other breeders at much higher prices and guaranteed to win. At the coming winter shows hundreds of Aldrich Strain White Orpingtons shown by our customers will carry off the most coveted prizes.

Increasing Popularity

The large classes of White Orpingtons shown at practically all the shows to date this season is only the forerunner of the best season's business in this most popular breed in years. We can put you in position to win at your show and secure your share of the season's business. Reserve your show birds NOW for the Fall and Winter shows. A small deposit at this time will reserve you a winner and enable you to defeat your competitor.

Our Prices Are Reasonable

Owing to the many orders we are receiving from our hundreds of satisfied customers, thus enabling us to cut down our selling costs, and to the fact that we devote our entire time to looking after our business, thus reducing our labor costs, we are enabled to offer our highest

quality birds at lower prices this season than ever before.

We can furnish you winners at the following prices:

For the State Shows and all but the Largest National Shows.

Cocks	\$50.00	Hens	\$ 25.00
Cockerels	50.00	Trios	75.00
Pullets	25.00	Pens	100.00

For Shows of Medium Size.

Cocks	\$20.00—\$25.00	Pullets	\$15.00—\$20.00
Cockerels	20.00—25.00	Trios	35.00—50.00
Hens	15.00—20.00	Pens	50.00—75.00

For the Smaller Shows.

HIGH QUALITY BIRDS GIVE SATISFACTION

We have no cheaper birds, as we only breed the best; but if you wish lower priced birds we will furnish you a list of our customers, whose expenses being less than ours, can supply your wants, or you can write any of them advertising "Aldrich Strain" in the poultry journals.

Our motto is, "Quality and Satisfied Customers," and the fact that every cockerel sold this season has won for our customers, and that we

have not had a bird returned this season is a record of which we feel proud.

If you wish to make a profit raising poultry, try the White Orpingtons and secure your foundation stock from the best strain in America. You can then advertise Aldrich Strain White Orpingtons and get good prices for your stock and eggs. Send for our new catalog with color plates and mating list, which is free if you mention American Poultry Journal. To save time, tell us your wants in first letter.

Aldrich Poultry Farm, 5082 North High Street, Columbus, O.

OWEN FARMS

*Buff Orpingtons White Orpingtons,
White Plymouth Rocks, White Wyandottes,
S. C. R. I. Reds and White Leghorns.*

Have won sweeping victories

for years at Madison Square Garden, New York, (where 393 Owen Farms birds have won the blue.) Palace Show, (New York,) Boston, Chicago, Pittsburgh, Syracuse, Allentown and the other leading shows both North and South.

OWEN FARMS EXHIBITS in the hands of our customers or of ourselves have WON the LEADING HONORS at HUNDREDS of SHOWS all over the country, and have raised the standard of these shows. Shows that do not include Owen Farms birds are not plentiful but, when found, are considered incomplete. You can help increase the prestige of your show by adding Owen Farms quality to your exhibit and swell your own winnings by calling to your aid the all powerful backing of Owen Farms.

December and January Shows Will Be Won by Owen Farms Birds

I now have in my fitting room cocks, cockerels, hens and pullets ready for shipment at short notice to win anywhere for my customers. Hundreds of breeders all over the country have learned from experience that they can secure here without delay just the bird or birds they need to complete their exhibit. You now know the weak spot in your show string. Why not MAKE YOUR WINNING CERTAIN by adding one or more birds from here?

Owen Farms' readiness has been the important factor in making the grand winnings my birds have made all over the country in Owen Farms exhibits and in the exhibits of Owen Farms customers. Why not secure this all-powerful backing by placing your order here where you will receive full value for your money and a little more?

BREEDING BIRDS

The most important thing in a breeding bird is to know what and how good were its ancestors. When you receive Owen Farms birds for foundation blood you do not need to worry about what they will produce. They will be selected and mated for you by Frank H. Davey in Rocks, Wyandottes and Leghorns, and by Maurice F. Delano in Orpingtons and Reds. Our long experience and absolute knowledge of the breeding and ancestry of the birds we mate for you will make your success certain. This service will cost you nothing, as at any given price the birds from here as individuals will be worth a little more than you can procure anywhere else, while their potential breeding value will make them the lowest cost birds you ever purchased. Fine breeding males at \$10.00 each upward, and females at \$5.00 each upward. All ordinary utility birds have been sold.

OWEN FARMS CATALOG will prove a real treat for you if you have not seen it. It is yours for the asking and you should read it carefully before placing your order. It gives the history of the flocks, describes the farms, gives the fair, equitable guarantees on stock and eggs, and innumerable photos of the leading winners in my varieties.

A typical Owen Farms winning was made at the New York State Fair in September when my White Rocks, White Leghorns, Buff and White Orpingtons won 12 out of a possible 20 firsts, 8 seconds, 9 thirds and 9 fourth and fifth prizes. A total of 38 regular awards. The most important of all firsts, first prize pen, was won in each variety. 28 Owen Farms birds won the blue. 8 birds of all other exhibitors combined won the blue.

My S. C. Rhode Island Reds and White Wyandottes

were not shown at Syracuse. Important sales in these varieties made me decide to give my customers the benefit of my best early birds. Later you will realize I am stronger than ever before.

My Birds Live, Grow, Lay and Pay.

AMERICAN POULTRY JOURNAL

VOL. XLVII No. 12

DECEMBER, 1916

W. R. GRAVES—PIONEER POULTRYMAN

W. R. GRAVES was born in Palmer, Mass., in 1868 and lived on the home farm until he was 21. When he was a boy of 14 years a neighbor gave him a copy of a poultry book, and the text and illustrations developed in him a pronounced case of "hen fever." That spring a man who had bought a cow of Graves' father gave the boy a dollar to deliver the cow at a place three miles away. His mother advised him to take the dollar and make a start in business. He bought two sittings of Brahma eggs, borrowed two sitters from his mother and hatched out 20 chicks. That was his start with poultry. He has since bred White and Silver Wyandottes, White and Barred Rocks and several varieties of Leghorns. Mr. Graves made his start with White Wyandottes

25 years ago with two sittings of eggs from B. M. Briggs, one of the originators. He liked them so well that he gave up other varieties for the White 'Dottes, and he has been very successful in many large shows. He became a poultry judge in 1903 and has judged at many big shows. In 1906 he married the widow of Harry W. Graves, a noted White Plymouth Rock breeder. Mr. and Mrs. Graves joined flocks and interests in both White Wyandottes and White Plymouth Rocks, and have since bred, shown and sold many blue ribbon winners in both varieties. Their remarkable winnings at the big shows are a matter of record. At the present time he is not actively engaged in breeding poultry, but expects to be in the near future.

Quality Poultry Requires Good Care

The Care of Breeding Stock. Excessive Showing An Injury to a Breeding Bird. *By C. H. Latham, Lancaster, Massachusetts*

IN THESE times of increasing demand for high-class stock in all breeds of poultry, and a strong desire by all breeders and fanciers to improve the quality of their birds we cannot give too much thought and study to this important, perhaps most important matter in breeding—the care of breeding stock.

If we can make progress by selection of breeding birds, we surely can make progress by selecting the conditions under which the bird must live and thrive.

If there are latent qualities of great value in a bird, we should strive to our utmost to bring them out. And to do so we should give the breeding stock every possible chance for growth and development, having their surroundings such that

find the same rule follows. We can set a fine made watch and a dollar nickel clock side by side, and for a time they may keep together, but sooner or later the watch will be keeping good time, and the clock falling behind. We can drop the clock on the floor, kick it about and abuse it a good deal, and it may still keep time after a fashion of its own, but treat the watch in the same way and it would be ruined. Give the watch its proper care and it will run and keep correct time for many years. The high-class, finely-bred bird is much like the watch, and the more ordinary-bred bird like the dollar clock, and it can give fairly good results under abuse and ill care, but can never reach the results that the high-bred bird will give under best of care.

The writer believes that it is right here where many breeders fall down in their breeding, they do not realize the care and attention that highly-bred stock require to give their best results. The birds should have the best of care and attention right from the day the bird is hatched, and as soon as it is possible to select the bird for breeding it should be separated from the stock at large and given all possible chance for increased growth and development.

Six, eight, ten, or twelve birds given a roomy coop, or still better, a section of the breeding house, where there is plenty of room, both indoors and out, shade from hot sunshine, and protection from winds and wet weather, will thrive far better than they would if left runnings in a large flock in crowded quarters. Then let these birds have the same roomy quarters till the breeding season opens, won't they be in far stronger breeding condition than they would have been if crowded in with a lot of other birds? Where finely bred birds are kept under poor conditions it is about as hard to get the good qualities to show in their offspring as it would be to extract

they are contented, comfortable, and healthy, and making the best possible growth, so as to keep in prime vigor at all times.

A bird that is not receiving what it needs and craves in the food it gets, and its surroundings ill-adapted to its needs and comfort, will not grow and develop into a breeding bird of real value. Such a bird may have been born with breeding qualities to throw very high-class birds, but be made worthless as a breeder, by the improper care and ill environment while being grown.

If the right qualities are in the bird, it is up to the breeder to bring them out.

The care and fitting of show birds given in a previous article, are very largely the same as should be given to the breeding stock, especially when the birds are young and growing. Anything that impedes the growth and development of a growing chick, injures the breeding qualities of the matured bird. High-bred stock of any kind must have good care and attention to have it give the results desired. We could go still further and take inanimate things and we

FIRST AND CHAMPION COCK, FIRST HEN, FIRST SHAPE AND COLOR SPECIAL PANAMA-PACIFIC INTERNATIONAL EXPOSITION, 1915.
DR. C. R. WATSON, MILLER, NEB.

blood from a stone. Still many breeders go on year after year trying to get good results in this way.

Another most important matter should be very carefully considered, if a bird is to be used in the breeding pen, with expectations of best results in production of fine specimens; it should not be all worn out with excessive showing. A breeder of experience would hardly accept as a gift a bird to be used in the breeding pen that had been used for showing at several shows previous to a breeding season. The vital forces of that bird would have been sadly impaired, and its chances of producing fine birds greatly reduced by the wear and tear of the showroom.

There are very few things that take more out of a bird than excessive showing, and a breeder had far better be satisfied with one good show for a bird, and then keep the best there is left in the bird for the breeding pen.

There have been many cases that have come to the writer's notice where choice exhibition birds have been absolutely ruined for breeding by excessive showing, and he has had it happen time after time in his own experience of showing and breeding. To be sure there are birds that will stand excessive showing and still keep strong and vigorous, but they are more the exception than the rule, and it is very doubtful if they breed as good stock as they could have bred if they had not been shown.

It is not the desire of the writer to lessen the number of birds exhibited at our shows, for it is an absolute business necessity to show some of our best birds, but we should not ruin them in doing it.

Whatever one may be breeding to improve its species, be it flowers, vegetables, fruits, or domestic animals and poultry, he cannot get the desired results and at the same time

get everything else the species is capable of producing. Would a breeder of small fruits allow plants of a choice variety of strawberries fruit the season they were planted out, and then let them set as many runners as would grow from them, with the expectation of getting a fine crop of large luscious berries the following season? He would not allow the parent plant to even blossom, and would allow only a limited number of the strongest runners to take root, and would give each new plant plenty of room to grow, or he would cut all runners and allow the parent plant to "stool" and so doing would get a large number of fruit stems to appear the following season. He would receive a large number of very fine berries, but had all the runners been allowed to grow, the quality of the fruit would have been poorer both in flavor and size.

It is exceeding difficult to get quantity and quality all at the same time, and if we would have quality we must work for it, for Nature does not pass out the very high quality specimens in large quantities, it is the more ordinary specimens in all things that there is the largest number of.

The question comes up: what, when and how to feed to get the desired results. There is no set rule for this, one breeder will practice one method with success, and another breeder will get equally as good results in some other way. We must study our own surroundings and conditions, and get the best results possible with what we have to work with. One thing we can be sure of, we must feed liberally if we would get large, strong vigorous birds, we must keep them coming right along from the very first feed to maturity. A young and growing bird can hardly eat too much; that is, if they have proper exercise to take care of it. As the birds mature they should have increased exercise by feeding fine grains in a

litter, hanging up cabbage just so the birds will need to hop up a bit to get at it, and using care that instead of getting too fat that they are in hearty active condition. Never be afraid of good fresh air, give a bird a chance to do so and they will be in the open air nearly all the time, and fresh air should be allowed to get into the sleeping portion of the poultry house. Given a house tight on three sides, and a sound roof over head, we have practically most of what is needed for their comfort, and if the south front of the house is more or less open to the weather it is right for the birds, if they are to be kept in a strong vigorous condition.

Do everything possible to have the breeding stock in best of condition so that when the breeding season open everything is right for strong fertile eggs.

If new blood is needed, or new birds required to fill out the

matings, do not delay till just before the breeding season to get them, buy them as early in the fall or winter as possible, and have them where you can properly fit them. Very few breeders who have surplus breeding stock to sell, can give the birds as good care and attention during the winter months as is to be desired, for they are obliged to keep these surplus birds in larger flocks than one would keep them, if cared for as mentioned earlier in this article. Then having them shipped, sometimes long distances, the birds do not recover from the fatigue of the long journey, so that they are not in as good breeding condition as they would have been in had the birds been shipped earlier. This is a very important thing to keep in mind. There surely is a loss of strength and flesh in shipping a bird a long distance; let this come as early as possible, and far better results will follow in the breeding pen.

Girls' and Boys' Poultry Clubs Exhibit

The National Dairy Show and Eastern States Exposition Held at Springfield, Mass., in October, for the First Time in the History of Girls' and Boys' Poultry Clubs, Afforded a Particularly Fine Exhibition of the Work in Hand and the Ability of the Members to Handle Same. *By A. P. J's Special Representative*

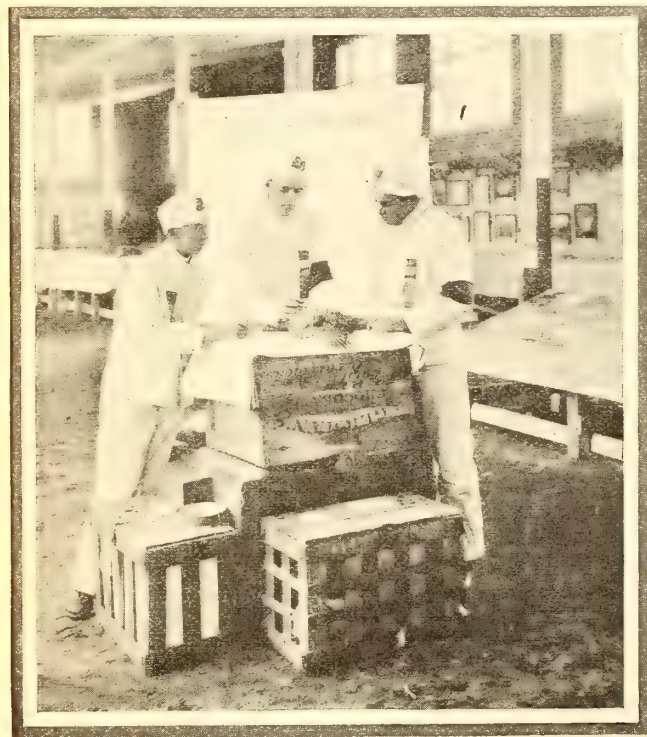

THE GIRLS' AND BOYS' poultry and egg exhibit, together with their demonstrations and judging contest as carried out in connection with the National Dairy Show and the Eastern States Exposition created a vast amount of interest and is destined to bring about an immense amount of good along educational lines. For the first time in the history of club work this combination of exhibits which embraces a representation of members from poultry clubs in eight states with their demonstrations and judging contests, afforded an extensive general idea of the scope of club work and the ability of the members to handle all phases of their project.

The benefits derived from this exhibition of products in which the members so ably displayed their ability to handle their work intelligently, cannot be measured in material terms. Its far reaching effect and inspirational influence on the members as well as the visiting public will unquestionably add an increased incentive to pure bred poultry culture.

The children's poultry exhibit, consisting of 18 varieties.

General view of Poultry Club members' live fowl exhibit, Springfield, Mass. See "Girls' and Boys' Poultry Clubs Exhibit".

Pennsylvania Poultry Demonstration Team giving caponizing demonstrations, Springfield Mass. See "Girls' and Boys' Poultry Clubs Exhibit".

of fowls and trios of chickens, totaled 111 entries of 235 birds exhibited by 86 members. While this exhibit as a whole represented a very creditable effort on the part of members to produce high quality, pure-bred stock, at the same time it is to be hoped that many of the members will grade their flocks more rigidly in the future with a view of attaining a still higher standard and eliminating some of the common defects and disqualifications found on some of the birds shown.

The egg exhibit while not as large as expected consisted of about 50 entries of brown and white shelled eggs produced by the members' fowls. The amount of prize money awarded members in the poultry exhibit totaled \$68.75, and in the egg exhibit \$36.50.

Poultry demonstration teams from each of the following states: Maine, Vermont, Massachusetts, Connecticut, Rhode Island, Pennsylvania, New Jersey, and New York commanded as much attention and interest as any phase of the exhibit. In all there were eleven teams of three members each who gave a thirty-minute demonstration thruout the period of the exhibit in each of the following lines of poultry work: Natural and artificial incubation, operating the trap nest, packing and grading eggs for market and hatching purposes,

Pennsylvania Poultry Judging Team winning first place in poultry judging contest, Springfield, Mass. See "Girls' and Boys' Poultry Clubs Exhibit".

preserving eggs in water glass, caponizing, and killing and dry picking poultry.

The poultry judging contest was very beneficial and of great educational value to the members engaged. In this contest ten teams of three members each took part and had as their object the placing of five out of eight fowls in each of three classes or breeds of poultry, making in all fifteen fowls to be placed out of twenty-four. The American Standard of Perfection was used as a guide in placing the fowls and the members of this contest were required to become acquainted with the American Standard of Perfection and its requirements in making awards. The breeds judged were S. C. White Leghorn pullets, S. C. Rhode Island Red cockerels, and Barred Plymouth Rock pullets. The result of the contest gave the team from Pennsylvania first prize of \$30,

the Vermont team second prize of \$22.50, the Connecticut team third prize of \$15, and the Rhode Island team fourth prize of \$7.50.

Harry M. Lamon of the Animal Husbandry Division, U. S. Department of Agriculture, acted as judge in the placing of the members' poultry and egg exhibits and likewise in the selection and placing of the birds judged by the members of the judging contest. Joseph W. Kinghorne of the Animal Husbandry Division, U. S. Department of Agriculture, supervised and directed the judging teams and likewise poultry demonstration teams from each of the states mentioned.

It is to be hoped that in the future of this event as carried out at Springfield will become an annual affair open to all boys and girls engaged in poultry club work. By this means the opportunity to display their birds and exhibits of eggs, as well as to conduct demonstrations of the various kinds of poultry work, including their ability as judges of pure-bred poultry, would be afforded them. The inspirational effect of exhibits of this character cannot but incite an increased interest in poultry culture and increased efficiency in coming poultry men and women. Those who have worked long and earnestly in the interests of the girls' and boys' poultry clubs should feel greatly encouraged at the success and enthusiasm displayed in the poultry tent at the National Dairy Show and Eastern States Exposition at Springfield.

SCALE OF POINTS	
Disqualifications.—Decidedly crooked beaks, crooked backs, or wry tails.	Perfect Score
Health and vigor.	Score
The bird must be free from disease or from any indication of having been affected with disease. It must also show strong constitution and great vigor as indicated by bright red comb and wattles, and by full, prominent bright eyes, by general alertness, and by black, lustrous plumage. Males should be decidedly masculine. Avoid females showing masculine appearance.	15
Head, 5.	2
Shape of head.	1
Should be short, deep, and broad.	
Face, comb, and wattles.	
Should be bright red. (Dark red approaching black indicates poor condition.) Wattles medium size. Comb small to medium. Fully set on head. Avoid lopped combs in those breeds where they are supposed to be upright.	
Eye.	1
Large, full, bright. (Sunken or dull eye denotes lack of vigor and poor vitality.)	
Beak.	1
Strong, straight, curved.	
Neck.	3
Medium short and stout in proportion to the body.	
Wings.	3
Strong, medium size, neatly folded, and held firmly in place. (Avoid breeding from slipped or twisted winged birds.)	
Body, 60.	5
General shape.—Body should show good length, breadth, and depth, and be well fleshed throughout.	
Breadth of body.	5
Should be broad at shoulders, breadth extending downward well back to hips.	
Depth of body.	5
Should be deep from shoulder to front of keel and extending well back.	
Back.	20
Back of good length, broad throughout, and fairly level on top, from side to side, throughout its entire length and ending in a broad full tail.	
Breast.	30
Deep, broad, full, corresponding with breadth of shoulders. Red or breast bone should be long, straight, and well fleshed.	
Thickness and texture of skin.	2
Skin should be thin and smooth; free from roughness or scalliness. Hairs are undesirable.	
Legs, 10.	6
Medium length and set well apart. (Knock-kneed individuals are undesirable.)	
Thighs and second joints.	6
Short, thick, and heavily fleshed.	
Shanks.	6
Short, strong.	
Toes.	6
Strong, straight, short, well spread.

Score Card used by the Department of Agriculture for the guidance of members of poultry clubs in judging breeding stock suitable for producing desirable table fowls.

UNITED STATES DEPARTMENT OF AGRICULTURE BUREAU OF ANIMAL INDUSTRY ANIMAL HUSBANDRY DIVISION

A GUIDE

FOR THE

SELECTION OF BREEDING STOCK

Suitable for the Production of Table Fowls

This card is designed as a guide for members of poultry clubs organized under the direction of the Department of Agriculture in selecting breeding stock of a type especially suited for producing desirable table fowls. It will also be found useful by farmers and poultrymen who are producing similar stock. It is arranged in the form of a score card so that it can be used, if desired, for the scoring of such fowls when exhibited in competition.

In applying this scale of points, due consideration must be given to breed characteristics.

Other points being equal, preference must be given to those birds most nearly approaching the standard weights for each breed, as given in the American Standard of Perfection.

Other points being equal, preference should be given to those birds showing greatest indication of standard breeding.

In judging the excellence of the fowls, it will be found helpful, if not actually necessary, to handle them and not depend upon observation alone.

In taking account of stock at the beginning of the year, a great many things should be taken into consideration. If your business shows a profit, where and how was it made? Even a very small leak in another line of the business may offset all profits unless checked in time. Have you made every effort to make friends of your customers? Remember the slogan, "The customer is always in the right," which is based upon the fact that we cannot afford to make enemies, since we can only do business with friends. A square deal with every customer will bring you business, and keep you friends. Oliver Wendell Holmes said, "The great thing in the world is not so much where you stand, but the direction in which you are moving."

Do not shut in your flocks too snugly on these cold, frosty nights. Snugly closed coops and houses are dangerous and liable to promote colds. The sleeping birds need open-front quarters and an ample supply of fresh air. On frosty nights open air is much more comfortable than close, stale, chilly, shut-in air.

Why the Popularity of the Ancona?

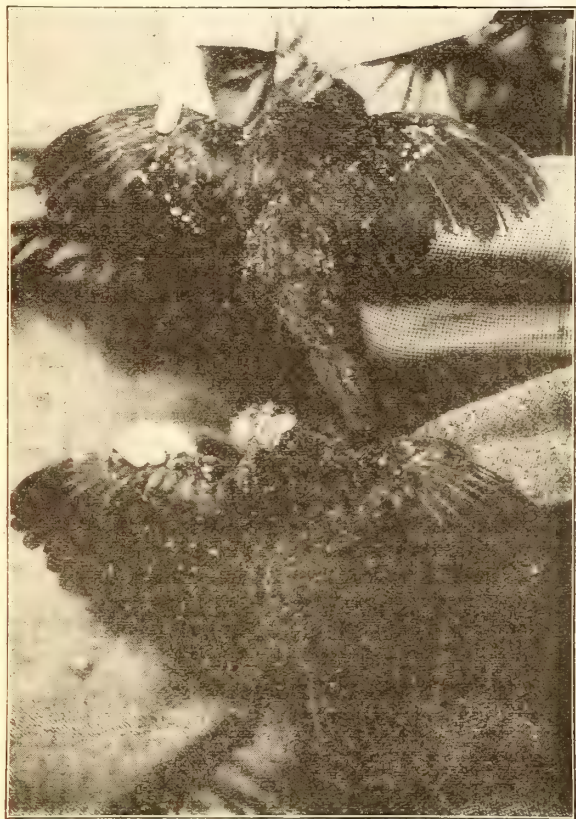

While I Fell in Love with Anconas As Baby Chicks, I Am Equally Delighted with the Eager, Active, Black and White Fledglings and the Graceful, Proud and Self-Reliant Cock and Hen. Thorobred Is Stamped All Over the Ancona. This Article Wins the \$50 Cockerel Offered by H. Cecil Sheppard, Berea, Ohio. *By T. H. Holmes.*

POPULARITY is often times the expression of fickle and hysterical enthusiasm, but in the long run true merit is the arbiter of sound popularity. To the poultry neophyte the great problem is "which breed shall I keep?" After a visit to a great poultry exhibition he is confused and puzzled, for there are so many different breeds that appeal in so many different ways, but it is not until he

heavy winter layers, persistent layers, seldom showing a tendency to sit and maintaining an egg rate that makes it profitable to keep them for three or four years. My flock of forty pullets is now ready to verify for me these statements. The fact that the Ancona lays a large white egg is worthy of mention.

The Ancona, being in the Mediterranean class, is primarily an egg layer and not a meat producer, but they make up in quality what they lack in quantity of meat. My little cockerels were fighting at three weeks, crowing at six and in the pan at nine. Their skin and legs are yellow in spite of their black plumage and their flesh is juicy, tender and tasty. They grow a little larger than Leghorns.

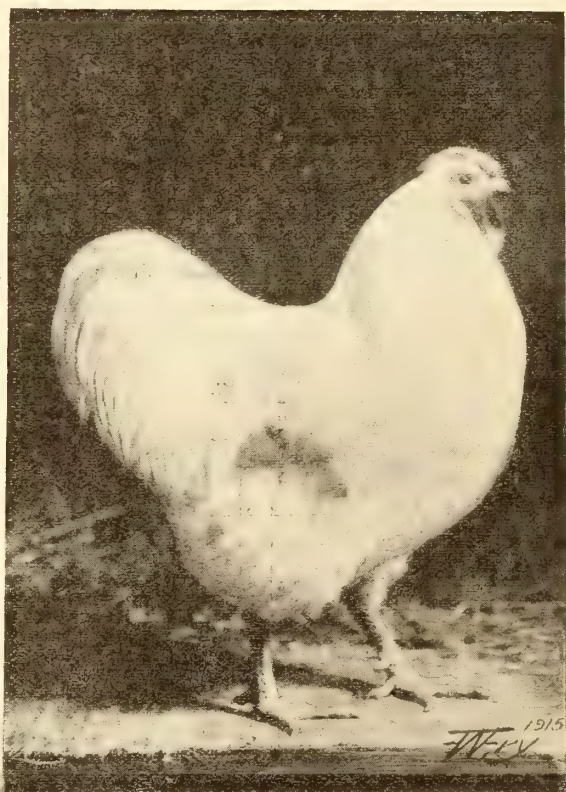

For those who want a non-setting breed, there are many desirable breeds, but the Ancona can claim superiority over all as to efficiency; for they hold the record at Mountain Grove of having produced eggs cheaper than any other breed. (See January, 1915, Report of Missouri Egg Laying Contest.) In these days of high cost of hen feed, it is certainly a great advantage to have hens that do not eat like pigs. Think of it! Three hundred eggs from one hundred pounds of feed. They are good foragers, busy from early morning till actual dark. As to the complaint usually lodged against active light-winged foragers that they are wild, easily scared and prone to fly out of bounds, I would say that it all depends on the keeper. I have found the Anconas very tractable and have had no trouble in confining my flock among gardens in a city lot by means of a six foot fence. As soon as the youngsters left

Wing markings on a pair of Anconas. Owned by H. Cecil Sheppard, Berea, Ohio.

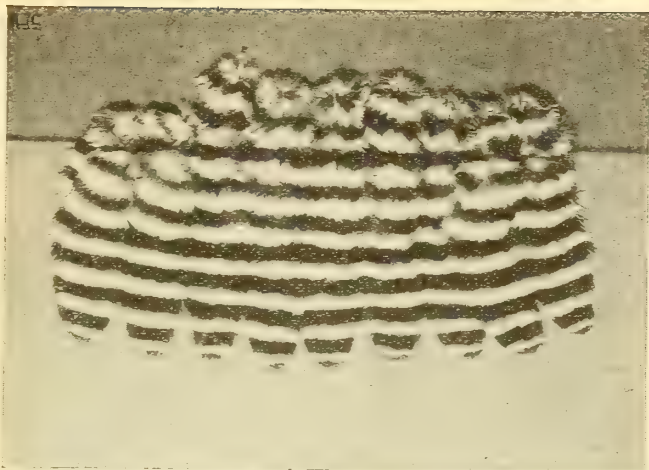

has lived with a breed thruout the vicissitudes of a year that he is really capable of a true appreciation of its merits. As a beginner, I selected for comparison a wide range of varieties: Buff Orpingtons, Barred Rocks, Rhode Island Reds, Black Wyandottes, White Leghorns and Black Minorcas. Into such a galaxy of reliable breeders I introduced the Anconas. Their entrance was due purely to accident, as I had never heard of the breed until a friend gave me a setting of their eggs. From the day my eyes fell upon those lovely little yellow babies with their greenish black caps and coats my satisfaction has increased steadily and consistently until I have discarded all others. Why are Anconas so popular? Because they deliver the goods, are so efficient and economical, and are so beautiful as to invoke involuntary admiration.

Besides being very beautiful, Ancona baby chicks are hardy, vigorous and active, and with quickly developing plumage soon grow out of the danger zone. Out of a hundred chicks, I lost but six. During the third month their development was simply remarkable, and by its close the chicks were transformed into sedate little hens or gay young roosters. The first egg from my 1916 pullets was laid four months and eleven days after that pullet hatched from an egg. Early maturity is surely one feather in the Ancona's cap. Besides laying early, they also lay late, for one day two yearling hens each laid two eggs. Anconas have the reputation of being

the brooder and were turned loose in the grassy run, I took five minutes each day to train them to be quiet and companionable. Sitting on a box and scattering a little feed I soon had these birds so tame that they would fly upon my lap, arms and head and I would have to brush them aside in order to walk thru the flock. With any animals it is highly important that one learn to move quietly among them and avoid sudden and unexpected motions. I allowed my big Airedale dog to follow me thru the yards and now he dashes back and forth on his untiring search for a rat without causing any commotion beyond a side-stepping to get out of his way. After the hens have been confined in close quarters, my children pick them up and carry them about in their arms.

To a true fancier, eggs and meat are sordid considerations. He finds more pleasure in sitting on a box and glorying in the beauty of his pets than he does in gloating over the eggs or fried broilers. So last, but not least, the Anconas are popular because they are so very beautiful. There is a very practical side to their beauty that had much weight in influencing my choice. The average poultry raiser cannot have grassy runs under orchard trees and so finds his snow white birds very much soiled. The mottled black and white plumage of the Ancona is a very practical work-a-day garment that does not show dirt, like the old-fashioned but enduring pepper and salt pattern of clothes so in vogue with men. The Anconas are beautiful every day of their lives, never passing thru any naked stage, either as youngsters or in the molt. While I fell in love with Anconas as baby chicks, I find myself equally delighted with the eager, active, black and white fledglings and the graceful proud and self-reliant cock and hen. With a beautifully proportioned body, long in the back, deep and wide like a perfect milch cow, with graceful fan tail carried low, with blood red comb curving coquettishly over one eye, with a black gown shining in the sunlight with a sheen of beetle green and daintily speckled with white like a sable robe flecked with snowflakes, the Ancona hen is every inch a beautiful lady. The lordly cock, proud ruler of the flock, has a bearing in keeping with his ancient and worthy heritage. More garishly resplendent than his mates is he with his flaunting serrated comb, his burnished greenish back, his graceful hackle of tapering plumes, each pencil-pointed with almost invisible white tips, his rounded snow-flecked breast and his proudly borne tail of black pinions each splashed at the end with white. Thorobred is stamped all over the Ancona.

A breed of long standing and well fixed characteristics, breeding true and consistently, beautiful to the eye, well behaved in demeanor, productive and efficient to a high degree, the Ancona deserves its present popularity and will continue to command an ever-growing appreciation.

The Beautiful and Efficient Ancona

This Worthy Variety Is Not Well Known in This Part of New York State. They Need Honest Boosting and I Am One to Boost Them. This Article Wins the \$30 Sitting of Eggs Offered by H. Cecil Sheppard, Berea, Ohio. *By Leroy E. Hepp, Syracuse, New York*

I AM a policeman, and in the spring of 1909 one midnight on my beat I overheard two men having a discussion about hens. One was telling a night watchman about a fine flock of poultry his father had. What fine looking birds they were and that they laid big white eggs—so many eggs that he was going to get rid of all other kinds he had.

I had never raised a chicken in my life, but I was interested, and I decided that night that I was going to make a start in the chicken business. The next morning I started on a fifteen mile trolley ride, with a further walk of a mile into the country, where I saw the finest flock of hens that I had ever seen at that time. They called them Single Comb Anconas. I purchased two hens and a cock for six dollars (\$6.00), placed them in a feed bag, brought them home, made a coop and started my chicken experiences.

These two hens laid almost every day during the summer. I purchased hens of other breeds from time to time, but they were slow on laying, so I wanted more Anconas. In the spring of 1910, I changed to Sheppard's R. C. Anconas, and still have that variety.

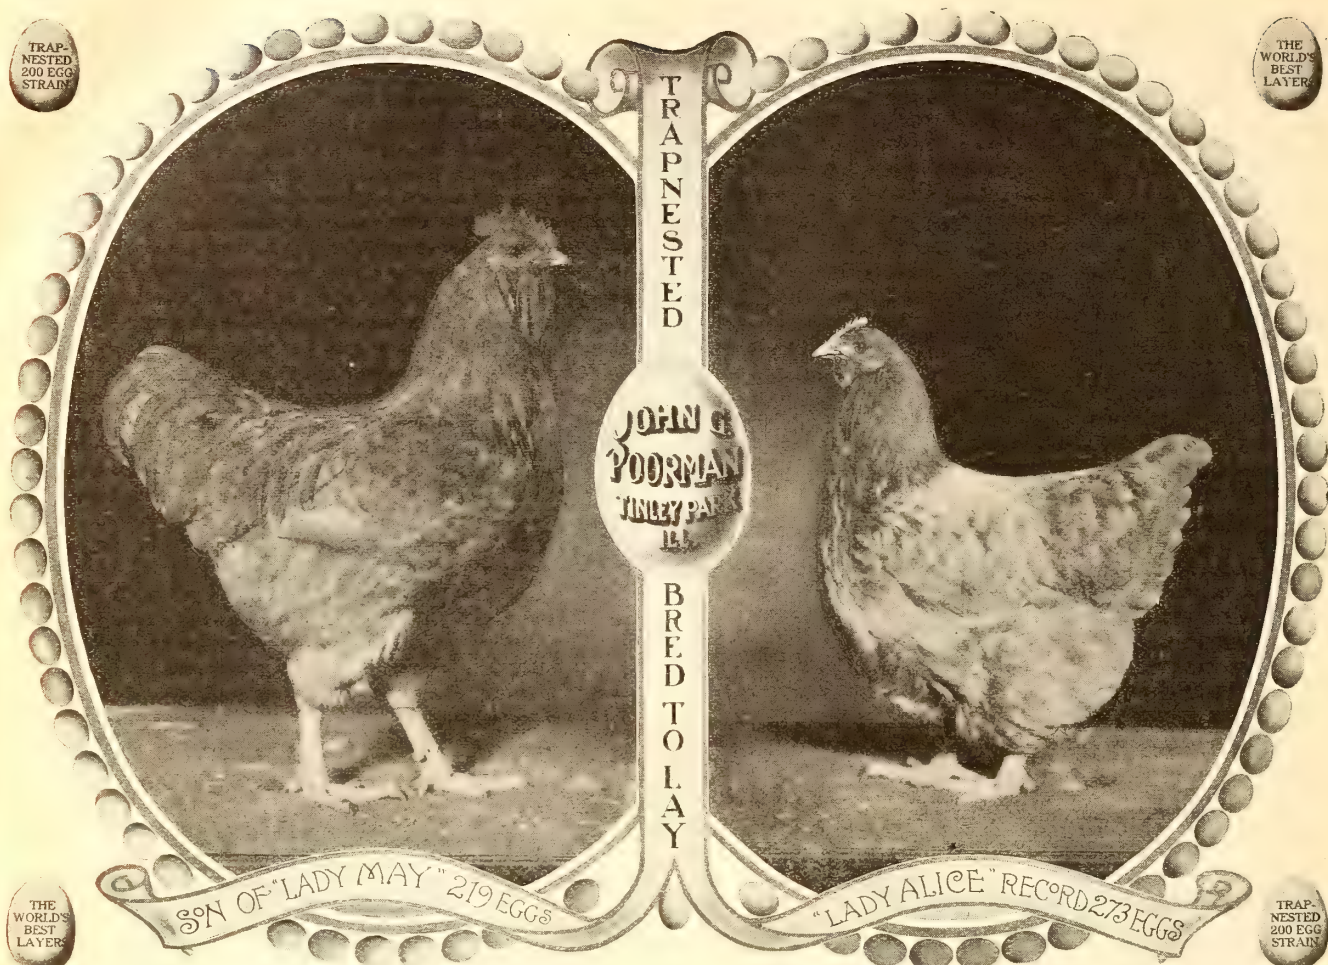

January 1, 1914, I had nineteen R. C. Ancona hens. Five of them were five years old in June, fourteen were four years old in May. I killed some of them the following summer, for I thought they might die of old age. I discovered one was somewhat deformed and I believe she had never laid an egg, and another had a water tumor. But these nineteen birds laid 2,018 eggs, or about 106 eggs a piece. Also two of these hens took first and second prize in a poultry show held in the state armory of this city.

Now take into consideration that my coop is only 6x8 feet

and my yard is about 9x12 feet and the fence is six feet high and that my hens have been in the same yard since 1909 and that every particle of food has to be given to them. They have been fed scratch grain, bran as dry mash, a little beef scrap, grit, lawn clippings and in the winter some cabbage.

Feathers from wingbow of Imperial "Ringlet" 1st prize pullet and champion female at Madison Square Garden, New York, 1916. Bred, owned and exhibited by E. B. Thompson, Amenia, N. Y.

A pair of Poorman's bred-to-lay Buff Orpingtons. Owned by John G. Poorman, Box 100, Tinley Park, Ill.

Not long ago I took ten of their white eggs to the store where I sell them and they weighed more than a dozen store eggs. I sold some, set one hundred and twenty-seven, used one hundred and twenty-three dozen in the house, fed three sitting hens, twenty-four in all, and my feed cost amounted to \$26.74 for the year. I received \$16.67 for eggs sold, so I had the one hundred and twenty-three dozen eggs used in the house for \$10.07. These figures were taken from my record from January 1, 1914, to January 1, 1915.

If any one can show me where this record of Rose Comb Anconas,—that were hatched on a back-lot, brought up and kept in confinement for four or five years,—can be beaten for the production of big, white eggs on the small amount of foodstuff and by a happy, singing family of birds—whether twenty below zero or in scorching hot summer days,—I would like to be informed where the flock is.

I did not keep a record in 1915, but I hatched a pullet that laid her first egg in four months and seventeen days without any special effort in feeding.

January 1, 1916, I had twelve Rose Comb Ancona yearlings. From January 1, 1916, to October 1, 1916, they laid one thousand four hundred and five eggs. There are now thirty-nine birds, old and young, in my 6x8 coop and yard. My feed bill for the last five months averages about \$2.30 per month and feed has increased in price thirty cents per hundred in three months.

I have only lost two matured Anconas from disease in the five years. I do not take any special care of my birds, except to keep the coop and yard clean, as they both are close to the house, being just under the kitchen window. The birds are so tame when I go into the yard they fly all over me, old hens as well as the young birds.

They lay in the winter when eggs are high. I have a friend in the country who bought two hundred and forty birds of another variety. He has been getting one or two eggs a week, while I have been getting from three to six a day from thir-

teen hens—and getting sixty cents a dozen for them. Think of that!

I started to raise poultry in a small way, without any knowledge of the business whatever. I could not tell one breed from another. Those Anconas that I purchased in 1909 were the prettiest hens I had ever seen up to that time. Since then I have studied all kinds of poultry journals, especially the AMERICAN POULTRY JOURNAL, to which I am a regular subscriber. I have attended all the poultry shows possible. I have studied the different breeds and tried at least four of them. But if I only had more room I would have all the Anconas I could raise.

I have had demand for all the pullets I could produce. I turned away this spring an order for four hundred eggs for hatching, beside numerous small orders that I could not fill and I am convinced that my birds are known all over this vicinity by the inquiries I receive.

I wish to say that during eight years with Anconas I have learned that Rose Comb Anconas cannot be beaten, and as long as I raise a chicken I will never be found without Anconas. Experience has taught me that they are the birds for the production of big white eggs, in large numbers, unaffected by extreme cold or hot weather or by close confinement—and for the smallest food cost.

The Ancona baby chicks are handsome little fellows. When just hatched they are a canary color with a black dot on top of the head and a black spot on the back. The mottling of some run down on the face and legs. They develop rapidly from shell to maturity and are wonderfully attractive. They are so handsome that many large breeders are using them in cuts in large advertisements.

The Anconas are not very numerous or as well known in this part of New York state as they should be. They need honest boosting and I am one to boost them. If any do not believe me, come see my birds. You will be made welcome. Yours for Anconas always.

Egg Prices Will Be Regulated by Weight

It Is Not Just to the Producer Nor the Consumer to Sell Eggs by the Dozen Regardless of the Weight. All Other Food Products Conform to This Rule, and Eggs Must in the Near Future. Progressive Poultry Raisers Will Do Well to Breed for Large Eggs. An M. C. Wilson Contest Article. *By E. J. Stoddard*

EVERY line of endeavor has to anticipate the demands of the future if ultimately it reaches its highest aim or reward. At the present time, hens' eggs have two purposes. One is to be eaten and the other is to hatch chickens. It is safe to say that not less than ten eggs are eaten to each one hatched. A small egg may hatch as good a chicken as a large egg, but there is not as much food value in a small egg as in a large one. A large egg is more apt to produce a pullet which will lay large eggs, which is a sufficient reason for using large eggs for hatching purposes.

Now as to the figures to show why large eggs are the ones to produce. We will say that the hen laying small eggs lays 160 per year and the large-egg layer lays 130 eggs per year. This is a difference of thirty eggs, but is it a difference in pounds of eggs? The small eggs, we will say, weigh one and one-eighth ounces each or 11 4/16 lbs. The large eggs weigh say 1 11/16 ounces each, which is 13 11/16 lbs. If we take twelve 1 1/8-ounce eggs as a standard and worth thirty cents, a dozen of 1 11/16-ounce eggs would be worth forty-five cents. If they were sold by weight at twenty-five cents a pound, the 160 eggs would be worth \$2.81, and the large eggs would be worth \$3.40. In other words, taking the small eggs as the standard, the large eggs would bring more money, altho the hen laid thirty eggs less. According to the above figures, eight large eggs are worth as a food value as much as twelve small ones.

Then from a selling standpoint. Today small eggs bring in most instances as much money per dozen as large ones. But how about tomorrow? The United States Government and the State Governments are daily passing laws regulating everything of a commercial nature. Pure food laws, pure fabric laws and honest weight laws, etc., are going into effect daily. How long will it be before eggs will have to be sold by the pound? It will come very soon. The poultryman who now breeds hens for good sized eggs will then be established with a "large egg strain" and will get the full benefit of the law. Therefore the time to begin to figure eggs by the pound is today.

I was talking, September 22, 1916, with an egg buyer for

a large produce firm in Chicago and during our conversation he told me he had just paid 31 1/4 cents per dozen for thirty cases of eggs in Lincoln, Illinois. The party selling the eggs had demanded 32 cents per dozen. The buyer knew that was a little above the market, but also knew the eggs were extra large and clean. He telegraphed his firm at 8:47 for quotations, and not getting a prompt answer, finally, after bargaining a while, gave 31 1/4 cents f. o. b. Lincoln for the eggs.

Golden Penciled Hamburg female.

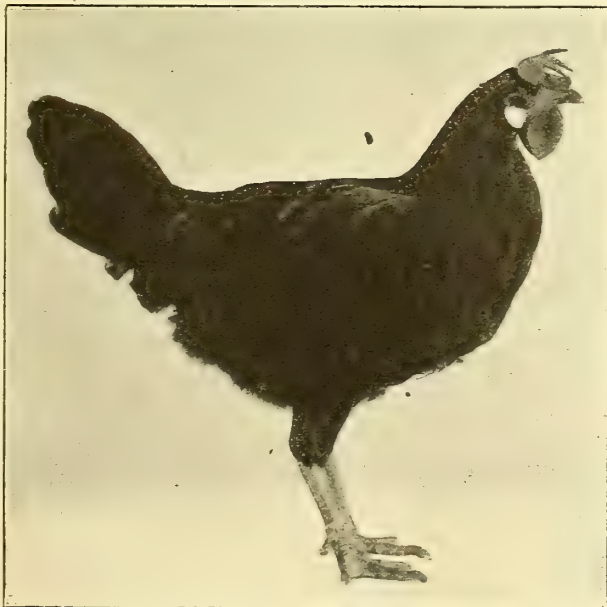

At 1:00 P. M. he received a telegram quoting 30 1/2 cents per dozen f. o. b. Chicago. He naturally expects to be criticised for paying 31 1/4 cents and plans to claim as a defense that they should have answered his telegram at once, that he was able to get immediate shipment, and—this is what applies to this article—"that the eggs were of extra quality, being large, clean, and packed in good cases." I asked him if he would pay a higher price for large eggs than he would small ones, and he said he would pay 1/2 cent per dozen more if he had to, but his firm figured they had to get some extra good eggs at prevailing prices to make up for some of the poorer eggs they bought at the same price. Therefore, some poultryman's noble, large-egg-laying hens are helping some small-egg-laying hens to get market prices for their eggs.

What would a farmer think to be offered a certain price per dozen for his dairy cows, his hogs, his horses or his corn, no matter what the size, condition or shape? Large, even-sized apples or potatoes bring much more than small ones. Would you want to sell your fryers at so much per dozen, no matter what the size?

I firmly believe that the American poultry raiser should begin at once to breed utility stock for large eggs. Our poultry journals, egg laying contest organizations and poultry clubs should naturally lead the way.

If the above reasons are true ones, then the International Egg Laying Contest prizes should be awarded to the hens laying the most pounds of eggs, so that the hens actually doing the best work would get full credit.

Men are just a little inclined to brag if they have half a chance. But let me ask you:—"Did you ever hear a poultryman brag about the nice, small eggs his hens lay?"

Single Comb Black Minorca, winner of first prize at Ohio and Indiana State Fairs, 1916. Bred and owned by John L. Brown, 1515 West 7th St., Anderson, Indiana.

American Poultry Journal

Entered as Second-Class Matter August 9, 1886, at the Postoffice at Chicago, Ill., under Act of March 3, 1879

SUBSCRIPTION PRICES.

Single Copies, 10c.
United States, Cuba, Mexico and
United States Possessions (except
the City of Chicago), 3 years (36
issues) \$1.00
Canada, 3 years (36 issues) 1.75
Foreign, 3 years (36 issues) 2.50
Chicago, 3 years (36 issues) 1.50
Chicago, Canadian and Foreign subscrip-
tions require additional postage and there-
fore the slight difference in prices.

Owing to the high quality of the peri-
odical which we are publishing at the price
asked for publications of inferior value, we
have discontinued the practice of entering
yearly subscriptions to American Poultry
Journal, but will enter subscriptions for 3
years (36 issues) for ONE DOLLAR
mailed to any point in the United States,
except Chicago. See above rates for Chi-
cago, Canada and Foreign subscriptions.

TRIAL SUBSCRIPTIONS—In order
to acquaint prospective subscribers with
American Poultry Journal, we will mail
one copy a month for six consecutive
months to any point in the United States,
its possessions or to Cuba or Mexico for
25c. The trial subscription offer (6 months
for 25c) is for new subscribers only and
not subject to renewal for a period of less
than three years.

If you change your address, give both
your old and new address, as well as your
subscription number when notifying us of
the change.

ONCE MORE we round out the full year
with the happy, prosperous AMERICAN
POULTRY JOURNAL FAMILY and look
forward to another New Year that is
full of hope and promise.

1916 has been a busy, strenuous
year; a year of big events and the
working of great changes in world
conditions. Civilization is still in the

seething melting pot, the mould is being shaped,
tho we cannot see it yet, and no one knows what
the result will be when the final cast is made. We
can only hope that this travail of the whole world
may bring forth better things and better times for
ALL mankind.

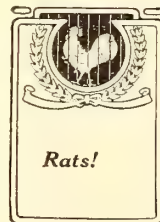

Lasting Peace and the Good Will of real Brother-
hood of all People of all Races of the World is our
best wish for the days to come. The seed has been
sown, the reaping of the whirlwind still continues;
but it was ever darkest before dawn, the light shines
bright beyond dark clouds, and after a storm comes
calm. Surely at this season we can all hope for and
believe in the ultimate coming of—

PEACE ON EARTH AND GOOD WILL TOWARD MEN!

To all our readers and business associ-
ates, to friends everywhere, who have
helped with criticism, counsel, friendly
co-operation, and appreciation, we wish
to extend again our sincere thanks and
all good wishes for the Holiday Season.

Season's Greetings to AMERICAN POUL-
TRY JOURNAL readers everywhere! May
you all have a very Merry Christmas and
a most prosperous and Happy New Year.

And may the New Year bring lasting Peace and
Good Will to ALL Mankind.

IN THESE DAYS of high cost of grains
and feedstuffs, we once more call the
poultryman's attention to rats.

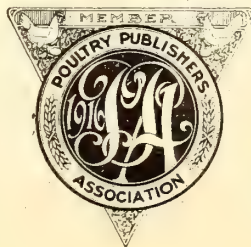

Everywhere rats are a nuisance
and a menace. Swat the rat! Health
boards in our large cities are calling
attention to the very grave danger of
transmission of loathsome diseases
thru rats. Millions of dollars are lost

annually because of rats. Cities are making big ap-
propriations to be spent in getting rid of rats. When
ships tie up in port, rat guards are put on the cables
and rat hunters are employed to kill the rats on
board. Rats are known to spread the bubonic
plague and may be carriers of other diseases.

Expert statisticians estimate that its costs from
50 cents to \$1.00 per year to keep a rat, because of
food they eat or waste and property that they de-
stroy. You can safely figure that on your farm or
poultry plant every rat is costing you big money.
Besides that rats may carry disease to your flocks,
will steal eggs and frequently kill young chickens.

Swat the rat!

On our home farm, because of its loca-
tion in the woods and on the shore of
lake and pond, with some very old build-
ings and many piles of fire wood—which
is our chief fuel—rats are very abundant
and troublesome. We have to keep up a
constant running fight with the pests in
order to keep them from getting the best
of the situation.

We find that a good Airedale dog and a rat-killing cat are very useful, but not enough. The cat goes into inaccessible places where the dog cannot reach and kills his quota of rodents daily. The Airedale is always on the job on his own account and is the chief performer on days when an active rat hunt is held. These hunts come frequently whenever the rodents become unduly troublesome. With a little assistance, like spading the earth under the sills of poultry houses and moving small coops, the Airedale catches and promptly kills unbelievable numbers of rats. But, still that is not enough. The hordes keep coming.

12 and 16-quart galvanized water pails, half full of water and a board tilted from floor to edge of pail, prove excellent rat traps,—the best we have used, and usually make a haul every night. An AMERICAN POULTRY JOURNAL subscriber recommended pouring soft tar into the rat holes, and this is a help. Another good remedy for use in the grain house, barn, and dwelling, is to mix equal parts by measure of plaster of paris and fine corn meal and leave the mixture about the premises in small paper bags. This dry-mash for rats kills off a lot of them. We have not had much luck with serums, virus or patent rat traps,—altho the back-breaker traps, baited with fish, do good work.

Eternal vigilance and constant warfare is necessary to keep down the rat plague. If the neighbors can be induced to join in the fray, the results will be more far reaching and lasting. Stop boarding rats at from 50 cents to \$1.00 per head a year. Get busy and SWAT THE RAT!

patience and work along right lines. Interest in pure-bred poultry is increasing. In spite of heavy selling of hens and chickens, due in part to the high cost of grain, the great army of "back-lot" poultry keepers is gaining new recruits rapidly. Farm flocks have been reduced somewhat in size, but there is a strong tendency toward better poultry and the keeping of pure-breds on farms where mongrels and mixtures were the only poultry kept. It costs no more to feed and care for well-bred stock than for the mongrel sort, and with reasonably good care the pure-bred fowls give better and more satisfactory results. It has been demonstrated that healthy, hardy pure-breds of the popular breeds are just as well able to rough it on the farm as common fowls and that pure breeding does not necessarily mean less constitutional vigor. Exhibition values require special care and attention to develop them in the highest degree, but the utility qualities thrive under good farm flock conditions. With the advent of pure-bred flocks in place of mongrel stock, the tendency is to give more and better attention to the poultry keeping branch of farm work.

We believe that 1917 will see much better business in the sales of breeding stock, hatching eggs and baby chicks. The interest and the money for buying is with the public. The demand can be stimulated and developed by advertising of the right sort. The business is there for breeders to secure if they go after it in the right way. Go to it! When you secure a

prospect, convince him thru truthful argument and plain facts about your favorites. When you land a customer, hold his friendship and his business by giving him honest values and a square deal. Better business is at hand, but it depends mainly on yourself how much you share in it. Good advertising and able salesmanship are necessary. Do business in a business-like way. Don't neglect correspondence. Don't expect customers to urge their money on you and to beg for what you have to sell. We have known customers to do almost that, but if you play the game that way and get the habit, someone else will get the bigger share of the business. 1917 holds good business opportunities for you. Don't waste them.

When Christmas Comes

BY HELEN T. WOODS

*We chant of bursting buds in Spring,
Of welcome sound when bird notes ring,
Of stretching hills' returning green,
Of sprouting grain in earth unseen.*

*We sing of Summer's glowing sun,
Of twilights long when work is done,
Of flower fragrance and waving grain,
Of leafy shade and Summer rain.*

*We praise the Autumn in dress of gold
And shades of scarlet yet untold;
We view with awe her changing hills,
Her bursting storehouse Nature fills;*

*But as Winter comes and Christmas near
Now every heart grows warm with cheer,
Love lightens sorrow, stills alarms,
Upholding in encircling arms*

*All human woes whose total sums
Fade from the view when Christmas comes!*

*O Christmas, that has come again,
To kindle warmth in hearts of men,
Bless well this season of Good Cheer
That it may mark an immortal year,*

*By making strife and war to cease
And spreading thru the world thy Peace—
When Christmas comes!*

CORRESPONDENCE FROM all over the country indicates prosperity and better business; there is work for everyone who will work; the people have money and they are spending it. Keeping money busy circulating is good for business and good for us all. True it is that high prices prevail, but we should not forget that low

prices and hard times go hand in hand. Over-high prices are bound to be adjusted, if we only have

Golden Rule in Business.

AT A meeting of the Boston Retail Credit Men's Association held in Thorndike Hotel, Boston, Mass., November 15, E. P. Tuttle, a prominent shoe manufacturer, declared that the moral standards of business today are far superior to those practised 30 years ago. "A more Christian age has arrived," he said, and the motto of successful business men has become "live and let live." Continuing his remarks, the speaker said:

"Competitors are no longer looked upon as enemies and it is no longer smart to sell a customer something he does not want or need.

"The golden rule is more in evidence in business today than ever before. The downfall of a competitor is no longer hailed with glee. Rather a helping hand is given him and we are playing the game with clean hands and heart. This change in business standards has been accomplished thru crystalization of public demands."

Leg Bands.

CAN you positively identify the individual members of your flocks? Do you know the ages of the different birds? Or do you just guess and let it go at that?

If you have only a small flock and are often with your birds, you may be able to know each of them individually; but the chances are that you don't. Modern leg bands and well kept records of the numbers and colors make positive identification easy.

For instant identification as to age—or for some other special purpose—the colored celluloid spiral bands are particularly desirable. You can identify the birds at a glance by simply noting color of band and you know them as far as you can distinguish colors. These bands come in eight or more colors. For illustration of instant age identification let us take five colors: red, blue, white, yellow and black. For example, we will say that your 1913 pullets were given a red band; 1914, blue; 1915, white; 1916, yellow, and 1917 will have black. When the "hen man" comes around and you are thinning out the

TO OUR READERS.

Our subscribers are our friends and we use every effort to protect them in every way. We believe that every advertisement in this issue is signed by trustworthy people, and to prove our faith we will make good to our subscribers any loss sustained by virtue of their having purchased fowls or goods from one of our display advertisers.

All we ask is, that in ordering the fowls or goods, you mention to the advertiser that you saw the ad in American Poultry Journal; also that the purchase be made during the month or months in which the ad is inserted, and in case of loss notify us of the fraudulent misrepresentation of the advertiser, giving us full particulars as soon as it occurs. In all cases in writing to advertisers say, "I saw your ad in American Poultry Journal."

flock, or when you kill a bird for table use or cull for market shipment, you can tell age at a glance by color of the band. Or for purposes of special identification of chickens or fowls, a colored band in addition to the numbered band makes the flock or mating identification easy.

The aluminum bands with large numbers are very convenient for identification of individual members of the flock for any purpose. They are inexpensive and easy to use. Leg bands eliminate all guess work in identification if you keep a record.

The modern combination bands made of aluminum and colored celluloid, with large, clear numbers, are best for all pedigree work with breeding birds and when trap-nesting layers. They cost a little more than the other kinds and are worth more. The colors are bright and the numbers large enough to be read instantly. Anyone who uses trap-nests can appreciate their value for quick identification and in labor saving. The modern sorts are well made, easy to apply, and won't lose off.

Smaller bands are made for chicks of all ages to help in pedigree work and to amplify the information as to parentage as indicated by punch marks in webs of chick's feet.

You need to know your birds. To know them as individuals and to be sure of identification, you need modern dependable leg bands.

Big Show Season.

THIS is the season of big poultry shows. Be sure to attend the big poultry show in your nearest large city.

The opportunity afforded to compare the various Standard breeds and varieties is well worth your while. You may find that the prevailing fashion that wins the ribbons is not just what you thought it was by reading Standard requirements. You will have a chance to see and compare the birds themselves in the various classes and to note what the experienced judges considered winning quality.

If you breed poultry, you need to visit the show to compare your work with what other breeders are doing and to get a line on what is necessary to win. If you are about to engage in poultry keeping, attending the show will help you in your selection of a variety.

At the show you can get in touch with other breeders and discuss their favorites with them. There is much to see and much to learn. You cannot afford to stay at home and you cannot afford to miss the big poultry show of your section, if you are at all interested in poultry.

Attend the big shows and study the exhibits.

A "Breeder" President.

IN looking over our exchanges we note that some folks are clamoring for a "breeder" president for the American Poultry Association next term. The association had a prominent breeder as president before Editor and Publisher Richards took the presidential chair.

While we would not and do not approve of the A. P. A. being under control of any one editor, or little editorial group, and, while we believe that the poultry breeders of the country should run their own association, we are not in sympathy with all this calamity howling about editor-presidents or editors running for office, if they are willing to serve the association, have the time, and are qualified to do so. From early in its history right down to date the A. P. A. has put a good deal of hard work up to editors and poultry writers and has been faithfully served in the great majority of cases.

At the present time most of the objection to editor-officers comes from those who oppose Arthur A. Peters, of Denver, Colorado, who is candidate for next president of the association. In the four successive terms in which Mr. Peters has served the A. P. A. as vice-president, he has been the hardest worked presiding officer. He has always been a credit to the association and those who attend the annual conventions

AMERICAN WHITE ORPINGTONS

WILL WIN FIRST PRIZE
FOR YOU ANYWHERE

BLOOMINGTON
INDIANA
USA

We can furnish you a Cock, Hen, Cockerel, Pullet or Pen from the "best line of males in the country." Every individual an American line-bred bird of eight years' standing. Pure white color, massive type and heavy laying ability are so intensely bred into these birds that they are acknowledged supreme by all. The most reliable reproducers of any strain. Ask any judge or breeder that knows, "Who has the best White Orpingtons?" "Woolery Farm, of course!" These birds are American line-bred and they win and lay. No breeder today can give you more in real value, nor will go further to give you the best satisfactory service.

We are the originators of the American bred White Orpington, and want all good breeders to know and appreciate their value. Get our winnings at the National Club shows, Chicago Coliseum, Madison Square, Hagerstown, Cincinnati, Indianapolis, and remember we bred every one of these winners, his sires and grand-sires. If you breed strictly Woolery Farm's American-bred strain you breed the best, and if you can advertise them you will find a ready market for all your surplus stock and eggs. Write us your requirements today; we can fill them promptly. New Catalog-Mating List ready January 1st. Register your name for one now.

WOOLERY FARM, Ralph Woolery, Prop., Box A, Bloomington, Ind.

Buff Orpingtons

A. E. MARTZ, BUFF ORPINGTON SPECIALIST
AND JUDGE

Box A, ARCADIA, IND.

know that he presides with dignity, ability and fairness to all. He is well fitted through long experience to be the next president of the A. P. A. and he certainly merits election by a large majority vote to show the association's appreciation of his long, able and faithful service. Arthur A. Peters is not only deserving of the presidency—he has earned it and we should not deny him his reward.

Some of his opponents object to Mr. Peters because he is a "poultry editor." Well, he has only entered the editorial field within a comparatively short time. He has hardly had time to get acclimated as an editor and to begin to "feel his editorial oats." He is welcome in the editorial field and no one fears that he will abuse his privileges or influence.

Before he became an editor, Mr. Peters had long been a fancier-breeder; was a breeder many years before he became a member of the A. P. A.

If the association wants a "breeder-president," Arthur A. Peters will fill the requirements. He has been a breeder of White Plymouth Rocks for more than twenty years. He originated the strain known as Peters' White Rocks that have proved strong and continuous winners at western shows, and such strong judges as Heimlich, Hewes, Pierce, Branch, Hale and others who have judged in the west know the quality of Peters' breeding. He has shown almost wholly in the west because he believes that a poultryman's duty is to patronize his local shows and the neighborhood where his business comes from. Having other business interests his poultry work has been necessarily limited to supplying the demand created through his winnings in these western shows and he has not had the time nor sufficiently large flocks to admit of his competing for honors in the eastern field.

Arthur A. Peters stands for election to the office of president of the A. P. A. on his record for efficiency in action as one of the most active and hard-worked officers the A. P. A. has ever had. If members want a "breeder-president" he is duly qualified by long experience as a fancier, breeder and exhibitor. The fact that he has within a few months become also an editor and publisher, should not be held against him. Even editors who could not be classed as poultry breeders have been known to do good work for the American Poultry Association. Better vote for Peters both on the nomination and the election ballots. Make it a rousing big vote!

Mineral Foods.

DR. CAREY says: "The body is made up of cells. Different kind of cells build up the different tissues and organs of the body. The difference in the cells is largely determined by the kind of inorganic salts which enter into their composition. If we burn the body, or

One of the laying houses on Garnet Grange Poultry Yards, Westfield, Ind.

any tissue of it, we obtain the ashes. These are the inorganic constituents of the body, the salts of iron, magnesia, lime, etc., which build up the tissues. They are the tissue builders, therefore, and both the structure and vitality of the body depend upon their proper quantity and distribution in every cell."

Robinson says: "The mineral elements (ash) in foods, disregarded in calculations of food values, are of great importance in nutrition and more important to poultry than to any other kind of domestic creature. The rate of growth of young poultry is very much more rapid than that of young horses,

cattle, sheep and swine. A chick weighing one and a half ounces when hatched and 27 ounces at ten weeks, has in the ten weeks multiplied its original weight eighteen times. In ducks and geese the rate is even more rapid. In all young poultry adequately supplied with material for making bone, the rate of growth of the skeleton is more rapid than that of the flesh (muscle)."

An egg containing all the elements necessary to make a perfect chick, everything, blood, muscle, bones, nerves, all vital organs, feathers, etc. The laying hen produces many such eggs in a year, 144 eggs, 200 eggs, even more than

Smith's Strain White Leghorns

300 eggs in a year being recorded for unusual specimens.

Eggs must be rich in inorganic salts, the "tissue builders" or "mineral foods." Grains and milled feeds are deficient in these mineral foods. Greens only carry a limited per cent of available minerals. The chick must have mineral foods for its development. The fowl requires mineral foods to maintain body health and vigor and to be able to reproduce. The laying hen must have abundant mineral food to supply material for making egg shell and the rich egg contents. Besides lime, phosphorus and iron are important constituents of the egg. Silica is required for feathers. Many combinations of mineral elements are required in the make-up and maintenance of the body of both

fowl and chick as well as for egg making.

We have to look to bone, shells, crushed rock and other sources for a supply of needed mineral foods. Prepared animal foods are the most dependable source. Fresh fish, scalded and fed bones and all, is a good food rich in protein and in mineral matter. Cut green bone is useful but hard to obtain in good quality and harder to keep. Beef scraps, animal meals, fish scraps and fish meals all, in addition to their protein, contain considerable percentages of mineral food. We are inclined to believe that good fish bone is a very valuable source of mineral food for poultry. Milk is good and contains valuable mineral matter but is also largely water.

Certain it is that mineral food is necessary and must be supplied to poultry of all ages and, besides grit and shell, we will find some sort of prepared animal food decidedly essential.

Winners in Ancona Contest.

IN the October number of AMERICAN POULTRY JOURNAL, H. Cecil Sheppard, Berea, Ohio, offered two prizes for the truth about the breed and telling why they have become so popular. The first prize, a \$50 Sheppard Ancona cockerel, goes to T. H. Holmes, 356 Thatcher Avenue, River Forest, Ill., while the second prize of a \$30 sitting of Mr. Sheppard's Ancona eggs, goes to Leroy E. Hepp, 709 Second North Street, Syracuse, N. Y. Both of the prize winning articles under the titles of "Why the Popularity of the Ancona?" and "The Beautiful and Efficient Ancona," appear in this issue of the AMERICAN POULTRY JOURNAL.

Mr. Sheppard should be congratulated upon the ready response and enthusiasm displayed by the contestants. There were sixty articles submitted, representing all sections of the United States, with a large number of the articles worthy of consideration in awarding the prizes. Ancona breeders should feel especially fortunate in having so goodly a number of enthusiastic boosters for the breed, for while many of the contestants expressed the hope that their efforts might prove worthy one of the prizes, they were more than eager to contribute their words of praise and appreciation for the breed. One contestant jokingly attaches a postscript to his communication, saying, "Tell Mr. Sheppard I prefer a dark cockerel with a small comb and good strong eye color."

Still another waxes poetical in his praise of the Ancona in this wise:

"They consume very little
But scratch for a lot,
And taste extra good
When put in the pot.
Their skin is quite yellow,
Bodies plump as Bologna—
Here's to one, and one only,
The Mottled ANCONA."

Northern-Bred Stock

For Years

Martin's Regal Strain White Wyandottes

have been bred for vigor. Canadian winters are severe and none but rugged birds would lay and breed successfully during the winter months. It is a fact, however, that for fifteen years a large proportion of my chicks are hatched in January and February. These chicks are accustomed to go out into small out-door runs, when they are a week old. Chicks grown under these conditions can stand anything and make most desirable breeding stock, high fertility being the rule.

The following letters illustrate this:

Dear Sir:—Regarding the three cockerels sent me last December, would say that I have sold this season some 40 settings of eggs. No setting reported has given less than 10 chicks and most of them 12 and 14 chicks. Am greatly pleased with the birds, as they are much better than the ones I bought from — last year, and in addition to their vigor they have better shape and are two pounds heavier. Will want more next season.

Yours truly,

H. W. JENKINS.

Dear Sir:—Am very much pleased with cockerel you shipped me. Eggs from his pen are running 85% fertile. Thanking you, I remain,
Yours sincerely,

P. L. DRAPER.

Dear Sir:—I am writing to advise you that the fertility of the pen you sold me is averaging over 80%. Considering the fact that cock's comb was frosted, this is a remarkable record.

Very sincerely yours,

L. S. DARROW.

The show record of my birds is a matter of history. If you wish to win or breed winners I can furnish you the birds to breed them. Reserve your birds now while I have plenty to select from.

5000—Cocks, Hens, Cockerels and Pullets For Sale—5000

John S. Martin, Box 51, Port Dover, Ont., Can.

"REGAL QUEEN", FIRST BOSTON HEN, 1913

They Feed Themselves

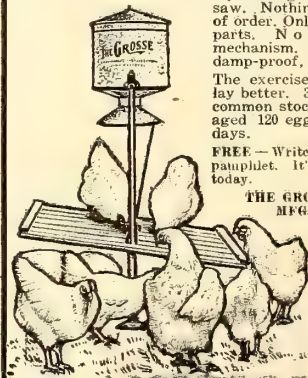

The Grosse Feeder and Exerciser removes all responsibility of feeding flock. You simply fill tank. The chickens do the rest, and you know they are fed correctly—not too much—not too little. No waste. Saves time, money and grain. The Grosse is the only real exerciser. Will accommodate large or small flock.

The neatest, completest, most dependable poultry-feeding device you ever saw. Nothing to get out of order. Only two moving parts. No complicated mechanism. Fool-proof, damp-proof, rat-proof.

The exercise makes hens lay better. 35 Grosse-fed common stock hens averaged 120 eggs each in 365 days.

Dr. Woods' Notes and Comment

MERRIE CHRISTMAS!

To everyone, on land or sea,
To everyone, where'er they be,
In city, town, or countryside,
Thruout all Nations far and wide,
The Season's Greetings,
Good Will and Peace!
Clasp hands once more,
Bid strife to cease,
And welcome
Merrie Christmas!

* * *

Try a nice fat capon for your Christmas dinner. Duck, goose, turkey, are all good; but a properly grown capon, killed and well dressed—when just ripe—has all other gastronomic delicacies faded to a frazzle—if the cook knows her business, and "we think she do!"

* * *

The interest in fish scrap and fish meals, prepared from wholesome material and comparatively free from fish-oil, as a combined high-protein food and source of valuable mineral salts for poultry feeding, is increasing wonderfully. We have letters from all along the Atlantic and Pacific coasts and some from the Gulf. Fish is a good food for poultry. There is a lot of it going to waste. It costs quite a bit to establish manufacturing and to turn this valuable material into a desirable foodstuff for poultry and stock, one that will keep well and that is practically rid of the strong fishy odor; but if American capital gets interested in that direction we are likely to be able to secure plenty of fish food for poultry before long. It has long been a staple concentrate in the old world, but it takes quite a while to develop resources on this side of the globe.

* * *

Not many "pig potatoes" will be fed to poultry this winter. We sold all our cull potatoes in November at \$1.00 per bushel. C. H. Latham, vacationing in the potato country, down in Maine, wrote us early in November:

"Potatoes up here where they grow them are over \$2.00 per bushel, and a man was around yesterday trying to buy seconds—very small potatoes, so small that most years no one would use them for cooking,—and he wanted to pay 75 cents a bushel for them; he will yet have to pay \$1.00. A Boston dealer has contracted for thirty carloads of potatoes at \$2.10 per bushel to be delivered in January."

* * *

Some prices for Irish spuds, which used to bring 50 cents a bushel. But it should be remembered that it was a poor growing season in the East—cold and wet—and a whole lot of potato growers did not get back more than the seed they planted. Of course, there were some fortunate ones who had a good crop, but it was a short crop and a poor keeping crop with many. Crop reports show plenty of potatoes in the West, but until transportation companies and food distribution comes under Government control we are likely to pay famine prices when the local crops fall short. There is enough food produced and wasted in this country to feed every family in it at reasonable cost, if so large a proportion of the profits did not stick to the fingers of those engaged in distributing foodstuffs and if there was some way to get the food where it is needed at low cost.

Good roads and low-priced automobiles are helping wonderfully in New England in the distribution of farm produce. The farmer can more easily get his products to the city market and at less expense. Also the consumer finds it more easy to reach the farms and buy direct. All along the state highways one finds small booths and tents with attractive displays of farm products by the wayside. Many farms have large bulletin boards giving prices of fruit, vegetables, milk, butter, honey, eggs and poultry and it is surprising what a thriving business is thus being built up along good roads. In a recent trip which took

in over 250 miles of state road we saw many such "farm stores" and we met hundreds of big and little auto-trucks loaded with farm produce going to market. To appreciate what the automobile is doing for the farmers get out on the good roads in the country in the early morning well before sunup. There is something doing on every main highway leading into the big towns and cities. Then, when the day is well advanced, the wayside farms do business with the folks in motor-driven pleasure vehicles. A full 24 hours of travel on Massachusetts state roads between representative cities and producing rural districts, gave us an eye-opener as to the remarkable developments in farm to consumer business in this state. It was well worth losing sleep for. To take it in properly, find out what are the regular market

*Never had so many good ones to sell as now
H. W. Halbach*

GET THE BEST

WHETHER you want a show bird that can win, or breeders that can be depended upon to improve your flock, a prepotent sire or a prolific female, it will pay you to make your purchase where quality has been the watchword from the beginning—from the strain that has produced the most sensational winners in the big shows for years, from the breeder who can and will give you the best values.

In White Plym. Rocks

You Can't Beat Halbach's

The unparalleled win of my birds at the great Coliseum, Chicago Show, December 13-18, 1915, was the final link to the chain of victories that has given them the undisputed championship. 1-2-3 Cock; 1-2-3-5 Hen; 1-2-3-4-5 Pullet; 2-3-4 Cockerel; 1-3 Young Pen; 1-2 Old Pen. ALL CHAMPIONSHIPS.

In the opinion of experts from every section of the country there never has been shown to date a string of White Rocks that so nearly approached the highest ideals of the breed. And every individual was bred on my farm—is the product of years of careful breeding—represents bred-in quality; not accidental quality. It is in the blood. You who buy of me may possess it—and it will be reproduced. I have hundreds of birds of superlative merit, closely related or directly descended from my great champions. Any one of them will breed the quality you seek. Every one of them is vigorous, active, prepotent. Every one of them is worth many times the price I ask for them as individuals for their breeding value alone. My thousands of satisfied patrons the world over are proof that my birds make good—invariably—in show room or breeding yard. And when I say to you that never in all my years of experience have I had so many good ones to sell as now, it means that Halbach's guarantee of satisfaction signifies more to you this year than ever before.

Write Me for Show Birds or Breeders, I'll Please You

Without exception my personal attention is given to every order. Whether you buy the lowest priced bird on my place or an outstanding exhibition specimen, it is my honest endeavor to fill your order just as I should wish to have one of mine filled by you. And every time, if what I send is not satisfactory in full measure, my customer may return it and get his money back. Write me today for what you desire to obtain. Make up your mind to own White Rocks from the real Champion Strain and you can win. Large catalog, 20 cents.

Waterford, Wisconsin

Russia Cement Co.

Takes Fish-Meal Industry In Hand

Big firm at Gloucester, America's Principal Fishing Port, Following Poultry Experts' Recommendations, Agrees to Provide Raisers With Clean, Pure Meal Made Only from Edible Portions of Sweet Fish, Every Ounce Laboratory Tested and Guaranteed.

THE experienced poultry-man who has been watching the bulletins of the government's Bureau of Animal Husbandry, the reports of Experimental Stations, and other authorities, does not need to be told of the value to growing or laying poultry, in choice fish-meal.

But with every increased evidence that a veritable gold-mine of food value lies in a concentrated fish-food, the wise poultryman has felt all the more keenly the need of someone's taking the preparation of a fish-food for poultry as seriously and conscientiously as the preparation of a fish-food for humans.

The name by which fish-food for poultry has been commonly known—"Fish Scraps"—indicates the degree of responsibility and seriousness that has been given it.

"Fish Scraps!"

"Scraps!"

A laying hen puts into her egg the very highest, purest life-giving element in her power. She reproduces herself in her egg. Should she be asked to do it on "scraps"—scraps, sometimes, of fish that the law would not permit being used for human food?

The Russia Cement Company has agreed to take the preparation of fish-food for poultry out of the "scrap" class. Located at Gloucester, America's greatest fishing port, and being in the manufacture of La Page's glue, one of the world's largest handlers of fish by-products, this concern has the opportunity of selecting what it wants from the best of the world's fish.

With a name and reputation known and respected in every civilized land, its guarantee on a product is as good as a government bond. With a laboratory unsurpassed in facilities and ability, not an ounce of any manufactured product can leave the Russia Cement Co.'s plant that might in any way mar the company's reputation.

And all of this is now to be put behind the preparation and marketing of a fish-food for poultry.

Here at last is to be a food for poultry prepared like a food for human beings, a fish-food just as clean and pure and sweet for its purpose as the fish that is packed in Gloucester and sold the country over for use in the home.

So that poultrymen may know and recognize this superior, carefully prepared product, it will be packed only in sealed bags and cartons under the Russia Cement Co.'s private brand name and guarantee. And so that no one need ever be deceived or get this scientifically prepared food confused with the old-style fish-"scrap", the distinctive name of this new fish-food will be the coined term "Chic-Chuk."

Chic-Chuk!

This is one of the most important announcements ever made to the Poultry industry. Fish as food for poultry has been found one of the most effective combinations of Proteins and Mineral foods yet discovered. But a fish-meal, fit to feed to good birds, has been hard to get. Commercial fish scraps have had no fixed standard that a poultry-raiser could depend upon and base a steady feeding formula upon. Too often they have been made from fish-waste and entrails and stock that has been discarded as unfit for human consumption, or from oily fish of so strong an odor that eggs would be tainted. The Russia Cement Co.'s announcement means that this company, one of the biggest handlers of fish by-products in the world, will now supply over its own guarantee a fish-meal as pure and sweet as if prepared for human use—a concentrated poultry food ideal in every respect for making strong healthy chicks, of even plumage and big egg yield.

Chic-Chuk will mean that the food bearing it is not mere fish-"scraps"; not mere scraps of whatever fish-parts come handy; not a product of any fish that you would not yourself eat; not any parts of any fish that would be condemned for human consumption; but Chic-Chuk will mean a fine, ground, sifted meal made only from the edible portions of sweet Cod, Haddock and Pollock—food that any chick will relish and can digest easily, and that will nourish and develop and vitalize and a food that will keep in any climate.

THE COMMON SENSE FOOD

Chic-Chuk, being a highly concentrated essence of the protein and mineral elements a growing or laying bird needs, is not to be fed by itself alone, but as a constituent part of the ration. Every package of Chic-Chuk bears scientifically worked out formulas for its use in dry or moist mash, in combinations with grain mixtures. For mash for adult birds 15% Chic-Chuk is sufficient, and for young chicks proportionately less. Thus, measured by the actual food value obtained, Chic-Chuk is a real food economy.

Not less than 50% Protein, not less than 30% Bone, which includes Lime Carbonate, Lime Phosphate and other Mineral Food, not more than 2% Fat and not more than 2% Salt, is guaranteed for every pound of Chic-Chuk. This, as is shown by the Table on the next page, means that pound for pound, Chic-Chuk furnishes more tissue-building, egg-producing material per dollar of cost than any other poultry food.

To the fancier who is interested in exhibition quality, Chic-Chuk will quickly appeal because of its richness in the mineral content that makes good feather-food. It promotes the feather growth and helps birds thru the moult, while its high protein content is developing the general health and strength that brings out the quality bred in the strain.

To the utility man Chic-Chuk will appeal because it has the ingredients that promote the heavy laying of large, well-meated eggs. Mixed with ground grains and greens it gives the bird the elements needed to encourage, and build up under, heavy laying.

AS A TISSUE BUILDER

Mineral food of the right sort is very necessary for poultry, more so than for other domestic creatures. Chickens grow rapidly and need mineral food for frame and rapidly developing tissues. Fowls breed and reproduce and need much mineral food—more than can be obtained from grains and greens. Eggs contain much mineral matter—not including egg-shell, which is practically pure lime carbonate—besides their protein content, and upon the right proportion of this

mineral food depends the proper development of the embryo chick. And no natural product suitable for food is more rich in available cell-building, tissue-building mineral than fish. Chic-Chuk being made entirely of the flesh and bone of healthy, untainted fish, is thus an evenly balanced combination of the inorganic mineral constituents and proteins.

IMPORTANCE OF UNIFORMITY

It is noticeable that always in the many recommendations of a fish-food for poultry, by eminent authorities, the point of "good quality" is emphasized. In "How to Raise Chicks," by Woods, the author says of fish-food, "When of good quality it makes a good animal food for fowls and chicks, added to mashes."

Note that he begins with "When of good quality."

And in the Bulletin of August, 1916, of the Bureau of Chemistry, U. S. Department of Agriculture, it is reported, "From the feeding experiments it appears that there has not been just cause for the assumption that the feeding of fish meal of good quality imparts a fishy taint to such products as milk, butter, eggs and meat. When the meal is fed in proper quantities, as supplementary with other feeds, apparently no deleterious effects are noticeable in regard to taint or flavor of fish."

Note again the qualification, "the feeding of fish meal of good quality."

In "Productive Poultry Husbandry," (Lewis) the author says, "Properly prepared fish scrap, from which the oil has been entirely removed, is being fed with very good results. . . ."

Note the qualification, "Properly prepared fish scrap."

It is in protecting the poultry raiser on this point that the guarantee and backing of such a concern as the Russia Cement Company and its scientific manufacturing methods, are important on every package or bag of Chic-Chuk.

In Chic-Chuk you know absolutely what you are getting. You know that no oil is left in it. You know that only edible portions of Cod, Haddock and Pollock are used in its manufacture. You know that better quality does not exist. You know that every pound of Chic-Chuk is of the same constituency as every other pound, and your flock will not be getting a change in diet. For the guarantee of the Russia Cement Company ensures it!

This has heretofore been impossible, as every poultry raiser has learned, and as all poultry experts have deplored. In Robinson's "Principles and Practice of Poultry Culture," he says, "A good clean fish scrap should make an excellent poultry food, but too much of what is sold does not answer this description."

Chic-Chuk does answer it. Not only that, but Chic-Chuk always will.

Compare Chic-Chuk with ordinary fish "scrap"—examine it with the eye, feel it with your fingers, smell it, put it under a microscope—and you will find it not only fine and clean and pure, but totally lacking in that strong fish-oil smell that comes from poor stock to start with.

Chic-Chuk, fed according to the proper ratios, absolutely will not taint either eggs or flesh.

HOW TO GET CHIC-CHUK

To insure the above protection to every poultry raiser, the marketing of Chic-Chuk under only its trade-marked name, and only in cartons or bags, sealed at the laboratory, is absolutely necessary.

Chic-Chuk will never be sold in bulk. For the large poultry

Table showing Comparative Value in Useful Nutrients of Beef-Scrap, Ordinary Fish Scrap and Chic-Chuk

Pounds	Food	Protein	Bone	Total Useful Nutrient
100	Meat-Scrap	55 lbs.		55 lbs.
100	Fish-Scrap	44 lbs.	15 lbs.	59 lbs.
100	Chic-Chuk	55 lbs.	30 lbs.	85 lbs.

She gives her very life to us in her eggs and her off-spring. Surely then she is entitled to clean food, nourishing food. Chic-Chuk is simple justice to the American Hen.

raiser it will be packed in 100-pound and 30-pound cambric bags; for the smaller raiser in 10-pound and 5-pound cartons.

Naturally Chic-Chuk cannot be sold at the same price that haphazard fish-scrap can be sold. The careful selection of stock from only Cod, Haddock and Pollock—the non-oily-fleshed fish—makes it cost slightly more than if made from menhaden, sardines, etc., which have oily flesh, but

also makes it infinitely more valuable as a poultry food. The elimination of tainted fish, and all entrails and refuse, makes the cost slightly more, but adds much to its food value. The careful cleaning and grinding and elimination of inedible chunks and scales, the extraction of all oil, the careful inspection and analysis, and the cleanly packing and protection in sealed packages, add slightly to its cost but add many times more to its value to your birds.

An actual test on your flock will prove that Chic-Chuk, with all the safety and feeding superiority it gives, is one of the most economical foods you can feed.

All good poultry and feed dealers will soon have Chic-Chuk, but many have not yet had time to learn of it and stock it. Ask your dealer today and if he not yet stocked Chic-Chuk, order direct at regular prices.

SEND FOR FREE BOOKLET

"Practical Talks on Poultry Feeding" gives many new, startling facts about foods for poultry. It contains

the very latest authoritative information on fish as a food, its value, and how to use it, and tells completely of Chic-Chuk, how it is made and why it is the greatest new help to poultry raisers discovered in the last generation. It will pay anyone interested in poultry to read the book carefully. It is free—simply send the coupon—but send it today. Address

Stock, Eggs & Baby Chicks

from Profitable Layers is Your Only Guarantee for Success in the Poultry Business

Isn't it a serious matter when eggs are selling at 40c to 50c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from.

You cannot be too careful in the selection of your foundation stock; the stock from which you will produce your future layers. I breed for eggs, and can supply you with stock that will lay when the egg prices are high.

That Means Your Success

EGGS—I can usually make shipment of eggs promptly upon receipt of your order. I would, however, advise that your order be booked in advance. This will assure delivery when you desire them. Prices, 15c and 30c each.

BABY CHICKS—I am now booking orders for baby chicks for delivery any time, weather conditions permitting. Early orders simplify matters and assure mutual satisfaction. Instruct me to book your order now. Prices, 25c and 50c each.

Laying and Breeding Stock. In all my eight varieties, namely, White and Buff Orpingtons, White and Barred Rocks, Rose and Single Comb Reds, White Wyandottes and S. C. White Leghorns, I can supply Laying and Breeding Stock, young or old, that will produce a future flock of the kind that has in the past given entire satisfaction to over 5,000 customers. I herewith present your opportunity to start right. My free instructive catalog has helped others and will undoubtedly help you. Write for your copy today.

JOHN G. POORMAN, Box 100, Tinley Park, Ill., U. S. A.

days and be guided accordingly in making your observations. Work for good roads. Good roads everywhere mean better times for everybody.

* * *

T. Harris Boughton, M. D., who won the first prize in the M. C. Wilson article contest—we did not know that he is a doctor until his acknowledgement of the prize came to hand—writes:

Wilmette, Ill., Oct. 25, 1916.

Editor American Poultry Journal:—Yesterday I received the pen of R. C. White Leghorns M. C. Wilson offered as first prize in the article contest which I won recently. They are certainly dandy birds. I don't believe that I ever handled nicer stock and look forward to much pleasure in breeding them.—T. Harris Boughton, M. D.

* * *

The North American gives the following interesting summary of results in three leading laying contests just closed:

	North American Eggs	Missouri Eggs	Storrs, Conn. Eggs
Birds entered.....	500	505	1000
Birds per pen.....	5	5	10
High pen score.....	1305	1185	2265
High pen average, per bird.....	261	237	226.5
General average, per bird.....	176.6	164.7	162.5
High individual hen record.....	289	275	286
No. hens laying 200 or more eggs.....	164	106	160
Pens averaging over 200 eggs per bird..	24	13	6

* * *

The number of 200-eggers discovered in these contests is surprisingly large, but hardly more surprising than the evident considerable percentage of poor or very ordinary layers in flocks that have been specially selected to compete in an egg laying competition. It will be noted in the first column of figures that the hens laying 200 eggs or more in a year represent 32.8 per cent of all the birds in the contest. Yet, with nearly one-third of all the hens in the 200-egg, and better, class the general average of all hens entered is 176.6 eggs per hen a year. That is a very good general average for 500 layers, but with 164 birds producing record yields of 200 eggs and better, the other 336 could not have been making any extraordinary showing as producers. In the Missouri flocks the 200-eggers (and over) represented about 21 per cent of the birds entered. The general average for the whole entry was 164.7 eggs per hen. At Storrs the heavy layers, with records of 200 eggs and over, were 16 per cent of all the hens entered and the general average egg yield was 162.5 eggs per hen. Evidently, with layers specially selected for contest work, with small flocks (which are reputed to be easier to keep up to high production than large flocks), with an unusual amount of attention given to care and feeding, there is very pronounced difference in the yields of individuals and it is not easy to coax hens to exceed the speed limit in egg production. We would like to see comparative tables on these contests showing the size, weight and marketable quality of the eggs produced by all the birds entered.

* * *

In looking over the fall catalog of Chiles & Co., Mt. Sterling, Ky., we find the following sarcastic comment on high record layers:

"We again want to say that we have no perpetual motion layers; never had a hen that

"Make-Her-Lay" OAT SPROUTER

Grows the largest amount of Fresh, Sweet, Green, Wholesome Food at lowest cost

Sprouted grain is fed with two purposes in view—economy in feed bill, and production of green feed quickly.

The "Make-Her-Lay" sprouts grain surely and quickly, without souring or becoming musty.

1440 Square Inches of Surface Space

Produces enough green food to feed 200 hens for a full week. Most Convenient, Durable, Knock-Down, Fireless Sprouters made or sold anywhere, at any price. 8 pans made of heavy galvanized iron, each removable, independent of the other, with perforated removable bottoms.

The "Make-Her-Lay" Sprouter is sold with our guarantee of absolute satisfaction or money refunded. Order one now. Most dealers have "Make-Her-Lay" Sprouters in stock or can get them for you. Buy from your dealer or direct from us. Write anyway for complete descriptive printed matter.

Improver Strain White Wyandottes

first pullet, second cockerel, third hen. Chicago Coliseum, December, 1915, first hen, first pullet, 1st young pen. Stock now ready for any show. L. J. DEMBERGER, Box 89, STEWARTSVILLE, INDIANA

Made another big win at the Indiana State Fair, Sept., 1916. Winning first and third pen.

laid every week day and twice on Sunday, or that wore oviduct out laying, and had to have surgeon insert a silver tube in lieu of oviduct. Others may have such hens and be able to sell them at \$1.00 each and eggs at \$5.00 per hundred. But we think in all such cases, to use an old expression, 'Doubtful things are blamed uncertain.' When these wonderful Lady Perpetual Motion, Lady Lay Well, Lady Lay on Forever, etc., perpetuate their wonderful laying qualities in their offspring, then eggs will be worth about 1 cent per dozen. Then there will be a return to the fancy or beautiful end of the game."

Personally, we are interested in good, sound, vigorous hens that will lay from 140 to 170 eggs in a year and deliver well-shaped, full-meated eggs that will run from 26 to 32 ounces to the dozen. If she is going to give us a large percentage of eggs that will weigh from 1 ounce to 1½ ounces each, and more or less soft-shelled eggs, we wouldn't have the 200 to 300-egger as a gift. When giving the number of eggs produced, size, weight and quality of eggs should be stated also.

Last season we had two White Plymouth Rocks that laid eggs of unusually fine shape and color. These hens were mated with a male from the same parent flock—we had no individual record of the breeders. We saved and hatched a considerable number of eggs from these two hens. One laid an egg very rich brown in color and very plump and full-rounded at both ends. The other laid a rather longer egg, rich in color but of decidedly different shade. Eggs of both hens ran pretty uniform in weight, going from 30 to 32 ounces to the dozen. Some of their pullets began laying early in November. It is interesting to note that in shape of eggs and color of shells the pullets are delivering eggs that are almost duplicates of those laid by their dams. Hen No. 1 lays a rounded egg of rich reddish brown, weighing 2½ ounces or a trifle more. Her pullets lay eggs of same color and shape, which are running from 2 to 2¼ ounces each. Hen No. 2 lays a rather longer egg with a purple-brown color, which weighs from 2½ to 2¾ ounces. Her pullet—only one laying at present writing—gives an egg of same color and shape, weight 2 ounces for first egg.

Do not, in an effort to keep down feeding expenses, sell male birds off too closely. It is well to have a few extra males of your own strain for use in the breeding pens if anything goes wrong with the ones mated with your flocks. Even at present high prices the cost of one good breeding male will pay the board of a number of cockerels thru the coming winter. We like to use breeding stock that we have bred and grown,—

TRAP-
NESTED
200 EGG
STRAIN

BURLINGTON, Iowa, March 25, 1916—Dear Sir: I am pleased to report the arrival of the cockerel ordered by me and if he breeds as well as he looks you will have my hearty endorsement to others, as well as more business in the future. Wishing you success, I remain, W. L. M.

INWOOD, Long Island, N. Y., March 25, 1916—Dear Sir: Inclosed find order for 30 S. C. Red eggs. I received 50 White Leghorn chicks from you last year and raised 46 of them, 28 cockerels and 18 pullets. From these 18 pullets I have received from January 1st to March 25th 1,001 eggs. I think I will sell all my other stock and breed from your stock altogether next year. Yours very truly, S. C. W.

GUTTENBURG, Iowa, March 28, 1916—Dear Sir: Please send me your free instructive illustrated catalog, as it might do me a lot of good and I might find what I would want. Yours truly, J. R.

P. S.—A good friend of mine told me to ask you for this catalog because he has your strain in his flock.

LA SALLE, Ill., February 19, 1916—Dear Sir: Please enter my order for 50 Grade "A" White Orpington chicks. Those we received from you last year are in fine shape and laying steadily—we are very much pleased with them. Yours very truly, M. B.

MAYVILLE, Wis., April 7, 1916—Dear Sir: Chicks came yesterday morning. They are the healthiest looking I ever saw. Yours truly, A. S.

FLORENCE, Mass., April 7, 1916—Dear Sir: I am rather late in writing, but the 50 chicks came thru all right, excepting two, one dead, the other with a broken leg. Aside from that they are about as lively a lot as I have seen. Haven't lost any as yet. The 10 pullets purchased from you are yielding me nine and ten eggs daily now, which is breaking the record around here. L. J. K.

PRICE, Utah, April 13, 1916—Dear Sir: In December, 1914, I purchased from you a R. C. Red cockerel and thinking that you might be interested in the results I have had with him, thought I would drop you a few lines. Will state that a number of his pullets started laying before five months old; last year at the Carbon-Emery Fair I was awarded first and second cockerels and second pullet and this in the face of strong competition and the fact that my stock is supposed to be only a utility strain. I am still using him in one of my breeding pens and this morning had a hatch of 15 chicks from that many eggs. This Fall I think I will again draw on you for some more stock. Yours truly, J. J. W.

DE WITT, Iowa, April 24, 1916—Dear Sir. The White Rock hens I have received from you have proved to be great layers, they have got my other Rock hens beat a mile. Yours very truly, T. T. B.

With my Strains and your careful attention, the above results will be YOURS.

The **KELLERSTRASS STRAIN** of

Crystal White ORPINGTONS

First Cock at Madison Square Garden, New York

won more first and second prizes up to 1911 and 1912 at the world's largest shows, such as the Jamestown Exposition, Kansas City, Baltimore, St. Louis, Chicago, and at

Madison Square Garden, N. Y.

than all competitors combined. Since that date we have not exhibited at those shows. We advertised in advance we would not show for a certain period of time. We did not, but most of the first prizes awarded on White Orpingtons at New York, Chicago and Kansas City during 1913, 1914 and 1915 were placed on birds owned by customers of the Kellerstrass Poultry Farm—breeders whose foundation stock was direct from Kellerstrass. This should convince anyone that the Kellerstrass Strain is

The World's Greatest Strain

of Crystal White Orpingtons. This fall we exhibited our stock at five of America's leading state fairs, traveling over seven states to do so. We competed for a total of 27 first prizes and won 21 first prizes, besides a silver trophy for champion pullet in the English class, special for champion hen in the English class, specials for champion cock and champion cockerel, were all carried off by our birds. First prize cockerel was won by us at all of these five great expositions.

They Lay, Weigh and Pay

As far as we know or can find out, no chicken ever equaled the world's record for laying made by a Crystal White Orpington bred and owned by Mr. Kellerstrass. This great pullet laid 263 eggs in 272 consecutive days and then went broody, was set and she raised a fine lot of 12 chicks; nine were cockerels. The mother then grew into a ten pound hen and became famous for her fine exhibition qualities. The

nine sons were bred from by Mr. Kellerstrass for three years, thus stamping the combined egg laying and exhibition qualities of this great hen on all Kellerstrass Strain birds. We believe that today our birds are bred whiter and produce more eggs than the birds of any other strain. One customer in California reports a pullet hatched from eggs bought in 1915 to have just finished laying 269 eggs in one year. Another egg customer in Missouri reports several pullets as now past the 220 egg mark.

1,200 Choice Show Birds and Breeders Now Ready for Your Orders

First Hen at New York

We can furnish high grade utility males or females, choice breeders or show birds of the kind that win in any show in the world, and at prices that are very reasonable for their quality. Tell us just what you want, the number, age, and sex, and we will select the birds, will describe and price them. Should you order we guarantee each bird to please you, and you can look it over 3 or 4 days. Should it not please you, return same prepaid and money in full will be returned.

10 Choice Pens Mated Oct. 15

They are "all star" matings, containing only the cream of the Kellerstrass flock, the very best layers and exhibition birds in the world. Can handle only a few early orders at \$5, \$10, \$20 and \$30 per 15. Come direct to the fountain head and get the best. Free catalog, also special fall sale price list. Date of special sale extended to December 15.

birds whose breeding and ancestry we know.

* * *

For variety that keeps one from being bored, that prompts various sorts of emotions, that stimulates but does not admit of any slip back or depression, the New England climate is without a peer. If one wishes to make a collection of the various sorts of weather, with very little duplication and some particularly rare and valuable sorts, he should come to New England. The time or the season matters little, but the coast region is most favored by collectors; here, within a very short time, it is possible to collect at least 57 varieties of weather of all dimensions. Variety being the spice of life, New England is a good place to live. October 28th the hens and pullets were following the plow and scratching grubs in the mellow earth; fall plowing was like early summer work. Biff, bang! along comes an easterly storm with howling wind and chill. The scene changes and summer days return. November 11th is like a summer day, but the moon rises cold and clear and water freezes in the poultry fountains at night. November 12th comes in with gray skies and then the warm sun breaks thru; we go on a beach picnic, cook dinner on the beach and enjoy a swim in the briny ocean and come home by the mellow light of the moon. Fifteen minutes after we have put the auto to bed and begun to get settled down by the open fire to read the papers, up comes the wind, and rain and hail beat upon windows and roof. November 13th comes in mild, foggy and springlike. The sky grows dull and leaden as the fog lifts; it is a day of mists and the sun and clouds play open and shut. November 14th, the first light snow fall of the season. The Boston (Mass.) weather man says:

"No November 15 has ever been as cold since the same cold spell of 1873, so that this year may set up a new record in fall frigidity."

No lack of variety here, and we are willing to wager that we will have opportunity for another picnic, and chicken fried over a fire on the beach, before Christmas day arrives. New England climate from the last of March until Christmas suits us fine, but the balance of the year we believe we would prefer Florida or Southern California if we could make it.

* * *

Be sure to keep the stock birds comfortable and contented. Feed well and give a variety of grains, greens, animal food, and plenty of fresh water, with a constant supply of good grit and crushed oyster shells. Good care and management is necessary if you wish to obtain best results from breeding birds. Do not over-show specimens intended for breeding, better still do not show them at all if you have other good birds that can be exhibited. One show a season is plenty to make with a bird you intend to breed from; two shows well apart is about the limit of safety, and three shows in succession will be apt to ruin even an unusually hardy, vigorous specimen so far as best results in breeding from the bird are concerned. The strain of conditioning and shipment to and from the show is considerable; the excitement and long sleepless hours in the exhibition hall are not good for the bird, and the risk of disease or injury has to be reckoned with. Take good care of your breeding birds.

The Big Show season is here once more and is welcome. We hope to take in the Palace, Madison Square Garden and the Big Boston exhibitions, to meet old friends, renew old acquaintances and make new ones, and to learn more about poultry experiences of big and little breeders, as well as to view the advance in Standardbred fashions of feathered favorites. Big shows make a lot of work for the men who must report them, but they also furnish a heap of enjoyment and much that is interesting and instructive. Don't miss the big shows.

* * *

Breeding stock should be mated up early. It is only a few short weeks now before eggs will be required for hatching early chicks. Incubators and brooding equipment should be overhauled and put in commission for the season's work. If you need new equipment, get your order in early to avoid vexing delays. Hatches must start in January for February chicks and the time is close at hand. Better get busy.

* * *

Baby chick hatcheries are now booking orders for early chickens, the demand promises to be better than ever during the coming season. Hatchable eggs for January incubation are wanted. Book orders for eggs or chicks early.

* * *

If breeding stock is required for the 1917 season, get your stock birds early. Buy now and get immediate shipment. The birds should be well established in new quarters, thoroly wanted and acclimated before you begin to draw on them for hatching eggs. Traveling in a shipping coop, under present transportation conditions, is a hardship for the birds. They need time to rest and recuperate. Buy early and get as much time between shipment and actual breeding use as you possibly can. Give the birds the best possible care. If you expect to buy new breeding specimens for use any time during the coming spring, buy *now*.

* * *

Gather eggs early and often during cold weather. Do not keep eggs in a warm room. Eggs for table or for hatching purposes should be kept in a cool room where the air is sweet and there are no strong or bad odors. Temperature of egg room should not fall below 40 degrees F. or go above 60. In keeping eggs, place in a box or basket in same position as they are usually found in the nest. Do not handle or turn more than is absolutely necessary. Remember that the fresher an egg is when set the better. Ten days to two weeks is long enough to keep hatching eggs, a shorter period is better, and three weeks should be the limit.

* * *

Some poultry keepers prefer to give drinking water warm in winter time. We don't. The birds get it just as it comes from the spring. It freezes and the birds break the ice,—keep a little drinking hole open by active use of water pails. Water is supplied every morning and renewed at noon if necessary. The birds do the rest. When clean snow is abundant, we give them a pail full of snow and they generally prefer snow to water.

* * *

Breeders and layers are all housed in open-front houses. They run out of doors in yards all winter when the yards are hard and dry. If there is much cold

The **QUALITY STRAIN** of

Rose Comb Reds

After winning first cockerel and championship male at Chicago, won five of the six firsts at St. Louis, won first cockerel and pen at Kansas City, won all first prizes at Nebraska State Show and State Fair, and then at the great Panama-Pacific Exposition, San Francisco, they competed against 900 Reds, 327 of them Rose Combs, coming from 16 different states, and under Judge Tucker, who has judged Reds at Chicago for years, and Judge Shove, who has judged the Reds at Boston and New York, and judge Card, who also has judged at Boston and New York, our great exhibit at this big world's exposition won the

World's Championship

in a manner so convincing that no one can question it. Under the three greatest Red judges in the world our Reds made a win never equaled in any show of National importance by any breeder. They won 1 and 2 cock; 1, 2 and 5 hen; 1 chl.; 1, 3, and 7 pullet; 1 and 4 breeding pen, winning every first prize, a feat never before accomplished by any R. C. Red breeder at any National Show. We also won Champion Red of the show, both males and females of both Rose and Single Combs competing; won special for best colored male and best shaped male, for best colored female and best shaped female. Special for best Red male, trophy cup for best display of R. C. Reds, and cup for best display of Reds, both Rose and Single Combs competing. Our record this fall at five leading state fairs shows our Reds better than ever.

Sire of first cockerel at Chicago, winner of special for best colored male, special for best shaped male, and champion male. Also sire of first cock and champion Red male at World's Fair, San Francisco, and grand sire of first cockerel and first pen cockerel at same exposition.

Our Champion S. C. Reds

Were also winners at the 1915 World's Fair, and this year we have produced over 1,000 head as fine in size, color, shape and head points as were ever bred on one farm. This fall, at the Iowa State Fair, in a class of 160, won three firsts one second and one third. At Nebraska State Fair, in a class of 192, won four firsts, four seconds, and two thirds. At three other State Fairs won 16 firsts from a possible 16, and in competition with 409 good S. C. Reds at the three fairs. Our customers in United States and Canada.

Buff Orpingtons

Chicago and World's Fair Winners.

White Wyandottes

Winners in five states.

White Rocks

Winners in five states.

Barred Rocks

Winners in five states.

White Leghorns

Winners in five states.

Indian Runner, Mallard and Pekin Ducks, Geese, White Holland and Bronze Turkeys, are all bred by us on our 5,200 acre ranch, and the quality of all is as great as is our White Orpingtons and Reds, but space does not permit details.

Note our selling plan and guarantee in White Orpington ad on opposite page. Breeding pens of all our varieties mated since October 15, and can fill egg orders now. Free catalog and special fall sale price list.

First prize winner in pen at the World's Fair in San Francisco. Over 300 choice birds raised from this fellow in 1916. Have 200 choice sons and daughters left for sale.

An Open Letter to the Poultry Fraternity

Chas. J. Fisk, Owner
M. L. Chapman, Mgr.
D. G. Keyler, Asst. Mgr.

Wilburtha
POULTRY FARMS

27 River Road
Trenton Junction
New Jersey

Trenton Junction, Dec. 1, 1916

Gentlemen:

As progressive poultrymen, concerned in the advancement of your industry, I feel certain you will be interested in knowing of the wonderful progress we are making at Wilburtha. We are doing big things here and we're going to do still bigger ones. Let me tell you about them.

Wilburtha Poultry Farms' birds were invincible at the large 1916 fall Shows. At New York State Fair, competing in all classes, we won nine Firsts and many minor prizes. At New Jersey State Fair, we entered in 16 classes, winning 13 Firsts. Birds in the hands of our customers have been equally successful at Toronto, Hagerstown, Allentown, and other fall Fairs.

In Columbian Plymouth Rocks and Wyandottes, we have again demonstrated undisputed supremacy at the New York State Fair, winning Best Display in both varieties. It will be remembered that we also won Best Display in both varieties last winter at Madison Square Garden. Our trade has been heavy in Columbians and we have but a few more birds to spare in these varieties. It is not too early to write us about **hatching eggs** and **baby chicks** for next season. Last spring we were obliged to return hundreds of dollars, as we could not fill all the orders on these popular varieties.

Wilburtha White Leghorns: While we do not claim absolute supremacy in this great breed, we are credited with having one of the two best flocks in the world. Wilburtha White Leghorns won prizes in every class at both the Palace and the Garden last winter. This is a noteworthy achievement never accomplished by the birds of any other breeder.

At the New Jersey State Fair this fall, we won four first premiums in strong competition. We have plenty of White Leghorns in stock, both utility and exhibition birds and are prepared to furnish birds for any Show. We will match these selected birds against those of any other breeder in the world, the prices being equal.

White Plymouth Rocks: This is the first year that Wilburtha Farms has advertised White Plymouth Rocks. Mr. Chapman, our General Manager, has, however, bred them for 20 years. He considers them to be the best breed in the world. Our first exhibit in this breed was in the hen class only, at the New York State Fair. We won 1st, 2nd and 4th. One week later, we won three Firsts and Best Display at the New Jersey State Fair. We now have White Plymouth Rocks in considerable numbers, and can fill orders for business-bred birds. We can also furnish cocks, hens, cockerels or pullets that can win in any Showroom in the world.

S. C. Rhode Island Reds: We fully believe that Rhode Island Reds have a great future. Mr. Chapman and myself recently spent about ten days in visiting the principal breeders of Rhode Island Reds. We returned from the trip well satisfied as to the quality of our own Reds. Although we have not exhibited our Reds this fall, we won, you will remember, Best Display in 1915 at the New York State Fair, New Jersey State Fair and at Hagerstown, Md. Write to us for anything you need in Reds. We can certainly send you birds that will prove satisfactory for utility or exhibition purposes.

Buff Leghorns: Our entire flock of Buff Leghorns, good-will, etc., was recently sold to Mr. Thos. Henry, Jr., of Chester, Pa., to whom all inquiries should now be addressed. We turned over a splendid flock to Mr. Henry and we recommend the man and the flock to all admirers of Buff Leghorns.

In conclusion, I just want to add that we are all very proud of Wilburtha and its place in the front rank of poultry farms. We are so proud of it that we will always protect its reputation at all costs. As long as Wilburtha is Wilburtha and under my control, you may be sure of a "square deal"—either entire satisfaction in your purchase or your money back and our apology for any inconvenience.

Sincerely,

Chas. J. Fisk
Owner

P. S. Why not write Mr. Chapman today? Tell him what you want—whether utility or exhibition birds. He'll help you.

wind, or if stormy, or if yards are wet and sloppy with mud or half frozen slush, the birds are kept in the houses. If snow is deep and ground frozen, a little space is cleared in front of houses so that birds can get out-door exercise in similar manner, except that they are protected from chilling winds by board wind-breaks.

* * *

Evergreen trees or boughs, leantos of boards, or fodder corn, all make good wind-breaks for fowls in the winter season. Fowls and chicks can stand cold temperatures, but suffer much from chilling winds.

* * *

We don't know what we did to deserve it, but we are going to take our medicine without a whimper. John R. Taft, of Gowanda, N. Y., presumably after having eggs for breakfast, roast fowl for dinner and chicken pie for supper, frees his mind to us in the following verse—not wishing to keep it all to ourself, we share it with you:

If the land was shorn of fanciers
And fancy chickens grew
Just specks and spots or hit-or-miss
As mongrel chickens do.

Perhaps in time some farmer
Might mate a breeding pen,
But then—why hang it all—
We'd have a fancier again.

* * *

All this controversy about the definition of the word "fancier" and what is and why is a fancier, seems to be getting on the nerves of the reading public and we feel certain that Mr. Taft's verses, with their apt and simple solution of the whole mystery, will prove like oil on the troubled waters.

100 % HATCHES STRONG HEALTHY CHICKS

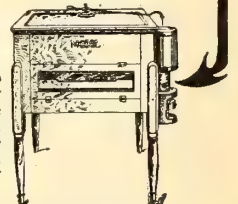

THAT'S the answer to big poultry profits, and that's the reason why you should investigate

Model Incubators and Hovers

Model Incubators are safest, most convenient and most economical. They hold the record of three consecutive 100 per cent hatches. They are fire-proof and fume-proof and they automatically ventilate themselves.

Prices \$10 to \$48.
According to Size.

Models cost no more than inferior incubators because we make every part ourselves, even the thermometer. You ought to read our guarantee.

Model Coal Burning Hovers \$15

Patent No. 1,204,836. Warning: Infringers prosecuted. Model Hovers protect your chicks during the critical first 3 weeks. Never equalled at the price. Self cleaning. Self-regulating. Spark-tight. Gas-proof. Let us send you literature.

Sanitary Hover Only \$8.50

40,000 sold in four years. All metal. Vermin-proof and fire-proof. Portable. Cleanly. Simplest to operate.

FREE—The advice of experienced and successful poultry breeders is contained in our big FREE book—"First Aid to Poultry Keepers"—130 pages.

MODEL INCUBATOR COMPANY
2 Henry St., Buffalo, N. Y. Also 3 Barclay St., N. Y. City

Intestinal worms, of several sorts, are very troublesome at times, especially with old fowl. When discovered in the droppings it is a good plan to thoroly clean up and disinfect the poultry quarters. A remedy for worms, recently reported as very successful with poultry, is the following: Mix thoroly from 10 to 30 drops (according to age and size of bird) of oil of turpentine with 4 table-spoonfuls of warm milk and two tea-spoonfuls castor oil. Bird should be kept without food until crop is empty; then inject whole dose into crop with a long-nosed, soft-rubber, bulb syringe. For flock treatment use a morning mash mixed with warm milk. Whip up in milk, before mixing mash, from 5 to 10 drops of oil of turpentine per bird. Lesser dose for small fowls. Give this medicated mash for three mornings in succession, feeding fowls early in morning when crops are empty. If rectified oil is used the fowls will eat the mash more readily, as it is practically free from unpleasant odor and taste.

* * *

Camphorated petrolatum applied to the nostrils and roof of mouth, after first cleansing the parts with warm water, is an excellent remedy for simple catarrhal colds of poultry. To get best results, apply when sneezing and snuffling is first noted.

* * *

Scaly leg is a parasitic disease, caused by a small scab-mite. A good remedy is the following: Mix 15 parts of oil of cade with 30 parts each of lard and soft soap; then thoroly stir in 15 parts of sublimed sulphur and 10 parts of calcium carbonate; add the sulphur gradually and work whole mixture until it is uniform. First cleanse the fowl's legs with warm soapy water to remove dirt and loose scales or crusts. Then dry thoroly and rub in the ointment. Apply every other day until three applications of ointment have been made. Three days after last application, wash legs well with warm water and soap and then rinse with cool water.

D. J. Browne, writing in 1849 "On the Laying Propensities of Hens," said:

"The act of laying is not voluntary on the part of a hen, but is dependent upon her age, constitution, and diet. If she be young, healthy, and well fed, lay she must; if she be aged and half starved, lay she cannot. All that is left to her own choice is, where she shall deposit her egg, and she is sometimes so completely taken by surprise, as not to have her own way even about that. * * * To every hen belongs an individual peculiarity in the form, color, and size of the egg she lays, which never changes during her whole lifetime, so long as she remains in health, and which is as well known to those who are in the habit of taking her produce, as the handwriting of their nearest acquaintance."

Leghorns Are Money Hens

S. C. White Leghorns stand the test of record keeping. Recognized everywhere as the commercial hen, lay well in winter; cost little to raise; produce more eggs and meat per pound of food than all other breeds. Winners in all egg-laying contests. Among White Leghorns Yesterlaid Range-Raised Laying-Leghorns are the strain supreme, so recognized by 24 State Institutions and Exp. Stations that purchased Yesterlaid stock or eggs. All "Yesterlaid" have blood records of—laying at 4½ months—261 eggs a year—470 eggs in two years. Find out why White Leghorns pay best.

Write for free literature.

YESTERLAID EGG FARMS CO., Dept. 5 PACIFIC, MO.

"Homestead"

The Word that Dominates in the World of Campines

Year after year, show after show, the Vigorous Strain of Silver Campines has forged ahead, until today they stand without an equal. As the months go by, just watch our winnings at the big shows, and to them add this wonderful list of wins:

At the New York State Fair, held at Syracuse, September, 1916, with a strong class of 119 birds, our first prize cock, and to them add this wonderful list of wins:

ere! was pronounced (by several leading judges) the best Silver Campine ever exhibited anywhere. At this show our complete winnings were: 1st and 2nd cock, 1st and 2nd cock-ere! 1st and 2nd pen, 1st display, 2nd, 3rd and 4th pullet, 2nd and 5th hen, and 2nd cock-late to be judged.

On account of delay in transportation, our birds reached the Great Allentown Fair too late to be judged.

At Brockton, Mass., Fair, October, 1916, we entered one pen and 2 birds in each single class. This, as everyone knows, is "the fair" of New England. We won 1-2 cockerel, 1-2 pullet, 1-2 hen, 1 pen, 1-3 cock. Color and shape special for best male, also for best female. Gold special for best six birds in class.

At Hanover, Pa., Fair, entered four birds, won 1 cock, 1 hen, 3 cockerel, 3 pullet. Write for prices and be sure to state if you desire exhibition or breeding birds. A beautiful catalog full of valuable information will be sent free, but we will appreciate a two-cent stamp for postage.

POULTRY ACCOUNT BOOK, with space to keep a daily record of your flock for one year, price 25c. American Poultry Journal Pub. Co., 542 S. Dearborn Street, Chicago, Ill.

POULTRY IN BRAZIL.

Richard P. Momsen, Vice-Consul of the United States, at Rio de Janeiro, Brazil, where he has been stationed for the past four years, at present in the United States on a leave of absence, has undertaken a commission for the National Brazilian Poultry Association to deliver to the Field Museum of Natural History, Chicago, Illinois, a silver medal of the type awarded at the First National Poultry Show held in Brazil.

Mr. Momsen, who was formerly engaged in raising thoroughbred poultry in Wisconsin, obtained from one of the American Poultry Journals a reproduction of the "Gallus Bankiva", the original mounted specimens of which are on exhibition at the above mentioned museum.

The Brazilian Poultry Association has presented this medal to the museum in recognition of its appreciation. Mr. Momsen, who for two years was Secretary of the National Poultry Association of Brazil, and

has also served on its Board of Directors, took an active part in promoting the First National Poultry Show ever held in Brazil, at which over two thousand birds were exhibited. Since then exhibitions are being held each year, usually in July or August, these being the winter months in South America, the seasons there being reversed from those here. Mr. Momsen states that the introduction of American thoroughbred poultry, as well as poultry appliances into Brazil, is meeting with increased favor.

The American varieties most in demand are the Barred and White Plymouth Rocks, Rhode Island Reds, White and Silver Laced Wyandottes, White Leghorns and Black Minorcas. The English Orpingtons are preferred over the American varieties because of their superior weight. Most of the poultry activities in Brazil are still in an experimental stage, there being many local problems still to be solved, among them being the difficulties with peculiar tropical diseases. The fact that corn is practically the

only cereal produced in Brazil, which necessitates the importation of wheat, barley and oats, and consequently makes their price very high has militated against the establishment of large utility farms.

American poultry breeders and dealers wishing to enter or enlarge in their Brazilian business may send the printed matter in small quantities to the Sociedade Brasileira De Avicultura, Caixa do Correio 316, Rio de Janeiro, Brazil.

The following are the most important breeders and dealers in Brazil, who would also be interested in receiving catalogs and other printed matter:

Dr. Calmon Vianna (Ascurra Basse Cour), Ladeira de Ascurra 55, Rio de Janeiro.

Dr. Delgado de Carvalho (Posto Avicola do Rio de Janeiro) Rua Mattoe Rodrigues, 36, Rio de Janeiro.

Manoel Pinto (Villa Ideal), Rua 8 de Dezembro, Rio de Janeiro.

H. Moraes, Rua do Ouvidor 63, Rio de Janeiro.

Get the Cyphers Company's Big New FREE Year Book

IF all the books ever written on poultry were destroyed and only this one complete book left, it alone would enable you to start right. Why? Because this book contains the boiled-down experience of the whole poultry industry. It gives the real, hard facts on which profitable poultry keeping is based.

Cyphers Co.'s Big 1917 Year Book Now Ready—FREE

A veteran of the poultry industry—one who by sheer force of ability has risen to a place of power and wealth in the industry—recently said: "No matter what you want to do in the poultry business, be you big or little, write for the Cyphers Year Book. You might spend \$100 and not get the practical information this book brings you free."

Cyphers Coal-Burning
Colony Hovers
Price \$15.00 Up

Broods 300 to 1000 chicks at one time. Has automatic regulator and plenty of heat, no crowding. Raises strong, vigorous chicks, uses little fuel, and is simple and easy to operate. Fully described in our FREE Year Book. Write for it and get full details of Cyphers wonderful hovers, the best brooding devices you can buy anywhere at any price.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

"The earth has grown old with its burden of care,
But at Christmas it always is young;
The heart of the jewel burns lustrous and fair,
And its soul full of music breaks forth on the air,
When the song of the angels is sung."

DECEMBER! Another year nearly gone, another year soon to open. I wish that each reader of the AMERICAN POULTRY JOURNAL could drop his and her every sorrow and care, as each steps from the old to the New Year. But that cannot be and even if it could, some of us would not have it so, for if we were to drop our sorrows we would, too, drop memories, and most of us have memories glorified by sorrow. May the new year be good to all of you, my readers, and may each of you be of help and cheer and comfort to some one who needs the service of the kind and the unselfish. The more we do for others, the more we do for ourselves.

* * *

The opening of December will find the work in orchard and garden completed here in the great North. And now we will put in a part of the long winter evenings planning for next season's work. It is more than fun these winter evenings, sitting before the open fire reading with our loved ones about, with apples, popcorn and cider in plenty. The log in the fire-place burning brightly is giving back now all that the tree received thruout its many years of life—sunshine, storm and memories of happy days when its limbs cradled young birds, and butterflies built their fairy-like palaces on its trembling leaves. I think I see all this in the crackling log on the hearth, the spitting of the log, the sputtering, the popping and the various little explosions as they boom. There in the smoke I see the dancing fairies, or is it the spirit of the wood nymphs who used to play about

the giant tree whose parts are now making my library so pleasant? And so in the mellow glow of the friendly fire, we plan for the year to come. We shall, no doubt, build many castles which will fall, but we will have the pleasure of constructing them. And some will endure and serve us thruout the year.

* * *

I am in receipt of cards announcing the marriage of Mr. Paul C. Stark and Miss Theodosia Armstrong. Mr. Stark is a member of the firm of Stark Bros., Louisiana, Mo. Congratulations!

* * *

In the North, grape pruning will be carried on to some extent this month. In this connection, Prof. Burgess says:

Grape pruning experiments carried on near Council Bluffs last season, to compare the "spur" with the "long cane" system of pruning, showed that vines pruned after the latter method yielded an average of 41 per cent more grapes than the spur pruned vines.

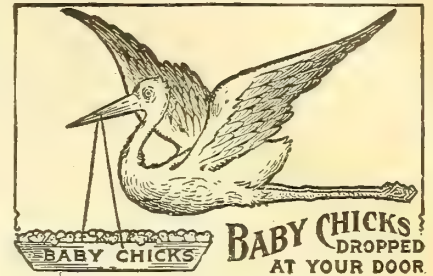

The tests were carried out in vineyards owned by J. W. Dorland, W. G. Rich, L. J. Johnson, Charles Konigsmarker and E. A. Hess, all of Council Bluffs.

In long cane pruning, some of the canes of the previous year's growth are left for fruit production, while others are cut back to one or two buds to stimulate production of new vigorous shoots and renewal spurs. Thus non-productive wood is replaced by vigorous young canes.

Intelligent grape pruning is based on these principles: (1) Fruit is produced on shoots which spring from one year wood and hence, a certain amount of last year's wood must be saved for fruit production, and provision made for renewal growth which can be used the following year; (2) Generally speaking, operations which reduce the vigor of the vine tend to promote fruitfulness, and operations which limit fruitfulness tend to promote vigor.

If too much wood is left on the vine, over-

Fall Spraying "SCALECIDE" Does the Work Controls Leaf Curl Cleans up the Trees

Don't put off the dormant spray until the spring rush. The weather may be bad or the ground too soft. Spray this fall and make sure of controlling peach leaf curl, San Jose scale, pear psylla, apple canker, collar rot, etc. You can save trees now that would die before spring. Use "Scalecide." Better and cheaper than lime sulphur—cuts the labor

bearing results; if too little is left, the vigor of the vine is directed to the production of woody growth instead of fruit. A happy medium between these extremes will give the maximum yield every year.

Before the long cane system was put in operation on the vineyards on test at Council Bluffs, a large amount of non-bearing vine was allowed to collect, the spur system being used.

I have practiced the "long cane" system with my vines and find it entirely satisfactory.

* * *

In answer to W. W. Trundale, Minn.: Yes, you can safely plant the Oregon Champion and Portage gooseberry, Red Cross and Diploma currants "forty miles south of Minneapolis." I am not sure the Royal Purple raspberry is quite hardy enough for your purpose. Try out a few.

* * *

Be sure to mulch quite heavily the fruit vines and shrubbery planted this fall. Important.

* * *

Being a subscriber to the American Poultry Journal, I read your items on Horticulture with much interest. Will you kindly tell me what you think will be the best varieties of apples, cherries and early and late or fall bearing strawberries to plant in this locality.

I have a town lot and wish to set out a few trees and plants. The trees to be planted in the chicken yard. I would want trees and plants that would produce both quantity and quality.

Minnesota.

E. S. Holm.

You will find the Wealthy Patton's Greening, Eastman and Iowa Brilliant entirely hardy. With the exception of Iowa Brilliant, the above named varieties are fall apples. You will want one or two Duchess for home use. You will surely want some Delicious. D. M. Dickerson, of South Dakota, reports his Delicious trees have withstood forty degrees below zero. E. C. Tullidge makes a like report on his Wisconsin orchard of Delicious. Early Richmond and Montmorency cherry are best. Make the planting largely of the last named variety. I would advise that you plant only enough of the fall bearing strawberries for home use. For commercial use plant Senator Dunlap and Havaland for early, and Sample and Brandywine for late.

* * *

I read with more than common interest Dr. Woods' remarks on fall bearing strawberries November AMERICAN POULTRY JOURNAL. I think he is wholly right as to a few of these plants for the home garden. I advise my readers not to plant these sorts for commercial purposes.

* * *

In answer to H. H. Hoover, Montana: I am unable to tell you which would be better for your twelve acre orchard, Senator or McIntosh Red. McIntosh Red grows to perfection in your state and has been very profitable for all growers there. It always is in demand at high prices. The Senator is a fine apple and some Montana growers find it more profitable than McIntosh Red. You will probably make no mistake in planting your new orchard to McIntosh Red, with every third row of Senator. You will then have sufficient pollination.

STILES' COLORED LEG BANDS

SAMPLES FREE

Used by poultry raisers everywhere. Made of seasoned material. Stay on till taken off. Identify without handling. On and off like a key ring. Distinctive colors, Red, White, Blue, Black, Green, Ruby and Buff. Mention variety when ordering.

H. H. Johnson
"The Incubator Man"

Note the new handy thermometer holder. Thermometer comes into view the instant you open the door. Saves time and stooping.

New big oil drawer beats getting under the incubator to fill and clean lamps, don't you think? Saves work and attention.

New Features in Old Trusty

M. M. Johnson
Inventor of Old Trusty

Make Big Hatches Easier Than Ever

TO make Old Trusty a better hatcher would be out of the question. We couldn't improve the case, nor the time-tested heating system. Bigger hatches would be impossible, for Old Trusty leads the procession for biggest average hatches year after year, even in coldest weather.

These new features we added simply as conveniences. I call them work savers. For instance, the big oil drawer holds five to six quarts of oil. Saves filling at night and morning—calls for less watching. The thermometer, as you can see above, is fastened right onto the inside of the door. It comes out to meet you every time you open the door. Saves groping around for it in over the eggs.

Mail Coupon **Get Our New Book FREE**

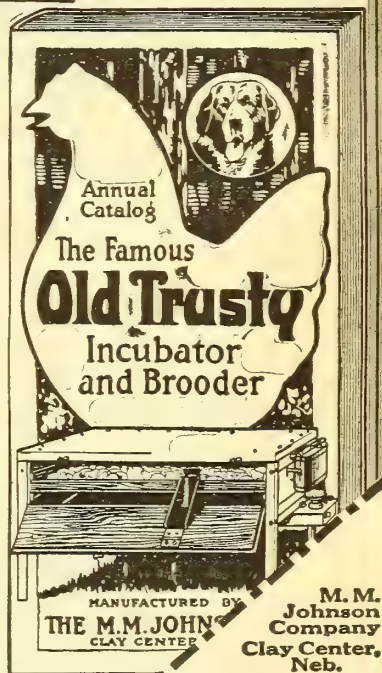

About 700,000 satisfied owners now boost for Old Trusty. Not a single one has ever found anything lacking in Old Trusty. They have made big average hatches year after year even in coldest weather. *Ten years* of big profit hatches for Francis A. Kressler of Walnutport, Pa., at about 20 cents each, is just one of thousands of Old Trusty's records that come to our attention. Of course owners are most always boosters, but the fact is Old Trusty has hundreds of thousands more owners than any other incubator. Why? Because Old Trusty was invented by a practical engineer and poultry raiser, is built by people who put their entire time and attention to it and who depend upon it for their success. Old Trusty could not be built better no matter what price you would pay for it. Better materials are not made and no one could think of a better construction. Yet you get Old Trusty at a low price. The reason is, it's built in the world's largest incubator factory with the latest cost-saving machines and equipment. We keep the quality up and the price down.

We Pay the Freight

SEX CONTROL

Offers You the Greatest Opportunity of Your Life

Sex Control is a proven fact and has been demonstrated to the entire satisfaction of scientific men and live stock breeders of national repute, and our Spok Ahne Strain of Langshans has made good, from Toronto to Corpus Christi, from Massachusetts Bay to Iowa, and back to North Carolina, and they will continue to make good, as long as they have a decent show. We now offer to sell the entire strain, consisting of the foundation hen, One Hundred, two of her oldest daughters, and her magnificent son, seven young hens that are very good, some of them ¾ the blood of Hundred, about a dozen fair pullets, three ready for service males, and one cockerel. With the flock will go the reputation, name, good will, and established business and all correspondence, inquiries and orders. Every bird will be pedigreed, and banded, and guaranteed a producing breeder, that will give you more females than males in her chicks. The price, Four Thousand Dollars (\$4,000), one-half cash, and balance in 12 and 24 months, without security, if your references are good. Failing to sell the flock, we will offer one pen, our selection, four females and one male pedigreed, and every female guaranteed to give you 75% females, or replace free. Price, \$1,000.

Whether we sell the flock or not, the price of eggs this season will be \$25 per setting, 15 eggs, eight chicks, six of them pullets, that will produce 70% females, or replace free, we add our guarantee to that of the purchaser of the flock, in case of sale. Place your order for eggs with us at once.

This strain of fowls is a finished product, ready for some one to make a fortune with. Our work is to develop a new strain, and by disposing of these fowls we will be able to devote our attention to the four other strains of Black Langshans we now have in hand.

Have just acquired 160 acres of land, which we are now developing with a view to establishing a herd of registered Sex Control Jersey Cows, which will be carried in addition to our flock of Langshans. Our interests will remain with these fowls after the sale as fully as now. We appreciate your correspondence, welcome your inquiries, but must have your order if we are to be of service to you. We are breeders, not dealers, and issue no catalog, but can give you value received for every dollar you send us, from \$25 for a setting to \$4,000 for the flock.

HERB E. SHARP LAN SHAN FARMS
R. F. D. 3, SPOKANE, WASH.

I would like to know if it is possible for me to take up shrubby plants, asparagus and pieplant roots, also small evergreens, cherry trees, currant bushes, shrubby and lilacs, also iris and peony roots this month. We have to sell our home and I have permission to remove these things and wish to take them to our new home, to help us feel at home. I have heard that they can be taken up in the fall and kept until spring out of the ground. Is this so, and if it is, should it be done before or after the ground has had a freeze, or will it be all right now that we have had quite a freeze but the ground not frozen very much, if at all. I will be very thankful if you will tell me, for I have worked hard to fix up things here and a new home without any of these things will seem even less like our home.

Iowa. Mrs. C. E. Draper.

All of these things, with the exception of strawberry plants and the evergreens, can safely be taken up and planted this month, or heeled in, provided the ground is not frozen. In this case if the trees and plants cannot be replanted it would seem as tho some protected spot can be found where the ground is not frozen where they can be heeled in. It is surely worth the effort. I would strongly advise against trying to keep these things in storage this winter.

* * *

Each season I await with interest the report of L. R. Johnson of Missouri regarding the behavior of his grape vines. Mr. Johnson has growing on his grounds about all the varieties of grapes of worth. His report for 1916 is of great interest. In the *Rural New Yorker* he says.

Goethe.—It is now the 23rd of September, nearly two months since the first grapes began to ripen, there has been a breath of frost, and still there are vines where sweet and luscious table grapes may be found. All of these are Munson seedlings, except one, the finest of all, and that is the Goethe, which also has the distinction of being the largest vine in all the vineyard, with a crop commensurate with its size. For a space of 12 feet or more one may stand before thick-hanging clusters of those big mouth-filling grapes, and help oneself as from a long counter. And these grapes will continue to hang for many days yet, for no bird now seeks them out, the appetite for grapes having apparently left the feathered rangers. I have tried sacking the Goethe, but found it a failure; the fruit will speedily decay when deprived of air circulation. Speaking of sacking, I find a great difference in its influence on varieties. Some improve under cover, some are unchanged and some deteriorate. Woodruff's Red would not stand it, but the thin-skinned Brighton kept wonderfully well, shriveling up, at last, like a raisin. Campbell's will keep perfectly for six weeks from the time they begin to ripen and the Wilder is another good keeper, as are most of Rogers'.

Comparison of Varieties.—Rogers was one of the great benefactors of viticulture, no one to compare with him unless it be Munson, whose work is still on trial. He gave us a group of new varieties that are unique in several characteristics, size, quality, beauty and as keepers. For a single variety we yield at once to Concord in its universality of success and popularity, but the grandest and most valuable of its family, as I find it here, is Campbell's Early a grape without a peer, the king of all. It is true there are clusters of Wilder that are as beautiful, but Campbell's will last as long, and is on the market receiving the high prices of the extra earlies long before Wilder is ready. It is paid more compliments than any other grape in my large collection, and attracts more attention and inquiry. It is the only grape that the Italian fruit vendors will buy without question, day after day, just like they do bananas, and keep a bulk of it always in their windows. It demands the highest price as an extra early and because it has no rival, it continues to demand it thruout the season and the last basket in September brings the same money as the first one in July. So much for Campbell's. I speak with confidence because it has maintained its rank as premier for 10 years without a failure. Yet a mile away a brother fruit grower pronounces it a failure, but he evidently failed to satisfy its two demands respecting which it will take no refusal. These are high feeding and short pruning. These it must and will have before it will show you what it is capable of. Every year it should be fed stable manure like cabbage, and pruned to not over 24 buds, with an average of 20. Even then it will steal a march on you by putting out two shoots from one bud. Great is Campbell's. I could make as much money

LEG BANDS

THREE KINDS

Five sizes, pigeon to turkey. State breed. Come bent ready to apply. 12-10c; 25-20c; 50-35c; 100-60c. Sample 2 cents. Also ear tags for rabbits.

Southern Poultry Supply Co. 928 Conti St. Mobile, Ala.

and have the table supplied during the whole season from first to last, with just that one grape and not feel much deprivation at the absence of the others. Probably I could make more money, for Campbell's would fill the bill for every kind of grape want, unless it be one for white varieties.

Moore's Early.—This is the Missouri market grape for an early, and gives satisfaction, for it is as easily grown as the Concord, and no more exacting. At first glance you might think it a peer of Campbell's but acquaintance would show you that Moore's is inferior in quality, beauty, size of bunch, productiveness and shipping and keeping value. I cut all of Moore's before I cut Campbell's, for the latter will not crack no matter what the weather.

New Sorts.—A new grape that may have a great future before it is a cross between Campbell's and Brighton, made by Prof. Bachmann of Arkansas. The sample bunches that I saw seemed to be the equal of Campbell's and to resemble it closely, but it may prove superior. The one defect in Campbell's is imperfect pollination, which results in many imperfect clusters which require fashioning over with the knife before going into the basket. Two new grapes that fruited here for the first time were the Regal and Lucile, varieties highly praised in some Eastern catalogs. I found them both to be heavy croppers of large, handsome clusters, quite superior in this respect. The Lucile makes a very long cylindrical cluster without shoulder; red in color, fair in flavor, but a little foxy. It has kept well in sacks, but did not color up so well; was not near so rich in hue. I consider it very promising. The Regal is also a red, has a shorter, more compact cluster and ripens rather late. It is fair in quality and not foxy. Tested by the first year, it is not the equal of Lucile.

Lucile fruited for the first time on my place this season. It is a heavy cropper here. It is a rampant grower, but unlike Niagara ripens all its wood. I found that unless I treated Campbell's Early as Mr. Johnson directs I could get no fruit. I am afraid my crop of grapes will be light next season. During July and August we had a spell of exceedingly dry weather and the vines made little growth. During September and Octo-

ber we had constant rains and the vines tried to make a normal growth of new wood. As a result when I came to prune the vines I found much wood which was not matured. This forced very close pruning, which for the Concord and Niagara and Diamond is not good. This fall I planted a few vines of the Wallis Giant. This is said to be twice the size of the Concord in bunch and berry and entirely hardy in vine and foliage. I also planted a few of the Delicious, a new red grape, for trial. Will report on this in due time.

* * *

In answer to Mrs. C. P. Lane, Michigan: Dwarf pear trees sometimes break off near the ground, where the trees have been grafted on quince roots, but this can be avoided by keeping the trees well cut back each year, and having the branches come out near the ground. You should remember that Dwarf pear trees should not be grown high, like the standard trees. I think this will explain why your Dwarf trees have broken off near the ground.

* * *

It is good these days to go out in the orchard and see the trees standing clean by reason of the fall spraying and to note that all has been done for them that should have been done. What a lot of comfort we can get by doing the things we should do.

* * *

Everywhere I go I see apple trees suffering because their roots are not properly drained of water. In many cases the owners of the trees know they should give the water a chance to get away, but to put in tile is expensive and they do not do it.

May I trouble you to send me the location in Texas of Mrs. W. K. Danley, whose letter you gave in the American Poultry Journal, page 1133, October number.

I understand the Argentine blind ant is spreading from the neighborhood of New Orleans and is quite destructive of vegetation. Being the owner of some Gulf Coast property, am interested.

Illinois.

Chas. S. Hart.

Will Mrs. Danley give our readers further particulars as to the species of ant that is doing so much damage in her garden and fields? Or write Mr. Hart at 803 Dempster street, Evanston, Ill.

* * *

Would you kindly inform me thru the column of Horticultural Department if you know of any grower who makes a business of raising the cut leaved weeping birch, and what do you think of the Cypress tree for southeast Wisconsin? Do you consider it more profitable to grow the dwarf than the standard pear? Do they bear younger? From an advertiser for many years.

Wisconsin.

Dawson Bros.

You can secure the cut-leaf weeping birch of almost any important nursery company. I do not think the cypress tree hardy enough for planting in Southeast Wisconsin. By all means set out standard pear trees if you are to plant a commercial orchard, or a home orchard for that matter. If one is very crowded for room it would be all right to plant the dwarf trees. Yes, the dwarf trees bear somewhat earlier than the standard trees.

Shoo Fly Plant

Another remarkable botanical curiosity. Though quite odorless, flies will not remain in a room where it is grown. Bears very pretty blossoms; blooms summer and winter. Grows rapidly from seed. Extra large packet of specially selected seed, 15c packet, 3 for 40c, prepaid.

Weather Plant

NATURE'S WEATHER PROPHECY. By mysterious changes that take place, this remarkable plant accurately forecasts the weather many hours in advance. Will grow anywhere all the year around. An interesting house plant. Bears large, fragrant, pink, butterfly shape flowers. A very prolific bloomer. Seeds, 15c packet, 3 for 40c, postpaid.

Norman Ovri, Dept. A Pelican Rapids, Minn.

Ship your eggs safely in Sefton Anchor Brand Boxes

Every egg rides in a private padded cell. The walls of every cell are scientifically constructed of resilient fibreboard, corrugated straw paper and cushions of air chambers. Made by a method over which we control the patents.

We get eggs from the country every week in Anchor Brand Boxes—and the eggs always arrive in perfect condition. Out of 200 dozen received by one man in the last fifteen months, 2 eggs were broken. Out of 250 dozen received in the last year by another city consumer, only 3 eggs were broken.

Ask your paper jobber or drop us a card. We'll forward illustrated price list.

Score Card for Plymouth Rock Classes.

I READ with interest in the October number of the *National Barred Rock Journal* a paragraph which runs as follows:

"The future success of the Barred Plymouth Rocks does not lie with a few of the so-called big breeders, but with the farmer, the back-lot poultryman, and the small breeders."

Carrying out this idea, the proper place to start the reform is in the large poultry exhibitions, where the judging should be on such a plan as will insure to every exhibitor not only justice, but

Single Comb R. I. Red cockerel. Owned by Geo. H. Shoenhard, Box 17, Freeport, Ill.

a chance to thoroly understand the relative merits of the exhibits, to know why and how one specimen is inferior to another, so that the back lot poultryman and the farmer, when competing with the professional exhibitor, may win if he has the birds, and may be satisfied as to why he did not receive the premium, by intelligent comparison with the winning birds. This condition of affairs can only be brought about by the score-card system, and at the big Boston Show in Boston in 1917 arrangements should be made which will insure

judging which will bring about this result.

I have written to the secretary of the association on these lines, requesting that two of the best known judges be employed, and that I will guarantee to the society the amount necessary to pay for one of them, the society to select both; that the birds in the Plymouth Rock class are to be judged by the score-card, and the average of the cards to determine the awards.

I feel confident that unless some arrangements of this kind is soon put in force in this state that the state appropriations for poultry shows will be withdrawn, as comparison judging which permits the judge to say, "I awarded the prize so and so because I think so," and allowing the exhibitor the only explanation as to why he did not win to be that he did not win because the judge thought so and so, but why or on how many points no one knows, in many cases not even the judge himself, the old explanation of desiring to "keep in" in a large proportion of cases, unless confined to a written statement in the form of a score-card, determines the awards.

If the Barred Plymouth Rock breeders, big and little, take this matter up and insist on what is just and right, the matter can speedily be remedied.

Trusting you may be able to stir the Barred Plymouth Rock breeders up to the point of adopting this or some better plan which will promote larger and better exhibits.

Worcester, Mass. John B. Bowker.

From Western Oklahoma.

Being a lover of fine poultry and living out here where grains are cheap, perhaps my experience with poultry on a small scale and as a side line may prove interesting. These broods have had unlimited range.

In March I purchased two broody hens at fifty cents each and two sittings of White Plymouth Rock eggs at thirty-five cents per sitting. On April 18, I took off twenty-two chicks, one was droopy and I immediately killed it. I gave the chicks all to one hen and sold the broody hen to a neighbor for the same as I gave for her.

On June first my hen began to lay and laid thirteen eggs and became broody

again. I bought another sitting of eggs for her at the same price and in July she hatched fifteen chicks out of sixteen eggs. On August 14 she began laying again and laid seventeen eggs and then became broody again and at this writing (September 21) shows promise of another good hatch.

On August 21, I sold my 21 chicks, consisting of nine pullets at seventy-five cents each and twelve cockerels at one dollar each, for a total of \$18.75. I now have a stock of fourteen chicks on hand, which at 20 cents each would amount to \$2.80, one hen valued at fifty cents and one hen sold for fifty cents, total \$22.55.

My expenses were as follows:

Two hens, 50 cents each.....	\$1.00
Three sittings of eggs, 35 cents each.....	1.05
Prepared chick food, louse powder.....	.55
Kaffir, wheat and maize.....	1.00
Total,	\$3.60

Besides the pleasure, I figure a gain of \$18.95.

Laverne, Okla. L. V. Mahaffey.

Weight of Eggs from Baker's Standpoint.

I have been reading the AMERICAN POULTRY JOURNAL with increasing interest for nineteen years, always finding good and interesting articles on some subject. Now my hobby is in the balance of justice, the size of eggs, and should the pen of Bro. M. C. Wilson's Leghorns land on my plant, he will hear from me about the eggs they lay. I am pleased to deal with the commercial end of this contest, using no names or breeds, as this is not a breed advertising contest but a contest of justice, to place credit where real credit belongs.

Most certainly the hens laying the largest number of pounds and ounces in a contest should be favored beyond the egg number class. Being connected with and having studied the baking business, I will present the commercial value of large eggs versus small eggs to the baker.

A small egg or one hundred small eggs will not whip up the quantity or quality of cake dough or batter that a ten to fifteen per cent less number of large eggs will. The large eggs whip a stiffer air-cell or wall and the sponge or dough is therefore lighter and of much greater quantity. That is, one hundred eggs of each kind beaten the same, the amount of finished product will be greatly exceeded by the large eggs, and even in creaming, the better and larger the eggs, the better and more product, the sugar and butter work up better,—quality of eggs being the same, of course, from strong vigorous hens.

The number of eggs required to do a batch of work is greatly in favor of the large eggs. Six large eggs will easily do the work of seven or eight small or medium sized ones, or ninety large eggs to one hundred and fifteen small eggs.

There is also the particular baker who discriminates. I recall a German baker from Ohio who was with me a few years ago. He was always particular about his mixing and always demanded that I get the best and largest eggs for Sunday cakes and fancy baking. I cannot say that cakes made from large eggs are richer, but the whites and yolks always whip up to a nicer creaming and produce more body to the finer grained product.

I have bred several breeds of fancy poultry, not including Bantams, and the

Mention AMERICAN POULTRY JOURNAL when writing to advertisers.

largest eggs invariably bring a better price and demand than small eggs. The loss by shell is greatly in favor of the larger eggs. This is noticeable when eggs are weighed and when using one hundred to a thousand eggs per day, the size of the egg content cuts some figure. For when it is easily seen that we can save from twelve to eighteen eggs to the hundred by using large eggs, when eggs are bought by the dozen as at present, of course the hens that produce the large eggs have it all over the small egg hens and should be given the credit due them. Just as the salesman who sells a \$115.00 bill of goods gets more commission than one who sells \$90.00 worth. Money is what counts on both sides of the ledger. The net profit at the end of the year is what every business man looks for.

Some claim that the hen that gives up the small egg does so more often, but this is not always so. I have in mind a hen under my knowledge, twenty months old, that has laid in record class since she was four months and twenty-one days old. Her six eggs last week weighed thirteen and one-half ounces. Seven of her eggs will weigh fifteen and three-fourths ounces or approximately a pound. She weighs six pounds and two ounces, is now in full moult, eggs always beautiful outside and perfection inside.

Are eggs of a small size equal to hers, or is the hen that lays the small egg equal to her? No, not in cash or looks, but the cash is where I base my views; from the egg's price and the baked product for the table. Which, my dear sir, would you prefer as a gift or purchase? But this hen is not the only hen that goes up to her owner's bank with two and one-fourth ounce eggs. The grand poultry industry is full of such commercial producers. Should hens that lay a few more small eggs be classed with hens that lay as this industrious producer provides for her owner? Not as we can notice, for these belong to the discriminating class.

Should any International Egg Laying Contest put a pen of hens that lay eggs of two and one-fourth ounces, or one thousand eggs of two thousand, two hundred and fifty ounces, against hens that lay eggs of one and one-half ounces or one thousand two hundred eggs of one thousand eight hundred ounces, and not give the former the ribbon and the credit, why something must be wrong "up the creek," if they did not. Which is worth the most, seven eggs that weigh fifteen and three-fourth ounces or eight eggs that weigh twelve ounces?

The way to get at the value of the hen or her eggs is by comparison, just as pointed out in our Standard. To do this we must compare the relative production of the hens. 'Nuf sed.

Shelby, N. C. O. F. Martin.

S. C. W. Leghorn BABY CHICKS

from the largest and best equipped Leghorn Plant in the N. E. States

From a hatching capacity of less than 3,000 eggs six years ago we have grown to over 75,000. We have always specialized in S. C. W. Leghorns, and today there are thousands of poultrymen breeding our strain of birds exclusively. Our Leghorn chicks are all of one strain and breeding,—no English blood in our stock, as we wish to sell good looking, good sized stock that lays good eggs.

Our plant is organized on a trap-nest basis, and we know of no other farm in the country that is doing more consistent work on these lines than we are. The coming season we shall be trapping more birds than any three of the leading contests, and the good work we are doing is bound to tell in the quality of the chicks we are selling. All our pens the coming season will be headed by males bred on high producing lines, and we can promise you better layers than ever before.

The Secret of Our Success

we attribute not to excessive advertising but to the real satisfaction our customers have been receiving from our stock. They are nearly all successful, because our chicks have the breeding and stamina back of them. The Lord Farms' strain of Leghorns is bred to "live and lay" and we mean "exactly what we say."

Buy Your February, March and April Chicks Now

If you wait until just about the time you need them you will be unable to get stock from us, as the demand for our chicks is 50% to 100% more than we can produce. Lay your plans now for 1917 and get started with a good strain of thrifty, good looking, pure bred American Leghorns. Get a strain that not only lays large quantities of eggs, but good sized white eggs, that will bring the top prices in the market. We can take your order for 25 or 10,000 chicks.

PRICES OF BABY CHICKS

25—49 chicks	17c	100—499 chicks	15c
50—99 chicks	16c	500—999 chicks	14½c
1,000 or more chicks		14c	

Sit right down now while you are reading this advertisement and tell us how many chicks you need for next spring's delivery, or at least write us for our 104-page catalog, free. This is a different kind of catalog than any you have probably ever read. It is a book of genuine information and written by a practical man of over twenty-five years' experience in the poultry business.

If you are going to breed your own chicks next year, buy our high record bred cockerels. Every one of these is bred from 200 to 288-egg stock; prices from \$5.00 up. We have a few big, thrifty, well grown cockerels of the same breeding, but a little off color, for \$3.00 each. We also have 75 two-year-old cock birds at only \$3.00 and \$5.00.

Every cockerel we ship is sold subject to your approval, or we will refund your money and pay the return express charges.

If you are looking for the utmost satisfaction in your poultry business you cannot make any mistake in trading with The Lord Farms. Address either

Sowing Rye in Runs.

I have read articles for and against feeding rye to poultry and as I have had some experience the past year with feeding rye, would like to pass it along.

My yards are divided into four pens of four rods wide by eight rods long. These I have cross-fenced so as to change from one field to another. Last fall I sowed the runs to rye using outside range for my birds until the rye got started, expecting to only use it for late green food. I turned a flock of sixty hens and two hundred and fifty nearly matured pullets and cockerels on this October 15, alternating every few days from one field to the other. They had access to these four fields all winter long. By January first I had my birds sold down to seventy-five hens and pullets. This spring they again had the rye to run on, but the rye kept gaining and headed out, in fact was such a good piece that my neighbor said I ought to cut it. I decided to let it stand and ripen on the ground and allow the hens and young chicks to work it down. I shut off on the ration, feeding only bran and meat scrap and with the aid of these

Front view of the Read Poultry Farm, Watervliet, N. Y., at Stop 27 Troy-Schenectady Road, where high official pedigree S. C. White Leghorns, White Wyandottes and S. C. Rhode Island Reds are bred.

two foods, the rye has kept the seventy-five hens and from two hundred and seventy-five to three hundred chicks all summer. They have also scratched enough rye into the ground so that it has come up this fall, making plenty of

green food for the fall and winter. I have never had a flock lay better, never had better fertility and the flock young and old have kept in the best of health and are today in the pink of condition. Lewis, Iowa. M. G. Weaver.

U. R. Fishel's White Plymouth Rocks have been bred in line for nearly thirty years and have proven their superiority as a fancy fowl and as a utility fowl. The U. R. Fishel

White Plymouth Rocks

have not only won at Chicago but at *six International Expositions* and *twelve State Expositions* and the leading poultry shows thruout America. Our winning for 1916 added to our previous winnings is *a record unequalled by any breeder.*

S.C. White Leghorn Baby Chicks and Eggs for 1917

If you have not placed your order for chicks and eggs for delivery in the spring, it will pay you to place your order now while the prices are low. After the 1st of January, 1917, my prices will be higher on account of high priced feeds. All who will place their orders this month for chicks and eggs can have them at prices the same as last season.

EGGS FOR HATCHING

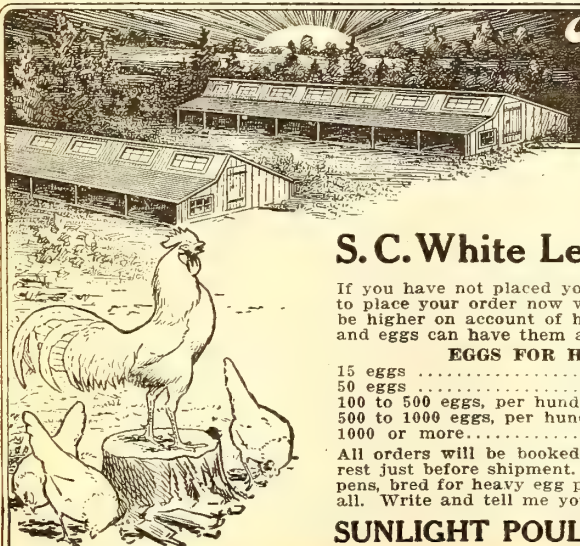

15 eggs	\$1.50
50 eggs	3.50
100 to 500 eggs, per hundred	6.50
500 to 1000 eggs, per hundred	6.00
1000 or more	5.50

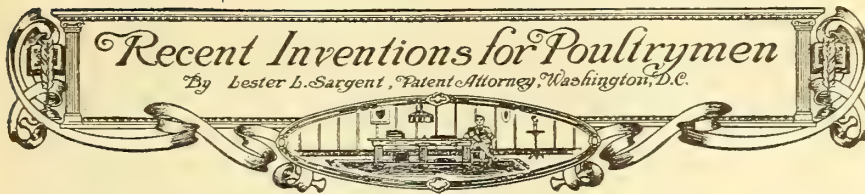

BABY CHICKS

25 to 50 chicks	14c
50 to 100 chicks	13c
100 to 500 chicks	12c
500 to 1000 chicks	11½c
1000 or more chicks	11c

All orders will be booked for future delivery, with one-fourth the full amount of the order and rest just before shipment. Let me furnish you with some excellent cockerels, cock birds, trios and pens, bred for heavy egg production. Be wise and place your order now. Satisfaction guaranteed to all. Write and tell me your wants, please. My new catalog will be ready to mail out this month.

SUNLIGHT POULTRY FARM E. N. LEMON, Owner Lynchburg, Ohio

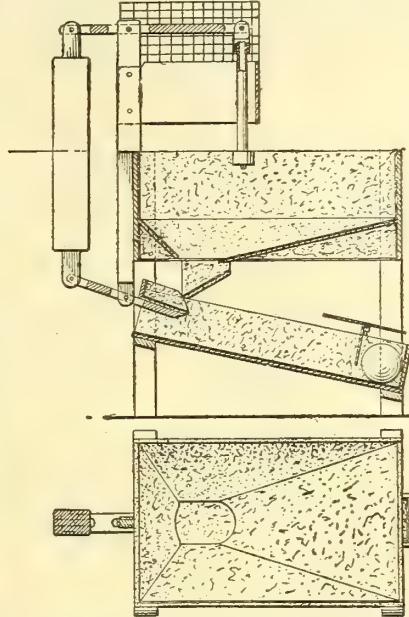

CHARLES WYCKEART of Stockton, Cal., has invented an exercising chicken feeder constructed along different lines from most other feeders of the exerciser type. The feed or grain is fed from the mouth of an inverted hopper down an inclined chute over which is a platform having a feeding opening. Narrow slats extend across this opening, so that the chickens must scratch to get their meals. Beyond this opening is a roller made out of spaced bars which project above the feeding platform sufficiently to provide a kind of treadmill for the chicken to rotate when it scratches against the bar. A belt connects this roller with another roller within the path of the feed at the mouth of the hopper. A pivoted agitated finger rests on flanges of this inner roller so that as the roller turns, the finger is moved up and down and prevents clogging of the feed. The more vigorously the chicken scratches the more feed there

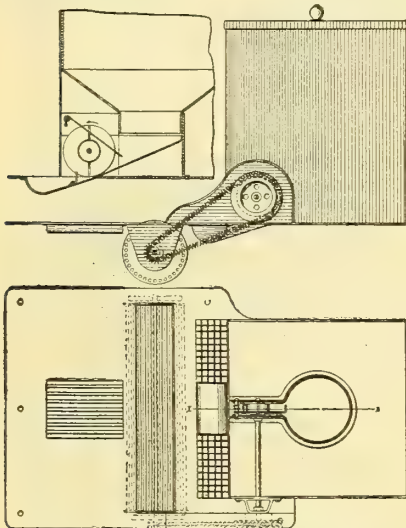

is forthcoming. The patent is No. 1,199,328.

A Hen's Nest, invented by Joel O. Tuttle, of Richland, Oregon, traps the egg as soon as it is laid, thus breaking up

Hen's Nest, patented by Joel O. Tuttle, Richland, Oregon. Patent No. 1,199,944.

the egg eating habit if hens have acquired it, and also disturbs the hen so as to cause her to leave the nest immediately upon laying the egg, thereby discouraging setting. The nest is provided with an opening and chute large enough to let the egg roll thru on to a pivoted lever padded at one end to guide the egg into an inclined receptacle and attached at the other end to a counter weight. To the upper end of this counter weight, which is of cylindrical form, is another pivoted lever. From the end of this latter pivoted lever there hangs a pendulum-like device. This pendulum

Chicken Feeder, patented by C. Wyckart, Stockton, Cal. Patent No. 1,199,328.

is raised a little above the hen until the egg is laid, and then the weight of the egg on the padded lower lever overbalances the mechanism so as to lower the pendulum and thus bump the hen gently to cause her to go. The lower end of this pendulum has a wick by which the hen may be marked and identified where it is desired to keep a record of hens that are laying. The patent is No. 1,199,944.

An Improvement in Thermostats, invented by Elmer P. Alexander, Yeagertown, Penn., has cross metal bars which by their diagonal arrangement and attachment to the main bars of the thermostat render it extremely sensitive to the slightest variation in temperature.

Thermostat, patented by E. P. Alexander, Yeagertown, Pa. Patent No. 1,199,225.

This, of course, greatly increases the value of the thermostat as a temperature controller in incubators and brooders where sensitiveness to temperature changes and is most important. The patent is No. 1,199,225.

An Egg Tester, invented by Edward W. Johnson, of Huntington, West Virginia, is designed particularly for testing eggs for incubator use. It is adapted to be moved up to the incubator from which the egg tray can be quickly withdrawn, the eggs tested or candled and the tray is again put back in the incubator chamber before their temperature has been materially lowered. The device is a portable cabinet having an open top and a movable door at one end, a V-shaped support extends lengthwise of the cabinet and to this the mirrors are attached, while at the bottom beneath the incandescent bulbs extends a strip of corrugated glass. Removably arranged in the top of the cabinet is a sheet of ground glass. This is used to soften the light so as to make the task of testing the eggs less trying to the eyes of the operator. The mirrors strengthen the light and increase the efficiency of the candler. The patent is No. 1,200,359, and a fourth interest in it has been acquired by James K. Oney, also of Huntington, West Virginia.

E. A. Crotser, Box 12, Fulton, Mich.

A Brooder, the invention of Perry S. Martin, Broadway, Virginia, has a hoop surrounding the deflector and spaced from it. This hoop may be raised and lowered to regulate the temperature in the vicinity of the brooder. It makes possible the distribution of the heat from the brooder over a comparatively large area so that a considerable colony of chicks may be comfortably housed and safely brooded. The hoop is regulated independently of the brooder heat deflector. The patent is No. 1,200,287.

A Collapsible Poultry Coop, invented by Arthur J. Minoprio, of Stonewall, Mississippi, has been assigned to H. C. Dear, of Enterprise, Mississippi. In collapsing the coop, hinged end doors are

Egg Tester, patented by E. W. Johnson, Huntington, W. Va. Patent No. 1,200,359.

swung inward, hinged top panels are folded down, hinged bottom panels are folded upward, and the sides of the coop collapse toward each other, thus providing a compact frame that can be easily shipped. The patent is No. 1,201,216.

A Trap Nest, of the simplest type, invented by Irving C. Lewis, Ulysses, Pa., has a circular entrance for the hen, a pivoted door projecting a little below the top of this entrance, a wire latch normally holding the door open, and a false or pivoted floor connected by an arm to the spring latch. When the hen enters and her weight comes on this floor, the latch is tripped and the door sprung to closed position. The trap must, of course, be re-set by hand, as there is no automatic re-setting mechanism. The patent is No. 1,199,473.

Exhibited by me or my customers, my long bodied, heavily saddled, full tailed Leghorns won at Indiana Inter-State Fair, September, 1916, Trenton, N. J., Fair and the Memphis, Tenn., Fair.

"**THE** correct length and slope of back, with undoubtedly the best head points on cockerels I have ever found on the same number of birds in a breeder's yard."

—JUDGE THEO. HEWES

Read this

Writing about the Leghorns on my 15-acre poultry plant in the November issue of Everybodys Poultry Magazine, Judge Theo. Hewes, one of the five best poultry judges on this continent, said: "The young birds on this farm were a marvel to me. They were bred on free range. There was not the slightest tinge of brass to be found on any bird on this range. Another feature of this strain is the length of leg on both males and females and the correct length and slope to backs, with undoubtedly the best head points on cockerels that I have ever found on the same number of birds in any breeder's yard."

I AM NOW OFFERING

1000 S.C.W. Leghorn Ckls.

at \$2.50, \$5.00, \$7.50, \$10.00 and up

From the same matings that produced these winners. Mind you, these cockerels are bred from my famous Chicago Coliseum blue ribbon winners of the last three years. Heavy laying is a character inherited thru the sire. Pullets bred from my cockerels mature early. I have affidavits to prove that pullets bred from my males lay at 4 months of age. Read the above excerpts from Judge Hewes' article. What more satisfactory evidence could I submit? I have the stock—everyone concedes this. I satisfy my customers. Send for testimonials. I quote rock-bottom prices. Where else could you buy into an established strain more cheaply? Tell me your wants and I'll guarantee to fill them.

Silver Campines

Three times winners Sweepstake
Championship, Coliseum, Chicago

Exhibited by my customers, my Green Sheen Strain Silver Campines this fall won at The New York State Fair, Syracuse, and at Hagerstown, Md. My strain is especially noted for beautiful color and the females are unsurpassed as layers of big, white eggs.

AN UNSOLICITED LETTER.

Chillicothe, Mo., November 4, 1916.
Have been getting eggs from some of the pullets since they were five months old. They are truly beautiful birds, well built, happy and genuine hustlers from morning till night. More than pleased with my purchase from you. Rest assured that the name "Hering's Green Sheen Strain" will be printed on my business cards and that I will be pleased to refer prospective customers to you.

Monthly Prize Contest Department

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

CAPONIZING THE SURPLUS
COCKERELS.First Prize Article American Poultry
Journal's Monthly Contest.

By JULIUS L. SCHMIDT, St. Cloud, Minn.

IT IS seldom we see here in the West a good account of caponizing, probably because the demand is not so great as in the East. In my town, or city I should call it, as we have a population of fifteen thousand, we have no market at all for capons. I have to ship to the twin cities, a distance of sixty-five miles,

Front View of fattening crate. (See "Caponizing the Surplus Cockerels.")

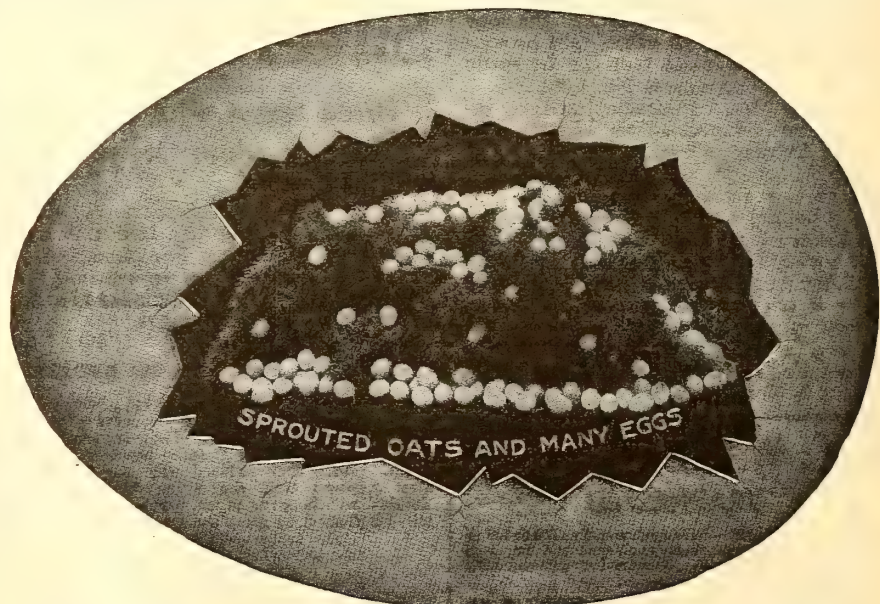

and even there the demand is limited—but I am getting a head of my story.

I had been reading up considerably in agricultural bulletins and in AMERICAN POULTRY JOURNAL about capons and caponizing and was quite enthusiastic about trying my hand along that line. This was in the summer of 1915. I

found I had about two hundred cockerels which I could not sell for exhibition or first-class breeders. I breed Barred Plymouth Rocks for exhibition, and while these cockerels were not culls, I did not consider them fit for breeders and was puzzled to know how best to dispose of them. Market prices were too low to sell them as they were. The thought came to my mind, caponize—why not? Accordingly I ordered a set of tools advertised in AMERICAN POULTRY JOURNAL. They arrived in good time and the directions accompanying them were brief but adequate and written so they could be easily understood.

After giving them the "once over," I set to work. I will admit, clumsily at first, but after a few were fixed up I had the hang of it pretty well, if I do say it myself.

I used a barrel head for a table, weighing the legs as shown by the bulletin of the Department of Agriculture, and as I had starved them for forty-eight hours prior to this, I had little trouble making the operation. At first I would cut on one side and after removing that testicle, turn the bird over and do the same on the other side. But this soon gave way to the more rapid way of cutting only on one side and removing the lower testicle first and then the upper one. As soon as one was done I would release it gently, letting him run into a large, slightly darkened room in which I had fresh water and some soft mash, of which the bird would eat greedily after his operation. Thus I went ahead until I had the whole bunch "fixed." After

The above illustration and caption are used by the Close-To-Nature Company, Colfax, Iowa, in introducing their line of grain sprouters. "Sprouted Oats and Many Eggs" or "Sprouted Oats and Winter Eggs" has become a maxim with well informed poultry keepers. The grain sprouter or perpetual poultry silo is now accepted as a necessary part of the equipment of successful poultry plants and the value of sprouted oats as a green feed has become very generally known thruout poultrydom.—Adv.

few days I examined them for "wind puffs," a puff right over the spot of operation, but luckily I found only a few and these I pricked with a needle to let out the air and the cut healed up rather promptly.

The comb of a real capon stops growing, as does the tail. They do not crow, except the slips, of which I only had three, which I killed and ate.

A capon gets very gentle and awkward and does not seek the company of hens, but on the contrary, likes to be alone. They eat like hogs and grow almost as fat—but I am getting ahead of my story. While I was doing this work on my table of a barrel head, I had two visitors, a neighboring farmer and a minister respectively. The latter, after one glance at my gory work, turned away in disgust, but the farmer tarried and argued that I was inhuman. I replied that it did not appear to me to be greatly different from making steers of bulls or geldings of stallions.

I kept the capons on range all summer and fall, feeding them nothing in particular but just grain and they balanced their own rations with the aid of bugs and grasshoppers, which were plentiful. December first I decided to fatten them up for the holidays. I made extra coops as illustrated, along the walls of the barn, two tiers high, each compartment being 6x3 ft. and holding just as many birds as could stand side by side and eat out of the trough comfortably. These coops were fitted with a false floor, made of $\frac{1}{2} \times \frac{1}{2}$ in stuff, spaced so the droppings would fall thru to another solid floor but still would not hinder the comfort of the birds. Running the entire length of the coops I had a galvanized feeding trough made of a rain water gutter. These I scrubbed every day, as I also did the floors and feeders. In this way I kept the place fairly clean and sweet smelling as possible.

I gave them a mash composed chiefly of bran and meal corn and mixed with buttermilk, which I procured at the local creamery. This was fed four times daily. Also once a day I put charcoal and grit before them, but no water. After the feeding I let down the burlap curtains in front of the coops, shutting the birds up in semi-darkness, as they rest better in this way than in bright light. I kept watch to see if any showed signs of "getting off their feed," and if any showed such symptoms they were taken out and given a balanced ration until in condition again.

Toward the end of the fattening period, I mixed freely in the mash what is known as "stock food molasses," which puts a finish on them, making them

SPRECHER BROS.

Box 44, Rohrerstown, Pa.

Close-to-Nature Grain Sprouters

The Close-to-Nature company originated the grain sprouter business; is the oldest and largest sprouter factory, and makes all kinds of sprouters for all kinds of conditions.

Double Quick Sprouter

The Original, the Pioneer of All Sprouters. Six sizes from $\frac{1}{4}$ to 8 bushels—a Few Hens to 1,000. Cypress case outside and galvanized steel case inside. All-metal one-piece aerated grain trays. Double walls insulated. For full Description see catalog. Designed to produce the Vapor-Bath sprout.

Oscar Arnold, Lawrence, Penn., May 5, 1914.—I have been using one of your sprouters now since December, 1911. (Three years.) It gives entire satisfaction.

Lynn A. James, Secretary and Manager Columbia Duck Farm, Home of "Dearie," the World's Greatest Layer, Bloomsburg, Columbia County, Pa., Nov. 17, 1914.—Have the No. 5 in use now and find it all you claim for it. Am feeding sprouted oats to our famous "Dearie" ducks, and the egg yield is already on the increase. We figure our feed after being sprouted costs us not over six cents a bushel. And it is the best of feed for ducks. We will likely need two or three more a little later on in the winter.

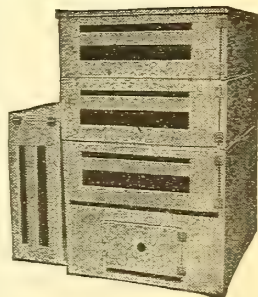

Ernest F. Smith, Kirkwood, Ill., March 29, 1914.—I think we owe you a testimonial for your sprouter which we purchased the latter part of February. We are operating it in a cellar where the temperature varies very little from 40 degrees above zero. In this cold place, at a cost of less than 1 cent a day for oil, we are operating one of your No. 4 Double Quick machines and growing sprouts from 6 to 8 inches in 6 days. We are using half the trays and are not filling them nearly to capacity, and are feeding 75 hens all they will eat once a day. In short, we are only operating it at about one-third capacity which we could sprout if need be at the same expense for oil. Yours is surely a fine machine for results and the hens surely enjoy the sprouted oats. Wishing you success, we remain, etc. (Redlayer Strain R. C. R. I. Reds.)

Colfax Metal—Sectional Sprouter

Purchase additional sections as your flock increases. Two size bases. On small base, each section holds $\frac{1}{4}$ bushel. On large base, each section holds one bushel. All-metal one-piece aerated grain trays. Double walls with heat flues, the outside wall insulated with asbestos. Produces the Vapor-Bath sprout. Full particulars in catalog.

J. H. Hartshorn, S. C. White Orpington, Traer, Iowa, Feb. 26, 1915.—You will find draft enclosed to pay for one large section for the Colfax Oat Sprouter. The oat sprouter works fine and is worth twice the price you ask for them. I would not be without one. Ship section by express.

Mrs. J. C. Hazlett, Muscatine, Iowa, Oct. 13, 1915.—The Colfax Metal Sprouter I bought of you in December is all right. We used it all winter and all summer. We got lots of eggs when our neighbors' hens were not laying at all.

The Lampless or Fireless Sprouter

For use in rooms of high temperature. Ebonized iron frame and one-piece, all metal aerated trays. Four sizes, $\frac{1}{2}$ bushel, 1 bushel, 2 bushel, 4 bushel. Drip pan has drain tube. Does not produce the Vapor-Bath sprouts. Full description in catalog.

Send for circular giving 100 letters like the following:

C. H. Latham, Lancaster, Mass.—"I am enclosing my check for two more No. 5 Double Quick Grain Sprouters to be shipped by freight. The one I got of you some weeks ago is doing good work."

H. F. Marsh, Sebastopol, Cal., Jan. 28, 1915.—I am highly pleased with the machine. It solves the chicken problem with me. Wheat is selling at \$2.50 per hundred retail, and my hens were not laying enough eggs to pay for their keep. Now I feed some corn and sprouted barley and oats, and my hens are laying fifty per cent more eggs since I gave them the sprouted grain. I will send for another sprouter of larger size next summer.

D. E. Jones, Grand Junction, Colo.—"My Double Quick Sprouter is working fine. I built a box around it and put it out doors and the thermometer went down to 16 below zero but it kept right on germinating. I sure gave it a good test."

L. C. Kent, Kewanee, Ill., Dec. 9, 1913.—It is the best investment I ever made. I used it nearly the entire year. I would not do without the sprouter for any consideration. It does not take five minutes a day to look after it.

Mrs. M. L. Hopkins, Superior, Montana.—"My sprouter is fine. I used it all last winter. My oats sprout fine. I have eggs when no one else has them. I have the White Leghorns and White Plymouth Rocks. I am getting 50 cents per dozen now, soon be 60 cents, for eggs."

Wm. Suske, Prairie View, Ill.—"I have received No. 2 Double Quick Oat Sprouter and it works fine. Our hens have gained in laying. I would not miss it for fifty dollars."

Chicks30 Days
FREESimplex
Brooder
Stove

Use the new 1917 Simplex Brooder Stove on your own hatch for thirty days free. Raise 20 to 50 per cent more chicks at 1-5 the cost, 1-10 the work and 1-4 the operating expense. Small and large broods. Three sizes of stoves. Try our stove under all conditions and if you are not delighted send it back and we will cheerfully refund your money.

Turn Losses Into Profits

This wonderful brooder will raise 50 per cent more of your chicks than you have been able to raise under the old fashion methods. No more deaths from white diarrhoea and poor ventilation. It turns the losses from dead chicks into big profits for you. The Simplex soon pays for itself by the extra money it makes for you. The Simplex Brooder Stove burns kerosene oil, natural or manufactured gas, automatically regulated to insure an even temperature with the least possible attention.

Free Brooder Book

Write today for valuable free brooder book and catalog. It tells how to "increase your profits by decreasing mortality." Tells how to save chicks you have been losing each year through disease and faulty brooding. How to make more money. Also catalog and details of 30 days trial free. No obligations. Write now.

SIMPLEX BROODER STOVE COMPANY

plump but not too fat, just so as to tempt the palate of the epicure.

When they were ready I killed by sticking in the roof of the mouth, plucking as a capon should be plucked, namely, leaving the feathers on the neck, tips of wings and tail quills. After wrapping each separate in waxed paper (having first been thoroly chilled), I packed in barrels and shipped to the twin-city fancy cafe trade.

After disposing of my capons in this way and figuring up the profit over and above cost of production, I had figures to make the most sagacious real estate agent stare in wonder and awe. I also sent one nice dressed capon to each of my two friends of the summer before as a Christmas present, and to my surprise they both came at different times to compliment me on the success of my venture, declaring they had never tasted a more delicious meat morsel in their lives and that they were now convinced of the wisdom of caponizing market birds.

COST OF REARING CHICKS.

Records of Two Flocks from the Egg to Marketable Size.—Second Prize Article American Poultry Journal Contest.

By FRED M. ROBINSON, Dallas Texas.

MANY articles have appeared from time to time on the cost of producing eggs, but I have seen very few on the cost of chicks from the egg to broiler, fryer or first egg laid. I realize how hard it is to get the exact cost, as very few keep records of food fed to each brood of chicks, the losses at different ages, etc.

For the last eight years I have tried to get what I considered exact cost of large and small flocks and have succeeded in getting two records that are remarkable for various reasons: One of twenty-seven chicks from thirty eggs, with only one loss (a chick only a few days old accidentally killed). There were thirteen pullets and thirteen cockerels, the latter being sold all at one time at the age of four months. See record No. 1.

Record No. 1 is of 27 day-old Rhode Island Red chicks from April 20 to December 20.

OVERHEAD AND FIXED EXPENSE.

The Unlaid Eggs

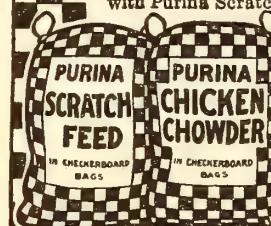

Grain-fed hens often carry yolks they can't complete into eggs because their feed lacks white-forming nutrients. Missouri Experiment Station tests show that 100 lbs. of wheat, corn, oats, barley, kafir corn make 224 yolks to only 154 whites. Based on this data

	Yolks	Whites
Purina Scratch Feed makes	247.49	142.11
Purina Chicken Chowder makes	182.05	282.55
Total	429.54	424.66

These feeds make a practically equal number of yolks and whites and more of both than ordinary feeds. That's why we can guarantee

CAIRNGORM FARM

NOTTINGHAM, OHIO

Which total of 26¼ cents per chick for food cost, added to 11½ cents per chick overhead expense, makes a total of 37 cents.

The eggs set were charged at market price at that time, and a fair price is allowed for the use of the two brooders, one for three weeks and the other for ten weeks. The coop used was placed close to the house, was collapsible and easily cleaned, which saved much time. The mother hen showed a good profit by laying eggs worth, at market price, \$2.40.

The thirteen cockerels were sold very cheap, as they were hatched late, only realizing thirty-five cents each for them and they had consumed ten and one-fourth cents worth of food in the four months and the overhead and egg cost would make 8½ cents each. The labor and overhead expense was the same for the thirteen pullets as it would have been for the whole flock. The hen's food was included in the cost of feeding the brood.

The first egg was laid by the pullets on December 6. All had laid by the time they were six months old.

Record No. 2 is of 12 Barred Rock chicks, May 8 to August 8:

OVERHEAD AND FIXED EXPENSE.

15 eggs for sitting.....	\$.32
Care and use of hen.....	.50
Labor 5 minutes per day for 2 weeks..	.17½
Labor 3 minutes per day for 6 weeks..	.32
Labor 2 minutes per day for 4 weeks..	.15½
Ten per cent depreciation on equipment	.15

Total, \$1.62

A total of \$1.62 overhead expense for the flock or 13½ cents per chick, while the food used for the flock for four months cost \$1.15 or 9 7/12 cents per chick, which makes a total expense per chick of 23 cents.

The twelve chicks from fifteen eggs (no loss for four months), six cockerels and six pullets, were kept under same conditions as above, being fed five times a day for two weeks, three times a day for six weeks and twice a day for the last four weeks, at which time the cockerels were sold for fifty cents each. This being considered a fair price.

Food used for both records cost as follows:

Roller oats.....	\$2.00 per 100 lbs.
Commercial chick food.....	2.25 per 100 lbs.
Steel cut chops.....	1.75 per 100 lbs.
Bran.....	1.35 per 100 lbs.
Oyster shells.....	200 per 100 lbs.

Winners

Madison Sq., 1916

My Rose Comb Brown pullets of 1915 breeding were never beaten, winning firsts and seconds in Allentown, Philadelphia and Madison Square. Also first and second hens. Eight firsts by customers in Canada. Sons of these winners \$15 to \$25. Utility line, 242 to 256 records, \$1.50 up. They won an egg contest in western Canada.

HOW TO MAKE POULTRY RAISING PROFITABLE.

How Much to Invest to Get Started
Right.—Choice of a Breed.

By E. S. ALDRICH, Columbus, O.

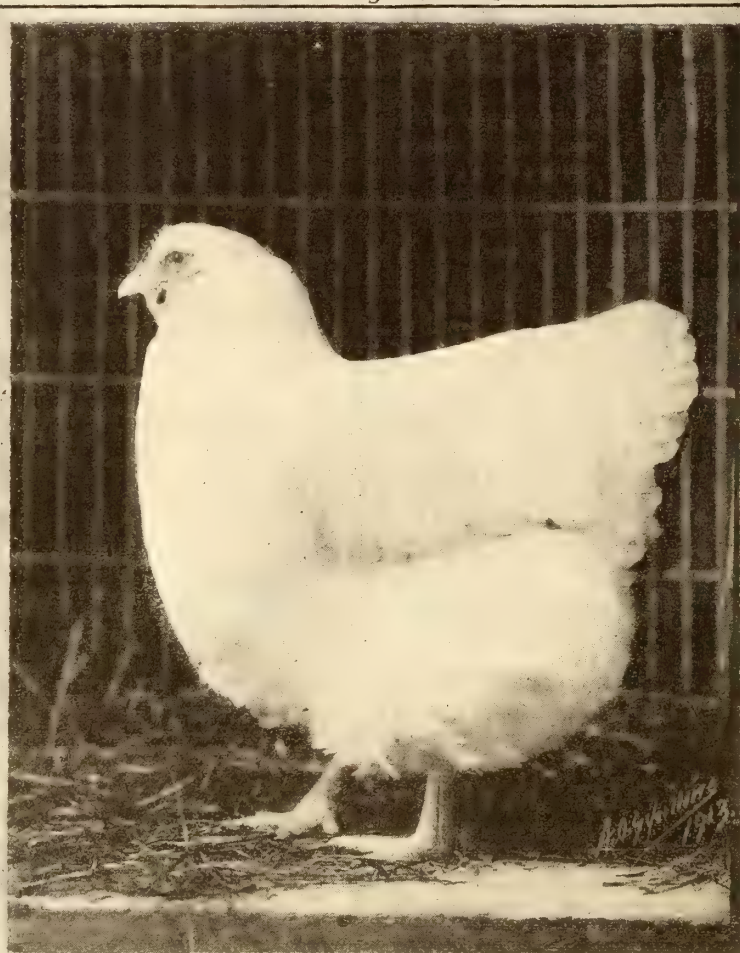

AMONG the many thousands of those raising poultry today there are a few who are interested only as a hobby, but the great majority are expecting their chickens will enable them to make a profit over and above the cost of feed, labor, etc. The most of those about to start in the poultry business take one or two poultry journals, and in order to help them decide which breed to put in and what their foundation stock will cost, they usually write to several breeders whose advertisements they have read in these journals and ask for their catalog. In this way they can usually decide which breed of chickens appeals to them, and then the next question to be decided is: What grade of stock or eggs should they invest in to make their investment a paying one?

Having secured a suitable location, with the proper buildings and equipment now ready, the next thing to de-

cide is the amount of money you can afford to put into your foundation stock. If you do not have enough funds available to purchase good stock, my advice is: Do not go into the poultry business at all. Many failures are caused by persons putting too large a percentage of their available capital into buildings, thus making it necessary to purchase cheap stock which was not good enough to even lay enough eggs to pay the cost of feed alone. Right here let me tell you to be very careful in investing very much money in poultry with the expectation of making money with egg production alone.

Many extravagant claims are made by breeders claiming to have 200-egg strains, while the greater percent of birds sent out by them are not trap-nested or even bred from the few high record layers they may own. During the last two years thousands of people have purchased stock or eggs from these "so advertised" 200-egg strains, but have found that they secured no more eggs from them than their neighbors were getting from their ordinary chickens. Then they discovered that their birds did not produce specimens good enough to win a prize even at a county fair, so

"WHITE QUEEN"

FIRST PRIZE WHITE ORPINGTON HEN
MADISON SQUARE GARDEN N. Y. 1913.
BRED AND OWNED BY
ALDRICH POULTRY FARM COLUMBUS O.

this prevented them from selling any eggs or stock at above market prices—which with the smaller breeds just about paid the feed costs—and so their investment, time, etc., was a total loss.

With a heavy breed, that lay a large percentage of their eggs in the winter months, and which can be sold for enough to pay the cost of feed, a fair profit might have been made had the purchaser secured his stock from a reliable breeder who had trapnested his birds long enough to have bred them up to a good egg production. For example, the firm of which the writer is a member began trapnesting in 1910, and in 1914 four pullets selected at random laid 729 eggs at the Mountain Grove National Laying Contest, an average of 182 eggs per pullet. 374 of these were laid from October 1st to April 1st, and at the Columbus prices for market eggs for the year, which are about 25 per cent less than New York prices, this made an average of \$5.28 for the eggs produced by each pullet.

The surest way to make poultry raising profitable, is to purchase good foundation stock from a reliable breeder who has bred his stock in line for years, and who has established a strain of exhibition birds, combined with high egg production. If this breeder has succeeded in producing birds year after year that have won in the best shows in America, and his customers have also been winning for several years, it proves that his strain is firmly established and birds bred by him may be expected to reproduce a large percentage of very high class exhibition stock, as good or better than the original stock purchased.

If the breeder has also been trapnesting and breeding for increased egg production for several years and his birds or strain has made good records in the laying contests, this should also be considered as being an added value over birds sold only for exhibition or laying purposes.

Now let me explain where more money can be made by those starting with stock of exhibition quality and high

AGAIN THEY PROVE SUPREME. At the recent New York State Fair, exhibiting our famous

Speckled Sussex

We won all of the *five first ribbons*, all seconds except cock; also third cock and 4th cockerel and best display. On account of Mr. Rawnsley judging the class, we did not exhibit any

Stop Hatching Weak Chicks

Anyone
Can
Succeed
With a
Queen

125-Egg Queen
Floor Space:
28½ x 32 Inches

With Cheap Incubators

Remember, it is not how many you hatch that counts, but how many you raise. Chicks that hatch out weak and wobbly, and live but a few days, mean nothing to you except trouble and loss. They make one sick of the poultry business. Most of the chicks you lose in the first two weeks die because they they did not hatch out with enough vitality or strength for a good start.

Queen Chicks Live and Grow

Queen Incubators are famous for big hatches of strong healthy chicks that live and grow. The Queen is accurately regulated—taking care of a temperature variation of 70 degrees without danger. It is built of genuine California Redwood—

very scarce in these days of imitation and cheap substitution. Redwood does not absorb the odor from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, retain the odors, to weaken and kill the hatching chick.

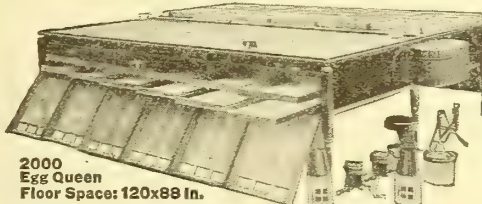

375-Egg Queen
Floor Space:
34½ x 63 Inches

Three
Egg
Trays

Queen Incubators

Sizes: 65 to 2,000 Eggs. Prices: \$8 to \$180

The large size Queens have all the features of quality material and construction, and tested modern improvements, that have made Queen Incubators of smaller sizes the most successful incubators of medium price. Double walls and bottoms of California Redwood insure complete insulation. The 1,000 and 2,000-egg Queens were successfully operated last winter in rooms of a temperature of 30 degrees above zero. They maintained a uniform heat on normal lamp flame without special attention. New heater is double-walled and

**2000
Egg Queen**
Floor Space: 120x88 In.

lined with five layers of asbestos. Drain cap to outside of heater. Lamp sets on safety shelf, completely enclosed in metallic hanger.

Queen Brooder Stove

Only Brooder stove in which both fire and amount of heat are automatically controlled by one thermostat, and one connecting rod. Gas controlled above deflector. No gas can escape below to injure the chicks. Hover is made in sections, easy to put together and take apart.

300 to 500 Chick Size \$13
1200 to 1600 Chick Size \$16
(\$15 and \$18.50 west of Rockies)

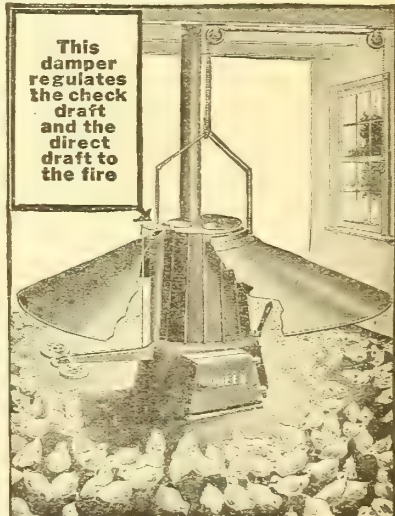

"Of Course"

W. H. Galloway, Geneva, Wash., wrote August 16th, 1916:

"I was told that you are putting out a 1000-egg machine. I would like to get a description of it, as I intend to enlarge my hatching plant this season. I have been using four 360-egg Queens for the past four years, so of course will want more Queens."

Queen Incubators are not cheap, but they are cheap in the long run. Ask for free book and prices.

STANDARD COLONY BROODER

Broods
100 to 1,000
Chicks

Price
Only \$16⁰⁰

A Little Higher in
the West on
Account of
Freight

→ PATENTED ←

The one practical, economical and safe brooder for all raisers. It's even better than the hen—it solves the whole brooding problem. Capacity, 100 to 1000 chicks; coal burning, (24 hours at one load)—self-feeding; everlasting; costs less than 6c a day to operate.

Write the Strongest Guarantee Yourself

Put it up to us, or any one of our 2000 dealers. Put in it all that a brooder should be, all that the best brooder in the world should do. We'll sign it. Then take the Standard on a 30 days' trial. If it doesn't come up to **your** guarantee, you get your money back.

That's the stiffest promise of complete satisfaction ever made, but we back it to the limit, and our responsibility is fixed.

Look at These Specifications

Solid cast iron stove; 52 inch galvanized hover; Two double-disc thermostats, tandem hitched; Rocker furnace grates, self-cleaning and anti-clog; Check valve hung on knife edge bearings; Gas proof—fire proof—fool proof; Guaranteed to burn more than 24 hours in any temperature with one coaling; Capacity, up to 1000 chicks.

Beware of Imitations. So far we have caught five competitors trying to imitate the "Standard." Make sure by looking for our name.

Get our "**Book of Proofs**" free. It tells what the users think of the Standard. True, it hasn't all the 10,000 satisfied owners, but there's enough to convince you. Write for it at once.

AGENTS WANTED Some good territory still open. An attractive proposition for the right man or firm.

The Buckeye Incubator Co.

115 Euclid Avenue

Springfield, Ohio

egg production, than by those who only start for eggs alone. If a person purchases a pen of birds good enough to win at his local or state show, he can expect to sell his eggs for setting all during the breeding season at several times the price he could obtain for market eggs. This additional price of eggs during a single season will usually pay the total cost of the pen originally purchased and allow the purchaser to set half the eggs for himself. Then during the next season he can sell his surplus cockerels at several times what he would get for them on the market, and after selecting enough pullets for his own breeding pens he can sell the balance for much more than the cost of feed, labor, etc. Now what better investment should one expect than this?

You can now easily see how much depends on the original stock purchased and, of course, the more you can invest at the start the more you can expect to make. If you find that you cannot get as many birds as you would like, get a smaller number, but do not cut down on the quality. Better by far, purchase a \$25 trio than a \$25 pen.

Now suppose you can afford to purchase a pen of the \$100 quality. You could then expect a pen good enough to win first at your state show. In this case you, of course, would have secured such a reputation that you could reasonably expect to get at least \$10 a setting for your eggs. You will find it necessary, of course, to carry an advertisement during the season in one or perhaps two poultry journals and in such a journal as the *AMERICAN POULTRY JOURNAL* you will find it necessary to only spend about one-sixth the amount of your income, at first, and less after you are better known. The Aldrich Poultry Farm find it only necessary to spend less than one-tenth their income for advertising and the per cent gets less each year. This is not true of many of the smaller journals which we have had to discontinue using.

One can also reduce his advertising or expect better results if, until he has established a strain of his own, he will advertise his birds as the strain from which he has purchased his foundation stock, provided the breeder where he has bought his stock keeps his strain properly advertised. His prospective customers will have greater faith that his birds will produce good stock, than if he only advertised his birds of a certain breed but no strain.

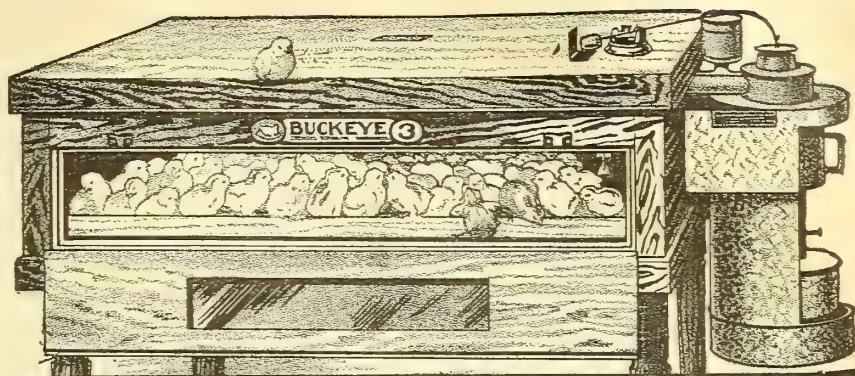

Now supposing you have the \$100 pen, you can reasonably expect that the four females will lay, if White Orpingtons and if bred for high egg production, 100 eggs each, or 400 eggs during the first breeding season, provided you have purchased them, say, before January 1st and secured females ready to lay by that date. There should be 360 good shaped eggs, or 24 settings. You could then sell half of them for \$120, leaving \$120, or the cost of your pen, after deducting advertising cost. From the balance of the eggs you could expect 150 fertile eggs from which, barring accidents, if incubated properly, or set under reliable hens, you should hatch 120 chicks. If you raise 100 of these you would probably have about 50 cockerels and 50 pullets. Suppose 80 per cent of these are good quality, you would have 40 pullets or enough for four full breeding pens, and after selecting eight cockerels to head these pens, you should

be able to sell the remaining 32 at an average of \$10 each, or \$320, or after deducting advertising cost \$262. This would more than pay the total feed cost on all the birds, and you would also have the eggs to sell during the other seven months. Thus you see you would at the end of the year have your original pen paid for and four complete breeding pens ready for the second year. Or you could by purchasing four more females of the same quality for \$50 double the above. You could, by showing these, also increase your show record. Should you also be in position to purchase a cock and cockerel at say \$50 each you could then show a full string at your show, and by making a greater win increase your reputation and secure even better prices. If you could invest \$100 each for male birds and \$50 each for hens and \$150 for a pen you could then secure birds good enough to win first prize in any show in America outside of Madison Square Garden or Chicago, and the following season you should be able to raise birds good enough for these shows. You would then find your national reputation would enable you to make a fine profit on your investment. Suppose you should invest that amount in utility birds only, you would have to have a much larger investment in buildings the first season, and the extra labor to take care of the larger number of birds would eat up all the profit.

Now if you wish to invest \$50 in a pen you could expect the same relative results. A pen of this quality should win at most state fairs and in all except the strong state and national shows. You could then expect \$5.00 per setting for your eggs and an average of \$5.00 each for cockerels. If you only have \$20.00 or \$25.00 available and wish exhibition stock from bred-to-lay matings, buy a trio at first and add females as you are able. Then you could get birds good enough to win in your county shows or fairs. Or if you wish birds only for egg production you could get a \$25.00 pen.

You cannot expect to get good stock at lower prices than these from a reliable breeder and if you invest your money with others you will surely become disgusted and want to quit. If you are already breeding birds and wish some new blood you could, of course, purchase single male birds or females, but do not expect to get exhibition cockerels at less than \$10.00 each, or cock birds at less than \$15.00, or hens or pullets at under \$5.00, and, of course, birds at these prices are only good enough for the smaller shows.

Now if you desire to start in the poultry business, the best time to purchase your foundation stock is in the fall. You can thus have the birds trained, conditioned and washed for your show at no extra cost and most breeders can give better value than later after having the expense of carrying the birds thru the winter. Also the booking, you order a month or so in advance enables the breeder to select you better value, because most breeders book many birds ahead on receipt of a small deposit and of course select the birds of the quality desired that will be in the best condition to go out at the date of the show they are selected for. Also if you order ahead your competitors cannot purchase a bird from the same breeder for that show, as all breeders only sell to one customer for a certain show.

BUCKEYE

The Best Incubator Made

*"Built up to a standard
--not down to a price"*

Experienced breeders don't *think* about the Buckeye. They *know*! The best for 25 years and still leading. Get a never-failing Buckeye and quit gambling with your eggs.

Even if you've never seen an incubator before, you can get successful hatches with the Buckeye. It works mechanically and *can't make a mistake*.

It's so automatic that all you have to do is fill the lamp and turn the eggs. It hatches with mechanical accuracy.

Here's What We Guarantee

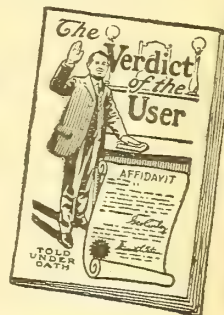

You get more chicks, bigger chicks and stronger chicks with the Buckeye than with any other incubator. We *guarantee* this. We also guarantee the Buckeye to operate satisfactorily in any temperature down to freezing.

The Buckeye Incubator is used by nearly half a million big and little breeders and sold by over two thousand of the leading dealers. Recommended by all Agricultural Colleges and Experiment Stations. We built the incu-

bator first and thought of price afterwards. That's why it has quality so sky high the "copy cats" can't touch it.

7 Sizes-- 60 to 600 Eggs

Questions and Answers

Conducted by Prince T. Woods, M. D.

Care and Profits.

Q. (a) If 12 hens are kept on a town lot and given all the green food, scratch food, grit, and other necessities, feeding them at regular times; or (b) if 12 hens are kept on a farm and let run, allowed to get their food anywhere, only just attending to other necessary things, is there any difference in the profits to be obtained from them?

Cambria, Wis.

Reader.

A. This question is a whole lot like the old query: "Why does a hen cross the street?" which, perhaps, may now be answered, "To collect damages from automobilists."

A farm flock that picks up its own living and receives very little attention, naturally costs very little to keep and calls for little labor; also, it is not particularly productive as a rule. The well-cared for back-lot flock costs more for labor and food, but should be much more productive than the neglected farm flock and should pay better returns because of the good care and management. The matter of actual profits, however, is one that will depend very largely upon the poultry keeper. On some farms a flock of 12 fowls could easily pick up a very good living. Some back-lot flocks, tho fed regularly and given plenty of food, may not show much profit when the

cost of labor and food is considered. Getting profits from poultry is a matter of good management and "know how" on the part of the individual poultry keeper.

Black and Silver Leghorns.

Q. (1) Why is it that such lovely chickens as the Black and the Silver Leghorns are not bred more extensively?

A. (1) Chiefly thru lack of breeders with sufficient capital to advertise them widely and popularize the varieties. Both are worthy members of the Leghorn family and could easily be made as productive and profitable as other Leghorns.

Q. (2) I am told that the Black chicks are not as hardy as other more popular varieties of Leghorns. Is this true?

A. (2) Properly bred and managed, the Blacks should be just as hardy as any other Leghorns.

Q. (3) Also am told that when they have first-class leg color they are nearly always too light in undercolor.

A. (3) This is a matter of breeding. We have handled many fine specimens with good leg color and good undercolor.

Q. (4) Is light undercolor in Blacks a disqualification?

A. (4) The Standard calls for sur-

5 New 1917 Features New Improvements Bound to Make Record-Making Hatches

NO other incubator today presents as many new innovations of real merit as the 1917 X-Ray Incubator. We have this year given it 5 New Features that more than ever assure Bigger Hatches—Better Chicks—Less Labor—Less Expense. In all, there are now 20 exclusive X-Ray patented betterments. The 1917 innovations include the X-Ray Gas Arrestor—new device that prevents lamp fumes entering egg chamber; X-Ray Nursery Tray, new feature that assures sanitation—protects little chicks; X-Ray Egg Tester, most perfect, handy tester ever conceived; New Handy Height; New 1917 Quick Cooling Egg Tray. All exclusive X-Ray betterments—never known in any incubator before perfection of 1917 X-Ray.

The New 1917 X-RAY INCUBATOR 20 Improvements—No Increase in Price!

Including, also, the X-Ray Vapor Generator; X-Ray Thermostat that automatically shuts off and turns on flame as needed to keep temperature of eggs precisely correct at all hours of the day or night without attention; X-Ray Duplex Heating System that absolutely prevents cold corners or cold sides and provides moist heat (the natural hen heat); X-Ray Central Heating System that gives direct heat and assures correct heat from all the oil.

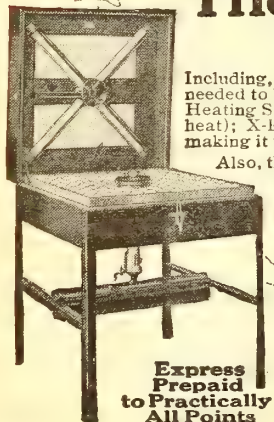

Also, the finest constructed incubator on the market—built of selected California redwood—with entire body covered and insulated with heavy enameled, ebonized steel—legs and supports heavy angle iron.

Write For the Free 1917 Book

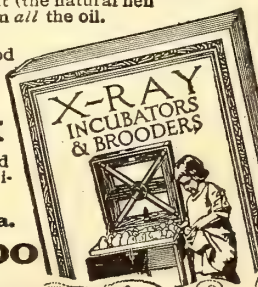

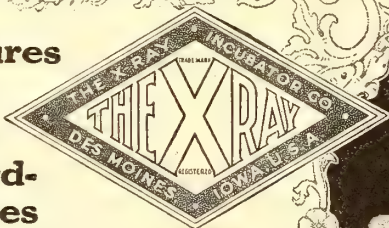

A beautiful book—packed with facts that will help every poultry raiser to add to his income—to add to his knowledge of incubator values—to know positively what to expect in an incubator. Write for it—tonight.

X-RAY INCUBATOR CO., Box 10 Des Moines, Ia.

1917 X-Ray Brooders, Too

Express Prepaid to Practically All Points

face plumage of lustrous, greenish-black; undercolor of all sections dull black. The disqualifications are: "Feathers other than black in any part of plumage; shanks other than yellow or yellowish-black."

Q. (5) Is it true that the Silvers are very bad feather pullers when kept in confinement?

A. (5) No more so than other varieties. Bad habits are the result of bad management; not of breed or variety.

Q. (6) Do both of these varieties breed true with single matings?

A. (6) Under good management and in skilled hands, so-called single matings should give good results. As a matter of fact, however, no matter what the variety, every mating is a separate problem of itself. Multiple, if not what are termed double, matings are necessary in all varieties to get best results in exhibition quality. The individual specimen and the breeding back of it has to be taken into account when mating. Go into the breeding yards of even an ardent advocate of "single mating" and, if he is successful in producing quality, you will find almost as many different kinds of matings as he has breeding pens.

Q. (7) Why are the Red Pyle Leghorns so scarce?

A. (7) Thru lack of efficient boosters and popularity.

Q. (8) How do these three varieties of Leghorns compare with other Leghorns as egg producers?

A. (8) No reason why they should not be equally good if bred right and managed right.

Q. (9) Will blue mercurial ointment, used for lice, interfere with the fertility of eggs?

Alta Loma, Cal. F. J. H.

A. (9) It might if used over-freely during the active breeding season.

Disqualifications.

Q. (1) Is it a disqualification for a pullet to have a bent toe or two, and would she be thrown out of competition?

A. (1) It would depend upon the extent of the deformity and the opinion of the judge. Crooked toes are not reckoned as disqualifications in the Standard, but are classed as defects and cut accordingly.

Q. (2) If a bird is disqualified in the show room, does it disqualify the pen she is shown in and will other members of pen suffer for her shortcoming?

A. (2) Yes.

Q. (3) Have a pullet that seems otherwise healthy, eats and drinks all right, but breathes hard so that it can be heard at some distance. Can you tell me the cause of this?

St. Cloud, Minn. J. S.

A. (3) Not without more information or examination of the bird. May be heart or lung disease, or may be canker.

Egg Farm Questions.

Q. (1) Can a one-man plant be made to show a profit with hens kept mainly for egg production?

A. (1) Experienced egg-farmers are

R. F. D. No. 1, LEBANON, OHIO

STOP THAT ROUP!

Roup starts as a simple cold in the head. The indications are watery eyes or nostrils, dirty beak, wheezing or coughing at night. Later the discharge becomes a thick mucus. A chicken cannot blow its nose. The nasal passages fill up. The face puffs out, the eyes swell shut, then death ensues. This disease is generally accompanied by "canker," a yellow or gray coating in mouth, throat or on tongue, which is similar to croup or diphtheria and is very contagious and fatal. The original cause is a damp or drafty poultry house, or extreme changes in temperature between night and day. A little Germozone in the drinking water generally prevents or checks these disorders right at the start and is especially valuable in preventing contagion. Sometimes individual treatment is necessary, but with Germozone, the work is easily and quickly done and no long, tedious "doctoring" necessary.

Louisville, Ky.

Prof. T. E. Quisenberry
Pres. American School of Poultry
Husbandry, Mountain Grove, Mo.
Formerly Director of Missouri
State Experiment Station.

"As Director of the Missouri
State Poultry Department I
used one of your 5000-egg In-
cubators and also some of your
Colony Brooders, which gave
such excellent satisfaction that
I am sending you an order for
a 3000-egg Incubator and some
Colony Brooders for the Amer-
ican School of Poultry Hus-
bandry."

Prof. H. P. Buchan

N. Y. State College of Agriculture
Cornell University, Ithaca, N. Y.

"I am pleased with our 2400-
egg Candee Incubator. It has
given us excellent results every
season since we started with it.
We have found the regulation
especially good even though the
machine is located in a room
where the temperature varies
greatly. The chicks it hatches
are strong and vigorous, which
indicates correct conditions of
heat, ventilation and mois-
ture."

Prof. H. R. Lewis

New Jersey Agricultural Experi-
ment Station

New Brunswick, N. J.

"We have had excellent results
with our 3000-egg Candee In-
cubator. The special feature
that appeals to us is the double
temperature control, which
maintains a very uniform and
constant temperature in all
sections. The water is so ac-
curately controlled in the sys-
tem that it rarely varies from
3 to 4 degrees in 24 hours."

Prof. F. S. Jacoby

Ohio State University
Columbus, Ohio

"The past four years we have
used our 1200-egg Candee In-
cubator and Candee Brooding
System with gratifying results.
Without drawing conclusions
in regard to success of commer-
cial hatching, we can readily
see that your equipment is ad-
mirably adapted for the pro-
duction of day-old chicks and
brooding of these chicks until
they are ready to go on range."

Mr. H. L. Holsinger

Mgr. Summit Poultry Farms
Ridgely, Md.

"In 1912 we installed our first
3000-egg Candee Incubator. We
started custom hatching and
then baby chick business and
now have 25,000-egg Candee
capacity. The demand for Can-
dee-hatched chicks is growing.
We refused one order for 200,000
but accepted one for 65,000
chicks for 1916. Only three per
cent loss with our Candee
Brooding System."

Both Professors and Poultrymen Endorse the CANDEE Incubator

You know these gentlemen whose pictures are shown above. They are some of the most prominent poultry experts in the country. Being so prominent and so well versed on hatching and poultry raising, their endorsements can be accepted as positive proof that you will be taking absolutely no chances when you install the Candee Incubator.

The Candee is not an experiment, as it has been in successful operation on thousands of poultry plants and Colleges and Experiment Stations for years, and has been proved by professors and poultrymen everywhere to be safe and sure in its results.

Why There Are More CANDEES in Use Than All Other Mammoths Combined

Automatic regulator at each compartment and regulator at heater that positively prevent overheating.

Hatches can be started at different times in the compartments of the CANDEE.

No raising or lowering of the egg trays.

No adding or drawing off of water from the heating system to get correct temperature.

It is shipped in all-built 600-egg sections—expense of experts from factory to install is unnecessary.

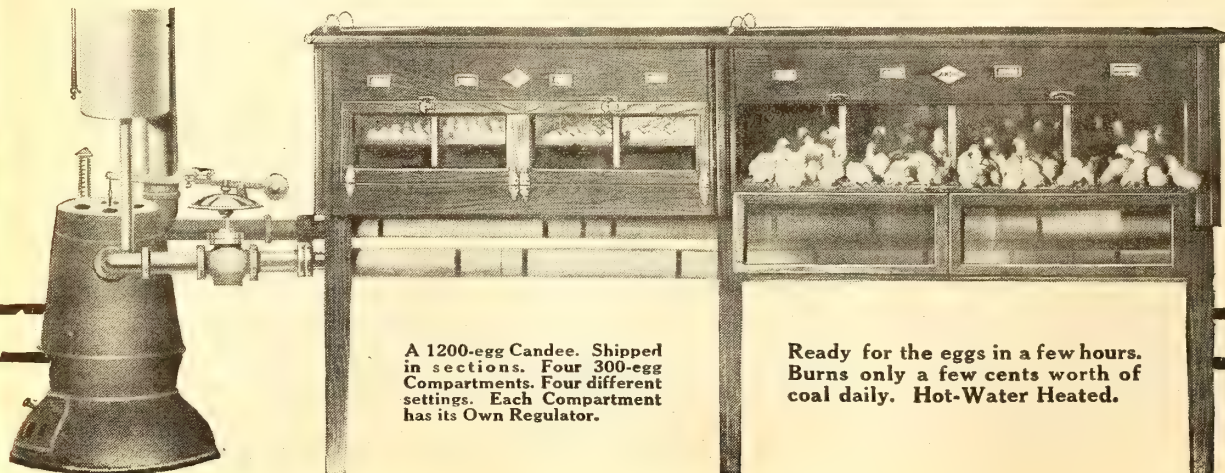

You can add more sections to the Candee any time without disturbing the original installation.

You can write your own money-back guarantee and attach it to your order for a Candee Incubator.

And there is a demand for healthy, Candee-hatched chicks.

BIG ILLUSTRATED CATALOG FREE

A 1200-egg Candee. Shipped in sections. Four 300-egg Compartments. Four different settings. Each Compartment has its Own Regulator.

Ready for the eggs in a few hours.
Burns only a few cents worth of
coal daily. Hot-Water Heated.

W. A.
Depart
Licensor
Incubator

Mr. R. H. Snyder
Wadsworth, Ohio

"As for my Candee Incubator, am sorry I did not get at least 3000 as I have refused more custom hatching than I could do with a 10,000 machine and not solicited one tray. I have not failed to get more than 60 chicks off a tray of 75 eggs of my own."

"The Candee Hatches are good, chicks are strong and customers are pleased."

Mr. Chas. W. Gault
Crescent Poultry Farm
Champaign, Ill.

"This has been a very busy season with us and have not been able to take care of the business that has come to us and have been compelled to turn away orders all season, having run at full capacity since February. I will have to increase before another season. Our Candee has given us the best of satisfaction, and the chicks are the kind that live and grow."

Mr. Erastus Jensen
Mfr. Manti Mammoth Hatchery
Co., Manti, Utah

"We are running our Candee Hatchery at full capacity this season and getting good hatches right along, and have sold every chick hatched as fast as taken out of the machine."

"Commercial hatching is a profitable branch of the poultry business. The demand for Candee-hatched chicks is increasing."

Mr. E. A. Scattergood
Progressive Hatchery
Wilkesbarre, Pa.

"I am a mill foreman but operate my 4200-egg Candee Incubator as a side line, and hatch and sell baby chicks in the city and find a ready market for all I hatch. Last season I sold chicks as late as August and every chick was carried away from my house by the purchasers. I also do custom hatching. I have been very successful and had lots of hatches that ran up to 85¢ and one 95¢."

Mr. J. H. McClelland
Hobart, N. Y.

"Besides being helper in the dairy end of farm work, I run 500 hens every year and a 2400-egg Candee Incubator. I have run 500 hens since the Spring of 1911. I have decided to break away from the dairy business as our profits from our poultry plant have equaled my father's profits from his 35 cows and the 160-acre farm every year."

And the CANDEE Colony Brooder Coal Burning——Self Regulating

There are many reasons why both professors and poultrymen endorse the Candee Colony Brooder:

Big and Dependable

The heater of the Candee is big and dependable, insuring plenty of heat in the coldest weather, when the chicks most need the heat.

Larger 12-inch Grate

And in warm weather, when the fire is checked most of the time, there is no danger of fire dying out in the Candee, because its larger 12-inch grate holds a much larger body of fire.

Simplest Regulator

The Candee regulator is the simplest, having only one bearing, which means free action and quick increase or decrease of heat as needed by the chicks.

Safe and Sure

Its heater base is high, cool, sealed and safe. Its coal magazine feeds the fuel to the fire evenly and continuously, and saves time and labor.

Special Colony Brooder Catalog

Write now for your copy of the handsome special Colony Brooder catalog, containing illustrations of the many superior features of the Candee, and many letters from poultry raisers who are delighted with the large number of big, strong chicks they have raised with their Candees.

All-Wool Curtain Stops Drafts

Its guaranteed all-wool curtain makes it unnecessary to heat the whole room to get the right temperature down at the floor, where the chicks are, saves much fuel and stops drafts.

Pure Air for the Chicks

Its high, flat, big all around hover gives the chicks plenty of pure, fresh air around the heater; and the specially constructed regulator draws from under the hover and changes the air, keeping it pure.

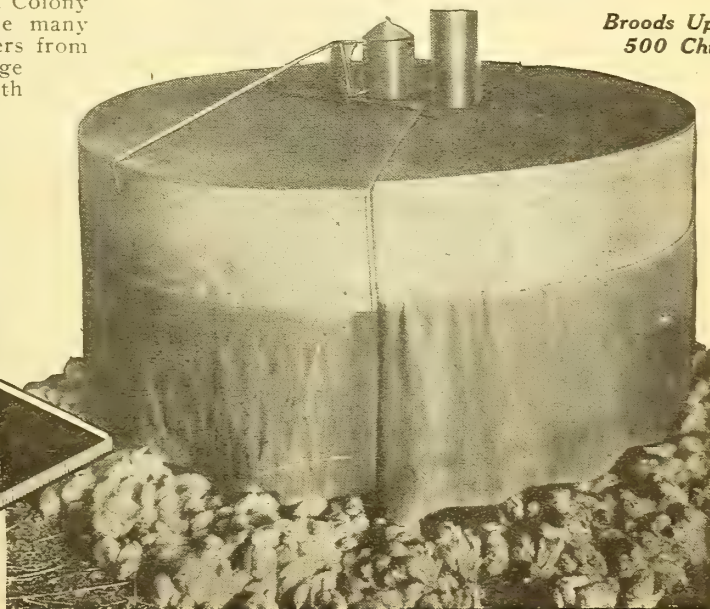

Handy Hover

The large, movable section of its hover gives the operator plenty of room to get at the heater and to attend to the fire and chicks without raising the hover.

Write Your Own Money-back Guarantee

You can write your own money-back guarantee and attach it to your order for a Candee Colony Brooder.

Its heater base is high, cool, sealed and safe. Its coal magazine feeds the fuel to the fire evenly and continuously, and saves time and labor.

Special Colony Brooder Catalog

Write now for your copy of the handsome special Colony Brooder catalog, containing illustrations of the many superior features of the Candee, and many letters from poultry raisers who are delighted with the large number of big, strong chicks they have raised with their Candees.

All-Wool Curtain Stops Drafts

Its guaranteed all-wool curtain makes it unnecessary to heat the whole room to get the right temperature down at the floor, where the chicks are, saves much fuel and stops drafts.

Pure Air for the Chicks

Its high, flat, big all around hover gives the chicks plenty of pure, fresh air around the heater; and the specially constructed regulator draws from under the hover and changes the air, keeping it pure.

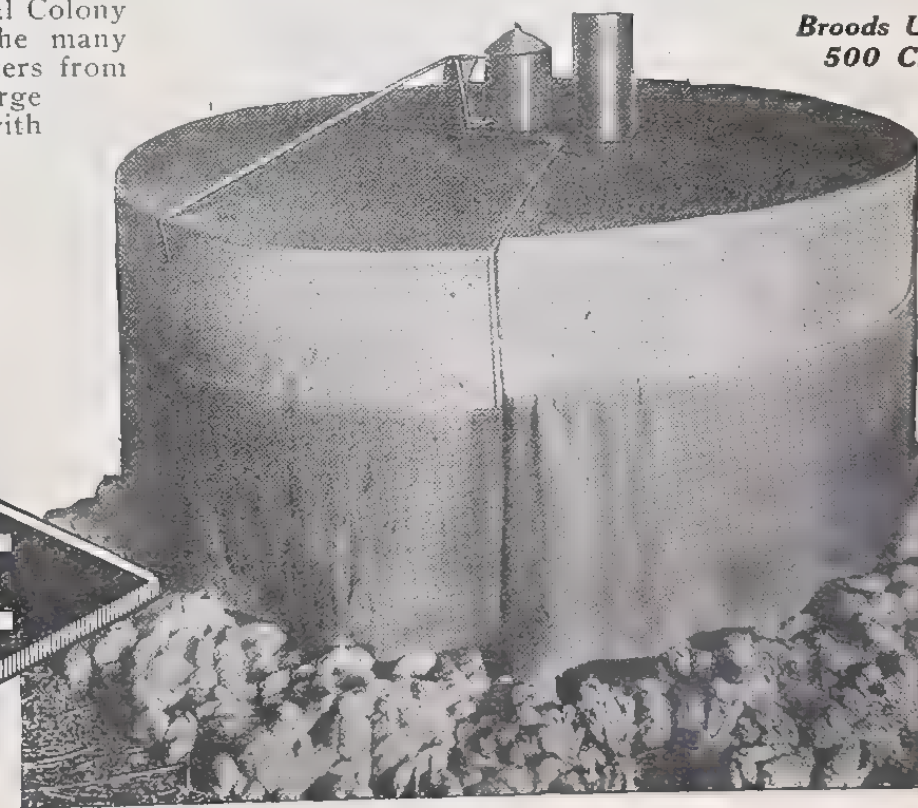

Handy Hover

The large, movable section of its hover gives the operator plenty of room to get at the heater and to attend to the fire and chicks without raising the hover.

Write Your Own Money-back Guarantee

You can write your own money-back guarantee and attach it to your order for a Candee Colony Brooder.

\$1.00 EACH

For splendid S. C. Leghorns, lusty pullets and yearlings; chesty cocks and cockerels. June pellets and cockerels 75 cents each.
Harrison Leghorn Farms Shelby, Mich.

Mention the AMERICAN POULTRY JOURNAL when writing to advertisers.

getting their living from such plants. Profits in egg-farming are somewhat dependent upon a favorable location, but chiefly upon the "know how," skill and enterprise of man who operates the plant. Some successful egg farms are located long distances from a railroad station and have to make long hauls of all supplies and of the produce.

Q. (2) How many layers can one man safely care for?

A. (2) 2,000 with good management.

Q. (3) How big a farm is necessary?

A. (3) You could house and yard them on 5 acres, but to go into egg-farming we would want a farm of not less than 20 acres.

Q. (4) What is the best location, near a city or in a small town?

A. (4) On a good road within reasonable distance of a railroad station having good shipping facilities and within easy reach of a good sized city. Cost of getting supplies and of shipping produce should be considered. Good roads and the possibilities of reaching customers direct by light auto truck conveniently, and at small expense, is a matter worthy of your attention in choice of a location. On good roads the possibility of trade coming to the door is one that needs developing. We sell a good many eggs to automobilists at good prices, tho we are not on a "state road."

Q. (5) Is it best to try to raise your own feed?

A. (5) You cannot raise all you require and give proper attention to egg-farming. It is well to grow some grain and straw.

Q. (6) How much capital is required to start?

A. (6) That is a matter we cannot decide for you. You cannot expect capital invested in a poultry plant to pay you bigger returns than it would in any other legitimate business enterprise. To start with everything paid for would require a good deal of capital,

INCUBATOR THERMOMETERS

and provision would have to be made for expenses until the plant was on a paying basis. Some of the most successful egg farmers have started very small, on heavily mortgaged farms and with little or no capital. These men found other work to pay the living and poultry expenses until they were able to make the poultry pay.

Q. (7) What would be a reasonable profit per hen a year?

A. (7) With good management about \$1.00 per bird to pay for your work.

Q. (8) What would be the best breed for the work? I am very fond of the Barred Rocks.

A. (8) That is a matter for you to decide. The Barred Rocks are an excellent variety. The leading popular varieties in the American and Mediterranean classes are all good for egg farm purposes.

Q. (9) I am a great lover of chickens and have handled them in a small way for several years. Have been successful and have had Barred Rock pullets laying in September and cockerels to weigh 6 to 7 pounds each at that time. Do you think I would have a good chance as an egg farmer?

Van West, O.

O. L.

A. (9) If you begin small, take advantage of all your opportunities, have plenty of determination, push and pluck, we can see no reason why you should not succeed as well as others who have gone the same road.

Drinking Water.

Q. (1) Almost every writer on poultry emphasizes the importance of a good supply of fresh water for poultry, but I seldom see a suggestion as to the kind of drinking vessels to keep it in. Please give some suggestions along this line, and tell us the advantages or disadvantages of vessels that keep the water warm.

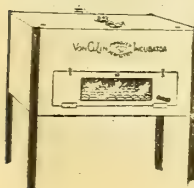

A. (1) For adult fowls, we prefer to use 12 and 14-quart galvanized iron pails. Pans of same material are good if placed on a shelf and protected by slats. Best watering system is by drip faucets from a piped supply from tank or spring having sufficient "head" to deliver enough pressure. We prefer to give our poultry cold drinking water, direct from the spring. Warm drinking water does not appeal to us and we do not believe that the fowls like it or do as well on it as with cold water. Experiment Station tests prove that fowls do well on clean snow in place of drinking water in winter weather.

Q. (2) Also with reference to nests, I seldom see much with reference to the construction and placing of nests. If I am not mistaken in your book on open-front houses you do not give any plans for nests. Please give us some suggestions on nests.

Richmond, Ind.

W. A. A.

A. (2) Location of nests is usually a matter of convenience. Where droppings boards are used, they may be placed under same. Nests may also be located at convenient height on side

Von Culin Incubator

The oldest make on the market. The latest up-to-date incubator. Made of sheet metal. Double and packed walls. Light and compact. Equipped with Von Culin Fireproof Lamp. Thermometer slides thru door. Price to compete with inferior makes. Catalog free.

GEO. WATSON BEACH, Mfr., Dept. 15, 126 Liberty St., New York

Make Hens Lay Now While Eggs Are High

Your hens will lay now if you provide right conditions. During spring and summer they find many things they need to keep them in health, and they lay heavily. In winter you must supply these necessities if you want eggs.

Pratts Poultry Regulator

serves this purpose fully. It is a combination of roots, herbs, mineral substances, etc., which spices the mash mixture and induces the birds to eat greedily; aids digestion; enriches the blood; improves circulation; speeds up the egg-producing organs; puts the fowls in the pink of physical condition; **MAKES THEM LAY.** And all at a cost of about one cent a bird per month. Pratts Poultry Regulator will increase your profits.

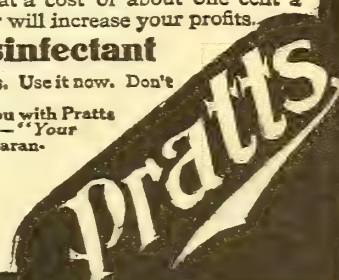

Pratts Poultry Disinfectant

will keep the houses sanitary and kill disease germs. Use it now. Don't let disease get a foothold in your flock. Our dealer in your town has instructions to supply you with Pratts Preparations under our square-deal guarantee—"Your money back if YOU are not satisfied"—the guarantee that has stood for nearly fifty years.

UNBEATABLE

\$9.85 BUYS BOTH

You can't beat the Progressive when it comes to getting record hatches of strong, robust chicks—healthy chicks that pay good profits—chicks that dodge the great chick graveyard.

How the Progressive Safeguards Hatches

It is because of the hundreds of dead air cells around the hatching chambers that makes the Progressive the **Record Hatcher**. This protects against sudden outside changes. It conforms nearest of all incubators to natural, healthy hatching by maintaining from start to finish even, moist, fresh air temperature. No dry, hot blast to cook your eggs. No hatches spoiled by failure to keep just the right heat all the time.

Built of Genuine California Redwood, equipped with Standard Double-Disc Heat Regulator, special Safety-Lamp, Egg Tester, etc. **Your money back with 8% interest if not satisfied.** Send for Big Free Book—it tells the whole story. Special deal if you mention this paper.

walls and partitions. Where nests are not located beneath drop-boards we prefer to give them a roof or cover with sharp pitch so that birds cannot roost on them. Make nests in groups of two, four, or more for convenience. Allow sufficient head room for size of layers kept. For large breeds we like nests about 12x14 in. and from 10x12 to 12x12 for smaller breeds. Usually construct them to face away from light with a runway for birds between wall and nest.

Pekin Ducks for Exhibition.

Some of our readers wish an article on how to mate, breed, feed, select and condition Pekin ducks for exhibition purposes. We suggest that Pekin duck breeders send in articles on this subject for the good of the cause.

Out of Condition.

Q. (1) I have two Buff Orpington pullets and a 2-year-old male that are sick. They just sit around with heads drawn close to body and do not eat. The male I bought and the pullet I raised. Please tell me what to do for them.

A. (1) Put birds into a warm coop, well bedded with straw. Mix a teaspoonful of brandy with half a cup of warm milk and give each bird a tablespoonful of this four or five times a day. When they show interest in food, give only a very little moist mash mixed with warm milk, for first few days, then feed grain and green food.

Q. (2) I have been considering the building of a poultry house made of cement blocks with walls plastered smooth so there will be no hiding place for mites. Will a house like this be cool in summer and warm in winter?

South Holland, Ill.

W. L.

A. (2) Properly built, such a house should give satisfaction.

House Alterations.

Q. I have a poultry house 7 ft. deep, 8½ ft. wide, 5 ft. high at back and 6½ ft. high in front. I want to make it into a Woods' style house. What dimensions should I make the front addition for best results? The back and sides are now tight and the front all open, with door on one side.

Muskogee, Okla.

J. L. W.

A. Leave room at top of present house to get two 3-pane 8x10 in. glass cellar windows in the monitor top. These windows to be hinged at the top and swing out. Make front addition 5 ft.

Three Big Reasons

why you should tell us what capacity and make incubators you now have, and get our Special Proposition on replacing them with

Blue Hen Mammoth Incubators

FIRST—Blue Hen Automatic Egg Turner

Turns every egg in five seconds, in any **Blue Hen Mammoth** up to 10,000-egg capacity; a few seconds more in larger sizes. Saves time, labor and eggs. Requires *seconds* where other machines require *hours* for egg turning. No lifting of heavy trays in and out.

SECOND—Largest capacity in smallest space

The same space that is required for a 3,000-egg, single-deck machine of other makes, will house a 4,000-egg **Blue Hen** or an 8,000-egg, double-deck **Blue Hen**, using but one heater. Easy to put a **Blue Hen Mammoth** in your dwelling cellar, and save building costs.

THIRD—You don't have to "sit up nights"

It's all right to "go to bed with the chickens," but why "sit up nights with the eggs?" The **Blue Hen** is a *Dependable Incubator*—its regulation is absolutely automatic—it gives the proper heat, fresh air and moisture without your attention. *And the temperature is always right.*

There are dozens of other reasons why you should not continue to worry along without a **Blue Hen Mammoth**. Our new **Mammoth Incubator Catalog** gives them—the experience of our users *proves* them.

Write to-day for full information and replacement proposition.

Blue Hen Colony Brooder

The big brooder at the little price

\$14.50 size large as many others rated as "thousand capacity"

Large Powerful Cast Iron Heater

Furnishes abundance of steady, uniform heat. Exclusive safety device prevents thermostat wafer bursting—fire always automatically controlled.

Exclusive Curtain Feature

Special curtain attachment (not shown in cut) furnishes plenty of fresh air but prevents floor drafts.

Many other special features.

Heat Held Down Around Chicks

Hover different from others. Holds heat down around the chicks' backs—where you want it.

No Overheating

The only Hot Air Brooder that warms a large floor area without overheating the brooder house.

Slow Maturing Pullets.

Q. I have 27 young Rhode Island Red pullets, all rich red in color. They are about 6 months old, but do not seem to take on any fat. They eat well and act well, but combs are small and pale. They do not look as bright as some other pullets that are laying.

St. Charles, Mo.

E. W.

A. They are probably all right but a little slow in maturing. Get more good beef scrap or fish scrap into their mash ration. Give plenty of greens and feed liberally.

Canker.

Q. I have over 100 fine pullets, most of which are afflicted with canker. I have tried many remedies and not found a cure. Can you help me? Are they fit to breed from?

Winslow, Ariz.

T. C. B.

A. Clean up and disinfect the poultry house. Burn all musty or mouldy litter. Be careful not to feed any musty or mouldy grain. Add about 5 per cent flowers of sulphur to the daily mash for a week or ten days. Dust canker patches with following: Mix one grain powdered permanganate of potassium with one ounce of finely powdered milk sugar and a little powdered gum arabic. Apply to canker patch with a fine brush or with a blow pipe. When it touches the moist parts it will turn purplish color. Always mix fresh lot of powder as needed. If canker is the only trouble, would not be afraid to breed them.

Bringing Out Exhibition Quality.

Q. Will you please explain this? In article in November issue on "How to Secure Exhibition Quality" the author, C. H. Latham, says: "A high-bred bird will not grow and thrive under some

conditions that a cross-bred or ordinary bird will thrive under."

Now the type of bird most profitable on a farm is one that will pick up a good share of its living during the summer months. Would this be an argument for a farmer keeping any but pure-bred stock?

I am breeding for utility and fancy and my experience has been that the pure-bred stock will outgrow and outweigh the mixed stock under the same conditions; i. e., free range with a light feed of grain mornings and evenings.

North Lawrence, Ohio. C. C. H.

A. In considering Mr. Latham's statement you should bear in mind that he was writing about bringing out the exhibition quality in the birds,—practically continuous "conditioning" from shell to show room in order to develop the highest exhibition excellence. In order to get exhibition quality that will win in hot competition,—that will show all that has been bred in the bird in color, feather, type and fashion,—special care and special grooming is necessary. We believe that is the point he was emphasizing. You cannot get the same results in exhibition excellence in two lots of chickens from the same parent stock, where one lot "roughs it" under ordinary farm conditions and the other lot is carefully managed and groomed all thru the growing season in a fancier's small flocks.

There is no doubt about pure-bred fowl being desirable on the farm and they will "rough it" and do well,—will be useful and beautiful specimens,—but compare them with birds of the same breeding that have been conditioned for exhibition excellence from the start and you will not find them as well furnished or finished. We do not know of any domestic creature that shows to such a marked extent the effects of skilled care, feeding and grooming during the developmental stage and all thru life that is shown by pure-bred poultry.

The farmer, who does not care about maximum results in exhibition excellence, who, if he shows at all, is satisfied with a ribbon at the county fair and cattle show, finds, as you say, that thorobreds outgrow, outweigh and outlay mongrels and mixtures, and that should be sufficient to satisfy him that pure-breds are best. He will have some birds that are good enough to win and he is not seeking to produce and sell winners for the hot contests in the big classes of our great poultry exhibitions.

Grand Hotel

Indianapolis, Indiana

OUT OF THE EAST

BY P. K. WHITE

If you live in a section where there is a heavy snowfall and find the shoveling of the snow thru your yards made extra hard on account of the gates, I would suggest that you try the idea used by Charlie Seigel of Sunset Poultry Yards, Oineyville, R. I. In place of hinges, which are costly, he uses the ordinary screw eye and hanger hook. They are very cheap, more durable than hinges and it takes but a second to lift the gate off altogether and put it away until spring. Taking off or putting back requires no tools whatsoever.

A man who doesn't advertise, is just like the man who winks at a woman in the dark. He knows what he is doing but she don't.

Henry Frick, the magnate, is building what he claims will be the largest poultry plant in the world when completed.

You can't get ahead, if the iron in the fire isn't kept hot.

If you are interested in advancing the S. C. White Leghorn, see that your ballot for president is marked for Chas. J. Fisk of Trenton Junction, N. J., owner of Wilburtha Farms.

You can't do any good by worrying about the election—so go on with the winter show season.

Harold Rawnsley, brother of "Len," has accepted the position of manager of Morris Poultry Farm, Lebanon, Ohio. Those who know Harold as well as I do, know full well that he will make a success of his new venture. Good luck to you, old boy.

American Rhinelander Club has recently been formed and the following gentlemen compose the list of officers: A. Schwarz, Burlingame, Cal., president; Rev. W. Berberich, Groton, N. Y., vice president; Mrs. F. Lager, Bullville, N. Y., secretary.

It may be wicked to work on Sunday, but when I see a man needs help, I am right there with the assistance. Called at Morris Poultry Farm, Bridgeport, Conn., a few Sundays ago and the help was away for the day. Mr. Morris had to ship two pens of birds for customers for a contest that opened Tuesday, so it was a case of get busy.

One of the most wonderful sights I ever witnessed happened while on a recent trip to Hickory Farms, Townsend Harbor, Mass. Arriving there about eight o'clock at night I noticed the skies shooting forth a number of lights which reminded you of hundreds of searchlights. This was my first view of the northern lights and it was a sight that will never fade from my memory.

Pay more attention to your advertisements and your advertising will pay more attention to your business.

"Jimmy" Glasgow tells that he danced before the King, but I watched him at Syracuse and noticed he fell down on the "Castle steps."

The highest record bird at Storr contest was a White Leghorn with a record of 287 eggs. She was sold to Morris Poultry Farm, Bridgeport, Conn.

The greatest record ever made by a Red at the Storr's contest was made by a bird owned by Pincrest Orchards of Groton, Mass. This bird made a record of 260 eggs.

When speaking of successful poultry women and women who really know birds, don't forget that real authority, Miss Griott of Homestead Campine Farm, Wayland, Mass.

ATHERTON'S FAMOUS SILKIES

The REAL Birds

EGGS \$6.00 per setting; two settings, \$10.00.

Single Birds, \$5.00 to \$25.00

W. B. ATHERTON
Randolph - Massachusetts

If you have never been in the east, it is worth your while to come here and see some real poultry plants. Every day I find a new one that I never heard of before. I don't mean back lotters, but real plants. In the last issue I said we had the poorest and the best Barred Rock farms here in the east. Well, since then I have visited another plant that must go in the real class. It is W. W. Carpenter, East Providence, R. I.

Keep your eye on the Boston show this year. It will be the biggest and best ever, for Brother Atherton is leaving no stone unturned to get all the boys out.

Competition is the life of trade. At least W. F. Hayward of Westboro, Mass., thinks that way, for he is working night and day to see that all White Rock breeders of the country exhibit at the National meet, which will be held at Boston this year.

Providence, R. I., thru Secy. Brown, is working hard for a banner show. He has selected the best of judges, among whom is J. W. Andrews, the well known White Wyandotte breeder of Dighton, Mass. Good idea, Mr. Brown. Other show secretaries will do well to select judges who breed that variety to judge it.

After what I call some real traveling around these United States, I am firmly convinced that Bird Bros. of Meyersdale, Pa., are the real turkey kings of the entire country.

It must run in the family. Chas. Hubbard, the Buff Orpington breeder and also the manager of Foxhurst Farm, Lime Rock, Conn., has an eleven-year-old son named after him and who is a real chip of the old block. He recently won first prize in the Connecticut boys' and girls' club, and in addition sold his birds at a profit of over two hundred dollars.

Paul Ives of Guilford, Conn., has a new Langshan to show us. Good luck to you old man. May it prove a success.

Read Poultry Farm, Watervliet, N. Y., is planning three new houses for this winter.

With a party of friends, we spent Saturday, Oct. 11th visiting the following farms: Pinchest Orchards, Harold Tompkins', Rock Ledge Farm and Homestead Campine Farm.

Honor for the most beautiful and costly home in the entire poultry world goes to H. P. McKean, Jr., owner of Willow Tree Poultry Farm, Beverly Farms, Mass.

Spent a very pleasant evening with my old friend, Chas. Wood, secretary of the Massachusetts Poultry Association. I said "friend" and mean it. Was caught in front of his house with two blowouts in my front tires and no one within forty miles who knew me. He fixed me out, that is why I say a "friend."

Records show that Arthur Bouck of Fernbrook Farm, Albany, N. Y., is a consistent winner at the leading shows, but it does not tell how good eating some of his birds are. A few Sundays ago I spent the day there, along with four dyed-in-the-wool fanciers from Haydenville, Mass. (also White Wyandotte breeders). Well, between the Brown brothers and White, Mrs. Bouck had some job on her hands, but we all left there full of happiness and chicken.

Right at this time good poultry managers are in big demand, so therefore, Mr. Owner, treat your manager human and give him credit for what he does.

Another good bred-to-lay poultry farm in Massachusetts is at Leeds, Mass., owned by M. W. Potter, one of the old school and a real breeder.

Visited the Barred Rock Farm of W. J. Wallis, Westfield, Mass., a well known breeder in New England, who has a very good plant.

If you expect to get real results from your advertising see that your copy is well written, your inquiries answered promptly and on a typewriter. If you do this you will find that poultry journal advertising is a dividend payer.

If you intend to exhibit at Boston but find it impossible to be there personally, just write to me at A. P. J. headquarters, Hotel Lenox and I will be glad to wire you of your awards.

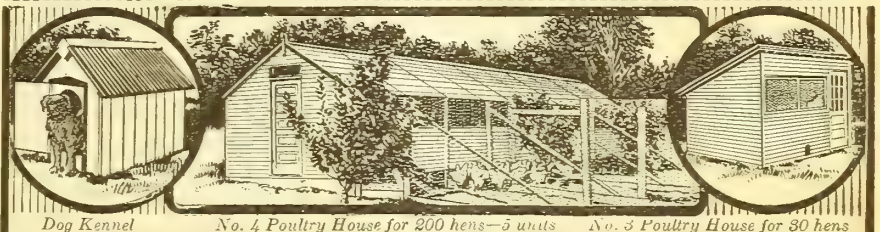

Wm. Halbach, secretary, W. H. Saart, president,—a good combination for you to vote for if you want to see the White Rock club advance.

BABY CHICKS

Prices quoted for January delivery.	Lots of 100	Lots of 50	Lots of 25

ing Troubles**

Nature's way of
brooding chicks
is outdone by

Simplex Perfection Feather Brooders and Hovers

They are real artificial hens—"giant biddies" is what they have been correctly nicknamed. They are made of natural feathers to suit the requirements of the largest as well as the smallest breeders. They have been successfully used on some of the largest poultry plants in America. In 1911 the Midlothian Poultry Farms, of Tinley Park, Ill., installed our feather hovers in all their brooder houses and have had them in continuous use since that time.

Simplex Perfection Feather Brooders are manufactured exclusively by us—both heated and fireless construction. Prices to suit every purse.

Simplex Perfection Feather Hovers for brooder houses are manufactured in 3 sizes. Prices from \$3.00 to \$5.00. They are light and sanitary.

Send for our complete catalog and let us tell you more about these wonderful Chick Raisers.

SEEN AND HEARD IN THE MID-WEST

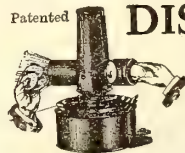

BY SHEPARD STRONG

The season for the winter shows is now at hand. I hope that everyone of you read Dr. Woods' notes regarding same in which he urged you in your own best interest to attend these shows and, if you have good birds, to be sure and exhibit. If you are going to send birds to one or more of the winter shows, be sure and use strong and suitable coops and follow in exact detail the directions for shipping and labeling outlined in the premium list of each show. In my own personal experience in the management of shows, I have found instances of birds being sent to shows in dilapidated coops—instances that were far too frequent—and in many cases by breeders of such prominence that if I should mention their names it would surprise you. I often have wondered how some of these coops hold together at all for the shipment. Other exhibits arrive at the shows in coops altogether too small for the comfort of the birds as well as their subsequent appearance when coming under the judge's eye. Still other exhibitors make their shipments to the shows with their birds all mixed together so that there is no way for the show people to tell just which birds the exhibitor wishes to be shown singly and which in pens, etc. Then there is the type of exhibitor—and his exhibit usually does not consist of more than one or two birds at the most—who bombards the secretary with a series of letters and telegrams; on the opening day of the show, he sends word wanting to be notified by wire whether his exhibit arrived safely; then after this will come one and generally two messages asking for immediate word as to his winnings, and then will come word asking the secretary to wire him whether he cannot return the exhibit a day or so before the close of the show as it worries him to have his birds away from home so long. Now, these birds may be the pets of the exhibitor's poultry yard, but they have been pests to the management all show week. On the other hand, as an example of a man who does send his birds properly to shows, I am going to cite the concrete case of L. H. Perry, Clay, N. Y. I know from personal experience that Mr. Perry's birds arrive promptly at the shows, are securely cooped, each crate being carefully labelled as to its contents and direction for return shipment. On the day the judging should be completed, the show manager receives by mail from Mr. Perry a list of his entries with request that his winnings be marked on same and returned in stamped envelope enclosed therewith on which is Mr. Perry's complete address. Then all the secretary has to do is simply mark first, second or zero, as the case may be, after each class, seal the envelope and the job is done. I have never met or seen Mr. Perry, but I know he is a thoughtful, considerate gentleman and remember, Mr. Poultry Exhibitor, that such people always get good service wherever they go.

The writer is scheduled to attend a number of the more prominent shows in the middle west and is looking forward to furnishing the readers of A. P. J. with prompt and reliable reports of same.

It is with great pleasure that we make announcement of the promotion of Mr. Hark, Sheffield Farms, Glendale, Ohio, to the office of general manager. Mr. Hark has been well known to the fanciers as superintendent of the poultry department of this famous

I guarantee satisfaction

HENRIETTA E. HOOKER South Hadley, Mass.

farm, in which capacity he has been largely instrumental in bringing the Partridge Wyandottes to the prominent position this variety holds today.

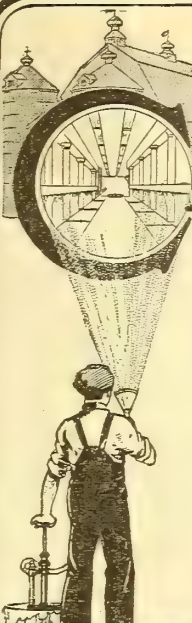

While in Indianapolis recently I called on Theo. Hewes, the able secretary of the Chicago Coliseum show. From what he indicated to me and also from what I hear all along the line, there is every indication that this season's show will be the greatest in the history of this classic institution.

I recently had a very interesting visit with Prof. Kilpatrick of the Ohio State Poultry Board, whom I ran across in Fremont, Ohio. He tells me of the active campaign that is being conducted in the encouragement and fostering of the poultry industry. This movement is worthy of the best support of the poultry journals.

The writer cannot see why secretaries of the winter shows do not work in closer union and so avoid the useless conflicting of dates. There are several bad clashes this year, most of which probably could have been avoided by a little foresight. The time is not far distant when the poultry shows—especially the larger ones—will be obliged to have a joint governing organization similar to the American Association of Fairs and Expositions, with power to assign and regulate date. I did not attend any of the show managers' departmental meetings at the Cleveland convention, but if this matter was not taken up and discussed it seems to me a decided oversight was made.

I recently called on J. O. Somers, Bedford, Ohio, and found him in the midst of harvesting the largest and finest crop of apples I have seen this season. Mr. Somers is secretary of the Cleveland show and we talked over the prospects of same in detail. Both of us are convinced that this year's show will be a record breaker in both numbers and quality.

There are several positions open at this time for competent and reliable poultry men to act as superintendents of plants. Also there is an opening for a bright young man to act as helper combined with the opportunity for learning the poultry business under the instruction of one of the best breeders and judges in the country. I will gladly put any qualified person in touch with the prospective employers who will write me regarding same at 4311 Prospect Ave., Cleveland, Ohio. *Shepard Strong.*

CARBOLA

Disinfecting
Germ-killing White Paint

Just putsome Carbola in a pail, stir in water until the mixture is thick as ordinary oil paint, and put it on-

to walls, nest boxes, dropping boards, etc., with a brush or a spraying machine. It will dry out a clear snow-white and will rid your poultry houses of mites and the germs of diseases that affect your chickens and reduce their production. The dry powder is unexcelled as a lice powder. Carbola is used by Egg Laying Competitions, Agricultural Colleges and the most carefully conducted poultry, dairy and breeding farms.

Use It Instead of Whitewash

in barns, dairies, creameries, poultry houses, cellars, outbuildings, etc. Will not blister, flake or peel off. Does not spoil by standing. Get some from your dealer today. If he has none send your order to us.

10 lbs. (10 gals.) \$1 plus postage. 20 lbs. (20 gals.) \$2 delivered free.
50 lbs. (50 gals.) \$4 delivered free.

Trial package (covers 250 sq. ft.) and booklet "The Disinfectant That Paints" for 25 cents postpaid.

Carbola Chemical Company
Department 1 7 East 42d Street, New York

Rhode Island Reds, Both Combs

At the Industrial Exposition and Fair, September 2-9, 1916, Cleveland, Ohio, I won on Single Comb Reds, 4 first and 4 second prizes. At Lorain Co. Fair, Elyria, O., won every first and second prize on both varieties. This in connection with my winnings at the last two big Cleveland Winter Shows, surely will convince you my Reds are as good as the best. If you want quality, write me.

B. M. BILLINGS, ELYRIA, OHIO

Newtown Giant INCUBATORS BROODERS

*The Newtown Giant Incubator
"HATCHES the most chicks, the
best chicks, with least labor and
at lowest cost."*

An incubator of large capacity costs considerable money. This should represent a long-time investment, one which will regularly pay big annual dividends in cash, satisfaction and peace of mind. A poor incubator is a constant source of loss, worry and annoyance. Invest your incubator money wisely. The success of your poultry operations depends largely upon this.

Buy the Newtown Giant—the choice of the most experienced and successful practical poultrymen—the incubator which is scientifically constructed and leaves nothing to chance—which eliminates labor, worry and uncertainty—which hatches more and better chicks than any other incubator ever made.

The Newtown Giant Incubator embodies every desirable feature on any other incubator of mammoth type, as well as many exclusive labor-saving, results-insuring features not found elsewhere. Included are automatic regulation of heat, ventilation and moisture in each 150 egg compartment, automatic eggs turner, automatic temperature indicator and electric alarm.

We claim that the Newtown Giant is the best incubator on earth, bar none, large or small. And we ask the opportunity to prove the truth of this assertion. Your request to "show me" puts you under no obligation. But you will be glad you wrote us.

Write today for complete incubator and brooder catalogs—FREE

NEWTOWN GIANT INCUBATOR CORP'N, 21 Warsaw St., Harrisonburg, Virginia

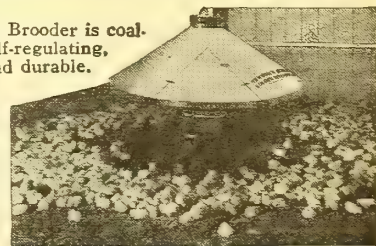

After you hatch or buy chicks, raise them. Poor brooding equipment and the inability to successfully grow chicks year after year, have probably wrecked more poultry enterprises than any other single factor.

You should have brooders which will raise good chicks and lots of them—which are not expensive to buy—which do not demand costly buildings—which are economical of labor and fuel—which will give continuously satisfactory service for many years.

The Newtown Coal-Burning Colony Brooder meets these specifications. It was the first successful brooder of the colony type offered to American poultrymen. It has been improved from year to year as a result of our experience which covers a longer period than that of other manufacturers of colony brooders. It has been imitated but never equalled. Ask the men who have tested the original and the imitations.

The Newtown Colony Brooder is coal-burning, self-feeding, self-regulating, freely ventilated, safe and durable.

It will satisfy your most exacting demands. Your dealer should be able to supply you. If not, we will. Made in four sizes for any number of chicks up to 1200. Sells at \$15, \$20, \$25 and \$32.50. Get the size you need, but be sure it's a genuine Newtown. There's no other "just as good."

*Newtown Coal-Burning Colony
Brooder "RAISES the most chicks,
the best chicks, with least labor and
at lowest cost."*

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

IOWA STATE POULTRY BREEDERS' ASSOCIATION

The result of the annual election of the Iowa State Poultry Breeders' Association has been announced by Election Commissioner Bittenbender as follows: President, Judge Jos. Dagle, Richland; vice presidents, W. E. Creath, Ottumwa; L. H. Heim, Dubuque; E. D. Monillaw, Cedar Rapids; secretary-treasurer, V. V. Warner, Bloomfield. The newly elected members of the Executive Committee will consist of H. E. Williamson, Dubuque; Geo. L. Marsh, Waterloo; S. A. Power, Fairfield. The Finance Committee, A. J. Smith, Cedar Rapids; J. H. Hastings, Grinnell; Miss Beatrice Mansfield, Altoona. Place of annual meeting, Dubuque, January 4 to 9. James A. Tucker, Jos. Dagle, and Harry Atkins, judges. This will make the Dubuque show the one great show of the state, as the Iowa State Poultry Association, the oldest organization in the state, will also hold its annual meeting and make its forty-second annual exhibit in combination with the Dubuque Poultry Association. Write Walter G. Hurd, secretary, for premium list.

NATIONAL MEET OF SINGLE-COMB WHITE LEGHORN CLUB

Breeders of Single-Comb White Leghorns should surely plan to send an entry to the National meet of the Single-Comb White Leghorn Club, to be held in connection with the Greater Chicago Show, January 10 to 16, 1917. This is one of the big shows of the country and the White Leghorn class at this show promises to be one of the largest and best ever cooped. Twenty-five per cent of the total entry fees on Single-Comb White Leghorns will be offered as cash specials to members of the club; this in addition to the regular cash prizes, club specials, silver cups, etc. Eight places on cocks, hens, cockerels, pullets and both young and old pens will be awarded. Two judges of national reputation will be put on White Leghorn class—one from the east and one from the west—which assures satisfactory judging to all. Make applications for membership in this club to its president, Eugene Smith, Aurora, Ill., or its secretary, F. O. Groesbeck, Hartford, Conn. Send your request for premium list of the Greater Chicago Show direct to D. E. Hale, secretary, 930 Monon Building, Chicago, Ill.

ILLINOIS STATE SHOW WILL BE A RECORD BREAKER

The twenty-third annual Illinois State Show, to be held in the Arsenal Building at Springfield, Ill., December 28 to January 3, will undoubtedly be the biggest exhibition ever held in Springfield. The Sangamon County Poultry Association, one of the liveliest organizations in the state, is out to show the exhibitors that Springfield is the real show town they say it is. The dog fanciers, cat fanciers, bantam men, pigeon men and pet stock men are all working in harmony and will no doubt draw a larger attendance than any show in the state. Each have a department of their own. Inquiries are coming in from practically every state in the Union and with eight judges all judging will be done in one day. Plenty of special premiums, cash specials for best shaped male, best shaped female, best displays in every variety; official and marked

catalogs distributed free to everybody; cash prizes larger than any show in the state, combined with first class treatment, and an absolutely square deal to all is what you will get at Springfield. Columbian Wyandotte, Ancona, Black Langshan Clubs will meet here. Why not you? Catalog will be ready soon. Write A. D. Smith, secretary, Quincy, Ill., for copy.

AMERICAN S. C. WHITE MINORCA CLUB

At a special meeting of the American S. C. White Minorca Club the following officers were elected: President, C. Augustus Raschke, Kingston, N. Y.; first vice president, W. H. Catterall, Chickasha, Okla.; second vice president, F. X. Zapf, Great Bend, N. Y.; third vice president, Mrs. I. J. Lorton, Union City, Ind.; secretary-treasurer, T. D. Brown, Muskogee, Okla.; chairman publicity committee, H. B. Shapley, Earlville, N. Y., assisted by E-President Mrs. J. G. Osborne, Fabius, N. Y., and members of the executive committee. We urgently request all breeders to join our club and help the officers to boost the White Minorcas in every way possible. From all present indications there will be a greater demand for stock chicks and eggs next season than ever before, and we have every reason to believe that with proper showing and advertising the S. C. White Minorcas will become one of the most popular breeds.

AMERICAN BUFF LEGHORN CLUB MEETING

A meeting of the American Buff Leghorn Club will be held at Detroit, Mich., Friday, Jan. 11th, 1917, at the Poultry Show room at 2:30 p. m. Further information can be had in Buff Leghorn Alley before 2:30. It is earnestly requested that all members and others interested be present with any suggestions they may have that will promote the interest in these egg laying machines and valuable market breed of poultry. Many important questions will come before this meeting. Be sure and get the new club book, 80 pages, and free to those interested, worth \$2.00 to many for the information they gain from the same. Dr. L. E. Heasley, president, Holland, Mich. Geo. S. Barnes, secretary, Battle Creek, Mich.

The Chicago Pet Stock Club held a bench show on November 3rd which was very well attended. Charles Gibson judged the rabbits and E. F. Deicke the covies, during the course of which the judges lectured on the merits and demerits of the various specimens. After the judging, raffles were held on several rabbits and covies which were donated for the purpose by members for the benefit of the club. We now have 44 members. Send all communications to Geo. C. Eckert, 2630 Winona Ave., Chicago.

The Silver Wyandotte Club of America will hold its state meet in Watertown, Wis., Dec. 5-10, 1916. They are offering \$45 in cash prizes to members of the club, 10, 20 and 30 per cent of the entry money, cash specials for pens and displays, also many merchandise specials. All Silver breeders are welcome to attend a special meeting to be held in the show room on Sunday afternoon, Dec. 10th, and the Watertown boys will entertain them to the best of their ability. For premium list write the secretary, Theo. E. Sonnemann, 512 8th St., Watertown, Wis.

SHOW BIRDS GALORE!

More than 2500 Aristocrat Barred Rocks are now growing up into superb, magnificent show birds. The Aristocrats are those wonderful birds which made such a truly

SENSATIONAL SWEEP OF VICTORIES

thruout all America last season—from Brooklyn, N. Y., to San Francisco, and from the great shows of Canada down to the Gulf—capturing **FIRST PRIZE** at such shows as Chicago, the World's Fair, Philadelphia, Norfolk, and scores and scores of other shows. This is one of the most **Victorious Campaigns** ever made by any strain in a single season. This great record gives force and power to the thought that

The Aristocrats Are Sure and Guaranteed Winners

Now—I ask you: Do you want to win this Fall or Winter? If so, sit down and write me, and we will make a deal that will safe-guard you absolutely.

W. D. HOLTERMAN, Fancier Box A **FORT WAYNE, IND.**

P. S.: This season the Aristocrats are even better than last year.

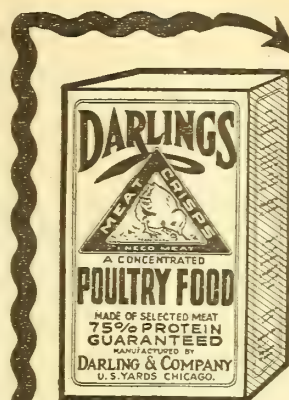

JUDGES AT GREATER CHICAGO SHOW

The following well known judges have been engaged and assigned classes for the Greater Chicago Show to be held Jan. 10-16, 1917, as follows: Newton Cosh: Barred Rock exhibition males and pens, cockerel-bred pens, pullet-bred cocks, hens, cockerels and pullets, all Blue Andalusians, all R. C. Black Minorcas. A. C. Smith: All Partridge Wyandottes, Barred Rock exhibition hens and pullets, cockerel-bred hens and pullets, pullet-bred pens. Frank L. Platt: All Sussex, Anconas, Houdans, Campines, Buckeyes. J. C. Johnston: All S. C. R. I. Reds, S. C. White Leghorn cockerels, pullets and old pens. Chas. McClave: All Leghorns except White, all Cochins. White Plymouth Rock cocks, pullets and old pens, all Columbian Rocks all ducks. Jos. Dagle: All Buff Plymouth Rocks, White Plymouth Rock cockerels, hens and young pens. H. B. Hark: All Partridge Plymouth Rocks, all White Wyandottes. Z. D. Struble: All Buff Orpingtons, Buff Wyandotte cocks, pullets and old pens. W. E. Stanfield: All Orpingtons except Buff, all Cochins Bantams except Black. J. A. Leland: All S. C. Black Minorcas, all White Minorcas, all Brahmans, all Columbian Wyandottes. W. W. Wise: All R. C. R. I. Reds, all Black Langshans, all Black Leghorns, all Black Cochins Bantams; Black Javas. Dr. H. P. Clarke: All Buttercups, all Games and Game Bantams, Cornish and Cornish bantams, Malays and Malay Bantams, Sumatras, Silkies, Sultans, Polish, Hamburgs, Yokohamas, Lakenfelders and Black Tail Jap Bantams. J. H. Lewis: All turkeys and geese. M. L. Chapman: S. C. White Leghorn cocks, hens and young pens, Buff Wyandotte cockerels, hens and young pens. This list subject to change if necessary.

A REAL NATIONAL SHOW

We hear this and that show talked of as being a national show. All shows are national as far as limiting entries are concerned, but when a show holds several nation club meets at one time it should be classed as a real national show. The Greater Chicago Show will entertain the following national club meets at its next annual show to be held Jan. 10-16, 1917: The National S. C. White Leghorn Club, The American Buff Plymouth Rock Club, the International Partridge Plymouth Rock show, the American Partridge Wyandotte club, the American Buttercup club, the American Bronze Turkey club, the National Golden Wyandotte club, also the Illinois State Barred Rock Club, the Zone Partridge Wyandotte meet for Missouri and Illinois. This means one of the largest arrays of specials, cash, cups and medals ever put up on any eight classes at any one show. The men composing the Chicago Poultry Breeders' Association are fanciers and hustlers and are putting on a great show. This show has made an enviable reputation for being a great selling show where fellowship and good spirit prevail. There will be club meetings, club banquets, fireplace talks, and last but not least, the F. L. E. A. banquet. See that your dues are paid to your club and be prepared to come, win and enjoy yourself. Premium list is now ready and will be sent for the asking by addressing D. E. Hale, 930 Monon Building, 440 S. Dearborn St., Chicago, Ill.

Frank L. Platt, Swanton, Ohio, has been added to the list of judges at Madison Square Garden. He will judge Light Brahmans, Dorkings and Sussex.

Here Is the Secret of Winter Egg Profits!

"Get the pullets started to laying before cold weather. When they go into the winter houses, make them eat all they possibly can; have dry mash and high grade meat feed always before them; the more they eat, the better, just so long as the meat feed in the ration is high in protein and is clean and digestible." The most perfect and economical form of meat feed is

DARLING'S MEAT CRISPS

This feed is made from selected meat trimmings collected daily in the Chicago markets. It is cooked the same day at 350° Fahr., thoroughly removing all grease and foreign matter. After drying it is ground into uniform particles. It is a sweet, clean, odorless concentrate of fresh meat. We guarantee it to contain 75% digestible protein. Packed in moisture proof cartons and wooden pails.

Poultry Book FREE

This book, entitled "Feeding Secrets of Famous Poultrymen", will give you more information about **Winter Egg Production**; Pushing Late Pullets; Making Eggs that Hatch; Feeding for Exhibition, etc. It tells the cause and cure of common poultry diseases, and in addition contains a lot of other valuable information. It describes Darling & Company's other poultry feeds. Write for your free copy today.

SOMETHING NEW

Sioux City has inaugurated a new idea for its poultry show; instead of one week it is spreading the show over a continuous period of five weeks; the first week, commencing Dec. 26, will be given to Leghorns, Hamburgs and Bantams, Campines and Minorcas; the next week following will be Orpingtons only; the next week, Rocks; the next week, Wyandottes and Rhode Islands; the last week will embrace all varieties not already provided for. Entry fee will be 50¢ per single specimen; \$2.00 per pen. The association owns its own steel wire coops, and there will be no cooping or feed charge. The show room is on the principal business street in the heart of the town and the public is to be admitted free. This is a radical departure from the old method of conducting poultry shows, and this season's experience will be useful in indicating better plans of grouping the varieties shown each week, for future shows, but in order that this method be continued through the ensuing years and be a permanent fixture, the poultry people must give us their support by showing their birds; we have 500 steel coops and room for more, so there will be no crowding; everybody's birds will be shown to the best advantage, for the room has excellent light. For further information, address C. S. Evans, president, Sioux City, Iowa.

BATAVIA, ILL., PREMIUM LISTS READY

We are in receipt of the premium list of the Batavia, Ill., Auditorium show, giving a list of the prizes at what promises to be one of the best shows in the state. The dates are Dec. 26-29, inclusive, and the entry list closes Dec. 18. You have just time to get a premium list and get your entry in. Judging from the classy premium list issued and by what we have already heard, the Batavia boys are evidently "on the job" and will have "some show." They are planning on cooping 1,000 birds and are offering several hundred dollars in "gold special" and regular premiums, as well as silver cups and trophies. Judge Hale will place the awards, assisted by another equally prominent, if necessary. Exhibitors will be urged to "place their advertising on coops as soon as birds are in." The Junior Department, the pigeon, bantam and pet stock departments, with a "winter fair" in addition will be special features. The Batavia show is "up to the minute" and will have many special features of an attractive, practical and educational nature to draw a large attendance. They claim "the best cooped show in the state." Write for premium list to Charles A. Pierce, secretary-treasurer, Batavia, Ill.

The annual poultry show in Denver next January will be free to the public and an advertising campaign now is being planned for making it an exposition of such proportions as to attract poultry fanciers from all sections of the Rocky mountain states. This program has been agreed to by the directors of the Colorado Poultry Fanciers' Association after consultations with city officials and officers of the Tramway company. The agreement has been reached with the mayor that the Auditorium will be furnished rental free, the association to pay the actual cost of lighting and heating the building. The Tramway company will provide advertising space on its cars free of charge and will assist in other ways in advertising the event. Other business concerns are expected to assist in making the 1917 poultry show an exhibition big enough to attract crowds to Denver in January.

The Wisconsin Black Orpington Club will hold their next club meet in connection with the Sheboygan show Jan. 3-7, 1917, and are offering cash prizes to the amount of \$75 to club members only. This will be in addition to the \$800 that the association is offering. This extra feature will make the Sheboygan show one of the best in the state. For further particulars address Geo. L. Spratt, secretary, Sheboygan Wis.

The national meeting of the American Buff Leghorn Club will be held in connection with the show of the Michigan Poultry Breeders' Association at Detroit, Mich., Jan. 9-14, 1917. The National White Wyandotte Club meet and Barred Plymouth Rock Club state meet will also be held in connection with this show. For full particulars write F. M. Crowe, secretary, Owosso, Mich.

LAYBILT "S. C. W." LEGHORNS
EVERFRESH EGG FARM Box A IONIA, MICH.

The Cleveland show, Jan. 8-13, promises to outdo all others. Many new added attractions will be found when this show opens. Pigeons will be a big feature, and the National Pygmy Pouter Club will hold their national meet with us, and probably the Pouter Club also. Chas. Wagner of Toronto will handle the pigeons. The United Ancona Club will hold their national meet with Frank L. Platt to handle this class. With J. C. Johnston to handle the Barred Rocks this will be a big feature. H. V. Tormohlen will handle the Brown Leghorns. Undoubtedly the American Cornish Club will hold the Ohio State meet with us, and Mr. Cecil Manners, Mountsville, Va., will judge them. The Ohio State University will place one of the most up-to-date exhibits with us, and will also conduct a poultry institute all week and both will be in charge of Mr. Milligan C. Killpatrick. This will be one of the leading features of the show. As Central Armory has been secured, and all birds will be single decked, this show will be one of the best ever held in the city of Cleveland. J. O. Somers, secretary, Bedford, Ohio.

The Pittsburgh show will be held the usual third week in January from the fifteenth to the twentieth, the week following Boston. The Poultry Exhibition of Pittsburgh has been reorganized into a large breeders' society and the indications are that the year's show will prove the banner event of five preceding shows. The success of which has placed Pittsburgh among the leading national shows. We are going back to our old location where the attendance averaged over six thousand paid admissions a day. The National White Orpington Club will hold its meet here and we anticipate a large entry of this variety. The judges so far selected are A. Fred Kummer, W. C. Pierce, Len Rawnsley, Fred H. Cook, J. N. Hazlett, J. H. Lewis. For premium list address, The Poultry Exhibition of Pittsburgh, 58 Grace Ave., Pittsburgh, Pa.

The sixth annual show of the Sheboygan Poultry and Pet Stock Association will be held January 3 to 7, 1917, and entries will close December 31. This year the association will hang up the largest amount of cash prizes in its history—\$800—and already inquiries are being received for the premium list. If you want to exhibit at this show, send today for a premium list, which will be mailed immediately by George L. Spratt, Show Secretary, Sheboygan, Wis. George M. Wells, of Oshkosh, will judge the poultry department, and K. J. Muir, Chicago, will judge the pigeon department. This year a combination will be worked, the first five awards placed by comparison, balance by score card. In place of cups this year the association is hanging up large cash prizes for sweepstakes, displays and specials.

Less than three years ago the Delaware County Poultry Association was organized, and two fine poultry shows have been held. Plans are now under way for the third, which will be held Jan. 17-21, in Media Armory. The show will be a four-day affair this year, this being an increase of a day over the other years, and the lists have been opened to include pet stock, while in the past entries were limited to poultry. Premium lists may be obtained by addressing P. G. Platt of Wallingford, who is secretary. W. G. Bengal of Media has been appointed show superintendent. The judges have not yet been named.

Don't let the talk about a railroad strike prevent you from entering your birds at the Kansas City Poultry Show, January 1, 1917. Birds are shipped by express. Express cars and mail cars go by the same train. The government will not allow its mails delayed. Make your entries early, and if a railroad strike prevents you shipping your exhibit, your entry fee will be returned to you in full. E. L. Noyes, secretary of Kansas City Poultry Show.

The Kansas State Poultry Federation Show will be held at the State Manual Training Normal, Pittsburg, Kan., Dec. 18-22, 1916. The cash and special premiums are very liberal. T. E. Quisenberry, G. D. McClaskey and E. C. Branch, judges. Send at once for premium list to D. J. Mackey, secretary, Pittsburg, Kan.

The Mrettoewee Valley Poultry, Pigeon and Pet Stock Association will hold its sixth annual show at Granville, N. Y., Jan. 22-27, 1917. Jaquin and Van Alstyne, judges. Send for premium list to D. B. Braymer, secretary, Granville, N. Y.

The Greene County Poultry and Pet Stock Association will hold its annual show the first week in January, 1917, at Springfield, Mo. This association has purchased coops and will have uniform cooping. C. A. Emery will place the awards. For premium list and particulars address the secretary, C. H. Fawcett, Springfield, Mo.

CARTER'S POULTRY FARM
JONESDALE, WISCONSIN

MILWAUKEE ANNOUNCES JUDGES.

This new national show has made an enviable reputation for itself and bids fair to be one of the best shows in the United States. This year the American Buff Orpington Club is holding its annual meeting at Milwaukee, and a fine list of specials offered on all breeds and varieties should call out an immense entry. The Convention Division of the Merchants and Manufacturers' Association of Milwaukee, appreciating the value of this exhibition, are offering a \$25.00 cup for best exhibit of Barred Rocks. Breeders who are interested will please write the secretary for lists at once. Address of secretary until December 25th, New Southern Hotel, 13th St. and Michigan Blvd., Chicago; after December 25th, Republican Hotel, Milwaukee, Wis. Date of show January 18th to 22nd; entries close January 8th.—Theo. Hewes, Secretary.

List of judges and classification.—George E. Greenwood, Lake Mills, Wis.—All Orpingtons. James A. Tucker, Royal Oak, Mich.—All Reds; White Plymouth Rocks; all Cornish and Sussex. W. C. Pierce, Hope, Ind.—All Leghorns; Anconas, Barred Rocks; all Bantams. George Wells, Oshkosh, Wis.—White, Silver and Golden Wyandottes; Houdans, Buckeyes, Buttercups. William Halbach, Waterford, Wis.—Buff Rocks, Buff Wyandottes; all Langshans; all Minorcas; Blue Andalusians; all Standard Games. James Greenwald, Cedarburg, Wis.—All Brahmas; all Cochins; all turkeys; all water fowls; Rhode Island Whites. Any variety not listed above will be assigned to the judges first thru their classes.

WHITE ORPINGTON CLUB ANNUAL MEETING.

The annual meeting of the American White Orpington Club will be held at Pittsburgh, beginning January 17th, and the liberal cash prizes to be offered by the management of the Pittsburgh Show, as well as the cups and ribbons which will be offered by the White Orpington Club, should bring out the largest classes of White Orpingtons ever shown in America. We trust that a large per cent of the members of the club will make entries at this show and thus help to make the classes as large as possible. The club is now pushing an active campaign for new members, and in case five hundred new members can be secured, it is planned to issue a new breed book on the White Orpingtons. This book will contain cuts of the recent first prize winners of the largest shows and much valuable information as to breeding conditions and judging White Orpingtons. This would be a big help to all breeders of this most popular breed and would be well worth the annual membership in the club.—William A. Stoltz, Sec'y, 416 State Life Bldg., Indianapolis, Ind.

NOTICE.

Attention, Buff Wyandotte breeders. We have arrived at a decision regarding our Illinois State Show of the American Buff Wyandotte Club and will hold it in connection with the Chicago Coliseum Show, December 13-18. We extend an invitation to all Buff breeders. We hope to meet you there, and do not neglect to bring your Buffs; it will make them and their owners feel proud of their existence to come. And the State Branch will also hold their annual meeting during this show. We want as many members present as possible.—Mrs. J. H. Postlethwait, Sec'y-Treas., Bloomington, Ills.

The Golden Wyandotte Club will hold the next club show and meeting in connection with the Greater Chicago Show, January 10 to 16, 1917. Twenty-five per cent of the total entry fee on Golden Wyandottes, providing there are 100 or more entered, will be given as cash specials to members of the club; this in addition to regular cash prizes and club specials. If you are not a member of the National Golden Wyandotte Club mail \$1.00 to President A. W. Lang, Dayton, Ohio, or J. S. Pennington, Plainfield, Ill. Be sure to write Secretary D. E. Hale, 930 Monon Building, Chicago, Ill., for a premium list of the Greater Chicago Show.

The Cuyahoga Falls Poultry Association will hold its annual show Dec. 20 to 23. The exhibit of the Ohio State University will be held in connection and this together with the fact that admission will be free, insures a large attendance. The show will be on the comparison basis and Judge Ricketts of Coshocton, O., will place the awards. W. F. Schultz, secretary, Cuyahoga Falls, Ohio.

Here Are Some Big Bargains

This is the *Faultless Automatic Feeder*

All you have to do is to fill the can of this feeder with wheat, corn, oats or any other kind of feed, either mixed or separate. When the chickens are hungry they peck at the cross bar; this causes some feed to drop to the ground where the chickens can pick it up. No feed spoils or is eaten by rats or sparrows. **You can save enough feed in one month to pay for these feeders.** Besides the saving of feed, you save work.

Here Are Our Low Prices

 This feeder holds $\frac{1}{2}$ bushel of feed. It is made of heavy rust-proof material. It sells regularly at \$1.50—we sell it for **\$1.00** at factory in Chicago, Illinois. It weighs six pounds packed for shipping. Order by No. 153.

And What is More, we will sell you two 8-quart feeders' same style as above, both for \$1.50 and ship promptly from warehouse in Chicago, Illinois. These two feeders weigh nine pounds and will not be sold singly. Order by No. 152.

Here is the Feeder for Your Low Coop Or for Your Baby Chicks

It holds five quarts, will feed any kind of feed, either mixed or separate. It is built on the principle of the large *Faultless Feeder* and is furnished complete with bracket, which can be attached to the wall or side of a coop at proper height. This feeder is beautifully enameled (dark brown) and with ordinary care it will last forever. It is guaranteed to feed your stock perfectly from the time the chicks are able to eat until ready for the axe. We sell this feeder for 75c, f. o. b. factory in Chicago. It weighs $3\frac{1}{2}$ pounds when packed. Get one today and feed your chickens right. Order by No. 151.

We carry a full line of poultry appliances and remedies. We also manufacture the well known Simplex Genuine Feather Brooders and Hovers—both heated and fireless. Send for our CATALOG; it will interest you.

SIMPLEX SUPPLY HOUSE, Pontiax Bldg., CHICAGO, ILL.

A NEW CLUB

Twenty-five persons have enrolled as charter members in the La Crosse Pigeon and Pet Stock Club, a new organization formed to encourage the breeding of pet stock, especially among the youth of the city. Officers have been elected as follows: President, C. F. Swerman, 303 West Avenue North; first vice president, Walter Jagow, 808 West Avenue South; second vice president, W. A. Bosch, 1426 Badger Street; treasurer, W. T. LaTulip, 609 North Ninth Street; secretary, D. V. Lawell, 1121 Perry Street, La Crosse, Wis. "It is the intention of this club to affiliate with the National Pet Stock Association, having a membership of about 3,000, formed for the purpose of mutual assistance and protection to pet stock breeders. Shows will be held yearly after club has become well organized. An especial effort will be made to interest women in the work of this club. The yearly dues are \$1 for persons 20 years of age or older, and 50 cents for persons under 20 years. An officer of this organization will be glad to get in touch with persons interested in a movement of this kind."

WINNERS in all Egg-Laying Competitions ::

English 200-Egg Strain

S. C. White Leghorns White Wyandottes
S. C. Rhode Island Reds Buff Orpingtons

"World's Champion Layers"

A Fancier's Pride in His Work

We're proud of our birds because of their quality. Proud of our 8 years spent in perfecting this quality. Year by year, as our business has grown, we have discovered new and better methods of breeding, mating, feeding and housing. The four factors that go towards making blue ribbon winners. We want you to know all about "Mirmichi Quality," about our wonderful winnings at the World's Fair, New York, Boston and other shows, so we have prepared a catalog that gives you an insight into our "Quality," S. C. Rhode Island Reds, White Rocks and White Wyandottes. This book is free, so write for it today.

No letter necessary—a postal card will do. We send you this beautiful and useful Monthly Calendar and Daily Egg Record because perhaps some day you will feed to your chickens

DICKINSON'S Globe Poultry Feeds

and we want you to be able to know just how much better these feeds make them lay. "GLOBE" Poultry Feeds are scientifically blended from pure, sweet, thoroughly cleaned grains. No screening or siftings are used. They go farther and nourish more than ordinary feeds. Try feeding your layers "GLOBE" Scratch Feed with "GLOBE" Egg Mash. Feed your young chicks "GLOBE" Chick Feed and "GLOBE" Developing Feed.

Find the "GLOBE" Dealer in your town and just try "GLOBE" Poultry Feeds

Black and Buff Orpingtons Red Sussex

Birds of Grand Color, Size and Type, Bred to Win and Lay.

Won at Chicago, 1916, 1-2-3 cocks, 1-2-3-4-5 cockerels, 1-2-3-4-5 pullets, 2-3-4-5 hens, 1st young pen; no old pen shown.

At the 1916 State National Black Orpington Club Meeting, Cleveland, won 1-2 cocks, 2-3 cockerels, 1-2-3 pullets, 1-2-4 hen; no pens shown.

Winners at many other shows. Exhibition and utility cocks, cockerels, hens and pullets in all three varieties for sale. Guaranteed winners for all shows. Birds shipped on approval. Satisfaction absolutely guaranteed or money refunded. Send for catalog.

MOORE & BOWLUS

Box 4

FREMONT, OHIO

There's Money In Eggs

Provided you get them when eggs are scarce and prices high. You can get winter eggs—plenty of them—if you will follow instructions laid down by Prof. T. E. Quisenberry. It's merely a matter of knowledge—knowing how to feed, and care for your flock.

2,461 Eggs From 10 Hens In One Year

That's what ten hens fed and kept according to Prof. Quisenberry's direction did. You can increase the laying ability of your flock—can get more and better eggs—have larger—stronger—better birds—and at much less time—expense—trouble when you understand real, practical poultry culture. We give you this knowledge right in your own home by mail in our complete course of instruction covering every phase of Poultry Husbandry. You are given money saving and money making methods in every lesson. You are taught how to build practical, inexpensive poultry houses—how to save money on feed—how to mate—breed—incubate—save baby chicks—market your eggs and poultry for the biggest prices. In other words you are given a complete—thorough—practical poultry education, such as can be obtained nowhere else, save at the best agricultural colleges.

Get Our FREE BOOK Today Our Free Book, "Dollars and Sense in the Poultry Business" shows you how you can make money and save money raising chickens.

T. E. QUISENBERRY, President, AMERICAN SCHOOL OF POULTRY HUSBANDRY, Box 51 Leavenworth, Kansas.

Riley's White Wyandottes

are the kind you want. Winners at Chicago, Toledo and Ohio State Fair. They are bred right, they look right and are right. Can please in breeding and exhibition birds. CYPHERS MAMMOTH INCUBATOR

Don't Buy Your Mammoth by Guess

DEMAND proof that it *can* do what is claimed for it. And first, send for the new Cyphers Mammoth Catalogue, just off the press. Learn about the Latest-Pattern Cyphers Sectional Mammoth—the *one* Mammoth that does make good on every claim.

The Cyphers Catalogue handles the mammoth question straight from the shoulder. It doesn't confuse with many words or with side issues; it doesn't dodge the question. All the essentials of mammoth incubation are laid before you in plain English.

When you get through reading the catalogue, you will know exactly what a Mammoth ought to be, and you will know, too, that there is *just one* Mammoth that can fully meet *your* requirements.

You will make a mistake that you will regret all the rest of your business life if you decide the Mammoth question without seeing the Cyphers Mammoth Catalogue—without learning the unequalled value we offer.

Cyphers Mammoths and Semi-Mammoth are truly Sectional. Simple and easy to set up. More sections can be added at any time without changing heater.

Cyphers Semi-Mammoth:

This book also describes the Cyphers Semi-Mammoth. This machine is manufactured for those who want a hatching capacity of less than 4,000 eggs. It is heated with oil and is cheaper than coal-burning machines of similar capacity, but is exactly like our regular Mammoth in every other way.

Send for your copy of this catalogue to-day—NOW, before you forget it. Write on your letterhead, if convenient; use a post card if it's easier. But let us have your name, some way, and we'll send the catalogue *by return mail*. Address

Cyphers Incubator Company Dept. 652 Factory and Home Offices, **Buffalo, N. Y.**

The Famous
NONPAREIL

Single Comb R. I. REDS WILL PLEASE YOU

Bred for years to win and lay and they have never failed.

If the other Red breeders have not been able to satisfy you, give us a trial. We want your business and will give you what you want at a reasonable price.

OUR BIRDS

are range raised on 110 acres of corn, clover and hickory trees. It is our belief that there is not a flock of Reds in the country which is raised under more ideal conditions.

The Sign of Quality

**You Are Looking for
the Best for the Least**

and we think we can satisfy you. Just give us a trial order, you to retain the bird 24 hours and if not satisfactory, return same and your money will be returned promptly, without any "red tape." Be sure to state which you desire, Exhibition or Breeding Birds.

Wisconsin Wins in Big Hatching Contests Every Year

Year after year, these unbeatable Wisconsins have proved
their superiority over all other machines
regardless of price. Below are a few of the
record breaking hatches taken off by own-
ers of this famous Wisconsin \$10.00 outfit.

**30 Days' Trial — 10 Years Guarantee
— Money Back if not Satisfied**

1st Year

Mrs. J. McMahon, Veed-
ersburg, Ind., won in
Missouri Valley Farmer
Hatching Contest, hatch-
ing 125 chicks from 125
eggs.

2nd Year

Mrs. C. B. Armitage, At-
water, O., won in the
Successful Farming Con-
test, getting 181 chicks
from 181 eggs in two
hatches.

3rd Year

Mrs. J. W. Mize,
Vaughans Mills, Ky.,
won in the Successful
Farming Contest,
hatching 208 chicks
from 208 eggs, 2 settings.

4th Year

Mr. F. H. Lewis, Mont-
rose, Pa., won in Suc-
cessful Farming Con-
test, getting 96 chicks
from 96 eggs in one
setting.

5th Year

Mrs. C. C. Rich, Russia-
ville, Ind., won in the Suc-
cessful Farming Hatch-
ing Contest, getting 94
chicks from 94 eggs—the
first hatch she ever made.

These records prove beyond a doubt you can't get bigger, better hatches
even if you pay twice the price. So why pay more?

Why Take Chances?

of Before You Buy. Send for Our Free Catalog and We Will Send You
a Sample of the Material Used in Our INCUBATORS and BROODERS

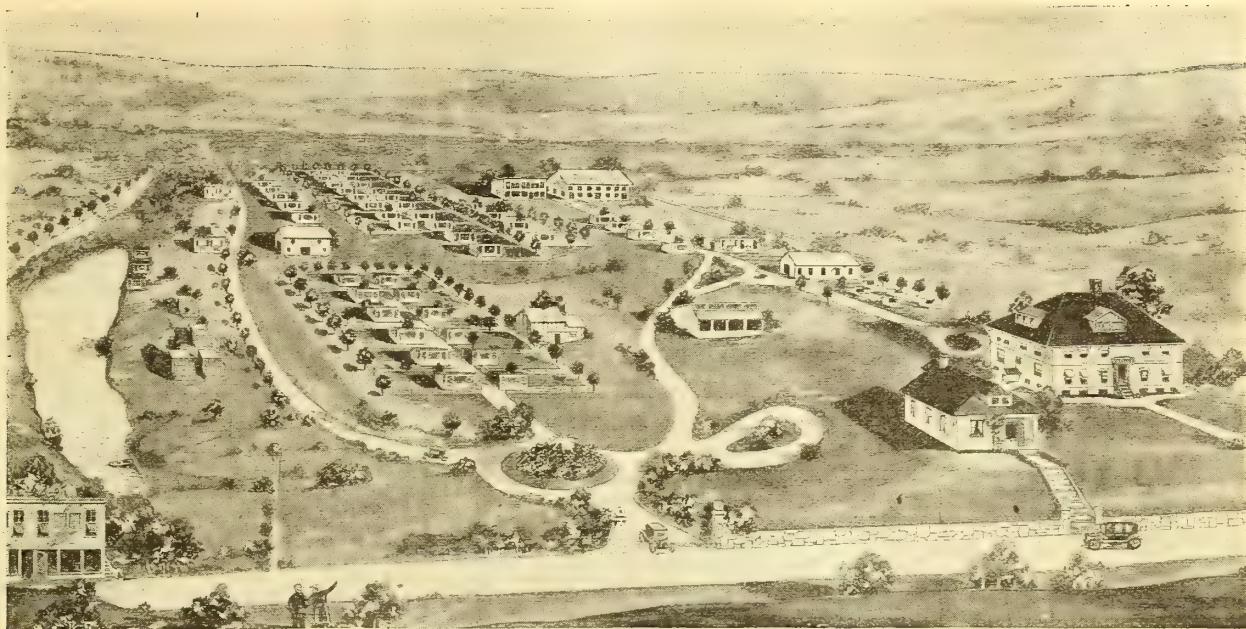

Then you will know which machines are built best, which will last longest and which will give
you the most value for your money. It pays to investigate before you buy. For example: Wisconsin Incubators
have double walls—the outer wall is of California Redwood and the inner wall is of insulating board with dead air space between the walls.
Hot water heat—double glass doors—**COPPER TANKS**—self-regulating. Roomy nursery under egg tray. Incubator is finished in its natural
color showing the high grade California Redwood lumber used—not painted to cover up inferior material. Both machines shipped complete with
thermometers, lamps, egg tester and book of directions; all set up ready for use when you get them, freight paid east of the Rockies.

Order Direct from this Advertisement

isified write me—send the goods back and I'll return your money and pay all freight charges. I have been advertising in this
paper for years. The publishers know me and know I do just as I agree. You take no risk. One good hatch will pay for the Wis-
consin and more. Don't buy any other until you get our catalog. Send TODAY. Address

WISCONSIN INCUBATOR COMPANY, Box 50, RACINE, WIS.

SINGLE COMB

500 choice show and breeding cockerels and as many pullets now for sale. Can furnish birds for any show room in the country or any breeding pen at prices to fit any man's means. Also some large husky cockerels for the utility man (weight 7½ to 10 lbs.) ready for service. Prompt attention given to all. Write your wants to HAROLD TOMPKINS, Box A, CONCORD, MASS.

For several months we
have been telling you
that you could

Increase Your Egg Yield 100%

by putting into operation the principles laid down in Geo. G. Newell's new book,

A Revolution in Egg Production

Many people have probably been skeptical, but from those who have taken advantage of this offer we are beginning to receive proof of the results.

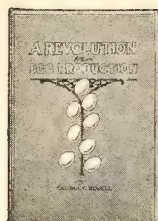

Here Is One 

We don't think you need any further argument. You are not going to let a dollar stand between you and more profit.

*Cloth bound, 112 pages,
handsomely illustrated,
postpaid, price \$1.00*

AMERICAN POULTRY JOURNAL PUBLISHING COMPANY

542 S. Dearborn Street, Chicago, Ill.

Mr. Newell.

Dear Sir—I am taking this opportunity to advise you of the success which I had by following the principles laid down in your very valuable book, "A Revolution in Egg Production."

Before giving actual figures, I wish to state that the effect of extending "the hen's business day" and "the asking the hen's judgment" in the matter of feeding, ideas that are original, is nothing short of marvelous. In the fall of 1915 I had 45 White Leghorn pullets which began to lay in September.

The yield was as follows:

155 eggs in September
382 eggs in October
539 eggs in November
112 eggs in the first week of December,

which meant a decrease of 18 as compared with the previous week. The second week in December the yield was only 68.

The birds were losing their vitality, their combs very pale and sickness set in, with the consequence that my prospective profits were vanishing.

As I always like to follow the man who knows, I have done the things explained in your book, with the following results:

In one week..... 96 eggs
The second week.....199 eggs
The third week.....227 eggs
The fourth week.....241 eggs

While there was a slight decrease after that, I have received an average of 32 eggs in January and February when the weather was very severe.

It might also be interesting to say that my hens never stopped laying in the late summer of 1916, the poorest week being 96 eggs, while the pullets of March, 1916, gave me 773 eggs for the month ending yesterday.

In conclusion I might ask like the cartoonist in the Chicago Tribune,

"Tell me, does it pay?"
Very truly yours,

VINCENT BALATY,
341 Raymond Ave., Congress Pk., Ill.

Congress Pk., 10-1-'16.

Barred Plymouth Rocks

BUY your exhibition and breeding birds from a firm that has been in the business for 25 years. We are specialists in barred rocks, have bred them in large numbers for a quarter of a century and we can give you selection no small breeder possibly can. 34 premiums at the big Kentucky State Fair and the great armory show at Louisville last year, prove our unequalled quality.

WINNINGS, KENTUCKY STATE FAIR, SEPTEMBER, 1916:
5 firsts, 4 seconds, 5 thirds, 1 fourth, 1 fifth; Cash Prize for Best Barred Plymouth Rocks.

Incubator Eggs, \$7.50 per Hundred

We have over 1500 birds this year, bred to perfection in color and barring, and when you buy this stock you get the best in America today. Our quality is wonderful, yet our prices are the lowest of any of the big breeders. Don't make the mistake of purchasing before you get our catalog and mating list. Send today for 40-page catalog.

POPE & POPE, Box A, LOUISVILLE, KENTUCKY

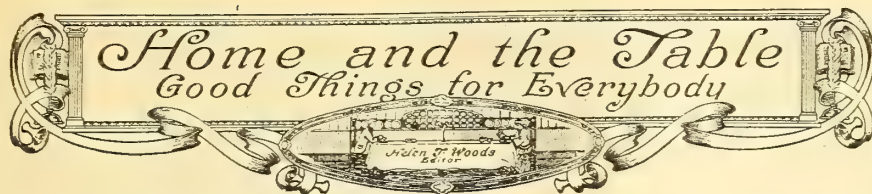

ROSE AND SINGLE COMB RHODE ISLAND REDS

Are you going to show this season? Do you want to win? If so, buy your Reds from a breeder of experience. Never had better youngsters than this year. We will ship anywhere on approval upon the receipt of 40% of purchase money. Remember, I have no other breed. Write your wants.

MORISBITE MFG CO BLOOMFIELD, N.J.

They come again at Christmas
 As birds return in spring,
 The thoughts of friends we've known agone—
 Their precious message bring.
 They come again in glowing log,
 In every garland green,
 In holly wreath and mistletoe
 Their presence plainly seen.
 They come again and grip our hearts
 In loving close embrace,
 Tho stretch of land or ocean wide
 Should hide each friendly face.
 They come again and bring us youth
 Tho withered, bent and grey;
 They come again and warm our hearts
 Each joyful Christmas Day.
 They come again, the friends we've known,
 And lost perhaps awhile,
 And scatter cheer, and joy broadcast
 In every friendly smile.
 They come again! Oh Friends—
 The years have proved your worth,
 In fostering Good Will in our lives
 And hastening Peace on Earth.

* * *

IT IS said that at the root of every failure exists an incapacity to love, while success in an undertaking, or in life itself, must depend upon the interest or love of the undertaking put into it. We cannot expect a great result from the effort of one who dislikes his work or lacks confidence in its worth.

Thus it is that the millionaires must have loved wealth getting; the immortals, knowledge; the athletes, physical fitness. Outside of these classes, however, is a vast army of plain men and women who love work for work's sake and the happiness to be found in the simple, homely, every-day joys of family life. It is by association with these that we can best realize that the wealth getters are not the only successful people, and that having unlimited checking account will not insure one the ability to dispense cheer or to corner the happiness market. There is no class of people getting more out of life than those who make their own gardens, wash their own dishes and attend to their own fires and who stand ready to give assistance and succor where needed. For while they may feel they are not possessed of all the wealth they could use advantageously, yet are able to appreciate to the full those things which are not dispensed by the pound but which are beyond price. And to such as these, life is always a success.

No matter how many friends may have proved false or what calamities may have been theirs, they are able to muster courage and with faith in their undertaking, keep on. And the reward comes not so much in the attainment of that for which they set out, but by the things which come to them along the way. It may be but a glimpse of a mountain or stream from a swiftly moving train window, the fading glory of an autumn sunset, the close clasp of a friend's hand, the sweet note of a woodland bird, the

clear gaze of a little child, or an appreciative word when sorrow hovers near, coming unsought that makes the days of a life time pleasant to remember.

Too many of us look to the future for our enjoyments, and are thus too occupied to observe the pleasures that are everywhere spread out before us. It is almost pathetic to think of the parents who are waiting until their children are grown in order to begin to enjoy life, when right here and now with their children as comrades, they should find a

have found before his three-score years and ten have passed away this life to be a bleak and tiresome existence.

We have all heard of the prospector who after staking various claims and toiling thru long years in the hopes of striking a rich vein of ore, sold out to another only to find that he had failed to see the wealth of gold nuggets in front of his own doorway. The saddest part of the perpetually sad people is that they are unable to grasp the joy that is theirs for the taking, because they are so occupied trying to trap the joy that is not.

an orderly minded people, we bear this wise injunction in mind thruout the whole year and relieve ourselves of a great part of the unnecessary rush at the holiday season.

Every now and then some one bemoans the Christmas shopping idea and rises to inform the general public that it is an expensive, foolish habit and greatly overdone; that men are opposed to it, and that women only indulge in it to outdo their neighbors and friends.

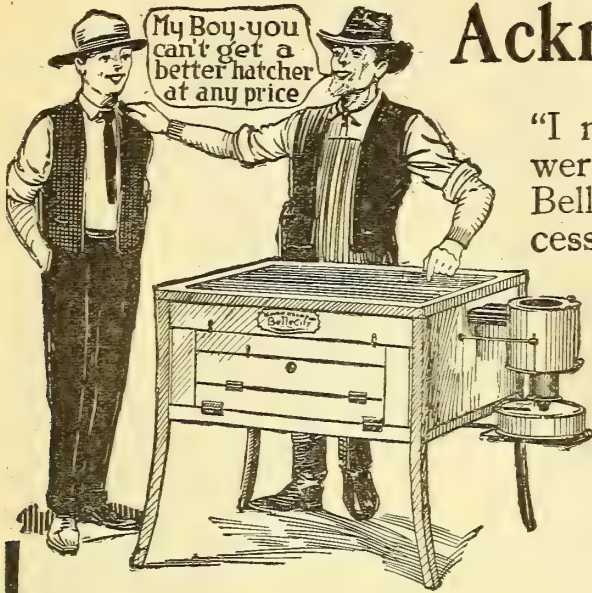

Of course it takes money to carry thru even a very modest Christmas shopping list. But for that matter it takes money to smoke even the poorest cigars, to drink beer or soda, to buy candy or go to the movies, and many other forms of amusement and it does seem that every one, children included, should be permitted a little fling once annually at the innocent and joy-giving amusement of Christmas shopping.

One of the pleasantest sights thruout the whole year is to watch the merry throng of Christmas shoppers that crowd our city streets at this season. Wherever we go the shops are well filled with eager crowds of shoppers—men, women and children, all bent on the same errand of happiness making. And so long as our Christmas shopping continues in this manner and is participated in by all members of the family, we may be very sure that this annual cultivation of the heart qualities in mankind is good for us all and will tend to make our manner of living during the rest of the year more nearly what it should be. For even the grouchy, self-centered folk who claim that Christmas shopping is a nuisance and a bore, forget themselves as the glad time approaches and are frequently seen hovering around back counters selecting all manner of gifts and carrying them home in concealed packages. With Christmas just around the corner and our minds filled with visions of things we would like to give those we love, it is a real joy to enter into the spirit of the season by hurrying off with the good natured throng on a Christmas shopping trip.

Of course, Christmas means little to those who do not find it necessary to deny themselves in order to indulge in a little Christmas once a year, but it means genuine enjoyment to most of us who have to figure out how we may best allow ourselves to dabble in the luxury of giving. To those who are unable to allow themselves the pleasure of material giving, there are human values of deeper worth, by the exercise of which we may transform a gloomy environment into one of great cheer. And at Christmas, if at no other season, we find a more general broadcasting of kindness, friendliness, love for our fellows, and faithfulness to service, among all classes of people. The spirit of good will becomes contagious and even the men in the trenches forget they are in opposing armies and find themselves telling stories of the peace and love of home. For it is not nature for men to hate and destroy one another and when they find the opportunity to relax into their natural selves, love becomes paramount for love is life itself. When it ceases we become but a dead, decaying organism loath to leave its shell.

Ability to appreciate what is worth while, and what is not, in human values goes a long way toward making Christ-

SWEETS FOR THE HOLIDAY SEASON

By E. C.

BROWNIES

One cup pecan or other nut meat; 1/3 cup of sugar; 1/3 cup butter; 1/3 cup molasses in which a pinch of soda has been dissolved; 1 egg; 1 scant cup flour; 1/2 teaspoon baking powder. Mix the sugar and egg, and add melted butter, molasses, a little nutmeg, and the sifted flour and baking powder. Add the nutmeats after flouring well, and bake in small fancy shapes.

* * *

POP CORN CRISPS

One cup brown sugar; 1 cup molasses; 2 or 3 quarts of freshly popped corn. Boil the sugar and molasses until it will harden when dropped into cold water. Remove from the stove and stir in as much popped corn as it will hold. Spread on to greased tins and cut into squares.

* * *

CHOCOLATE POPCORN

One cup sugar; 1 tablespoon butter; 1/2 cup milk; 1 ounce grated chocolate. Boil until it hardens when dropped into cold water, flavor with vanilla and pour over freshly popped corn. Form into balls or pour into a greased pan and cut into squares.

* * *

PEANUT BRITTLE

One cup granulated sugar; 1 cup broken nut meats (any kind of nut meats may be used). Put the sugar in a porcelain kettle and stir constantly. When entirely melted, add a pinch of soda. Allow to boil for a few moments, add the nuts, and pour onto a marble slab. Cut into squares as it cools.

CAUTION: Any Bone Cutter claiming to be MANN'S without F. W. MANN CO. cast on its surface, is an imitation. The genuine MANN'S is made only in Milford.

Make Hens Lay

WE publish a book which gives the secret that all fowl raisers are most interested in—the secret of making hens lay when eggs are high as well as when they're cheap. The quick and easy way. Goes into the why of the subject. Makes you master of the poultry and egg business. Opens up a new line of thought on the best feed for poultry—the ideal egg-producing food, viz., ground raw bones with the meat and gristle that adheres to them.

MANN'S LATEST MODEL BONE CUTTER

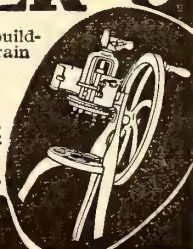

prepares raw, green bone and gristle into a fine mash, four times richer in protein (the egg-making, body-building element) than corn. It supplies the animal food that chickens must have. Easily digested. Saves grain feed. Fowls relish it. Makes them grow, keeps them well, makes hens lay.

We Sell This Machine On Ten Days' Trial

No money down. Try it and note the improvement in the egg yield. If you like it, then buy it. If not, send it back at our expense. Send today for the book and read it. It is free. It will make you want the machine and the machine will add greatly to your profits.

The Dollar Which You Mail in Acceptance of this Offer Will Bring

The Biggest Returns of Any Dollar Investment You Can Make.

Announcement

\$1.00 will now buy a three years' subscription to American Poultry Journal. No subscriptions will be entered for a period of less than three years (except six months trial), as the high quality of the periodical which we are selling, at the price asked for publications of inferior value, does not warrant entering subscriptions for a shorter period.

As you are interested in poultry, you want the best information which you can get for your money, and without a particle of doubt such information is found monthly in the American Poultry Journal, which at the rate of three years (36 issues) for \$1.00 is the best buy any poultryman can make.

Not Only How Big, But How Good

The above reproduction of a photograph illustrates three bound volumes of what readers of American Poultry Journal obtained during the past three years. A year's volume contains approximately 1,500 pages. Three volumes contain 4,500 or more pages, size 9x12.

Now just think for one moment, where can you get a 1,500 page book for \$1.00? Yet we offer you practically three 1,500 page books for this amount. You do not get obsolete literature when buying the American Poultry Journal, but you get the very latest up-to-date information on poultry.

Our Guarantee

In accepting your order, we guarantee to mail a copy of American Poultry Journal to your address about the first of each month for 36 months. We guarantee you against fraud on the part of our advertisers as per notice on editorial page. And we further guarantee to uphold the envious reputation of American Poultry Journal by filling the reading columns with the best, most useful and instructive articles obtainable.

Fill out the order blank and mail to us with One Dollar in currency, money order or stamps, and assure yourself 36 issues of THE ONE GREAT POULTRY PAPER OF AMERICA.

Big Winter Eggs Out of Clover. How? Ask Me.

EGGS A FOOD PRODUCT TO BE SOLD BY WEIGHT.

And All International Egg Laying Contests Should Award the Prizes to the Hens Laying the Most Pounds of Eggs Instead of the Largest Number of Eggs.—An M. C. Wilson Contest Article.

By DEAN HARR, Wichita, Kansas.

"HOW much are your eggs per pound?" This is the keynote to success in "egg farming." The sooner the "egg farmer" can induce society to accept his product on this basis, or can persuade the main factors that control the marketing of eggs to establish this custom or legislate along these lines, just that much sooner will his profits show an amazing increase.

I am not a chemist, nor am I posted on egg statistics that would materially assist me in bringing out the points I desire. I am, however, a dealer in food products and my close association with same, places me in position to know that within a short period of time radical changes have occurred in the merchandising of the products. I want to sound the warning here that the fellow who is slow in marketing his eggs by weight will be wondering some of these bright mornings in the near future why he is not mentioned as one of the "live poultrymen."

The condition we desire to bring about is to market eggs by weight. The first question I will ask my reader is, "Why is an egg laying contest?" The reasons are too numerous to mention; among them are: Publicity for the breed and the man who owns them; the creating of interest in the production of eggs; and, the gathering of statistics on the relative value of the different foods to egg production.

You will have to admit that, while fancy poultry occupies a prominent position in the poultry industry, it is in reality a negligible quantity when you consider the amount of both money spent for, and eggs used commercially for food. Food value of eggs is the paramount issue. Fancy poultry is a fine sight for the eyes and very essential to the industry, but if the development of this fancy poultry did not finally develop into the betterment of eggs and egg production for food, there would soon be an overabundance of fancy poultry with no outlet for the sale of same. Therefore, coming to the conclusion that the real purpose of the poultry industry is to supply the masses with food, why not sell our eggs for their real worth as food, realizing the profit on every ounce in food value we produce and quit accepting for our large nutritious eggs the same money our neighbor receives for smaller and usually inferior eggs?

I wish also to establish the fact that it is desirable to market eggs by the pound rather than by the dozen. This fact being established with the foregoing fact that the total production of eggs for food really supplants, by many times, the value of fancy poultry eggs, I can then make clear the reason why our egg laying contests should award prizes for pounds instead of numbers.

You will agree that eggs vary in size.

New KEROSENE LIGHT BEATS ELECTRIC OR GASOLINE

10 Days FREE—Send No Money

We don't ask you to pay us a cent until you have used this wonderful modern white light in your own home ten days, then you may return it at our expense if not perfectly satisfied. You can't possibly lose a cent. We want to prove to you that it makes an ordinary oil lamp look like a candle; beats electric, gasoline or acetylene. Lights and is put out like old oil lamp. Tests by U. S. Government and 34 leading Universities show that it

Partial view of long breeding house erected recently by A. A. Carver, Seville, O. This house has accommodations for 16 breeding pens, each section 8x16 ft. There has not been a dollar wasted in the construction of this house and it can well be termed one of the most practical and complete poultry houses ever built. Mr. Carver has named it "the 100 per cent efficiency house." The construction is such that it is rat-proof and moisture-proof; cool in summer and warm in winter.

You will agree that the shell is usually full of the food portion, or the larger egg has more in it than does the smaller. Let us for example take the net weight

Indoor Closet

More Comfortable, Healthful, Convenient

Eliminates the out-door privy, open vault and cess-pool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

ABSOLUTELY ODORLESS

Put It Anywhere In The House

The germs are killed by a chemical process in water in the container, which you empty once a month. **Absolutely no odor.** No more trouble to empty than ashes. Closet absolutely guaranteed. Write for full description and price.

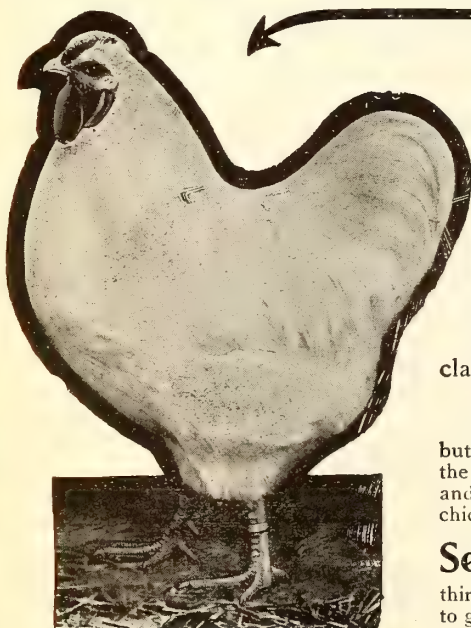

ROWE SANITARY MFG CO. 1203 A ROWE BLDG., DETROIT, MICH.

Ask about the Ro-San Washstand—Hot and Cold Running Water Without Plumbing

of the food in the standard egg to be an ounce. If your eggs are sold at a certain price per pound, it naturally places a value on this ounce which is a part of this pound. Why then should your neighbor come along with three-fourths of an ounce, namely a smaller egg, and get the same money as you do for your ounce? Also is it right for your other neighbor to sell an ounce and a half, a larger egg, for the same money? An ounce of protein has value as food. Surely then the three-fourths ounce will not suffice for the ounce even tho it is put up in the same style package. You pay more for an ounce of drug, than you do for less than an ounce. You pay more for a pound of potatoes than you do for three-fourths. And right here, dear reader, do not say potatoes are not sold by the pound because you will certainly be mistaken. The same is true of apples, cabbage, bread, etc. Oh, you do buy bread by

the loaf, don't you? All right, let's go down to the bake shop and watch the baker "weigh" the dough that makes this loaf. Watch wheat go up and the loaf "cut" down. Is this not by the pound? Do the railroads haul by the bushel, package, or pound? They want the benefit of every "ounce" they handle, so why not let us get the benefit of every ounce we produce?

Now, back to my title. I have proved that the greatest value of eggs is for food. I have proved that this food should be sold by weight. Thus I have proved that the utility arm of the poultry industry is of much more magnitude than is the fancy, consequently let's follow along the lines that will benefit the majority and conduct our egg laying contests to give publicity to, create interest in, and gather statistics for the utility arm, and thereby indirectly be as beneficial to the fancy division, as it is the foundation of all poultry.

FISHEL'S White Wyandottes

have won the coveted honors at Chicago, Indianapolis, St. Louis, San Antonio, Cincinnati, Nashville, Columbus, Springfield, New Orleans, Atlanta, Cleveland, Des Moines, South Bend, World's Fairs at St. Louis and San Francisco, as well as many more of the largest shows against all competition and this wonderful unequalled record proves our claim to

The World's Best

but do not lose sight of the fact that they are bred for meat, eggs and quick growth with the same care and attention as for show room purpose; their blood lines are the strongest and that places them in the Sterling Mark Class. Our customers report eight weeks old chicks weighing two and one half pounds each. Very interesting for the broiler plant man!

Send For Our Literature describing and pricing these wonderful fowls. Never before in our thirty-five years of poultry breeding have we been in a position to give such quality. We have the largest flock and the grandest in quality that we ever had and therefore are in a position to give the best value. Remember every sale must make a satisfied customer. That is our goal.

J. C. FISHEL & SON
Box J Hope, Indiana

PRACTICAL ADVICE ON POULTRY BREEDING.

An Address Before the Fourth Annual Poultry Convention, Massachusetts Agricultural College, Amherst, Mass., July, 1916.

By HARRY M. LAMON, Senior Animal Husbandman in Poultry Investigations, United States Department of Agriculture.

THAT the breeding of poultry is more of an art than a science is well understood by the experienced poultrymen. The common principles of breeding can, perhaps, not be termed strictly laws, but are at least expressions of more or less common occurrence in the experience of breeders, and one should familiarize himself with the phenomena of inheritance or heredity, such as reversion or atavism, which is to revert back to grandparents or further, variation, meaning some characters good and some poor; prepotency, many of the offspring having same characters, sports radically different from parents.

In order to become thoroughly proficient as a successful breeder of Standardbred poultry, one must become thoroughly acquainted with the Standard description of the particular breed in which he is interested, in fact he must become a judge of his breed if he wishes to be a successful exhibitor. The breeding of high quality, pure-bred poultry requires much thought, a great deal of hard work, and involves countless details which must not be neglected. There was a time not so long ago when many people were of the opinion that any one could make a success of the poultry business, but in a very short time it became evident to numbers of these same people that they could not even keep their flocks in a healthy condition, let alone becoming successful breeders.

Success in poultry breeding, as in any other branch of animal husbandry, rarely comes in a short time or with little effort. It would be most interesting to know the experiences of such men as A. C. Hawkins, Lester Tompkins, Maurice Delano, Haldie Nicholson, J. W. Andrews, C. H. Latham, Bradley Bros., and many other great breeders of poultry here in Massachusetts, aside from prominent breeders in other states. It would be interesting, I say, to know how many years it has taken these men to reach their present high positions as poultry breeders, how many obstacles met with and how many difficulties overcome, and how much money they have invested in the business during that time. I think I am safe in saying that all of these men have been breeders 15 years, and some of them much longer, which is sufficient evidence of the courage, determination and grit required to become successful as a breeder of pure-bred poultry.

The value of breeding from selected, high quality fowls is of great importance to the poultry interests of the country, as it is from such stock that our advancement and improvement in poultry is to come, whether in egg production, meat production or show points, as I believe there is high quality to be found in each of the above classes.

We hear a great deal at present of the utility-poultryman. He has come rapidly to the front of late. Why? Because he is a keeper of records. The

M. C. DAVIS, HAYWOOD ROAD, WOODSTOCK, ILL.

success of his business is his livelihood. He must know in dollars and cents just where he stands, consequently he becomes a student of his business and studies it in all its details. He has been the greatest user of the trap nest, for he knows by its use he can learn exactly the number of eggs the different individuals in his flock are producing. The trap nest has been and is of great value to the poultryman of this country. It is valuable:

- (1) To tame the birds, thereby tending toward increasing the egg production.
- (2) To furnish definite knowledge concerning traits and habits of individuals.
- (3) To furnish the only satisfactory basis for utility or other breeding.
- (4) To eliminate the non-productive hen.
- (5) To add mechanical precision to judgment and experience in developing and maintaining the utility of a flock.

It is only by breeding from selected stock that any great reputation is made in either the fancy or utility branch of the poultry business. Once it becomes known that a man is a careful breeder of high egg-producing stock, he can practically name his own price, as the demand for such is far in excess of the supply. This also holds good with the fancy poultryman.

In making a mating of Standardbred for utility poultry, and assuming you know very little or nothing of the breeding or ancestry of the stock, the very first thing you must do is to get an ideal thoroly fixed in your mind's eye to breed to. With an ideal it is difficult enough to produce the desired specimens and without which you will surely not advance. The most important requirement that you must impose upon your breeding stock is that it be constitutionally sound, healthy and vigorous. Once you have selected the male to head the pen, select the females that are strong in the sections where the male bird is weak, always being on the lookout for disqualifications and other serious imperfections. I have in mind a few defects that

A Scranton Single Comb Red Will Do It!

Win that show for you—improve the color, improve the type of your flock—put the size and vigor there—breed prize winners for you—make your flock a money maker.

Ours is Ben Scranton's own flock—perfected by him thru 12 years of careful breeding. The birds we offer are the very cream of all he has bred and raised. No flock is so strong but that this Scranton blood will help it. We can sell you a cock, hen, cockerel, pullet or pen, rich in every good quality, ready to win or breed winners and priced right. Write us today, before the opportunity passes for this season. Make up your mind to get the best now.

MONROE, N. Y.

I consider have done, and are doing, a great deal of harm to the breeds most affected, and specimens having them should not be considered for a place in the breeding pen, no matter how good they may be in other respects, as these imperfections are transmitted to many of the offspring, namely: Twisted wings in Barred Plymouth Rocks, slipped wings in White Plymouth Rocks, and white in the face of White Leghorns, young stock. Once the blood of birds having these defects gets into your flock, it is most difficult to remove. After raising the young stock from your mating, studying both good and poor specimens, you will begin to become familiar with what I term the breeding tendencies of your stock, and once you know these breeding tendencies you are in a position to make a success in breeding poultry commensurate with your ability. This information cannot be purchased, but is only gained by study and years of experience in breeding. That is why, even tho we purchased the best stock a breeder has to sell, we are rarely able to produce its equal until we have bred and handled it for several generations, and during this time you should remember that the very best specimens produce good and poor stock, but poor stock rarely, if ever, produced high class stock.

I associate good management so closely with successful mating and breeding that without it, no matter how high quality your mating may be, the offspring are bound to be of inferior quality. What I mean by good management is good feeding and good care. To produce the best of specimens, they must be kept growing right from the time they are hatched until they reach maturity. They should be fed four or five times a day up to the time they are four months old. I used to think that feeding four or five times a day up to three months of age was often enough, but I have learned that many birds will make very rapid growth up to four months if fed liberally. They must not be allowed to crowd in the brood or growing coops. The different sizes must be kept together or the smaller chicks will not make a good rate of growth. Separate the sexes as soon as the cockerels begin to bother the pullets. As soon as the chicks reach broiler age, begin to cull those which show disqualifications and other imperfections, and keep it up until the flock is of the desired quality. Show me the man who culls courageously and intelligently and I will show you almost invariably a successful breeder of poultry. Many a beautiful flock of young stock has been ruined in the fall by allowing the chicks to crowd in the brood coops at night, where they become over-heated, and when let out in the cool air in the morning they catch cold, which often takes on the form of distemper and goes thru the whole flock, usually checking their growth. I often think birds so affected rarely, if ever, regain their normal health. It also often affects the growth and color of the feathers to the extent of producing white in the flights and other sections to red, buff, black and other colored birds.

In conclusion, I wish to say:

First—In your breeding work keep a detailed description of your matings, so as to be able to look back and know the quality of the ancestry of your stock. In this way only are you sure of your ground in breeding.

Second—Trap nest every hen, and toe punch, band or mark in some way every

chicken, so that you will have a complete record of their breeding and know to a certainty just what your matings are producing.

Third—Breed from two and three-year-old hens, as they lay larger eggs than the pullets.

Fourth—March and April are the best months for hatching. Early hatching has a favorable influence on the size of the stock, and it must be remembered that no eggs will be received from pullets until they are matured.

Fifth—It takes healthy fowls, good incubation, brooding, feeding and range to produce successive generations of high class stock. Give the breeding stock free range, if possible.

Sixth—Birds on range lay a larger percentage of fertile eggs than those that are yarded.

Seventh—In selecting breeding stock, keep in mind whether it is eggs, meat or exhibition birds that are needed, and be consistent in your selections.

Eighth—Establish your own blood lines and know the ancestry of your breeding stock.

Ninth—Have an ideal to breed to, a fixed plan of procedure and adhere to it.

Tenth—Feed four or five times a day up to 4 months of age; separate the cockerels from the pullets when the young males begin to get bothersome, and keep the different sizes together. All these have an important bearing on the health, growth and vitality of the young stock, without which the best of breeding plans go for naught.

HAPPENINGS of INTEREST in the POULTRY WORLD

O. R. Remington Arrested.

IN our November issue, on page 1216, I appeared the advertisement of O. R. Remington, Box 1527, Washington, D. C. On November 13 we received a communication from F. E. Little, postoffice inspector, Washington, D. C., informing us that one O. R. Remington, with address P. O. Box 1527, Washington, D. C., had been taken into custody on the night of November 9, charged with having used the mails of the United States for fraudulent purpose.

It is believed that he operated the same scheme in October and November, 1915, from Cincinnati, Ohio, using the name H. H. Audley, but that his real name is Harold Moore, a resident of Oneida County, N. Y.

Owing to business reasons, Mr. Barnum of Foxhurst Farm, informs us that he has decided to sell, without reserve, all of his Black Orpingtons. This includes his foundation stock, together with his great line of show birds, including the Madison Square Garden winners. It is with much regret that we make this announcement, as the fancy poultry business needs more such men as Mr. Barnum, and cannot well afford to lose him. We therefore sincerely hope that Mr. Barnum will find time to take at least some interest in the fancy.

H. H. Coburn of Red Sussex Farm, St. Clair, Mich., informs us that he sold his entire flock of Red and Speckled Sussex, including his New

York and Chicago winners, good will, etc., to Walhalla Poultry Farm, Ascola, Mich.

IRISH POTATOES FOR POULTRY FEEDING

Excellent and Valuable Food for Poultry Fed Either Raw or Cooked.

By MAURICE H. DECKER

I REMEMBER WELL, when years ago my attention was first called to the good results obtained by feeding large quantities of vegetables to hens by an old German farmer. This elderly gentleman, a typical personification of German thrift, by supplying his flock with plenty of fresh air, night and day, by giving them plenty of cooked and raw vegetables and by keeping their feet from coming in contact with ice and snow, advocated in this early date of business-like poultry raising, three practices for obtaining good egg yields thru the winter, which are now current and popular. His poultry house effectively protected on all sides by encircling hills and dense sapling growth was built of logs well chinked, with a thatched roof, and was ventilated by a large opening cut into the front, covered merely with wire netting. This opening he assured me was never closed, except when an old piece of carpet was

hung up to prevent driving storms, coming head on, from beating in, and which was an infrequent occurrence in this sequestered nook among the hills.

Early each morning the house was opened up and the fowls, large, husky, individuals, principally Barred Rocks, marched out over a narrow path of marsh hay laid on top of the snow to the barn and cow shed, where they scratched and hustled for their breakfasts. At noon they were given an enormous kettle full of boiled cabbage, turnips, potatoes and carrots thickened with bran, and at night a liberal feed of corn on the ear. As large quantities of these vegetables were grown and stored away each year, there were an ample number of bushels available for this daily mash, the small specimens being carefully gathered up for this purpose, along with any damaged, soft or decaying tubers, sorted out from time to time. Supplementing this menu there was generally a crock of sour milk or butter-milk setting in the poultry house.

And how those hens did lay! The flock averaged about 200 thru the winter and it was common knowledge in that neighborhood that the hens kept the family supplied with clothes and groceries. From this flock their owner

Ironclad

TRADE MARK

Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only \$11 we guarantee to deliver safely, all freight charges paid (East of the Rockies) BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an Ironclad—the Incubator that has for two years in succession won in the GREATEST HATCHING CONTESTS EVER HELD? In the last contests conducted by the Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered, including practically every make, style and price. With the Ironclad—the same machine we offer with Brooder, freight paid, for only \$11—Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in last contest.

Completely Covered with Galvanized Iron

COPPER TANKS Built for Service

Both for \$11 Freight Paid East of Rockies

150 EGG INCUBATOR CHICK BROODER

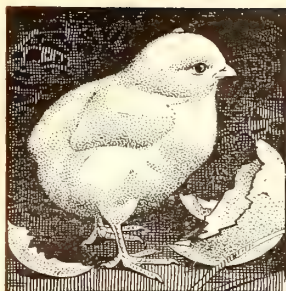

When an incubator is constructed of material of this kind it gives you the strongest and most durable incubator that can be made—a machine that will not warp or shrink, or open up at the seams, as every joint is lapped over with our galvanized iron covering—giving you a machine that will last a life time. Don't class this big, galvanized iron covered dependable hatcher with cheaply constructed machines. Ironclads are not covered with cheap thin metal and painted, like some do to cover up poor quality of material. Ironclads are shipped in their natural color—you can see exactly what you are getting. Don't buy any incubator until you know what it is made of. Note these Ironclad Specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tyco's thermometer, glass in door, complete book of directions, and many other special features fully explained in free catalog. Write for it today or order direct from this advertisement and save time.

Poultry Association

\$750
ONLY and Up

If interested in hatching in big numbers, state hatching capacity desired and write for special proposition.

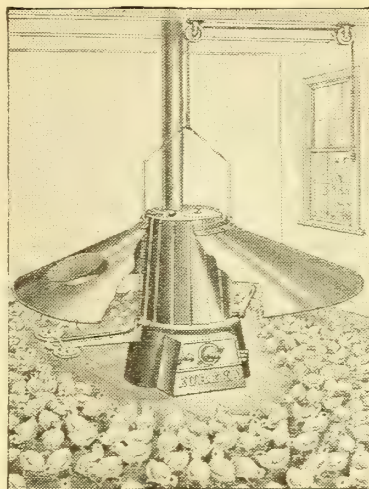

I recognize a distinction between the value of vegetables and green feeds, such as sprouted oats and steamed clover when prescribed as being indispensable to a layer's requirements and do not see how one can completely take the place of the other. It has been my own experience that both must be fed if the very best results are to be expected. There is a sufficient variety of both classes to enable some representatives of each being kept continuously on hand.

The vegetable which appears to me to be most suitable and profitable to grow in connection with the poultry flock is the potato. We grow a few mangels and sugar beets now and then principally in testing out different varieties, but our hens never seem to relish them as they do the Irish spud. If potatoes are cheap we have a good feed that can be converted into cash via the egg basket and if the market is good we sell the best and buy a few bushels of the cheaper beets and turnips. Either way we come out ahead, providing the yield per acre is good. I regard the potato as cheap hen food at 40 cents a bushel and when we take into consideration the diversity of soils in which potatoes thrive and do well, and the possibilities of enormous yields, it certainly sums up on the whole as a rather attractive proposition, particularly to the poultryman with a limited amount of ground.

With the prevailing high prices of grain and the probability of their duration, poultrymen are going to find it a difficult task to produce eggs and meat at a profit unless wheat, corn and oats are supplemented with some feed produced on the home farm at a low expense. We have considerable faith in the potato meeting this demand and are planning to plant them in every possible piece of ground on our farm.

If scientific methods (I take the word science to mean simply common sense correctly applied) were more generally applied thruout the United States to the smallest garden potato patch as well as the biggest fields, and the yields per acre brought up to those obtained in other countries, an incredible amount of wealth would be added to this realm, and furthermore, if all the small tubers usually left upon the ground were scrupulously saved and fed to the hens along with culls picked out by an occasional sorting over of the storage bins, another substantial sum would be added to our country's resources.

The poultry yard is a splendid place for the potato patch. The ground requires cultivation to keep it sweet and the hens do not injure the plants when once well started, except by an occasion-

With the New Improved

EUREKA COLONY BROODER

The Best Brooder Stove Proposition on the Market

This wonderful brooder raises the chicks instead of smothering them. It is absolutely *gas proof*, can be operated at a cost of only five cents per day, and being self-regulating needs attention only once every 24 or 48 hours, (depending on the weather.)

The price for 500 capacity, is but \$12.00; for 1000, \$15.00. This is the only colony brooder on the market selling at anything near the price. You can make real money selling this brooder—its quality, construction, automatic features, and general efficiency impress on sight. Experience is not needed. Send at once and get the rights for your territory. We make the Eureka right and we treat our agents right.

Price is low—discount liberal.

240 N. Front St. Philadelphia, Pa.

WINNERS AGAIN

At Hagerstown, where there were about 9000 entries and every class well filled, Monmouth Farms demonstrated again its right to the title of "America's Premier Leghorn Farm." Against the stiffest competition we won almost every first and second prize in Whites and went far ahead of any other exhibitor in Buffs.

DOES IT MEAN ANYTHING TO YOU?

Wouldn't you like to be represented in a Show by birds of this character? It's the surest way we know to come out with Blue Ribbons. Better write us today—right now. Tell us where you want to exhibit. We'll help you win.

HAGERSTOWN WINNINGS

Whites 1st and 2nd Cock
1st, 2nd and 4th Hen
1st and 2nd Cockerel
1st, 2nd, 4th and 5th Pullet
1st Old Pen
2nd Young Pen

Bufs 1st and 2nd Cock
1st Hen
2nd and 4th Cockerel
1st Old Pen
4th Young Pen

CORA B. GARBUTT
DARIEN WISCONSIN

al "wallowing" in the row and little chicks have the regular time of their lives foraging under the vines.

We have found the principal requirements under human control for a successful potato crop to be a medium soil, rich in potash and humus, good seed free from disease, two good cultivations, after the plants are up, then a straw mulch, two or three sprayings for bugs and diseased leaves, timely digging and proper storing of the yield.

Humus can be supplied by plowing under in the fall, a rank growth of vegetation preferably some legums, or fifteen to twenty loads of stable manure, or both, along with two hundred to four hundred pounds of sulphate of potash per acre. The deeper you can plow the better. Then in the spring disc in five or six loads of chicken manure rather free from straw and you will have a soil capable of producing a profitable crop. The seed should be carefully selected from as large a quantity as possible and should be regular in form and medium in size with plenty of good eyes and formalin treated to insure freedom from scab and rot. We select our seed at digging time and by choosing considerably more than our requirements call for, are enabled to plant those specimens that come thru storage in best shape.

About four inches deep will be found the best depth to plant. Cultivate twice just deep enough to clear out the weeds and then cover the patch evenly with the straw litter from the poultry house floor you have saved for this purpose during the winter. We believe we get better results when the rows are not hilled up but are left level the same as the corn ground.

The importance of several good sprayings with a solution of lime and sulphur plus Paris Green, if bugs are present, can never be fully appreciated until you have once tried their effects. Oftimes the yield may be increased by one-third by this attention. Unhealthy looking, stunted plants, generally denote diseased leaves and when such are noticed the sprayer should be brought into action at once.

At digging time (if you dig by hand) your back will greatly appreciate the superiority of a long handled six-time manure fork over the regular short potato spade.

We prefer to store our potatoes in a cellar, placing them in bushel crates, which are stacked up one on top of the other rather than loose in large bins.

They get better ventilation this way, are easier to sort over, to locate decaying specimens and my wife says by using up one crate at a time the little ones are not all left to be used last.

The ideal way in which potatoes should be prepared for the hens is boiled with the skins on. As those latter are pretty strong and there is more or less dirt present on potatoes intended for poultry, we pour off the first water as soon as it boils and then they can be salted and fed whole or mashed and mixed with table scraps and ground feed. I like to feed them with steamed alfalfa to our hens and give them all they will eat at noon every day. Potatoes may be shredded in a root cutter or placed raw in a wire netting pocket nailed to the poultry house wall, to be picked at will and the raw tubers are undoubtedly valuable to them as a change. But our hens like them nine times out of ten, best when cooked and will sing for an hour after filling up on their potato mash. In very cold weather the scratch food should be mainly cracked corn, when lots of vegetables are fed, or the birds will not get enough of this heat producing grain to keep them comfortable when on the roost at night.

Shoemaker's Poultry Book and Almanac for 1916.

The book has about 200 pp., with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies.

All about Incubators, their prices and operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. Only 15 cents. Your money back if not satisfied.

ENCOURAGING NEWS

I have just received word that my strain pen won first honors in the Missouri Laying Contest (under Government supervision) by laying 1,185 eggs. The best pen record ever made in any of their five contests. In last year's contest they outlayed every other breed entered, and made the remarkable Winter Month Record of 134 eggs for January. The 100 pens (all varieties) in these contests are the cream of the best flocks in the United States, Canada, Australia and England, and included the famous English and Australian laying strains. Such official evidence as the above, the records they made in the North American and International Contests, what they have done in our hands, and the reports from customers in all parts of the United States and foreign countries, should convince the most exacting that as layers and particularly winter layers

Why do the Big Packers Feed MILKOLINE?

HERE is no sentiment with big poultry feeding plants—quick fattening and greatest profit is the first and all important consideration. Over two thousand leading feeding stations use MILKOLINE and KNOW that it excels every other ration as a top-notch profit maker.

MILKOLINE is condensed buttermilk—modified and medicated. Buttermilk is recognized by the U. S. Department of Agriculture, by every State Agricultural Department and every leading feeding authority as the best of all feed stuffs for poultry. The main objection to ordinary buttermilk—its bulk—is removed. Each gallon of MILKOLINE equals fifty gallons of buttermilk. You cannot feed enough ordinary buttermilk to poultry to secure rapid growth or quick fattening. MILKOLINE completely solves this problem. Ordinary buttermilk sours—MILKOLINE is modified and keeps perfectly and indefinitely. Lactic acid works wonders in feedstuff. It is the greatest digestive known in feeding. The lactic effect

is likewise fifty times greater in MILKOLINE than in ordinary buttermilk. MILKOLINE mixed with your other feed relatively increases its productiveness. Every poultry raiser and feeder must feed MILKOLINE to get the highest possible results and profits.

MILKOLINE

PURE CONDENSED BUTTERMILK FEED + HEALTH

WE WANT every poultry raiser and feeder to try MILKOLINE—to do so without risk. The fancy breeder will improve his flock and the vitality of his stock and eggs; there will be greater and quicker growth, and fattening for market will be made in much less time and cost.

MILKOLINE will save ninety to ninety-five per cent of your death loss.

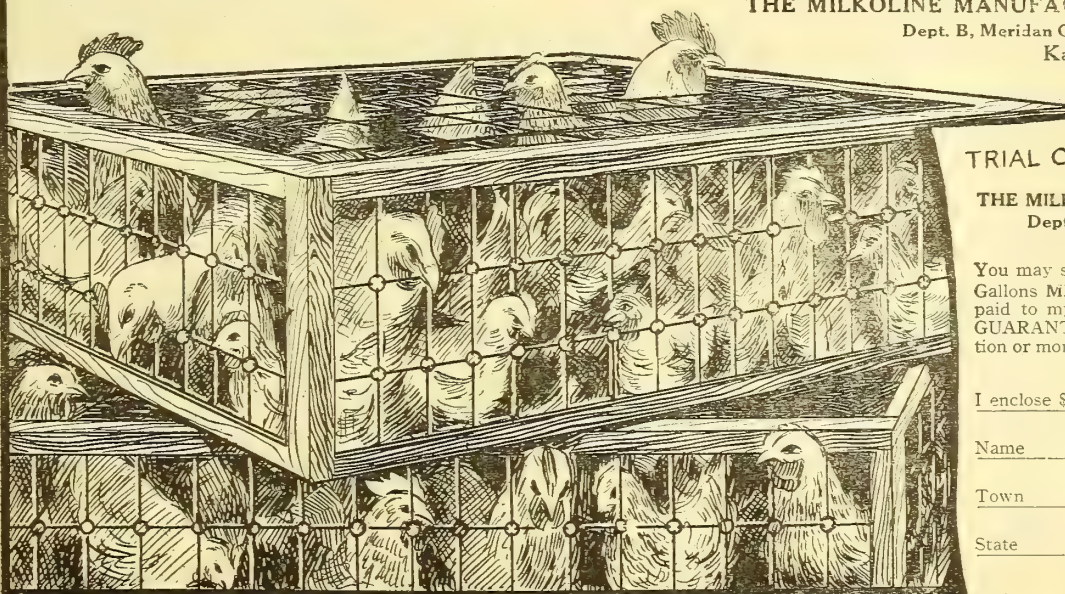

We sell it on the positive guarantee that it will prove entirely satisfactory or you can have your money back—and without quibbling.

NOW—make out your order for a liberal trial quantity, attach your remittance for same, and mail it right along—get the actual goods themselves, feed according to directions accompanying the shipment, watch results—and if your enthusiasm don't force you to order more, ask for your money back.

PRICES—1 gallon, \$2.00; 5 gallons, \$1.50 per gallon; 10 gallons, \$1.25 per gallon; 32 gallons, \$1.00 per gallon. WE PREPAY FREIGHT ON ALL SHIPMENTS TO YOUR STATION.

BREEDING WHITE LEGHORNS FOR EXHIBITION.

Rules for Feeding, Selection and Preparation for the Show Room. Pullets Conforming to Standard Type Are Best Layers.

By R. R. MYERS, Elkhart, Ind.

ASSUMING the breeders are in good condition and properly mated, S. C. White Leghorn eggs run high in fertility and hatch well. The chicks feather very early and I find, when the wing primaries are clipped, the chicks grow rapidly and develop quickly.

I will give no feeding rule, as location and market generally govern such. However, I feed chicks a little commercial chick food three times a day, give them free range and let them balance their own ration. As they grow older I substitute a good developing food, later a good scratch food, market the surplus cockerels and let the pullets range until fall.

The promising cockerels are kept in well shaded runs and fed a liberal quantity of bread and milk. As the mature feathers appear, cease feeding yellow corn to both pullets and cockerels.

As the fall rains approach, get the pullets into the laying house. Don't change to the laying ration too soon, as it will induce a moult. I find after a gradual change, they will do well on a little commercial scratch food, in litter, in the morning; greens and scratch food at noon; good mash containing 10% beef scrap at 3 o'clock, and whole white corn at roosting time.

I have found the pullets approaching the Standard type are my best layers, and consider a good cushion, which makes the sweep to the tail possible, beneficial to winter egg production. Have also found the small comb not so liable to frost.

Old birds intended for exhibition should have their shanks vaselined and bandaged as soon as taken from the brood pens, fed plenty of bread and milk and foods containing no yellow pigment—and must have plenty of shade to grow the desired blue white plumage.

The cockerels intended for exhibition should be cooped separately to allow them to become cocky, learn to be handled and pose readily. Look carefully for white in the face, for more S. C. White Leghorn cockerels are disqualified for that than all other defects combined.

Pick the pullets that will lay about show time, as they are then at their best. If their combs are not large enough, a little meat and a warm room will remedy

them, if too large keep them in a cool place and feed no stimulating foods.

About a month before showing. I wash my string and blue them good and strong, return them to their former quarters, where the blue will gradually fade and take the creaminess with it, and if at this time the ear lobes are a little creamy, a few applications of zinc ointment will help to whiten them.

Just before the final washing, remove all dirt from under the scales of the shanks and toes.

Space forbids describing the final washing, more than to say I use four tubs of water and castile soap, am very careful to rinse well, as the feathers will not web out if any soap remains. Am also very careful not to use much bluing in the last washing. The birds are then put on a perch, in a warm room, to dry, as in this way they cannot muss their tails. If the neck hackle curls a little, the room is too warm, the hackle may then be moistened, the room cooled, and they will come out all right. To fan the tails is time well spent and a little corn starch dusted thru the feathers, when dry, will help web them out, after which blow the wrong way of the feathers, as this will remove the excess starch.

Prior to shipping to the exhibition, I widen the tails by taking the main tail feathers between a lead pencil and my thumb and turn each pair downward. If the bird shows a break at the base of the tail I turn the saddle up in the same manner. This may not be perfectly legitimate, but as most exhibitors do it, you must do so or be left at the post.

It is now a fact that we must double mate to produce the exhibition specimen of today and will say, for producing cockerels, I prefer a Standard exhibition male, with a small comb well set on his head, mated to Standard type females, with small straight combs with firm bases, said females to have very heavy cushions. For producing females, I prefer a Standard exhibition male, with a thin comb and not much base; mated to Standard type females, with combs a little large, said females to have rather light cushions. Of course all birds to be as white as possible, have neat heads, full breasts, good wing carriage, proper station, long concave backs, low well-spread tails and free from white in the face. However, if we must use a bird with white in the face, have a little red in the lobes of the other side of the mating, to offset it, and last but not least, all females must be heavy layers of large white shelled eggs.

My experience with S. C. White Leghorns has led me to believe that they are the highest producers of eggs in the poultry world, as the fact, that about 90% of the commercial egg farms are stocked exclusively with them, will bear me out.

I also know of no variety of fowls that will assimilate and turn into eggs the concentrated foods used in forcing egg production that these fowls will. This is largely due to their active disposition.

In conclusion, my opinion is, when properly housed and fed, no pullets will lay earlier, no fowls will produce more eggs, be productive for a greater number of years or make a quicker two-pound broiler than S. C. White Leghorns.

DIAMOND CORN GLUTEN MEAL

"BUSINESS economics is the high priced name for common sense." Henry N. Prouty once said: "Any intelligent poultryman can make his business profitable by applying good common sense management."

"Take the matter of protein—all recognize the value of protein to insure a good egg yield. Find the best form of protein—the one that is guaranteed to be uniform, feed it regularly, vary your formula according to seasons, and you have solved one of the largest economic problems of the poultry business."

Diamond Corn Gluten Meal is the most economical and concentrated form of corn protein on the market. Guaranteed 40% protein. For Winter feeding try this formula:

100 lbs. Wheat Bran
100 lbs. Wheat Middlings
100 lbs. Diamond Corn Gluten Meal
50 lbs. Corn Meal
50 lbs. High Grade Beef Scraps
25 lbs. Linseed Meal

If you cannot get Diamond Corn Gluten Meal from your dealer, write us direct.

WHY I BREED BLACK LANGSHANS.

The Aristocrat of the Show Room with Original Shape and Style—One of the Best Breeds for Caponizing—Unexcelled for Utility Purposes—A Contest Article.

By DEWITT T. FREE, Thurmont, Md.

I BREED Black Langshans because I enjoy it and because it pays. Both very good reasons.

Of the origin of the Langshan, little need be said, for it is generally known that the breed was imported into England from the Langshan district of China some forty years ago. Previous to that date it had been bred true for many generations. With this long line of ancestry, its prepotency is great and its breeding qualities are true. In spite of bad matings it is difficult to change the type, and if matings are good and carefully made a very large per cent of the offspring will be high class specimens.

The Standard of Perfection calls for a cock weighing nine and one-half pounds; hen, seven and one-half; cockerel, eight; pullet, six and one-half. Although we sometimes have birds that run larger than these weights, I try to keep them from getting coarse, and for this reason it is well to breed pretty

close to the Standard requirements.

The Langshan is recognized as one of the best of the breeds for caponizing, not because they grow larger but because they are more easily operated on than any other breed. I have never worried over the visits of friends or neighbors as meal time approaches when I have a Langshan for the table.

The Langshan cannot be surpassed for beauty. He is the aristocrat of the show room and there is no more impressive or commanding figure than the Langshan male, with his flock at home. The glossy, greenish black coat, which adorns the typical show bird, the elegance of carriage and general bearing make the Black Langshan appeal to those who care for richness and the artistic in fowls—even tho they may not have either in their pockets or their homes.

One of the main reasons why I fancy the Langshan is because of the character of the breed. I leave it to the reader of the following incidents to judge whether I am right or wrong.

I have a Langshan cock bird that will deliberately fly and fight at a stranger who will attempt to pick up one of his hens, while there is never a stir when I do the same. I have seen the Langshan mother fuss when strangers would approach only to become quiet by my appearance. I have taken hens and pullets which have started their nest on the ground or floor, put them in reg-

ular boxes, and unlike some breeds, settled to their work, and from that time on, knew their places. It is very rare to see a scary, flying Langshan, tho they are active beyond the imagination of those who have not bred them and know them not. Langshan males and females will follow like dogs, and it is seldom, if ever, that you hear of a Langshan breeder with nets or hooks with which to catch his stock.

The laying ability of any breed is one of the first things for consideration, especially for those who are contemplating a start in the poultry business. I have been asked many times, "How do the Langshans lay?" and to this question now as then I answer, fine, especially during those spells when breeders of other varieties cannot stretch the facts that far. The published records show the laying ability of the Langshan. In the present Missouri Egg Laying Contest, a Langshan hen stands fifth after five months. It is in the Winter time when eggs are high and scarce, that the Langshan does its best work laying. The eggs are dark brown in color, large in size and, if you will weigh a dozen of these, side by side with a dozen of eggs from some of the other varieties, you will be somewhat surprised at the much greater weight of the Langshans.

My chicks are mostly hen-hatched and all are hen reared. I sometimes have to hustle to get the setting hens but I get them. I have found that the chicks start better and grow stronger and reach an altogether finer development raised this way. The hen starts them to ranging and they keep it up later. She teaches them a great many things which they need to know and which mankind cannot teach them. I take great care to avoid too many chicks being in one coop, mainly because the chicks develop faster than we realize, and the lack of air, room, water and food, as well as unsanitary conditions where they are crowded always tends to stunt and keep back the growing chick. Give a Langshan chick plenty of room, good food, plenty of water and forage and you cannot beat it for good development.

In closing, I wish to repeat that the Langshan breed consists of a beautiful show bird with an original shape and style, not manufactured and consequently not too hard to breed for Standard requirements. And they are excelled by none as utility specimens as they are always large, fine-fleshed and small boned, besides being as good as the best Winter layer and better than the average for the year around.

They are not wild, flighty or unapproachable, and as they are hardy, both the young and the old birds, I believe we have a breed from which it is impossible to ask more.

WHY I BREED S. C. BLACK MINORCAS.

Because of the Color and Quantity of Eggs; the Wide Awake and Vigorous, Friendly Attitude of the Breed, and Their Clean-cut, Fresh, Unsoiled Appearance—They Are a Perfect Combination of Beauty and Utility.

By CHARLES W. LEWIS, Ashokan, N. Y.

IN ATTEMPTING to show why I breed S. C. Black Minorcas, I shall have to start at the beginning. In 1910 I realized that irrespective of the laying qualities of cross-breeds a flock of one variety could be made to do as well, and perhaps better, and after carefully considering all breeds and varieties selected the S. C. Black Minorca, basing my selection on the local demand for large white eggs and the clean-cut appearance of the variety.

Starting with the newly-hatched chick, no better testimonial can be given than the remark of a man to whom I sold two settings of eggs (his first experience with Minorcas), that "they are so large and vigorous that my future chicks will be of the same variety." They seem to have the constitution to enable them to safely pass the period of "feathering out."

I find they are easily grown to maturity, and while not as light feeders as some of the less weighty breeds the

feeding costs are not excessive. When running on range they can be depended upon to do their share on the feeding proposition.

Contrary to the general belief of many persons, their weight is very near that of the Plymouth Rock. Cockerels grow quickly, averaging a gain in weight of about one pound per month up to seven pounds. After this a slight gain in weight is made more slowly. Good bred pullets weigh between five and six pounds at the age of six months, when they generally start to lay.

The flesh is juicy and tender, of good flavor and appearance, and the so-called "crows" dress much better than their appearance would lead some to believe.

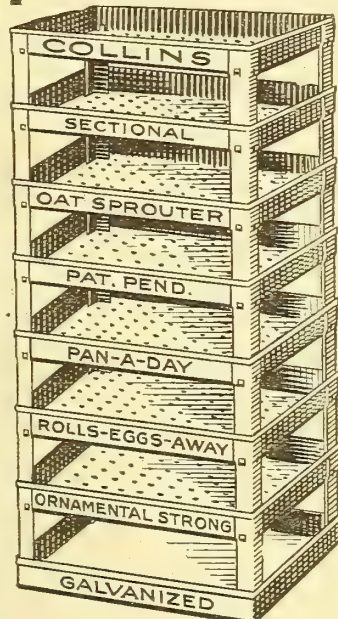

The argument is offered that the S. C. Black Minorca is susceptible to frost bite, due to the large comb and wattles. To a certain extent this is true, but the same applies to other large-comb breeds. Proper housing and ventilation preclude this trouble, which only happens occasionally; in fact, some Winters are so mild that the fowls are never in danger of freezing their combs.

If the primary object of poultry keeping is market eggs, what more could one desire than the Minorca. They are fairly prolific layers of large white eggs, and, with few exceptions, waste no time in broodiness. It is true that they have made no wonderful showings in egg-laying contests, but I do not hesitate to assert that this may be attributed to the fact that breeders have not as yet centered their efforts in developing

Collins Oat Sprouter

Must Prove Its Worth or We Refund the Purchase Price After 10 Days Fair Trial.

Could any offer be more fair? Write today for a Collins Sprouter, enclosing \$3.00. Use the Sprouter, try it out in any and every way, and if after 10 days fair trial you are not fully convinced that you have the best value ever offered in a grain sprouter, and one that at lowest cost will produce in the shortest time, abundant, fresh, sweet, green egg-producing food, and that the Sprouter does everything we claim, return it to us and we'll refund your money.

**Thousands Sold Last Year,
Not One Returned**

DESCRIPTION: All galvanized steel; Knock-down; each part lifts off separately; pans are perforated to insure proper drainage; Fireless; Most complete, Satisfactory, Sanitary Sprouter made.

SIZES: The Popular size Sprouter, 8 pans, 11x15 inches, \$3.00, and small Back Yard flock size, 11x15 inches 5 pans, \$2.00; the Big Breeders Size (20 sq. ft. of surface) 11x32 inches, 8 pans, \$6.00.

PRICES: Made in Three Standard Sizes, at \$3.00, \$2.00 and \$6.00. Delivered free. West of Mississippi River add 50c; west of Rockies, add \$1.00.

Feed Sprouted Oats and Produce Winter Eggs at Half Usual Cost

Unless you feed sprouted grain this Winter you can hardly afford to keep hens. The price of grain is steadily advancing. Cut your feed bills over 50%; increase your egg yield; provide the necessary low-priced green feed, and insure the health of your flock by feeding sprouted grain, grown in a Collins Sprouter.

You Will Feel the Same as Mr. Green After Feeding the Collins Way:

"I received the Oat Sprouter, and put the oats in on Sunday and today (Thursday) have sprouts about an inch high. Those I put in Tuesday are starting to sprout. Am very glad I did not buy an artificially heated sprouter, also think the \$3.00 I spent for this sprouter was the wisest investment I ever made."—MARCUS GREEN, Canton, Ohio.

DEALERS SPECIAL PROPOSITION

I'll send any responsible dealer, all charges prepaid, a sample sprouter with show card, printed matter, etc. Display the Sprouter, make sales, order more. If unsold at end of sixty days return it to me. Customers supplied thru their dealers, or direct. Write for circulars and prices in quantities.

AGENTS—I have a good proposition to offer. Write me.

A Suitable Christmas Gift

Have you a friend?

ONE who is close enough to you to be remembered with a gift at Christmas time, yet who is not close enough that you feel justified in expending very much money? If you have such a friend who is interested in the raising of poultry, we can solve the gift problem for you. Think of presenting this friend with a gift that cannot but help keep you remembered, for it reaches them every month for 36 months.

This is our offer: Just fill in the blank on the other side and return it to us with a dollar bill. We in return will mail your friend a handsome engraved Xmas card telling them that you have presented them with the American Poultry Journal for 36 months; this card will reach them Xmas morning. Then, beginning January, 1917, and continuing for three years, they will receive the Journal.

Now truly, can you suggest a more suitable, reasonable and lasting remembrance? Do not wait, mail this coupon now!

Anyone
raising
Chickens
will
appreciate
it.

high-producing strains by trap-nesting.

I take pride in exhibiting to my friends the large white eggs produced by my flock. The marketing is no proposition at all; they sell themselves; and I receive the proceeds of my sales with the feeling that I have given full value.

Some persons assert that a layer of large eggs must necessarily be a poor layer, due to the fact that large eggs put an excessive tax on the vitality of the hen. I have trap-nested since January 1st, 1915 and find that my best layers produce eggs averaging 30 oz. per dozen, uniform in size, shape and color.

The Minorca, being active and, therefore, able to stand confinement, is not prone to acquire fat, a condition tending to retard egg production. My trap nest records of Minorcas and other breeds show that the fat hens are drones. There are no fat Minorcas in my flock.

If any reader should not find in this hastily written article good reasons why one should breed Single Comb Black Minorcas, I would suggest that he, or she, visit a flock of this variety at night feeding time, noting, first, the size, color and quantity of eggs; second, the wide-awake and vigorous, yet gentle and friendly attitude of the flock; third, their clean-cut, fresh, unsoiled appearance—the bright red comb and wattles, and white ear-lobes, offering a decided and pleasing contrast to the greenish black feathers; and fourth, their activity when the first handful of grain is thrown into the litter.

BUCKEYE INCUBATOR CO. SECURES INJUNCTION

Against Correct Hatcher Company and Model Incubator Company.

Judge Hazel, sitting in the United States District Court at Buffalo, N. Y., has ordered an injunction against the Correct Hatcher Co., of Leesville, Ohio, and The Model Incubator Co., of Buffalo, N. Y., restraining them from imitating the "Standard" coal-burning brooder made by The Buckeye Incubator Co., of Springfield, Ohio.

The Buckeye Incubator Co. brought suit against The Correct Hatcher Co., The Model Incubator Co., and Charles E. Adair, in the United States Courts for unfair competition, and, after hearing a volume of testimony Judge Hazel found the defendants guilty of unfair competition and restrained them from building or selling any more brooder stoves like the Standard.

Judge Hazel says in his decision: "The defendants have not added to their stove any ornamentation or distinguishing marks, but have made a copy of complainants'. They have copied its form, height, proportion of converging sides, base, sliding door, vertical rods, and projecting thermostat arm—all the essential features of complainants' vendible article. Indeed, it was admitted, as heretofore stated, that in making their stoves, patterns were taken from complainants' castings."

The Poultry Fanciers' Club will hold its first banquet on Saturday evening, at 6:30 P. M., December 30, 1916, at the Prince George Hotel, during the Madison Square Garden Poultry Show, New York. It is earnestly requested that all members attend. It is important that the Secretary be notified at least 10 days in advance, so that plans can be perfected. The club's ambition is to elevate the fancy and placing it on a firm foundation.—D. Lincoln Orr, President, Orr's Mills, N. Y.; J. H. Drenstedt, Secretary, Schenectady, N. Y.

NOW IS THE TIME for you

\$4 BUYS A PERFECT INCUBATOR

Cycle Hatcher Complete \$4.00

Hatcher and Brooder Complete \$5.00

During the rush season we add 400 new machines to our hatchery each year and use them two or three hatches. Every time we run a "CYCLE" it pays us \$1.25. When run twice the profits are \$2.50 on each machine. This is why we can sell them at reduced prices, and is gives customers a tested incubator and the profits it has made. The "CYCLE" was the only machine that produced 100% hatch in a large incubator contest. Our catalog, "Poultry Profits," tells all about this and many new discoveries of the greatest importance to poultry keepers. Send postal and get free copy.

CYCLE HATCHER COMPANY, 13 Lake Street,

Cut Catalog. Full of Illustrations for your printing.

Keeping Accounts.

Every poultry breeder should keep a careful debit and credit account with his fowls. He should know definitely, not only that they pay, but how much they pay. Such accounts need not be elaborate, but they should be accurate. Charge the fowls with all that they consume and credit them with all they produce; the balance will be the profit. Not all of the profit, for no one can measure in dollars and cents the pleasure that one gets from his flocks, and that is a big item in the real profits.

We sometimes hear people say they never had a chance. Invariably those who give voice to this plaint are gifted with good sound bodies and have the blessings of hearing, sight, touch, taste and smell. In other words they are fully equipped but do not understand how to make the most of their mechanism. The finest machine is the human machine. Nothing ever conceived by the brain of man can approach it, in its marvelous illimitability. No other machine can stand such abuse or possesses the same measure of adaptability to right itself. No man would own even a low priced car without giving some thought to its care and capability. When a car is worn out and must be discarded, a new one may be purchased to take its place at slight cost. The human machine with any sort of care will keep in good running order for seventy-five to one hundred years, but it must have the same little daily attention that is given the car between runs. Think of it! In possession of a marvelous machine, easy to keep in good running order, capable of accomplishing all manner of herculean tasks at the bidding, at very slight upkeep cost. All we have to do is to study the mechanism, find out for what purpose it is best adapted, keep it in order and have a clear mind guide the hand that holds the steering gear.

Here, indeed, is the marvel of the world, the study of the ages, the hope of the future—the Human Machine.

Dr. J. W. Cooper, in his book on *Game Fowls*, published in 1859, makes the following extraordinary claim:

"The cutting off of the access of air to the embryo in the egg, does not kill or prevent its being hatched, but on the contrary preserves it alive for a much longer period than if otherwise treated. By covering the egg with a spirit varnish we have produced chickens from eggs of two years' keeping. The following is the recipe: Dissolve some Gum Shalac in a sufficient quantity of alcohol to make a thin varnish, give each egg a coat; and after they become thoroughly dry, pack them closely in bran or sawdust, with their points downward, in such a manner that they cannot shift about. After you have kept them as long as you desire, wash the varnish carefully off, and they will be in the same state as they were before packing, ready either for eating or hatching. This is beyond doubt the best and safest method known, and has been amply tested."

[Note—We don't like to doubt the worthy doctor's claim, especially when he cannot "return fire," but this story reminds us of the yarn from the Southwest about growing corn from seed 2,000 years old, which was removed from an Inca tomb.—EDITOR.]

Dr. Oliver Wendell Holmes said: "Truth is tough. It will not break, like a bubble, at a touch; nay, you may kick

it about all day, like a foot-ball, and it will be round and full at evening."

John Locke said: "The best way to come to truth being to examine things as really they are, and not to conclude they are, as we fancy of ourselves, or have been taught by others to imagine."

And James Russell Lowell wrote: "Get but the truth once uttered, and 'tis like A star new-born that drops into its place And which, once circling in its placid round, Not all the tumult of the earth can shake."

Keep the drinking vessel clean and see that the birds have a constant supply of water to drink. You can't expect them to lay well unless there is a good water supply; water is very necessary to the production of eggs.

R. A. Chiles, Mt. Sterling, Kentucky, says that the following is the most successful rule for rearing Pheasants: "Faith of Abraham, perseverance of Joshua, meekness of Moses and patience of Job."

There is hope for everyone but the self sufficient man. The individual who devotes his energies and abilities to sighting the defects in all other classes of humanity but discovereth not the mote in his own eye is due for the inevitable swiftly sliding toboggan.

Bradley Bros., Lee, Mass.

Famous Barred Plymouth Rocks

Known best for their Madison Square Garden first prize records. We are now furnishing exceptionally good birds at prices right and offer for sale:

Fine large show-type Cockerels for exhibition and breeding—quality and type the kind buyers seek. Females of superior merit—just what one needs to produce cockerels to win.

Pullet-bred males, both old and young, which will produce show pullets. Pullets and hens to go with them for exhibition or pen.

A Number of Nice Cock Birds at Medium Prices

Now is the time to place order and secure specimens which will surely benefit. Describe wants that we may be able to select to please you. We aim to benefit our patrons. We believe we were never better able to furnish "classy" birds for our customers. Ask any visitor here who has seen our stock.

Won at two shows. "I have had the pleasure of winning at two shows with the Cock bird you sent me.—R. W. Johnson. Okla. City, Okla., February, 1916.

Bradleys Please. "The pullet arrived O. K. January 1st, and I want to thank you for your selection. If I were to try and fault her, I do not know where I would start. She pleases me fine." F. F. Hinman, Lincoln, Nebr., January, 1916.

Will you pay the postage if we give you

These Books Free?

This book tells you how to operate any Incubator or Brooder. It contains 124 pages and has heretofore always sold for 50 cents per copy. While they last we will sell them postpaid for

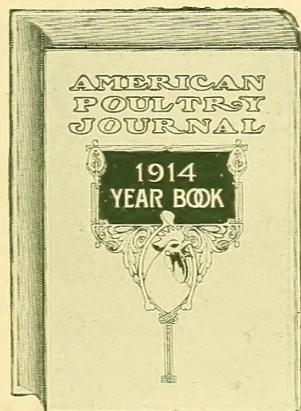

10c

We are cleaning house and we have a large supply of some books on which we are overstocked and we need room for some new books. We want to dispose of these books at *less than cost*. If you want them you can have them at the following prices, which little more than pays the postage it will cost us to get them to you. Read thru this ad—it's a bargain.

This is an unusual book, widely different from all other poultry literature—it is based on actual facts, and the light, breezy manner in which the story is told holds your attention from start to finish. The appendix in this book gives complete feeding formulas, symptoms of, and remedies for poultry diseases. It contains 75 pages and has heretofore always sold at 50 cents per copy; you can get copy now postpaid for

10c

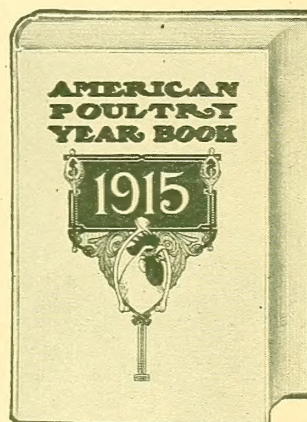

This book contains 384 pages and weighs one pound. It is the Poultry Almanac for the year 1914. This book is without doubt a big buy at 50 cents. But as we have a pretty large supply on hand, you can get a copy postpaid for

25c

Send 75c for all this

for only 75 cents we will send these four books and seven beautiful painting reproductions of 87 different varieties of fowls in natural colors. Size 7x10 inches.

This, the Poultry Almanac for 1915, contains 448 pages, and, like the 1914 Year Book, it weighs just one pound. It's without doubt the biggest buy in poultry literature, as we are closing out our supply at the low price postpaid of

25c

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win at the Imperial Show
of all the World

Madison Square Garden
New York

January, 1916 -- Competition Open to the World

The following matchless record: All the Ribbons and Prizes offered on Cocks, Cockerels, Pullets and Exhibition Pens, viz:

Cocks	1st, 2nd, 3rd, 4th and 5th
Cockerels	1st, 2nd, 3rd, 4th and 5th
Pullets	1st, 2nd, 3rd, 4th and 5th
Exhibition Pens,	1st, 2nd, 3rd, 4th and 5th

Sweepstakes Champion Male and Female. Shape and Color Specials—Male and Female. All Silver Cups and cash Specials. More First, Regular and Special Prizes than any exhibitor of any breed. This is the Capstone to their unexampled record at New York for 28 years.

My exhibit of **100** birds of supreme quality is an achievement unknown in the entries of Poultry Shows—unequaled in the annals of Barred Rock history.

Grand Winning Show Birds

The finest that all America has ever produced—are now on my farm ready to win Blue Ribbons and Silver Cups for you in any competition in the World in Cocks, Cockerels, Hens, Pullets and Pens. They are elegant in size and shape, fine heads, rich, clear blue color, with that sharp, clean cut, straight, narrow "Ringlet" Barring to the skin that wins under all Judges. The prices are reasonable.

Winners of every first prize offered at Madison Square Garden, New York, February, 1915—first cock, first cockerel, first pullet, first hen and first pen cockerel.

Prizes and Silver Cups have been won by my customers on Imperial "Ringlets" in more than a thousand show rooms throughout the civilized World—You can win the same laurels. I will sell you grand exhibition birds for any show, and breeders of this richest First Prize New York blood in elegant single birds, trios and pens, mated to produce prize winners.

If you want the best in Barred Rocks you must have my Imperial "Ringlets."
My customers are my first thought and nothing is too good for them.

Elegant Catalog Upon Request.

EGGS from the finest exhibition matings in the World,
\$10.00 per setting; four settings, \$35.00; one hundred eggs, \$60.00—One-half these prices until December 1st.
